The talk here is about protected industries; what does that mean? To me it is a sound and nothing more, "Like a tale told by an idiot, full of sound and fury, signifying nothing." Our position is that there are no industries in this country that produces anything that are not protected, if not directly then indirectly. Gentlemen talk about discrimination. The true policy of protection is to protect by tariff taxation the industries of this country which come in competition with the industries of the old countries, to the end that they may produce the articles necessary for the comfort of the American citizens primarily and the purchasers of our commodities wherever found, and that in so doing we protect and stimulate and build up and make profitable every industry in this country which produces anything that the American citizen or his neighbor abroad buys and uses.

Mr. Chairman, there are several items here which I would like to have spoken about, but time would fail me to attempt to notice all the inconsistencies and unjust discriminations in this bill of abominations.

The general result of my argument is, that the country under the administration of the political party to which I belong has grown in wealth and prosperity in a ratio never before witnessed in the development of any country on earth; and it has not been shown on the other side, and with all due respect to the very able men who are to follow in defense of this bill, it will not be shown here why it is that under their administration and under the operation of the laws which they are proud of, this country stood still or retrograded in the great march of progress.

Mr. Chairman, I protest against the passage of this bill. I protest against it because the men engaged in the industrial pursuits of this country, which are absolutely akin to the great farming interests of the country, and upon which the farmer depends for his market and for the profits upon his agricultural productions, are almost uniformly opposed to this measure. There is nothing to be gained by it. There is no reason for it. The Republicans on this side of the House will present, doubtless, if not in the form of a bill, certainly in the form of more than one amendment to this bill, a substantial method by which the difficulties complained of, so far as they exist, can be gotten rid of. There is no argument which I have heard that justifies a tax upon sugar. There is no argument which I have heard that justifies a tax upon rice. There is no argument in favor of free raw material that justifies leaving the protective duties upon iron, iron ore, and bituminous coal, and at the same time striking down the Northern products of wool, lumber, and salt, and, generally, the protected products of the country. Not only have the friends of this bill started out upon a principle which long ago was the turning point in the great commercial controversy when they sought to wreck the nation, but they have followed it up by framing a bill so sectional in its character that it appeals to every Northern man to stand like a wall of fire against its passage.

Mr. Chairman, I look with an eye unswerving in faith and a confidence born of intelligent study of the whole situation to the re-entering into power and place in this Government of the Republican party—a party that, coming back to the old familiar position it occupied for almost a quarter of a century, will find the beautiful traces of its handiwork not yet quite fully obliterated from the commercial map of the nation by the untrained and inexperienced Democratic rulers—the old party of liberty, conscience, of equal rights and justice to all men, that laid deep and strong the foundation upon which this mighty superstructure of a free and prosperous government has been builded. It will come back wiser, and by its observations of the failure of its opponents, by the assaults made upon its industrial system by those seeking to drag the prosperity of the country down, coming back re-ordained by the popular voice of the people of the country to again rescue the nation, it will be able to refurnish and rebeautify the magnificent structure it created, and which has been the pride and glory of American citizenship; it will lay the foundation of commercial prosperity deeper, and it will build the beautiful temple broader, higher, more glorious. I see in the uprising of the people everywhere against this monstrous system of cheap labor and cheap production the omens of coming victory. I hear the advancing notes of a triumphant song of free labor, well-paid labor, educated labor, remunerative capital, fair and just distribution of burdens and profits, and an era of prosperity, both commercial and political, such as neither this Government nor any other government ever experienced before on earth.

There is a rainbow in the sky
Above the paths where lightnings trod.
'Twas written by a hand on high,
It is the autograph of God.

[Loud applause on the Republican side.]

Bureau of Animal Industry.

REMARKS

OF

HON. PRESTON B. PLUMB,

OF KANSAS,

IN THE SENATE OF THE UNITED STATES,

Thursday, May 3, 1888.

The Senate, as in Committee of the Whole, having under consideration the bill (S. 2083) to provide for the establishment of a Bureau of Animal Industry, and to facilitate the exportation of live stock and their products, to extirpate contagious pleuro-pneumonia and other diseases among domestic animals, and for other purposes—

Mr. PLUMB said:

Mr. PRESIDENT: It was to be expected that there would be some difference of opinion, and perhaps a very radical one, about some of the provisions of this bill, and it may be that, as asserted by the Senator from Michigan, that difference of opinion arises from a lack of appreciation of the danger liable to result from the existence and spread of contagious diseases among domestic animals. The importance of this subject certainly should not be underrated by the Senate.

It was gone over in 1884, and yesterday the Senator from Nebraska [Mr. PADDOCK] argued the case very strongly, and I think very conclusively, in regard to the propriety and absolute necessity of some effective legislation on this important subject. It affects not alone the interests of owners of cattle but also all the people, because it relates to the food supply of this country, and to some extent of the world. That this country should ever be seriously short of food seems to most people an unfounded proposition, but it may occur at any time, and from no quarter is there so much danger as from the spread of contagious diseases among our domestic animals.

As population becomes more dense, precautions against the spread of infectious and contagious diseases among persons becomes more necessary, and with increasing density of population comes of course greater numbers of animals, their greater proximity, and a consequent greater danger of the incurrence and spread of disease. This danger is still further increased by the more active and constant transit of cattle from one portion of the country to another, arising from the opportunities presented and by the necessities of the situation. This greater danger must be met by legislation corresponding thereto.

It was one thing to have a population of ten or fifteen million people, with an immense area of virgin territory beyond and all about them, with communities and individuals separated by such distances that, whatever there was of disease, however epidemic in its character, the results were practically sporadic, and entirely different to have on the same territorial space 60,000,000 people, increasing at the rate of perhaps 2,000,000 each year, and in the mean time intercourse immensely quickened.

The disease of pleuro-pneumonia, with which this bill mainly

deals, is an importation coming, I think, according to common consent, from the Channel Islands. It is not only swiftly epidemic, but insidious and deadly. It sometimes takes as much as nine months for the disease to manifest itself after exposure. During all this period of time the diseased animals may be transported from place to place, spreading the contagion; and I have no doubt it has happened that many a cattle-owner has yielded to the temptation to sell for shipment when he knew or had reason to believe that his animals had been exposed, in order that the loss which he fears may result therefrom may be unloaded upon other and innocent persons. This bill has a provision in it covering cases of that kind, which is of great value, and which, if adopted, will alone be worth all the discussion and agitation which have ensued.

Mr. President, great loss has already occurred to cattle producers of the Eastern and Middle States by reason of the ravages of pleuro-pneumonia, not only on account of the death of animals, but on account of the interruption of trade.

The Senator from Missouri (Mr. VEST) mentioned a moment ago the great excitement which existed in the State of Kansas in 1884 by reason of the supposed outbreak in a herd of cattle there of foot-and-mouth disease. The damage by reason of the fear of the people on that subject was as great as though the disease had actually existed.

If there had been at that time ample machinery on the part of either the State or the National Government or both, not only to act promptly in investigating the character of the disease and settling it beyond controversy, but also to have prevented its possible spread, there would have been little or no fear, there would have been comparatively no interruption of traffic, and therefore practically no loss. It is not alone to guard against the spread of the disease that legislation is necessary, but it is to give the strongest possible assurance by means of known and sufficient agencies that the Government is ready, willing, and able to suppress the disease whenever and wherever it occurs, and thus prevent its spread, and enable it to be stamped out so that there may be no fear or as little as possible, and therefore no unsettling of values and no interruption of trade beyond that which the known situation requires.

In the midst of such a scare as occurred in Kansas in 1884 and as has come since in Missouri, Illinois, and elsewhere, liable to be repeated at any moment, the individual man, whether dealer or producer, is helpless. He may feel that his own herds are sound, but he can not tell how soon they may become infected by reason of the movements of cattle over which he has no control, and he is at once cut off from certain markets by reason of which the value of his cattle is largely reduced. And the remedy is beyond his reach. This makes an emergency which can only be met by the exercise of power in a summary way, and almost inevitably this power must be that of the General Government. Unless all the States should be acting upon the same line at the same time and in full accord the remedy might prove inadequate. As this could not be expected, the only recourse is in the authority of the National Government.

Complaint has been made through the medium of a letter read in this debate from a cattle-drover in Virginia, of the fact that Kansas had quarantined against the cattle of that State. It has been only a few days since the quarantine declared by the governor of Kansas against the cattle of Illinois has been removed. While that quarantine existed, of course cattle could not be taken from Illinois to Kansas; they could not be taken through the State, and so a great traffic was interrupted at the loss of large sums to the community and to individuals. It is possible that if all the facts were known, the quarantine was not justified, and yet so great are the interests involved, so great the possibilities of damage, that the governor of Kansas, as well as of any other State, is justified in acting upon suspicion merely, and thereby guarding against the possibility even of the introduction of diseased cattle within the limits of the State of which he is executive by the exercise of all the power conferred on him by the law.

It may be, as has been often stated, that the actual danger of the spread of disease is overestimated. Grant it; yet after all, if it does break out, as it did in Kentucky, Illinois, and Missouri, the damage is not only immense, but it creates a fear which is ever present, which often magnifies trifles, and the effect of which can not be wholly eradicated. All the more the necessity of having at hand machinery so ample and in such hands that the cattle owner and producer may have the greatest possible assurance of safety, and therefore not yield to fear.

It was my fortune to have been in charge of the bill which passed the Senate in 1884, known as "the animal industry bill," which was the first recognition by national statute of the existence of the disease of pleuro-pneumonia and of the necessity of serious efforts to exterminate it. There was no lack of opposition to the bill, within and without Congress. But the most virulent came from the stock yards at Chicago—from the men who sell stock on commission—and from the dealers and packers of that great city. They not only telegraphed to every Senator, saying that there was no pleuro-pneumonia in the country, but they filled the newspapers with denunciations of the bill, and employed an attorney of national reputation, paying him $25,000 as a fee, to come to Washington and urge its defeat. By reason of this opposition the bill was shorn of some of its most valuable provisions and passed in a much less acceptable shape than it should have done. But it was better than nothing, and in connection with ample appropriations since made has resulted in much good.

It was somewhat of a surprise when a couple of years later a delegation appeared here headed by the leading stock-yards commision man of Chicago, and one who had done more effective work publicly and privately against the animal industry bill than any one else, demanding that legislation of the most drastic character should be adopted for the suppression of pleuro-pneumonia; accompanying it by a denunciation of the Agricultural Department, and insisting that the work of extermination should be placed in the hands of an independent commission.

It soon became apparent that the legislation was the minor thing, and that what was chiefly desired was a commission which should have full and complete control of the question of quarantine transportation and of all other things having to do with the suppression of pleuro-pneumonia. This was to some extent accounted for by the fact that the offices of commissioners, etc., had already been parceled out, and the delegation embraced chiefly those who hoped to thus get upon the Government pay-roll. But this desire for office was soon found to be only a part, and not a large part, of the plan involved in the proposition for a cattle commission.

Mr. President, the most powerful, the most unscrupulous, combination that exists to-day in the United States is the combination of beef and pork packers, having their headquarters at Chicago, with branch organizations at Kansas City and Saint Louis. There is no trust or combination, whether it be the oil trust, the sugar trust, the copper trust, or a trust of any other name or kind, which has had so powerful or so baleful an influence as this combination of packers.

For years the price of cattle to the producers has been going down. The average decline during the past four years has been fully 25 per cent., and during that period of time the price of beef to the consumer has been kept up. Every dollar of loss to the producer has gone into the pockets of the Chicago combine. The members of this combine have alone benefited by a decline of prices which has broken up many and seriously damaged all the producers of beef cattle in the United States. So perfect is the organization and so complete its system that it knows in advance not only how many cattle will arrive in Chicago each day, but also the names of shippers, where shipped from, etc. Every morning an agent of the combine inspects the cattle in the stock-yards and fixes a price upon them, which is the price they must be sold for unless the combine chooses to make a reduction. There is no competition for purchase. None is permitted. No commission man would dare break the prices fixed by the combine by bidding over them. It would be the last business he would do about the stock-yards. Occasionally, when the number of cattle coming in is light, prices are raised a fraction. This stimulates shipments, and before the cattle reach Chicago the prices are put back to the old level or lower.

Under the operations of this combine the price of cattle has declined unnecessarily more than $10 a head. It has been put at even more than twice that by good judges, but it is safe to say that on every steer of three years old and upwards, produced west of the Mississippi River, during the past four years the actual market value has been reduced by means of this combination not less than the amount named. The damage to the State of Kansas alone during that period of time has been more than $40,000,000, and this sum has gone into the pockets of the combine. Their profits last year are stated to be over $50,000,000, which represents that amount of loss to the producer.

It would seem that profits of this amount would soon satiate those who receive them. No, Mr. President, power of that kind, and I guess of all kinds, grows by what it feeds on, and the man who (and there is more than one of them) has made $50,000,000 out of this business wants another $50,000,000—yea, another $100,000,000—as bad as he wanted the first $50,000,000.

So, Mr. President, the idea was conceived by these men to help themselves to increased profits by getting control, by law, of the entire cattle business of the United States, and it was in pursuance of that purpose that they sent a committee down here last year and the year before. It was in pursuance of that purpose that they have had a representative here during the present session to get Congress to provide for a commission with enormous powers, which they expected to control.

See how useful the powers of such a bill as they proposed, administered by a commission under their control, could be made to the cattle ring. The power to declare quarantine is the power to stimulate or repress shipments—the power to determine over what lines of road cattle should be shipped and to what places, and where unloaded in transit. Under this power Chicago could be made the only Western market for cattle. The administration of the powers of the bill they proposed would put other millions of money, drawn from the impoverished producers of cattle, into their already overfilled pockets. It was a scheme for dominion, and they could afford to employ and pay plausible and unscrupulous agents to promote it, and to spend other sums to get control of cattle organizations, whose resolutions they could thereby manipulate. The result to be achieved was so stupendous that they did not hesitate to bring to their aid the most unscrupulous misrepresentations, to resort to personal defamation, to make sure of it.

So powerful a combination was bound to have allies. It has had

them, with or without constraint, in the railroads which center at Chicago, and to some extent perhaps in other railroads as well. The cattle ring controls vast shipments. The railroads knuckle to them for business. Chicago is a great cattle mart. But not content with handling the cattle brought there, and deriving profits from them alone, the cattle ring levied contribution from the railroads on all the cattle shipped by—not through—Chicago on their way east. Fifteen dollars per car was the amount of this tribute taken from the cattle producer, so that it did not make any difference whether all roads led to this new Rome or not, because the cattle transported upon roads which went elsewhere had to pay tribute.

Their allies, the railroads, have enabled them to break down small packers and also to a great extent local butchers in a great radius around Chicago, so that cattle can not be butchered except they are sent to Chicago. From there they are sent in the shape of carcasses back to the localities from where they were shipped to be sold at retail. The country is fast coming to a condition where it can only eat its breakfast by permission of the cattle ring. It can do so now only by submitting to what is practically extortion. Prices to consumers remain as they did when the producer got 25 per cent. more than he does now, and meanwhile the number of cattle in the country has been proportionately greatly reduced.

It may seem strange to many that the railroads should have been drawn into an alliance against the producers of cattle, whose prosperity would seem to be a part of the prosperity of the roads themselves. It was not the work of the railroad stockholders.

It is one of the mysteries, and miseries, too, of railroad management, that those who are in most absolute control are not the men who own the stock. There probably is not a freight agent or a general manager of a railroad in the United States, who has anything more than a mere nominal interest, if even so much, in the road which he controls. He puts rates up or down, he gives to one man at the expense of another at his own sweet will, with little or no care for the permanent interest of the property which is under his control.

If railroads were managed by the men who own them and by men living along the lines, and therefore in a condition to appreciate local conditions and needs, they would not be under the ban of an intelligent public opinion as now.

As those who manage the roads have no financial connection with them, and therefore no hope of any direct return for services rendered except in the shape of salary, it is not to be wondered at perhaps that they should be drawn into speculations in which the only capital they furnished was their official place. At all events they have become interested in stock-yards and in various enterprises connected with the roads they managed, and the cattle combine no doubt found other ways to make them useful to their projects.

In this and in other ways railroads have been perverted from the purpose of their creation, until they have become in effect the allies of wrongful combinations and the instrument of illegitimate private gain.

A great strike occurred over in Pennsylvania a few months ago, embracing 30,000 or 40,000 employés of one of the most powerful railroads of the country. I do not believe that there is any observing man who has not come to the conclusion that the misfortunes of that railroad company, which have been visited upon its employés, grew out of the fact that it departed from its legitimate business of transportation, and entered upon the production of coal, the owning, the holding, the controlling of immense areas of coal land, with a view to the final control of the price of anthracite coal; and because the great scheme fell through, having been extravagantly undertaken, it finally became necessary, in order to save the road from the great and illegitimate burden which the wreck of its coal scheme produced, to charge the losses to the wages of employés, and they struck in consequence.

I yielded with some reluctance to the qualified provision found in this bill providing for a commission. It was a compromise, as the whole bill has been; and yet I view that provision even now with some suspicion. Giving all due credit to the President of the United States for the faithfulness which he might be expected to observe in the appointment of the commissioners, I know that the railroads and this cattle ring, through the agencies they control, extending to the banks, the railroads, and through all the ramified industries and interests of this entire country, have avenues of approach to that official, as to all officials, which no other combination of men can have; and that they would have one hundred chances where the cattle-owners would have not a single one to impress themselves upon the President and secure a commission which would serve them implicitly at the expense of the public.

The administration of the proposed law will involve large outlay The amount can not probably, with even the exercise of economy be less than half a million dollars per annum. This is a large sum of, money, but the interest to be protected is an immense one. The Senator from Nebraska [Mr. PADDOCK], in his admirable speech of yesterday, estimates the cattle of the United States to be worth more than $1,500,000,000. This great interest is to be protected from disease, and to be measurably at least under the control of this commission provided for in the bill. The money is of the smallest concern. The safety of the cattle interest would be cheaply obtained at an expenditure of five millions a year.

The main thing is the fidelity, the honesty, the capacity of the commission. I am not prepared to pass final judgment upon the work of the present Bureau of Animal Industry, carried on under the supervision of the Commissioner of Agriculture. I neither accuse nor defend; but the Consolidated Cattle Growers' Association, at its last convention in Kansas City, indorsed the work of the Bureau, and I have no reason to disbelieve the Commissioner when he states that great progress has been made and that the dread disease of pleuro-pneumonia is in process of extinction. The Commissioner is at the head of an important and permanent department of the Government. Whatever becomes of him the department goes on. Its main functions are exercised in plain view of Congress and the country and under a sense of responsibility which, in my judgment, no commission could have unless that commission were a part of the machinery of the department itself.

The present Commissioner of Agriculture came to his position with the reputation of being a practical agriculturist and an honest, able man. He has shown himself intelligent and zealous in his high office, and has at least fairly justified his appointment. I believed well of him when he was appointed, and have seen no reason to change my good opinion. I believe he has conscientiously done his best in expending the large sum of money given him by Congress for the suppression of pleuro-pneumonia. He has had widely extended agencies under his control. They may have been perverted at times. I do not expect a pure civil-service reform at the hands of this administration any more than the Senators on the other side of the Chamber do. I know the men who are to exercise the functions provided in this bill, as those existing heretofore, measurably at least, where the appointments are not of experts especially, will be from members of the Democratic party, made upon the recommendation of leading and official Democrats. This is to be expected. I shall not oppose needed legislation because it will be administered by Democrats.

I believe that the Commissioner of Agriculture will do as well with the powers named in this bill, if it shall become a law, as we are likely to have done by anybody else. I believe there is general confidence in him on the part of those whose interests are affected; and whether he be good or whether he be bad, I would trust him much sooner than I would trust any one of this Chicago cattle combine, which has done so much to oppress the cattle industry, and which, from the declaration that there was no disease in the country at all requiring legislation to extirpate, came down here to say that the country was overwhelmed with it, and that they must be put in control of legislation desired to stamp it out. The Greeks bearing gifts are to be distrusted.

Mr. President, this is aside from the main question as proposed by the bill. I have already called attention to one provision which is entirely new to our legislation on this most important subject, and which is worthy of being embodied in a separate bill if need be. It is the provision which puts a direct responsibility upon the owners of cattle for their sale and transportation after they have been exposed to contagious disease.

When it comes to be known that every owner of a herd of cattle is responsible for the exercise of a sound discretion and judgment as to whether his herd is infected or not or has been exposed, and that if with knowledge of such exposure or such infection he sells cattle for shipment he will be punished, a large portion of the dangers which the country now fears from the transportation of cattle from one portion of the Republic to another will disappear.

That portion of this bill which seems marked for opposition on account of alleged infringement upon the rights of the States is not without warrant in what Congress has heretofore done in other directions. Some years ago there was an outbreak of yellow fever at New Orleans, or in that vicinity, and also at Memphis. The effect was disastrous to those communities, and disaster was threatened to all the Southern States. An emergency was presented of the gravest character. The Senator from Tennessee [Mr. HARRIS], prompt to look after the interests of the community which he so ably represents, introduced legislation, which passed, constituting a national board of health, and gave it powers as drastic, as far reaching, and as subversive of the rights of States so called as anything found in this bill.

The Senator from Michigan [Mr. PALMER] well said that, in the presence of emergencies such as that which existed last year affecting the cattle industry, Congress would make haste to do pell-mell what at other times it would not do at all. Perhaps the danger is not so imminent as it has been. It is therefore the best time to agree upon legislation to be enacted as a matter of sober judgment preparatory to future emergency, liable to come at any time, and thereby prevent being hurried into unwise and perhaps into unconstitutional and certainly arbitrary action under the impulse of great danger.

Therefore I think every Senator ought to feel it to be his duty to assist in perfecting this bill. I do not want, any more than any other Senator, to take away from the States what is properly their due in the matter of authority. I want the National Government to do that, and only that, which it can not only do better than the States can do, but which is within the purview of its constitutional authority; but I want that authority to go to the farthest verge, because I can see in this unification of power, this singleness of action, this com-

bination represented by the Federal Government, that which will not only give the greatest assurance to the people of present safety, but also make sure of the future.

We need to get through and beyond the personal contention which has centered around this bill, away from the denunciation of the Commissioner of Agriculture by those who would usurp his function in order to accomplish a nefarious purpose, and away from the sentiment expressed in petitions and protests presented here from day to day from those who fear this bill may be a blow at the Department of Agriculture, something designed to rob it of its proper primacy.

The Senator from Nebraska [Mr. PADDOCK] calls my attention to the fact that the protests against this bill were largely begotten from a belief that the bill was designed to degrade the Department of Agriculture. I have been for years an advocate of building up that Department. I believe it ought to be put upon an equality with all the other Executive Departments of the Government, and I believe that the man whom the President appoints as the head of it he ought to take into his Cabinet.

In France and England important functions relating to vines, to food, and so on are committed to men holding higher relative rank than the head of our Department of Agriculture holds. The bill as originally proposed was designed, by the malign influences I have spoken of, to prevent the Commissioner of Agriculture from having control of the agencies for the suppression of pleuro-pneumonia because he could not be relied upon to act in the interest of the Chicago cattle ring. But as now reported the control of the Commissioner is measurably preserved, although not as fully as it should be.

I believe not only in giving chiefly and with as little limit as possible the powers of this bill to the Commissioner of Agriculture, but I believe in adding to the dignity of that Department in still other ways. I would not, I am sure, consciously vote for any provision which I thought would detract from the dignity or the power of that Department. If it has not the right man at the head of it, one can be found. It is not a question of men, it is a question of agency.

The agriculturists of the United States feel that the powers of the Department ought to be enlarged; that it ought to cease to be the foot-ball of patronage or of politics; that it ought to be put upon the highest possible plane, with a strong, wise man at the head of it and with ample agencies under his control for the disseminating of information, and for the bettering of the condition of those engaged in this most useful calling.

This bill is the result of a compromise. I did not agree to it as originally introduced, because I thought it was too arbitrary and in some respects unconstitutional. I believe in it as it stands to-day as reported, with the single exception of whatever objection I may make to the constitution of the commission.

My objection to that is qualified largely by the fact that the Commissioner of Agriculture is to be *ex officio* the president of the commission. Still I can not fail to see that to some extent, at least, we may set up in regard to this very important matter a divided jurisdiction. The power to be exercised by this bill, and especially that which is objected to, is arbitrary, and must necessarily be so. It is summary. As the Senator from Missouri [Mr. VEST] said, many things are to be done without trial, relying upon the judgment of the officer to execute, leaving after consequences to take care of themselves. The home of the citizen may be invaded to some extent, his property taken possession of in the name, of course, of the public good; but it is a power that is liable to be abused.

I would, therefore, put it as closely as possible into the hands of one man. I would have it in such a shape that abuses could be detected, and that responsibility for them and for all administrative acts could be located. I would give it to the Department of Agriculture in some shape or other, because it is a great Department of the Government, one, as I said, to be magnified and not to be depreciated; a Department for to-day and to-morrow and for all time; a Department here under our scrutiny; a Department under daily scrutiny in all its machinery, more responsible to public opinion than any commission could possibly be.

Mr. President, I am not willing to say that in detail, and perhaps to some extent in matters of substance, this bill is not open to just criticism; but I hope that Senators will not fail to recognize the magnitude of the interest involved; that because they object to single provisions they will not oppose the entire bill, but that every one will address himself to the question of amending, if he deems amendment necessary, and of changing if he thinks changes should be made, in such a way as to make it, if not all the stronger, at the same time more nearly in accordance with what he thinks it ought to be, always having in view the work that is to be done.

I know that the Senators from Texas have some jealousy upon this subject. That is a great State. It has got innumerable corns on its toes. That is one of the penalties of greatness. It has a great cattle industry, and the Senators from that State, and I think properly, insist that Texas cattle have a right to be diseased if they want to be, and they know, I think, that nearly all of them are diseased.

Notwithstanding that fact Texas cattle are a great and necessary item in the commerce of the country, and it ought not to be rudely touched; but if pleuro-pneumonia should ever break out upon the plains of Texas, the people of that State would see the difference between it and the splenetic disease with which all Texas cattle are affected, and which is communicated to all northern cattle, and especially to those of high grade, with such fatal ease that the trail of Texas cattle driven through Kansas, Missouri, or other northern States can be traced as easily as the track of a prairie fire by the dead animals which line the route.

Every cow or steer which pastures where Texas cattle have passed, or drinks from pools where they have drank, is doomed.

This disease does not injuriously affect the Texas cattle themselves, singular as that may seem; and according to the report of the Commissioner of Agriculture of a few years ago, it is more or less common to all cattle raised south of a certain line, say the extension of the north line of Texas. It is to some extent what Mr. Walker once claimed the slavery question to be, an isothermal question.

But if pleuro-pneumonia should ever break out among the cattle herds of Texas, the people of that State would be the first to realize the difference and ask protection—when probably it would be too late; and there is the trouble, the shadow that constantly haunts the Western cattle men. It is not so with the man who owns a handful of cattle around New York City, or with the owners of the comparatively small herds in the East. The disease can easily be circumscribed there.

But where cattle have wide range, if you put one animal infected with pleuro-pneumonia in a herd the loss that would ensue, beyond any power to prevent, would be numbered by hundreds of millions of dollars and a practical destruction of half the food supply of the United States. Yet communication is so free, traffic is so unrestricted, that the animal which to-day browses along the banks of a New Jersey stream, afflicted with this disease, four days later may be in the heart of Montana or in western Kansas. It may never happen, and yet to the man who has got his all invested in this business it is an ever-present fear; it is a fear which the Government can do much to allay; it is a fear the foundation of which the Government can destroy.

More than all that, this and kindred diseases affect our foreign trade. As long as it exists our cattle are excluded practically from the markets of the old world. They are not allowed to be shipped there or on foot, or, if shipped at all, they are required to be butchered within twenty-four hours after their arrival, and before they have a chance to recover from the fatigues and the natural depletion of the long journey, destroying thus a large portion of their value.

Mr. President, I do not believe to-day, scanning our calendar, that there is anything more important that Congress should do than to give as nearly as possible absolute security to this great, to this most important, industry. Perhaps this bill will not effect it. If it will not, then it is the duty of every Senator, having in mind the magnitude of the interests involved, to address himself to the perfection of the proposed legislation. It is not to be put aside with a sneer, and any portion of the measure, whatever it may be, which seems to those who are sensitive to be an infringement of the rights of the States, ought to be carefully scrutinized to see exactly where the proper line is between Federal and State authority, and if there be odds, give it to the exercise of Federal authority, because in that direction lies safety.

It is in this spirit, Mr. President, that I hope the Senate will continue the consideration of this bill. It may not be twelve months, we may not meet here again, till every Senator may reproach himself for his share of that negligence which allowed this measure to go unacted upon, whereby a great emergency could not be satisfactorily met by reason of lack of authority.

If we can not crush out the wrongful combinations which have oppressed and well-nigh destroyed the cattle industry of the United States, we can at least protect it from the threatened ravages of a disease which unless suppressed may, and probably will, take what is left.

The Tariff.

SPEECH

OF

HON. THOMAS R. STOCKDALE,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 5, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and to simplify the laws in relation to the collection of the revenue—

Mr. STOCKDALE said:

Mr. CHAIRMAN: I have listened with earnest attention to this extended discussion of the revenues, which more than any other question has the solicitude of the American people.

I have tried to comprehend the bearing of the vast and varied array of statistics and historical facts brought under review and handled with consummate skill by the orators of this debate, with the view to

understand the arguments adduced and appreciate the force of the conclusions sought to be established thereby. I will not be understood, environed as I am by this brilliant display of learning and logic, as assuming the rôle of critic in such a presence when I say I have not been able to escape the conviction that the two great parties have not met face to face on the real merits of this great controversy; that the issue before the country, and which the people are most anxious to decide, has not been fairly joined nor discussed in this House. That the present law which forces the citizens to pay into the Treasury over sixty millions of money annually more than the Government, with all its extravagance, can use or waste should be revised is admitted on all hands, declared in the platforms of both parties, and by speakers and writers for the last decade.

The Committee of Ways and Means of this House has, with great care and labor, formulated and presented a bill setting forth in detail and with reasonable clearness the mode by which it is proposed to accomplish that long-promised and much-desired result.

It is a plainly drawn and distinctly stated declaration of a proposition for reduction by the party desiring revenue reform, reported into the House, printed and distributed, and notice served on the opponents of the measure to appear and answer on a day certain.

The committee and the House and the country had the right to expect a frank and honest response, either concurring in the passage of this bill, or showing some other and better plan by which reduction can be accomplished.

But instead gentlemen of the opposition, with an unanimity that can not be casual, have resorted to a system of skillful special pleading for the purpose of preventing any change in the present law, and thereby availing themselves of the advantages of a system of taxation which they have acknowledged to be vicious and unjust in its discriminations, and which they dare not openly support before the American people. There is not a member on this floor who dares to openly advocate and commit his party to the support of the present tariff laws of this country. But to escape the condemnation of the people protectionists battle against a phantom of their own creation, which they call "free trade," a thing that no member on this side has advocated or hinted at. Afraid of the real issue before the country gentlemen on the other side raise and discuss an issue that is not now and has not been in Congress for a quarter of a century.

Mr. WEBER. Will the gentleman from Mississippi allow me to ask him a question?

Mr. STOCKDALE. I will, if the gentleman from New York will ask the question without going into an argument and consume my time.

Mr. WEBER. The question I wish to ask the gentleman from Mississippi is, whether it was not the evasion of that issue which brought success to your party?

Mr. STOCKDALE. Where?

Mr. WEBER. In New York. And was not SAMUEL J. RANDALL sent to close protection States of the North whom you now declaim against on this floor, and that it was Hon. SAMUEL J. RANDALL who saved your party?

Mr. STOCKDALE. I do not know what power Hon. SAMUEL J. RANDALL has in New York. If he saved the Democratic party I desire to do him honor.

But I take this discussion here on this floor as voicing the sentiments of the two great political parties on this question, and we need not go to New York or elsewhere to ascertain what they are.

The people know as well as we can tell them what parties have done, and will pass upon it; but the eyes of the country are upon us, anxious to know what we are going to do at this session of this Fiftieth Congress. Shall the present revenue laws of the United States continue on the statute-books as they are, with all their evil consequences, or shall they be revised and modified so as to remove from the Government the odium of oppressing its own people and to withhold the vandal hand of legalized plunderers from the pockets of the working people and the wealth-producing people?

This side of the House and the Democratic party say, "Change the laws and make the iniquitous burden lighter." You say by your actions you do not desire any change and will have none if you can help; and this is the present issue between the parties. At the same time I undertake to say to that side of the House that you dare not openly advocate that doctrine and commit your party to it. No member has done it; none will have the temerity to do it. The honest yeomanry of your party would recede from a policy that shocks the common honesty of the country.

Constituencies who reap the profits of this unjust law may require their Representatives to prevent a change, and leave it to them to adopt such skillful methods as they can to accomplish that result, and at the same time rescue their party from the responsibility of defeating what it has solemnly proclaimed ought to be done.

I do not intend to speak invidiously, but I have the right to interpret reasonably men's actions. The leading politicians of a great party do not act with such unanimity without an object, and that, too, well understood among themselves. The Mills bill was pressed upon the attention of this House by the chairman of the Ways and Means Committee in a most forcible and logical argument, and was responded to by an exhaustive argument on the subject of slavery prepared and read by the venerable gentleman from Pennsylvania [Mr. KELLEY], who was born and raised in the then slave State of Pennsylvania, which held human beings in bondage until 1784, and then grudgingly freed them, not promptly as Christians throw off an evil, but by gradual emancipation. By that law it was wrong to hold a man in bondage and sell him if he were under twenty-eight years of age; but if he were over that it was accounted as righteousness to hold him till he died. The time between the dates when slavery ceased to exist in Pennsylvania and in the South is very short, and for aught I know some of my colored constituents may be descendants of men owned by the ancestors of the gentleman from Pennsylvania. The minority of the Ways and Means Committee demanded and obtained ten full days for the Republican side to discuss this pending bill. Nearly half the time has been consumed, and while they have not dared to say that reductions should not be made, and dare not discuss the issue pressed upon them day by day by members on this side of the Chamber, they must needs do something to convince the country that they are valiant soldiers in the great tariff contest. Therefore, not daring to fight this bill and oppose reduction, they have fashioned and shaped a man of clay, and set him up and paternally and affectionately christen him "Free Trade," a thing conceived and born in their own household. And then, Mr. Chairman, the knight of the sorrowful countenance never made a more valorous attack than did these gentlemen with trumpets and with flying banners move their phalanxes upon and proceed to demolish that child of their loins just to show how well they could fight free trade if anybody should advocate it.

The working people may well view with alarm the possibility of the return to power of a party whose recognized leaders denounce with bitterness and vehemence as a free trade-scheme a bill that reduces the present oppressive import duties only about $56,000,000, and will itself produce revenues over $200,000,000.

The Democratic party is willing to levy imports to an amount that will pay the expenses of the Government, but there is a limit that the people can see. But where is the limit to protection for protection's sake? No limit except to fill the rapacious greed of the men who get the money. God has set bounds to the sea, but He has never pretended to bound human avarice.

This debate has shown that the real issue between the parties is, shall the Democratic doctrine that the Government shall tax the people so as to raise revenue enough to meet the proper expenses of the Government, and no more, prevail? Or, on the other hand, shall the Republican doctrine prevail, that the Government tax without limit, for the benefit of a privileged class, and that privileged class are to say by their votes how much will satisfy their pockets? Let me ask those gentlemen, Mr. Chairman, where will this doctrine lead us? When and where will the demand on the people who are not manufacturers end? Is it not reasonable to suppose that where great profits are made that new enterprises of the same sort will spring up, and that the tariff must be raised to protect them. And then still others, and still more and more voices are added to the clamor for protection; more laborers are brought from Europe; more votes for high tariff, and there will be no end until the American farmers will have to support the whole pauper population of Europe, and but for the vigorous opposition of the laboring people of the Pacific States, China as well. American capital does not object to the importation of Chinamen; it would like to have them as "American labor," and American capital to oversee them, and both protected by compelling American farmers to buy their products.

I desire to expose some features of this tariff scheme that have not appeared in this debate, so far as I remember, and may therefore indulge in a very few calculations.

First. The surplus in the Treasury, that will reach the fabulous sum of $150,000,000 by July unless it be curtailed by purchase of bonds or by this bill, is not the result of some fortunate venture, but the fruits of an indirect tax on our own people. This money was put in circulation by the Government. How did the Government get it? It issued its bonds at 4 and 4½ per cent. interest to get the bullion and the bank currency, and the people are now paying interest on that surplus at an average rate of about 4 per cent., perhaps a little less. Who pays that interest? Not the bondholder; he gets it.

The Republicans are willing to take it out of the Treasury by all sorts of extravagant schemes, because the people need it for circulation and clamor against the double injustice. But these same Republicans want to put an equal amount back there next year. Why? Let us see. I submit a short table, Mr. Chairman:

The imports into the United States in 1880 were valued at	$656,262,441.00
Upon that the Government levied impost duties to the amount of	186,522,065.00
About 30 per cent.	
The were manufactured in the United States in 1880, merchandise valued at the enormous sum of	5,369,519,191.00
The material to make these manufactures cost the sum of	3,394,340,027.00
The wages paid to make these manufactures was	947,919,674.00
Total cost	4,342,259,701.00
Not including wear and tear and insurance, etc.	
The capital invested in these manufactures was $2,790,223,506.	
Allow 3 per cent. on that for wear and tear	83,706,705.00
Total cost	4,425,966,406.00

Deduct that amount from value, and it leaves difference between cost and value	943,553,787.00
Deduct from this 10 per cent. for reasonable profit	94,355,378.70
And we have clear profit to the manufacturer	849,198,408.30

That is the result of high tariffs.

So that the Government, in order to collect for itself $186,522,065, made the people pay to adjoining States the sum of $850,000,000 in round numbers.

The people have stood that; but now let us return to the surplus. The revenues are now $217,000,000 in round numbers, and the manufactures $6,000,000,000 in round numbers. Imports in 1887, $692,319,768, say $7,000,000,000 in round numbers, about 30 per cent. on the price of the goods, and of course the manufacturer will raise the price of his goods accordingly.

We have seen that the proportion of imports to home manufactures is about $700,000,000 to $6,000,000,000; deducting the amount of home manufactures exported and not consumed here, the ratio will be about 1 to 8.

Therefore, while we now pay $217,000,000 duties to the Government on foreign goods, we pay eight times that, or $1,136,000,000, to manufacturers on the goods we consume of their make, and which pay nothing into the Treasury.

Now, when the surplus shall have reached $150,000,000 let us see what it will cost the people to get it into the Treasury:

Principal	$150,000,000
Interest at 4 per cent	6,000,000
Amount compelled to pay to manufacturer on other goods in proportion of 8 to 1	1,200,000,000
The cost to the people	1,356,000,000

To prevent that amount accumulating in the Treasury saves to the people thirteen hundred and fifty-six millions of money annually. That is what the Democratic party wants to do. The Republican party want it to go in annually, by which they will get the larger share of the twelve hundred millions, and then deftly insert their educated fingers into the Treasury and extract the one hundred and fifty millions. There can be no doubt that they are the party of progress.

As to the conscience of it, that is a purely local question, and I am told amid the luxurious comforts and social charms and overawing influence that great wealth brings to its possessors scant audience is sometimes given to the still small voice that otherwise might prevent crime, and I am constrained to say it is as much of a shame to the intelligence and manhood of the people who submit to these wholesale extortions as it is to the conscience of those who perpetrate them; and we on this side must yield something to each other's views in order to avert the greater evil. I may offer amendments to the bill to avoid a disproportionate reduction affecting my constituents, but am willing to act in a spirit of compromise.

But, Mr. Chairman, when this subject is pressed home to these gentlemen, they, with the polished adroitness of courtiers, would lead you away from a disagreeable subject; discourse with seeming earnestness to the effect that the country has prospered for twenty years and more under a protective tariff. They have invaded the Bureau of Statistics and precipitated upon this House an avalanche of figures to prove that prosperity came to the country under a protective system. And, Mr. Chairman, it is always a dangerous thing to commence figuring with New England people; if you do you are gone—they are inspired cipherers.

Mr. Chairman, will it be seriously maintained in such a presence as this that because two things are contemporaneous in the same place, one causes the other? The Northwest and New York prosper under blizzards, Texas under droughts, Virginia under internal-revenue tax, the South under yellow fever and carpet-bag reconstruction, and these unexampled tariff extortions, England under her debt, Russia under Nihilism, and this whole country did prosper under the scourge of Republican rule, and that is the most wonderful instance of them all. That word "under" comes unbidden to all the gentlemen who talk in that strain. It prospers under protection as under a cloud, as a strong man under a burden, as runs the sinewy racer under weight, like a good ship makes the voyage under a head wind.

In my county a small man, Mr. Martin, fought with a large man, General Cain, who was not in the rebellion. The general bore him to the ground and punished him. Martin related afterwards that he fought under General Cain.

Is it not more reasonable to maintain that prosperity produces high tariff, called protection? People will submit to greater extortion when they are prospering than when adversity comes.

Mr. KERR. Will the gentleman permit me to ask him a question?

Mr. STOCKDALE. Yes; but please look at the clock while you are asking it.

Mr. KERR. I understood the gentleman to say a moment ago that all your side, or your side were all in favor of protection.

Mr. STOCKDALE. I do not remember of saying anything of that sort. [Laughter.]

Mr. KERR. Are you opposed to it?

Mr. STOCKDALE. I am just telling you now what I am in favor of and what I am opposed to, and if you will be quiet I will tell you all about it. I am perfectly willing—not wishing to evade the gentleman's question—that the country may have all the incidental protection that grows out of this bill. Now, whether that bill itself will be just all the country thinks it ought to be, or whether it is too high or too low on some articles, is a question for future consideration.

The elements of prosperity with which God has blessed us, the thousands of accessions to our population, great inventions, great discoveries, abundant crops, and the teeming wealth that flows out from the mines in a thousand hills, and the boundless energies of the South, who have nearly doubled the cotton crop, the only crop that saves the balance of trade in our favor, in spite of and in the very teeth of protection have forced prosperity upon the country.

I admit that protection for protection's sake prospers the favored class, just as corners in provisions bring prosperity to the manipulators of the markets, as trusts prosper the perpetrators of that infamy, but it is tough on the poor who pay double price for provisions and oil and other articles.

Banks prosper with their 40 per cent. profit. Extortionate freight tariffs prosper railroads. Wars prosper contractors, camp-followers, and sutlers. Stock-jobbers prosper when they by skillful manipulation transfer large sums of money from other men's pockets to their own, and protectionists prosper when they can so shape legislation as to compel fifty millions of people to pay tribute to the other ten millions, and when those prosperous classes assemble at great dinner feasts around tables groaning with delicacies from the four quarters of the globe, with iced wines at every plate, as the various toasts go round complimentary to the great operators in these various departments, the gilded hall resounds with applause.

But when you undertake to speak to that other audience, composed of the victims of the stock-jobber, the poor whose scant purse was drained by jobbers in provisions and high freights, and the victims of protection, these same toasts would elicit sorrow and often tears. So much is the difference on which side of these operations we are and on which side of protection we are. It is the difference between a smile and a tear, between a laugh and a sigh, between a shout and a groan, between wealth and poverty.

Protection means that some one is protected against some body else. Protectionists say it is against foreigners. I say it is against agriculturists. Any American citizen may go three marine leagues from shore and board a vessel and purchase what he please. Let him try to bring it home, and a revenue cutter will soon run him down, and he will land in prison for even an attempt to defraud the revenues, and he must pay 47 per cent. on his goods for the privilege of landing them. I imagine it would be hard work to convince him that the pauper labor of Europe paid that 47 per cent. or that the pauper laborer of Europe was in jail and not he.

But it is said here with lugubrious seriousness that all this is to protect American labor. Does it? Where is the evidence of it? Will some gentleman answer in the future? My friend from Missouri said the other day that there were mortgages all over the West owned by Eastern people, largely in New England; that the great railroads and great improvements in the West were owned by Eastern people. He said he did not object to it. Certainly not, because they made the contract. But how came it there? How came these people to own that property so vast in amount and extent and in controlling influence? Their soil never produced it. Labor produced it, as they admit, and as the gentleman from Indiana [Mr. BYNUM] said in his speech a few days ago, the manufacturer controls nothing but labor. He can not control the markets for the purchase of his raw material. If he could he would not be here wanting free raw material. He can not control the markets for sale. He controls labor and only labor, and out of labor those manufacturing communities have accumulated those great fortunes.

Who owns this fabulous wealth that labor has created in these nine manufacturing States? Do the laborers own it? Ah, no. A sad tale of woe comes up here from those States to tell us who are the owners of that mass of money that has been made by the toil of the workingmen. And by the skill and the cunning of the capitalists they manage to divide on the same basis that the white man divided the game, consisting of a turkey and a turkey-buzzard, with the Indian.

The capitalists manipulate the labor and the machinery and they realize colossal fortunes, while the laborer is pinched to live at all. Mansions rise over the owner and luxury abounds within; obsequious servants do his bidding and glittering equipages await his pleasure, while his operatives barely live in their crowded tenements or incommodious, miserable houses. No laboring man in New England or in any of the nine manufacturing States owns any mortgages west of the Ohio or elsewhere. Laboring men own no railroad stocks, no bonds; but there comes up here from the hills and from the valleys of those States a wail from the laboring men asking for bread and for work.

Gentlemen get up on the other side of the House and complain with vehemence of this side because we are opposed to the existing tariff system, and say that the laboring men are suffering in the East and at the North, and that American labor needs protection. I say yea and amen; it does need protection; but against whom? From the owners of this great mass of wealth who crowd their laboring men into the merest huts and pay them scanty wages, and whenever they dare to

ask for a pittance, for even a small share of the spoils derived from these great wealth-producing enterprises, they are turned out of their huts to seek employment wherever they can find it. Let the workingmen ask for one dime more than their scanty wages and that is how they are served by these kings of fortune. And in speaking of these men of great fortunes I do not wish to denounce or criticise them harshly, because I am not here to wound men's feelings, but I speak of them as a part of society, as figures in the great political arena of this country.

I say that when their workingmen ask for a little larger share of the profit that is produced by their labor, the masters answer: "These are our premises; these are our houses and our mills; you can go." And then, having turned out those American citizens, those American workingmen, they send to Europe and bring in hordes of "pauper labor" and crowd it into the same huts and into their same mills and mines, and then begin again to cry out for "protection to American labor," when probably not one of their "American" laborers can speak the English tongue. In common with other Congressmen I have from time to time received letters of instruction from these gentlemen as to how I should vote on this question, and I have taken the trouble to write to them occasionally in return, asking: "Is it true that you have at any time turned out American citizens and employed European labor because you could get it cheaper?"

And, Mr. Chairman, not one has denied that he has done it, though in some cases apologies have been made. And under these circumstances if the workingmen undertake to resent these outrages or to make any trouble about it, the word is whispered over the wire, "Pinkerton detectives;" and soon come a lot of minions, hired at the rate of $10 a day, it is said, out of the money the laborers made, and these American workingmen, these American citizens who have produced the wealth, are turned out of their huts at the point of the revolver and the musket in the hands of hired ruffians. If we are to protect anybody, I say, for God's sake, let us protect American labor, because American capital can protect itself.

Mr. BRUMM. Is it not true that the very men who have employed the Pinkerton men in all these coal strikes are free-traders, headed by Mr. SCOTT, of this House; Mr. Corbin, of New York, and Mr. Cox, of Pennsylvania, all free-trade Democrats?

Mr. MCMILLIN. Does the gentleman charge that Mr. SCOTT has done so? Does he assume to say that he has?

Mr. BRUMM. I assume to say that he has, and I am responsible for that statement and am ready to prove it.

Mr. MCMILLIN. Well, you and he can settle it between you. He says it is not true.

Mr. BRUMM. Mr. SCOTT, Mr. Corbin and Mr. Cox, Democratic free-traders——

Mr. STOCKDALE. Mr. Chairman, I was about to say in reply to the gentleman from Pennsylvania [Mr. BRUMM] that I am neither the guardian nor the guardian *ad litem* of Mr. SCOTT and the other gentlemen. I regard them as amply able to take care of themselves. But I do know by history that this was done by American capital. I do know that it was American labor that was at the muzzle of the gun and American capital at the breech. No laboring man ever called for a Pinkerton detective. No laboring man in the coal-mines or elsewhere ever called upon Pinkerton's men to protect them. That was done by American capital, and in that way American workingmen, American citizens, were put out and European paupers were put in their places. Now, Mr. Chairman, it makes no difference to me who the individuals are. I would not care if SCOTT and Corbin and a dozen more were among them. I speak what I believe to be the truth and apply it directly. I know what it is to be a laboring man. I was raised to my present height at the handles of the plow. I know the hardships, the wants, the privations of a farmer's life, and I yield to no man, be he Democrat or Republican, or member of the Labor party, in disapproval of such proceedings.

Mr. Chairman, I notice one peculiar feature about these strikes. There is always an investigation asked for, and by whom? The employers never; they do not want investigation, but resent it. It is always the laborers that want it. Strange that the innocent want to cover their tracks and the guilty want the light thrown upon theirs! They treat Congressional committees with royal disdain; despise the laws of common humanity. The laborers may shiver in the winter's blast; their wives may cry, and the tears may freeze as they flow on the unlighted hearthstone; their children may plead for bread; but nothing on the earth, in the heavens, or under the earth can move the hearts of these men, if they have any. And this is American capital that we are to protect for protection's sake, just to have such righteousness among us for God's sake! Why not investigate this condition of things? Why do not these great property-holders come here so that we may hear them say, "We do not oppress these people; it is a mistake to suppose that we have turned them out. We want to protect them and we want you to protect them; and we court investigation so that we can show to the world that we deal justly by these people."

The laboring men of the country come here for protection—for investigation, rather; they need no protection. I am sorry that that word "labor" was ever introduced. As expressing a class of people, "American capital and American labor" is a glib phrase among employers and owners as though it expressed two things to be used and bartered on equal terms. Perhaps the common law of these protection districts will soon be that American labor will pass in the conveyance of the plant "without special mention." I would have a Department of Industry instead of a Bureau of Labor. I would consider together the interests of the mechanic, the farmer, and the wage-worker, generally—the interest of every man who makes his living by the exertion of his two hands. I would group them all and create a Department of Industry, and make its head a Cabinet minister. Let these wage-workers be heard, not through their oppressors, but, together with their friends, the great working masses of the country, constitute a Department of the Government with a Cabinet officer to represent them, not to beg favors, but to assert their rights. Then add to the Post-Office Department a Government telegraph system and bring quick transit of news within reach of their means; but give them these measures of scant justice and you will not hear them clamoring for protection. I tell you, sir, that the men in this House who have interested themselves in framing laws to protect these people have earned their gratitude; and the name of O'NEILL will go over this land and be a household word in every working family from now until he dies.

The people who work with their hands (I address them at home as fellow-citizens and gentlemen with as much pride and respect as I upon this floor say gentlemen of that side or of this side of the House), I say they must rescue this Government from the grasping hand of a purely money power, always cold and cruel to the poor.

Mr. Chairman, as I was interrupted I did not finish what I was about to say on this subject of protection.

A MEMBER. Protection, so called.

Mr. STOCKDALE. The gentleman says "so called;" but it is protection. It is protection to those people who have mines and factories, but to the agriculturist "it is such protection as vultures give to lambs." As the fable has it, the doves asked for protection and got it.

A farmer can get along well in the world as long as he tills the soil, and no one thinks of protecting him; but just let him discover a coal mine or iron mine on his farm and Congress must rush to his rescue at once.

American writers and orators boast of the wealth of our mines, and yet they are the only pieces of ground we have where men can not live without help. The sturdy pioneer goes bravely into the burning deserts of the great West. He smites the side of the mountain with the trident of his genius and the waters pure and sparkling come to his feet from its cleft side. He stamps the earth and the arid waste blossoms around him and the unwilling lands yield abundant harvests at his bidding; but let him find a coal or iron mine and he is paralyzed and throws himself upon the mercy of Congress and cries out, "Gentlemen, protect me; I am now American capital; send me a cargo of paupers, convicts, anarchists, or any other late brands of 'American labor,' and then prohibit these infernal agriculturists from purchasing from anybody else and I can live."

How have the mighty fallen! In my youth I read with profoundest awe of a wonderful race who, with the courage of a lofty ambition, launched their frail barks upon the wild waves of the almost unknown ocean, and with boundless faith and songs of triumph set the compass for the shores of the New World, there to commune with God and freedom.

The story of their daring, their sufferings, and their triumphs loomed up in the horizon of American history as a pillar of cloud by day and a pillar of fire by night to beckon the ambitious and patriotic on the way to glorious achievement. They grew into a mighty people, and the wilderness and the savage receded from the presence of the dauntless Anglo-Saxon whom frightful wars failed to subdue.

To-day the descendants of these great vicegerents of civilization and prowess who assumed for generations to teach mankind the art of success in business, as well as in the graces, we see all over the same land, surrounded by all the modern improvements, holding up their hands and crying in a loud voice, "We can not cope with other people; give us protection or we will become paupers; save us, or we perish. Let Congress vote us aid and enact laws compelling the great masses to pay tribute for our sustenance."

Will this be accepted as a true chapter in history? Ah, no; it will not. These gentlemen will indignantly repell it, and say we are the peers of any other people in business capacity, and that is true. They can and do compete successfully with the world, and give daily evidence of it.

It may be safely assumed as axiomatic that New England will not long pursue a business that does not pay. And it is a fact that they manufacture goods and ship them abroad and sell them in the very markets where they say goods are made so cheap that their introduction here will ruin our industries unless a tariff raises the price; and they export and sell in foreign markets—in competition with free-trade England, so much denounced—the very same goods that they make us pay from 25 to 36 per cent. more for at home. That is to say, an American citizen can go to foreign ports and buy goods there that were manufactured in America cheaper, by the amount of the tariff, than he can

buy them here. And the exporting of articles of domestic manufacture in the United States has been increasing all the time while the present exorbitant tariff existed, until it reaches many millions now. In 1887 American manufacturers exported iron and various articles manufactured from iron amounting to $15,958,502. They also exported agricultural implements, such as are in daily use by American farmers, to the value of $2,138,398. These were sold in foreign markets at a profit, after adding the freight across oceans or seas and without any protection whatever or any benefit of tariff.

I have a table here showing a list of articles manufactured in the United States of iron and steel alone, and sold in foreign markets in 1877:

Iron and steel, and manufactures of, 1887.	Quantity.	Value.
Iron ore.....tons...	2,509	$5,254
Pig-iron.....do.....	7,801	142,949
Band, hoop, and scroll iron.....pounds...	388,733	12,302
Bar-iron.....do.....	2,131,025	56,887
Car-wheels.....number...	12,598	98,865
Castings, not elsewhere specified.....	.....	267,160
Cutlery.....	.....	136,546
Fire-arms.....	.....	664,253
Ingots, bars, and rods of steel.....pounds...	134,208	10,624
Locks, hinges, builders' hardware.....	.....	1,357,332
Machinery, not elsewhere specified.....	.....	4,607,714
Nails and spikes.....pounds...	11,575,918	317,675
Plates and sheets of iron.....do.....	2,162,517	65,106
Plates and sheets of steel.....do.....	564,080	14,183
Printing presses, and parts of.....	.....	162,754
Railroad bars or rails of iron.....tons..	524	18,396
Railroad bars or rails of steel.....do.....	2,241	74,330
Saws and tools.....	.....	1,305,706
Scales and balances.....	.....	225,564
Sewing-machines, and parts of.....	.....	2,212,853
Fire engines.....number...	3	9,083
Locomotive engines.....do.....	58	373,245
Stationary engines.....do.....	219	213,060
Boilers and parts of engines.....	.....	281,790
Stoves and ranges and parts of.....	.....	200,658
Wire.....pounds...	9,612,005	386,759
Other manufactures of iron and steel.....	.....	2,742,708
Total iron and steel manufactures.....	.....	15,958,502
Leather manufactures.....	.....	$10,436,138
Vessels sold to foreigners:		
Steamers.....tons...	87	40,343
Sailing vessels.....do.....	1,568	30,437

Now, by our tariff law, if an American farmer goes to Europe, in the same foreign markets where these American articles were sold, and buys there the same article of foreign make at the same price the American got for his, that farmer would be compelled to pay a heavy duty for the privilege of bringing it in. Why? For protection to American manufacturers. The farmer will say, "You do not need protection; you sell these articles abroad, after adding freight, 40 per cent. cheaper than you will sell to me at home. I ought to be as good as an Englishman or other foreigner." If the American manufacturer gives an honest answer to this it will be, "I have not the foreigner in my power, but I have you in my power perfectly, by virtue of the American tariff laws, and I will grind out of you the last cent you can pay. I admit that I can sell to foreigners, and do sell to them for exportation, cheaper than I sell to you, and I could sell to you cheaper and make money; but thanks to the infernal folly of the American Congress you can not help yourself, and I have no God before mammon."

Now, to show that he can do what is here attributed to him, I submit some figures from a work that no human being dare dispute. It was written in Boston by a Boston man. I copy from J. G. Martin's Stock Fluctuations, Boston, 1871–1882. He puts down the dividends of leading concerns from 1870 to 1881. I take a few examples:

Lowell Machine Shops (capital invested, $900,000):

	Per cent.
In 1877 it yielded a regular dividend of.....	10
And a special dividend of (February, 1877).....	30
In 1879 a regular dividend of.....	10
And an extra dividend (August, 1879).....	20
In 1881 a regular dividend of.....	10
And an extra dividend (September, 1881).....	50
Total.....	140

In these three years the concern paid back to the stockholders all the investment—$900,000—and $360,000 beside.

Hamilton Woolen Manufacturing Company, capital $1,000,000: In 1880 it paid a dividend of 10 per cent., besides an extra dividend (July, 1880) of 33⅓ per cent.; 43⅓ per cent. in one year.

Lancaster Manufacturing Company, in 1880, paid a dividend of 17½ per cent., besides an extra dividend (in November) of 50 per cent.—67½ per cent.

That is what American capital got out of protection. What American labor got this eminent statistician failed to report. Perhaps he reported, in short, that there were, say, two hundred head of American labor with the plant. That would be in keeping with the manner of this man towards the workingmen.

Mr. Chairman, the devotees of protection on this floor, feeling and knowing that such is the logical sequence of the actions of their constituents engaged in these immense operations, when their guardian angel, "Protection," has been shelled out from every refuge, incensed at the exposure of the great wrong by which a favored few take to themselves the earnings of the oppressed people, they labor to distract the attention of the country from the contemplation of a great national economic question by interposing the oft-repeated, vituperous, political ritual of abuse of the rebel brigadiers and the solid South, and proceed to exhume wrathfully the long-buried corpse of slavery. Such a course, it seems to me, is an ignominious confession that the scheme of protection, beyond what incidentally arises from the levy of imports for the needs of the Government, as protection for protection's sake, and thereby accumulating a dangerous surplus in the Treasury, is wholly indefensible in equity and good conscience, is utterly without constitutional authority, and therefore without any authority, and differs from the business of the highwayman only in the methods.

The gentleman from Michigan boasts, not invidiously, that the 26,000,000 of farm lands in New Jersey and New York are worth more than the 200,000,000 of farm lands in the late Confederate States, and claims that protection did it. He makes no allowance for the fact that property in the South was destroyed by the ravages of war—more than all the farm lands of New York and New Jersey are worth now; and that protection takes the money from those States that should be expended in improvements and transfers it to New York, New Jersey, and New England. Besides, his argument proves too much from his standpoint. If he will look at free-trade England, lands there are worth many times the value of New York and New Jersey lands. Therefore protection has injured values in New York and New Jersey.

I desire now to speak of my immediate constituency of both races, and more particularly of the colored race.

I promised the colored man to exert myself as best I could towards removing from his patient shoulders the *burdens* that have been laid upon him by his new task-masters, which he regards as unduly heavy and grievous to be borne. The cotton-planter has received but little attention in this discussion, and it is the favorite and chief industry of the colored race.

Whatever burdens in the shape of tithes to other industries it may be deemed necessary to lay upon the white population of those States, who in the qualities of heroic manhood are the greatest people of the world to-day, surely the negro should not be held longer in servitude to those gigantic industries from which he derives no benefit and to which he is under no obligation.

He needs not to be told, and thrice told, that he was held in slavery, and that gratitude should bind him forever to his deliverers. He has not forgotten that the soil he now possesses, together with his own person, once belonged to the men with whom he now works side by side in the great struggle of life, under a panoply of a common interest, in peace and harmony. He knows the whole story from the time the first great gun sounded the tocsin in the startled ears of the nation until the Confederacy and slavery fell together to rise no more forever. In this he is far in advance of and a better historian than gentlemen who talk of him as a slave, sensitive as to how he votes, but oblivious to his interests and prosperity.

He remembers his masters as a joyous, comparatively idle race, and was astounded to see them, without preparation, leap into a war that is without precedent or parallel in history; saw a government as by magic rise into existence with the limbs of a giant, writhe in the grasp of war for four fearful years and then go down forever. He has not forgotten the story of the last chapter, when giants grappled in the final struggle, then the meeting at Appomattox, when the last gun had been fired, the last tattoo had been sounded, the last flag had been furled, the book was written, the cause was lost, and his emancipation accomplished and peace restored.

The experience was short and terrific, and by the genius of Southern soldiers the science of war had been revolutionized, the navies of the world rendered obsolete, and as a result a race of four millions of people had been born into freedom and citizenship.

The victorious soldiers divided rations with their fallen foes, and the two great armies parted without hatred toward each other—the Northern man, with light and bounding step, back to homes of plenty and a land of teeming prosperity amid the *adulations* of his people; the Southern soldier, exhausted and impoverished, pushed his solemn marches back to where his home had been. New conditions of society surrounded him and he was in the presence of a problem that was without precedent in history and which he must solve at once.

The two races who had parted as master and slave amid joyous prosperity and boundless wealth, now met again amid a desolation vast and appalling. The deposed master and the enfranchised slave, without hesitation, joined hands in mutual confidence to solve this great problem of their new life.

The crops that had been planted by slaves for masters were finished by them as freemen and partners and equitably and satisfactorily divided by them when matured. Then the new year of 1866 was ushered in. The colored people, now fully realizing the great change that had come into their lives, set up for themselves. Cotton was the ideal bonanza of the colored man, and he bent what energies he had almost exclusively to its production.

When spring had melted into summer and summer's hot breath had softened into the autumn breezes his glad eyes rested upon his whitening fields, the recompense of his toil. When the frosts had come and his little provision crop was housed and his cotton gathered, counting over and over again the dollars it would bring, all his own, he wended his way to market, he made his sales, had his account for supplies estimated and his money laid out before him, enough to pay his debt and a little to spare. His heart swelled as he contemplated the joy he would carry home to his little cabin, but, at that juncture, to his consternation a revenue officer appeared with a brass tag, that he did not want at the price, and he was compelled to hand over from his little fund $13.50 for every bale for the privilege of shipping his crop to market. That or the prison. That left him in debt. This was his first venture as an American citizen. The next year the balance against him increased. After several other years of toil the more thrifty of the colored people began to save a little money. Little by little it was gathered into the Freedman's Savings Bank and Trust Company, where it still is. In the mean time he was cajoled out of his earnings by many a saintly trick, perpetrated by the Freedman's Bureau and the carpet-bagger, whose history has not been written, and the story of whose life has not been told—which is well for the credit of humanity and of decency. When he had been freed from these plagues, more grievous than the plagues of Egypt, and become better informed, he inquired after this mysterious character called "protection," from which he had been taught to expect abundant prosperity, and learned, to his cost and great disgust, that through all those years he had been paying, as a sacrifice to that unknown god, 25 to 75 per cent. more than he ought to have paid for the necessaries of life, amounting, according to the calculation of my friend from Georgia [Mr. STEWART], to ninety or a hundred dollars a year. Then, when his crop is ready for sale, and he had to contend in the open markets of the world for a buyer, he is impressed with the wisdom of the old colored man in my county, who said:

'Pears to me I'se on the wrong side o' dat protection.

During all these vicissitudes of the colored race in their new relations, their former masters have provided schools for their children and labored assiduously to elevate them in the scale of intelligence. The white people have taxed themselves to support these schools. It is safe to say that the colored people pay less than 10 per cent. of the taxes that are expended in the support of schools. Is it marvelous, gentlemen, that these people, the most intelligent of them, decline to vote your ticket and vote with their only friends? The scheme of creating and fanning animosity and distrust between the races succeeded for a while and both races suffered sorely; and if the plan of salvation be broad enough, I hope the perpetrators of that villainy may be forgiven.

But I tell you the last card that can be drawn from the sleeve has been played against the negro since he discovered that the representations of danger to his freedom or his rights were a deception and a sham; and he will not be cajoled into voting against his own interests by the quadrennial exhibitions of solicitude by the Republican party just before the voting time, and their tirades against the solid South. It will not avail any longer to tell the negro that Southern white rule means danger to his liberties or his rights. They sit on juries together; have their cases tried before mixed juries; colored men against white, and *vice versa* as litigants and no complaints are made. The colored men smile in derision of the frantic orators who talk such gibberage. They know now that it is all false. If the colored people were treated as the radical 4th of Julie orators say, strange they do not leave the South and step across the line into the North, where they can enjoy all the fabled blessings of freedom. You can not persuade one of them away from among the Southern people. The Kansas and Indiana exodus was an antidote to all that. People usually stay where their friends are. But, Mr. Chairman, I desire to say to gentlemen what they perhaps already know if party discipline would permit its avowal, in presence of the representatives from the South, believing that they will indorse the utterance, that sectional feeling has no agency in producing the political condition sometimes denominated the solid South, that no hostile feeling towards the North contributes to that result. It results from the difference in the principles of the two great parties.

From the first Democratic national convention after the war, in 1868, of which I had the honor to be a member, until this hour, the South has not asked for a place on the Presidential ticket, but the Southern States have simply exercised with unanimity their right of choice between Northern men aspiring to the Presidency. They care not for the spoils of office; they want to be allowed to live and keep what they make. The interests of the Southern States being similar it might be expected that they would act with unanimity with the party best calculated to promote their prosperity.

The policy of the Democratic party to reduce taxation and lighten the burdens of the people is in strong contrast with the methods of the Republican party to maintain the present high rates which the South is unable to bear.

The Democratic party is strongly in favor of encouraging the development of the South and refrains from denunciation of her people to discredit them abroad. The Democratic party is opposed to the domination of the Anglo-Saxon race by any other race regardless of color or previous condition. I will say further in this presence, with full knowledge that what I utter will be read and passed upon by the South, that the Southern States are to-day as loyal to the United States Government as any other States or State, and far more loyal to constitutional liberty than those who use the legislative power of the Government without authority of right to take from one class and give as a gratuity to another, thus making the Government into a trust far more powerful and dangerous than those private trusts of which we have heard so much on this floor.

If the gentleman from Pennsylvania [Mr. KELLEY] will go South, first letting the scales fall from his eyes, he will see evidences of it. A whole population—white and black—including Confederate soldiers, maimed and crippled and scarred—yea, and rebel brigadiers—all harmoniously working together with might and main to make an honest living, to pay the war debt, to pay pensions to Union soldiers, and all the expenses of the Government without complaint, see the white people of their own means providing schools for the colored people, and churches everywhere. Would he or his party rejoice to see the two races thus harmoniously struggling to restore prosperity to their homes? Would he inquire what he could do to advance them in the great work?

Ah, no; his pig-iron interests would loom up before him, and with bated breath he would hurry back and tell his party there is too much harmony between the races in the South; we will lose the colored votes, those infernal rebels are educating the negro, and when he finds out that he wears taxed shoes, taxed hat, pants, and coat, drives an unprotected mule, with taxed reins hitched to a taxed plow by taxed chains, the very blinds that keep his mule from seeing how to kick him is taxed; and when he finds out that he digs his potatoes with a taxed hoe, and with taxed ax cuts the wood to cook them in a taxed pot and a taxed fire, and takes them out with a taxed spoon, puts them in taxed plates, eats them with taxed knives and forks, and gets up and goes to a taxed bucket for a drink of water, he exclaims with a sigh of relief, at last I find one, only one, thing untaxed, and drinks from a gourd, and now comes the crowning infamy of it all a direct tax on his cotton-seed product. I tell you the gentlemen will, when they read that schedule and find that not a thing they make is protected, they will vote solid with the rebels. Blow your trumpets, curse the rebels, and scare the negro, or protection is gone. I want to test the affection of the Republican party for the colored race and see whether they will relieve five million people from tax on agricultural implements or retain the tax for the benefit of five hundred making those implements.

And, Mr. Chairman, the scheme that is said to be in incubation to compensate for all these hardships on his necessities by giving him free whisky is hardly the thing; it is not a good substitute for bread or clothing. I tell you, Mr. Chairman, there is more lamentation in the Republican party over one colored man who votes with his friends to escape New England taxation than over ninety and nine who die. Draughts may afflict them, floods may overwhelm them, New England will send them tracts on transubstantiation, but if one votes out of the church whose god is protection the legislation of the United States Government pauses, and thousands are spent to know why that negro voted that way.

It is neither to our interests nor in accordance with our tastes to indulge in criminations and recriminations in which there is no good to either side, and Southern Representatives are not here with that desire—prompted by no animosity towards any section, but simply battling for the interests of a struggling, heroic people to prevent a blight from being blown over their growing prosperity, which seems by not unfair interpretation of their actions to be the object of the Republican party. And therefore the sentiments of the gentleman from Michigan [Mr. BURROWS] are extremely refreshing, coming from there, and which I believe came from his heart; and—while I dissent from his logic—is not to establish the result he desires. I respond promptly and with earnestness to the invocation for prosperity upon the South, when he said:

Her heavens are aglow with the break of a new day, and when the sun shall reach the zenith of that glorious day the North and the South, cemented in the indissoluble bonds of commercial and fraternal unity, will stand together under the banner of protection to American industries and American labor and move to grander industrial triumphs.

These sentiments are not new to me—leaving out the "banner." I believe I made the first public utterances in that line in the United States after the war, and under far different circumstances from these surroundings. In the heart of the South, in 1875, when the North erroneously supposed that disloyalty was the prevailing sentiment; when the fangs of persecution were deep in the flesh of the new body politic; and animosity kindled by wicked hands and fanned by unholy breath was prolific of evil to both races, and seemed to portend the humiliation of the Southern people and the utter destruction of prosperity in that stricken land. Believing as I did that the nobler sentiments of the Northern people, and particularly the great soldier element, did not intend to destroy prosperity in the South nor to humiliate her people, I spoke to a reunion of Confederate soldiers, after recounting the evils under which we suffered—I said what I now ask to have read as extracts from that speech—parts which I have marked:

The Clerk read as follows:

I have thought long and anxiously upon this subject, and am fully persuaded that there is a remedy, practical, ample, and complete, if we will have the courage to apply it, and it is of this I desire to speak to-day, and I speak with an

impulse stronger than a desire to please or to avoid offense. I speak for the rising generation, your children and mine, and for the children of our brave comrades who fell by our side. And I thank God that I address men who have been tried in the fire, and ennobled to that liberty of soul that rises above prejudice and passion to the higher plane of reason and truth. I speak what I do believe when I say there is a remedy at hand ample for the ills that afflict this nation. It is reconciliation between the estranged sections of the country, honest, thorough, and full reconciliation between the people of the North and the people of the South. It must not be in pretense, but in honor and in truth.

I have spoken of the characteristics of the true soldier for the purpose of showing here how reconciliation may be accomplished.

The estranged sections must meet, if it all, through agents who have the confidence of their people and confidence in each other. Such agents are found only in the soldiery of the opposing armies.

* * * * * * *

The soldiers of the North and the soldiers of the South should come forth once more in the power of their might, not in strife nor with arms, but with the olive branch; not divided, but united, in one common cause—the cause of reconciliation and peace.

Mr. STOCKDALE. From that day forth I have never ceased to hope for the full enthronement of that auspicious event. I would rejoice to hear going up from all the altars in this land, at early mass and the evening vespers, the invocation, "Let us have peace" and thorough and complete reconciliation. Let the waves of oblivion roll over the mistakes and wrongs of the past, and commercial and industrial prosperity flow over the whole land, sweeping out of existence sectional animosities and sectional lines, so that the words "North" and "South" shall have no more political significance than East and West; so that a chord of patriotism touched at the Lakes will vibrate to the Gulf, and ocean will speak across to ocean in language of national friendship, of national unity, national greatness, announcing that the grandest race of the world has arisen once more in perfect reunion in her pride and in her glory to take her rightful place in the advance of the present civilization, and that the star of empire again moves towards the zenith. I will say to the gentleman from Michigan that however much I dissent from his doctrine of protection as a means of putting the South on the highway to the the glorious achievements he predicts for her, I appreciate his utterances as manifesting a manhood to be admired, and rejoice to have seen them favorably commented upon at the opposite end of the Capitol.

The gentleman says eloquently:

He rejoices that there is a new South, a new industrial South, full of hope and full of courage, she stands to-day with uplifted brow facing the dawn of a mighty future.

And if I could I would bring an amen down from the skies to the sentiment. And I would say to those other gentlemen who suggest that capital and prosperity will flow South when her people manifest a proper spirit, that the tide-flow has already set in that direction; let them look out for the ebb; and if it had not, I would not have the South cringe even for so great a boom.

Her own manhood has brought her out of a desolation that would have been despair to any other people. Her sublime faith in the right brought her through the slough of despond. Her matchless skill and dauntless courage guided her bark over the maelstrom, created for destruction, back into the harbor under the ample folds of the Stars and Stripes, and she will go out no more alone; she will sail with the fleet, but proposes to sail and not be towed.

Gentlemen who assume to sit upon thrones erected by protection and withhold property from the South until her people make obeisance before them, must remember that God's providence is grander and stronger than men's animosity and the nation's gold.

That while He has sorely afflicted the South, and made her tread the wine-press alone and pass through much tribulation, she bends the knee to none but Him.

We are here under the broad panoply of the Constitution, with all its amendments acquiesced in; here of right by the voice of a great and free constituency; here on business, not to apologize or ask favors. The great chivalric heart of the nation does not demand it.

The great warriors who restored the Union and unfurled the flag again over all the States do not demand it. They imposed no conditions then, they ask none now. They who could be terrible in war can be magnanimous in peace. Those scarred veterans who slept under the stars and marched to the music of artillery on an hundred hills, whose eyes blazed in the battle line, whose cheeks did not blanch in the hot breath of the cannon's mouth, whose hearts did not quail when the surging columns dashed together, would not have it. They won their laurels because they overcame and brought back with them to the Union a mighty race of warriors and statesmen, and you tarnish their glory when you would belittle the South.

They would despise a faltering foe in this arena of brains as they would have done on the field of battle.

A true knight never breaks a lance on an insignificant shield, and never decries the valor of his foe and thereby detract from the renown of his victory.

There is no human being that a Union soldier should hiss from his presence so promptly as the man who undertakes to detract from the greatness of the Southern people. What were a million and a half of Union soldiers doing for four years? How did they perform such valorous deeds as to cause monuments to be reared all over this city and over the country if there was no formidable people to overcome?

We say they are great soldiers because they overcame a great people. We have no animosity because we believe they fought with an honest purpose. We are now one nation, under one Government, float the same flag, and will defend its honor with fervor and with blood, if need be. My last sentence on this occasion, standing in the marble halls of the nation's Capitol—a nation too great to harbor revenge against her citizens—by virtue of a commission from a people as brave and true as walk the earth, is to express the hope that when time shall have removed the present year into the past, and the coming centennial year of constitutional liberty shall have come and passed to full ripeness, and spread plenty over the whole land; when the proud Anglo-Saxon race shall assemble in the capital city of the greatest nation of the world to emphasize the great event; when the pendulum shall have swung the arc of a century, and the hundredth stroke shall peal out over the heads of the assembled multitudes of American citizens, and bound to the lakes, to the golden shores, to the gulf, and all along the Atlantic's teeming coast, it will be the eternal requiem of all sectional animosity and herald a peace that shall have no end. [Applause.]

The Tariff.

SPEECH

OF

HON. HENRY G. TURNER,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 10, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

The CHAIRMAN said: The gentleman from Georgia [Mr. TURNER] is entitled to the floor.

Mr. MCKINLEY. I ask unanimous consent that the gentleman from Georgia be allowed to speak without limit.

There was no objection, and it was so ordered.

Mr. TURNER, of Georgia. I am greatly obliged to my honorable friend from Ohio for this unexpected courtesy on his part; but I hope to occupy not more than the usual time.

Mr. Chairman, if there is anything new under the sun, I have not been able to find it in the general subject of the tariff. I had hoped that our able colleagues on the committee who differ with us would have tendered us some measure of relief for the people and the abatement of public burdens, in order that we might have some choice between two new schemes of taxation.

Whatever expectation may have existed as to the purpose of the Republican minority to propose such a measure suited to our present conditions, that expectation has been disappointed. We have had nothing on the other side but an effort to attaint the pending bill and some of its authors, and to defend the general policy of protection. It is therefore, Mr. Chairman, a question between the bill under consideration and our present system of taxation.

The concerted movement made to cast odium and contempt upon the origin of the bill must be intended to divert attention from the history of the present law. That law was never framed nor considered by any committee of the House, was never submitted to the Committee of the Whole House, and was passed without being read in the House, by a revolution in its time-honored rules of procedure.

Mr. Chairman, the origination of this bill may be very briefly stated. Certain Democratic Representatives, actuated by a sense of responsibility to the country and to their party, and not pretending to be a committee of the House, conferred together for the purpose of reconciling their own differences and agreeing upon a consistent plan for the reduction of taxation. Republican gentlemen complain that they were not admitted to these private conferences. They might just as well take offense because they were not invited to the conference of our party last night.

This complaint is not worthy of the self-respect of the gentlemen who make it, and I shall not dignify it with further notice. After the bill had been prepared in this way it was submitted to the Committee on Ways and Means, and became an official proceeding. Then the Republican members of the committee had a right to be consulted in regard to it, and not before.

Let it also be borne in mind that Republican leaders have very generally insisted that the tariff should be revised only by its friends, and the gentleman from Pennsylvania [Mr. KELLEY] is reported in the public press to have said that it was no part of the duty of the minority of the committee to prepare any bill on this subject. These statements sufficiently show that our Republican colleagues have not favored a policy consistent with our duties and obligations.

But, sir, we have been arraigned because we said that we would not as a committee hear oral statements and arguments from gentlemen not members of the committee, and to that complaint some reply may be proper.

There are many thousands of people and corporations in this country besides importers and consumers interested in the policy of protection. To have heard a full and adequate discussion by representatives of all these interests would not have been possible during a session of Congress, and to have given audience to some interests and not to others asking the same privilege would have given just cause of offense.

But it is due to us to say that as individual members of the committee we never refused to hear any persons who chose to apply to us for that purpose. We also examined the petitions and memorials referred to the committee relating to the various details with which we were charged in connection with the tariff and internal-revenue laws, and we were accessible at all times to written and printed communications through the mails; and, finally, we had on the committee some of the ablest advocates which protection has in this country.

Mr. REED. That is, they have allowed private hearings, but refused public ones.

Mr. TURNER, of Georgia. I did not hear the gentleman from Maine.

Mr. REED. The observation I made was that you say you allowed private hearings but refused public ones.

Mr. TURNER, of Georgia. Mr. Chairman, the gentleman from Maine [Mr. REED] may have refused to hear gentlemen who applied to him, to examine the memorials referred to the Committee on Ways and Means by the House, and to read the arguments that came to the members of that committee through the mails, and, in that event, perhaps, we ought to have sat as a committee for his accommodation in this regard; but lack of time prevented.

Mr. REED. Will the gentleman allow me to make an interruption?

Mr. TURNER, of Georgia. I will.

Mr. REED. The observation which I made and which the gentleman requested me to repeat was not intended as an interruption to him, but I desire to say now, with his permission, that the objection which we make to what I call private hearings as compared with public hearings is that a public hearing gives an opportunity for examination and cross-examination, while a private hearing does not. The gentleman is too thorough a lawyer not to understand that the truthfulness of statements unsubjected to cross-examinations is not something to be relied upon, and therefore the private hearings of which the gentleman has spoken do not seem to us to be a satisfactory method of eliciting the truth.

Mr. TURNER. These private hearings were given to the advocates of protection in the room of the committee and at other convenient places about the Capitol and at our private rooms. And these gentlemen, perhaps, underwent cross-examinations.

Mr. REED. I do not think the House will have any difficulty in understanding what both of us mean after the explanation the gentleman has given.

Mr. TURNER. I presume this doctrine of protection to which the gentleman from Maine has dedicated his life finds in him as able a champion and as accomplished a representative as it would have in any gentleman who is engaged in the actual business of manufacturing.

It is said that we resisted all motions of its enemies to amend the bill when it was submitted to the committee. These propositions were to strangle the bill in its infancy, to rend it limb from limb—in short, to "out-Herod Herod" in regard to it. And as usual, persecution endeared it to its friends. A principle can not be crucified. And now the bill is in the Committee of the Whole House, where every citizen and every interest is represented, with the fullest liberty of discussion, and where every statement made can be subjected to examination and cross-examination. And it is in that other grand committee of the whole country, where its provisions are undergoing the scrutiny of all the assemblies and all the conventions of all the people.

But, Mr. Chairman, the bill has been denounced because some of its authors represent districts in which slaves until recently were held as property. Slavery was an institution of greater antiquity than one generation. It may have been bad; but those who bought the negroes and paid for them and fitted them for the high estate of freedom and American citizenship, certainly deserve no greater obloquy than those who brought them to our shores beneath the decks of their ships and sold them on the wharf like bales of merchandise. If we deserve reproach, Mr. Chairman, those who sold us the negroes ought not to throw the first stone.

But, sir, I have no disposition to indulge in recrimination. The times have changed. Those who brought slaves here through the horrors of the "middle passage" have changed their opinions, and so have we. But if we are unfit on account of our relation to slavery to consider public measures proposing to reduce the burdens of the people, might I not with equal propriety say that those who enslaved the African can not be trusted with the task of revising the privileges of freemen. [Applause.]

Let us deal charitably with each other. Let us suppose that the African slave trade was a great missionary movement, and that pious people, actuated by that spirit of broad benevolence which characterizes a certain section of the Union, by means of this traffic, undertook to bring the heathen to Christianity. [Laughter and applause.]

Mr. Chairman, against taxation to provide for the general welfare under the Constitution, so levied as to help rather than to injure American industries, no Democrat will complain. But taxation so devised as to prevent revenue to the Government and to yield revenue to individuals, or so extended as to produce more revenue than the Government needs and maintained for the benefit of a class or section at the expense of all other classes and sections, is contrary to good morals and subverts the Constitution. Against this exaction, known under the specious name of protection, I protest to-day. I impeach protection of high crimes and misdemeanors. Let it answer before the bar of justice.

When war was flagrant and the Treasury was empty, and the population of the entire country, including the Southern States, was but little more than 31,000,000, the tariff then framed to meet the most extraordinary emergency that ever arose on this continent, imposed during the first year of its operation an average rate of 36 per cent. After twenty-three years of profound peace, with a Treasury full to repletion, struggling with an accumulated surplus over the largest wants of the Government of $150,000,000, with a population of over 60,000,000, the tariff now levies an average rate of 47 per cent. This surplus has arisen notwithstanding an immense increase in our annual expenditures, and is itself a constant temptation to wasteful extravagance. And it is not only a mischievous influence in public affairs, but it measures the extent to which the Government has contracted the currency, to the imminent peril of every private interest. The people need more money than they have hitherto had; and to take from them this immense sum which the Government does not need, and which is so indispensable to the business of the country, is indefensible extortion. Heavy taxation of a people having an adequate currency is bad enough; but unnecessary taxation of such a people is a crime.

Our aggregate circulation of gold, silver, and paper money, including the funds in the Treasury, is estimated to amount to about $1,500,000,000. The people paid to the Government in tariff taxes $217,000,000 and in excise duties one hundred and seventeen millions, making a total taxation of $335,000,000 last year. This immense tribute is over 22 per cent. of all the money in the country. We have only $25 in cash for each man, woman, and child in the country, and on each man, woman, and child is levied an average tax of over $5.50, or $27.50 on each family of five persons.

Now let us consider the incidental taxation which is collected under the tariff by the manufacturers. The total value of all the manufactured products of the United States returned according to the last census amounted to $5,369,667,706. Our dutiable imports last year amounted to $450,000,000 in round numbers, on which we collected over $217,000,000. As our duties are laid confessedly for protection, it is very probable that on the immense aggregate of our domestic manufactures, in competition with which our taxed imports are sold, an addition of value is placed equal to many times the income of the tariff to the Government.

But taking $217,000,000 as the measure of the bounties paid last year to our manufacturers, let us commute protection into an annuity, computed at the Government rate of 3½ per cent.; the principal of that annuity would amount to $6,200,000,000. That annuity is the interest on a sum greater than the cost of the war! And the moderation of this estimate of protection no man will deny.

The enormous taxation which I have endeavored to outline is so contrived as to bear lightly on the rich and prosperous and heavily on the poor and unfortunate. To those who do not need, it is a largess and benefaction; to those States and their people that are cramped by narrow and scant means, it is a hindrance and oppression. To the latter it is a deduction from the comforts and necessaries of life, from the education of their children; a burden upon the offices of religion and charity; a tax on school, on church, and on home.

When I heard the other day the splendid inventory of New England's wealth presented with so much pride by the gentleman from New Hampshire [Mr. GALLINGER], and reflected on the system under which that wealth has been drawn from other sections, and on the beggarly reductions of taxation which our bill proposes, I felt like exclaiming, like Lord Clive before a committee of Parliament: "By God, Mr. Chairman, I am astonished at my own moderation!"

The tariff, sir, is a tax on consumption. It is not laid on the taxpayer according to what he has, but it is levied on his wants. It is apportioned among men, not according to their means, but according to their necessities. It is an income tax, graduated not accord ng to what men make, but according to what they buy. It is therefore hardest on those who have to spend all that they make.

But, Mr. Chairman, inequality is the foundation of the system of protection, and the only inducement for its preservation. If a scheme of protection could be devised by which each citizen could tax his neighbor just as much as his neighbor could tax him it would be equality, but it would meet with scant favor. The present system is worse, because it is brigandage without reciprocity.

Let us expose some of the profits of protection according to its own returns made during the last census year. The capital invested in

manufactures then amounted to $2,790,272,606; materials used cost $3,396,823,549; wages, $941,953,795; total product, $5,369,579,191. It can be easily seen from these figures that manufacturers made enormous gains, amounting in clear net profits to more than four times the income of the Government from the tariff.

But it is said that protection advances wages. If this is not mere pretension, then wages ought to keep pace with protection. Let us see. In 1860 the average tariff rate on the dutiable list was 19 per cent., which has been frequently denounced as free trade. And yet during that year labor received over 20 per cent. of the total product of our manufactures. In 1870, when the average tariff rate was two and a half times as high as in 1860, amounting to 47 per cent., labor received less than in 1860, or a little over 18 per cent. of the total product of our manufactures. And in 1880 labor received 17½ per cent. of its entire products.

These figures seem to demonstrate that the increase of protection is not accompanied with an increase in wages.

The chief argument for protection is founded on the assumption that wages are higher in this country than in Europe. Seventeen and a half per cent. of the value of our manufactures covers the entire cost of wages paid for their production. We levy 47 per cent. to pay for the difference between this cost of our labor and the cost of labor on the other side! If labor in Europe cost nothing at all, we could put our manufactures on the same footing as to labor with a tariff rate of seventeen and a half per cent.!

Mr. Chairman, I propose to show that Democratic policy has fostered wages and protected labor in this country. That policy began first when Virginia gave to the Union her great northwestern territory, and Georgia added that splendid domain which stretches from the Chattahoochee to the Mississippi River. Louisiana and Florida were purchased, Texas was acquired by annexation, and magnificent areas of land were obtained by treaty with Mexico. By these Democratic additions to our territory, acquired in spite of uniform opposition from New England, we established our border on the Gulf, and extended our heritage of freedom to the Pacific Ocean.

In 1826, when John Quincy Adams was President, his Secretary of the Treasury (Mr. Rush), in his annual report, took the position that a diffusion of population hindered the accumulation of wealth. In 1832 Mr. Foote, of Connecticut, introduced in the Senate a resolution to suspend the surveys and sales of the public lands, on which took place the famous debate between Mr. Webster and Mr. Hayne.

We sent out the surveyor with his chain and compass to mark out these lands for the homes of freemen. [Applause.] And then when a man in New England aspired to be a freeholder rather than to accept unsatisfactory wages, he joined in that mighty movement which has expanded thirteen little States into thirty-eight great commonwealths. [Applause.] What a magnificent field for labor and independence! The free homestead, abundant and cheap lands, and the marvelous development of the great West have furnished labor in this country its only defense against oppression. In Italy and other countries of Europe the land is all occupied; and there the landless have no alternative but to accept dependence and any wages offered. In this country we have emancipated labor by a free offering of a home and the opportunity for every citizen to work for himself. [Applause.]

My honorable colleague on the committee [Mr. BURROWS] the other day seemed to insist that protection has established the balance of trade in our favor. This is a curious instance of an effort to make the facts do duty on the wrong side of the argument.

This balance of trade consists in the excess of our exports over our imports. Protection has undoubtedly restricted our imports by arbitrary exactions; but protection has not furnished a dollar to our exports. These are contributed by the unprotected classes. Last year we sent abroad $204,000,000 in cotton, $30,000,000 in tobacco $92,000,000 in provisions, and $165,000,000 in wheat and breadstuffs. The products of agriculture constituted three-fourths of our exports and the rest was supplied by manufactures which can compete abroad upon the basis of free trade. That balance of trade, therefore, so far as it is a triumph of energy and progress, is due to free trade.

This policy of restricted importations and free exports has provoked defenses against it by those from whom the balance comes. Our beef and pork products have encountered restraints and restrictions. Our great silver resources are shut out of the commercial countries of Europe by demonetization; and England is trying to grow her cotton and wheat in her own provinces. The balance of trade in our favor in 1885 was $164,000,000; in 1886 it had fallen to $44,000,000, and last year it fell to $23,000,000. Trade can not long endure without reciprocity, and this shrinkage in our trade balance means a shrinkage in the value of our agricultural products, caused by the defenses abroad to which I have referred.

The gentleman from Michigan [Mr. BURROWS], in endeavoring to illustrate the effectiveness of protection, compared it to the dike system, by which he averred the people of Holland keep out the ocean. He evidently meant to say that this wise end is accomplished by means of a dam. It is a peculiar license of fine rhetoric not to call things by their right names. [Laughter.] But, sir, that barrier erected by the noblest exemplars of freedom was built not so much to keep out the ocean as that they might get near to the ocean and receive its mighty co-operation. It was the ocean that these people plowed and cultivated and planted; and it brought back to them on every tide and on every breeze the richest harvests that any people had ever enjoyed since the world began. And by that same system they secured a means by which, when the occasion arose, they could let in the ocean and overwhelm oppression within.

If the gentleman desires a just and instructive illustration of the policy of protection he can find it in that long-tried system of narrow exclusion and restriction which has brought down on the Chinese the contempt and execration of all mankind. [Applause on the Democratic side.]

It has been claimed in this debate that protection saved the Union. The money with which the soldiers were paid, with which the great armies and navies were provided and maintained, was paid, not by protection, but by those who are its victims. The only office of protection in this business was to tax for its own benefit those who did save the Union. It charged two prices for the clothing the soldiers wore, for the shoes in which they marched, for the blankets under which they slept, for the comforts and necessaries required by their wives and children, for the powder and lead with which they met and defeated the foes of the Union, and now puts a tax of 47 per cent. on the pensions of their widows and orphans!

The chief mission of protection during the struggle was to establish itself, not the Union, to feather its own nest, to put money in its purse, and while the brave and patriotic were fighting the battles of the Union protection bound them hand and foot.

Protection can not face a competitor, much less an enemy. It shivers at sight of a rival, and if one appears in our ports it pleads infancy and begs the power to tax its own customers as a defense against invasion. And now, to perpetuate its pensions, it says to the old soldier, "Give me that flag; get behind me; I saved the Union!"

Twenty years ago, when the soldiers of the Union returned from the South, after they had received the surrender of Lee and Johnston, they marched by the Capitol, stacked their arms, and, like American citizens, dispersed to their homes, battle-scarred and empty-handed, while the garrisons of protection were gorged with the spoils of war. It was an example of duty and loyalty for the imitation of mankind. Opening, then, campaigns against the wilderness, and subduing the desert, they have added immense areas to the home market, and now offer four new States to the Union and to the tariff. But the old guard of protection never dies nor disperses.

And, sir, what has become of that other army? Having lost their cause and their fortunes they went back to labor in the South. Their homes were in ashes; their States unroofed and despoiled. They have gone through subjugation, reconstruction, pauperization, and servile domination; but they have emerged from that flood of wreck and ruin, and begin to feel that desolation is behind them.

With patient and patriotic devotion, in the face of unsurpassed difficulties, they have rebuilt sixteen States, and have proudly reinstated them in the Union. The men who sought to establish an independent government have, in fact, restored the Union. It is not a "new South" added to a new Union, but it is the old South rehabilitated and added to the Union of our fathers. [Applause.] New and glad prosperities are beginning to appear. The energies of a brave and patriotic people are finding scope, and seek a fair field. They begin to feel the blessings of good government now and to hope for better things in the near future. Love of country is returning, and pride in the State and in the Union is being taught to our children.

In this new era, as one of the representatives of the South, I do not ask you to help her, but to release her from oppression.

Reduction of Taxes.

SPEECH
OF
HON. JUDSON C. CLEMENTS.
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 10, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. CLEMENTS said:

Mr. CHAIRMAN: That condition of American citizenship which revels in sectional hate and spite, which enthralls the citizen in whom it lives and moves to such an extent as has been demonstrated here to-day, is the object of pity rather than of resentment. I will not take the time of this committee in making any reply whatever to it. The measure before the committee is one of national importance. It is one which affects the interests of all classes of people in all sections; and we come here, at least in theory, as the trustees and the representatives of the

American people. We ought to accept that trust in a spirit of fraternity, in a spirit of patriotism which looks to the building up and not to the tearing down of any section, and to the prosperity of the whole.

The propositions to revise and reduce tariff and internal-revenue taxes and to simplify the tax-collection laws embodied in the pending bill are practical business questions.

Upon a wise and just determination of these questions depend in a large measure the prosperity and happiness of the sixty millions of people that Congress has the honor to represent.

This decision must affect in greater or less degree, either for good or evil, all classes of the people, whether poor or rich, of whatever profession or occupation, and of whatever political persuasion. Therefore these propositions should challenge our highest wisdom, and should call into exercise our most conscientious care. They should command our deepest sense of justice, that we may not be guilty of injustice to any, and at the same time our broadest patriotism, that we may look well to the prosperity of all. The discussion and consideration of the measure should be candid, and with a view to the greatest good and not merely party antagonism or political advantage, for the country is greater than any political party, and the country's welfare is more important than the success of any party. Again, that party serves itself best which serves the country best. The people ask now as they have asked before for substantial relief, and when they ask for the "bread" of even-handed justice they will not be content with the "stone" of mockery and delay. Those who have opposed the pending bill have all, so far as I remember, without exception, devoted their time largely to a discussion of the general and abstract doctrine of free trade. To this extent it seems to me the debate has been irrelevant. It is not a question of free trade.

Gentlemen on the other side of the House have seen proper to discuss from the beginning of this debate down to this time the Confederate constitution and the abstract and general principles of free trade. Why, my friend from Maryland [Mr. McCOMAS] a few days ago talked about the new South and his great love for her, and among other affectionate words, said:

To-day every old soul-driver of the South is a free-trader.

That is the way a practical business question is met by the representatives and trustees of the people. I will not take the time to go from one gentleman to another who have spoken upon the floor about the Confederate constitution and free trade and make fitting response on this question. We do not live twenty-five years ago. Slavery has been settled and abolished. There is no question of free trade before this House.

As was suggested by the President of the United States in his message, he presents for your consideration a condition, not a theory; not an abstract proposition of free trade or of protection, but a condition which must be met.

What is it? An overflowing surplus in the Treasury of $150,000,000 over and above all the needs of the Government for any purpose; and for the last three or four years the figures show that this has been increasing year after year. It is greater this year than it was last year, and greater last year than the year before. The public debt is being paid off, and the interest account is being diminished, and therefore there is need for less money instead of more of it in the Treasury. That is the condition, and not only that but the entire circulating medium of the country, both in the Treasury and out of it, counting the paper money of all kinds for circulation as money, is only about $1,400,000,000, or about $23 per capita of the people of the United States. About one-fourth of it all is locked up in the Treasury, and a great deal more is locked up in the banks of the country. So that the actual circulation of money amongst the people is far less than the total amount I have named.

Now, we will have within this year an accumulation of about $75,000,000.

That is excessive and unnecessary taxation amounting to about $1.25 to every man, woman, and child in the whole country. It is contributed to the vaults of the Treasury this year beyond the needs of the Government and beyond the legitimate purposes of appropriation to spend it and pay it back among the people, where it can fulfill its proper and legitimate functions as money. Allowing five people to a family, that amounts to about $6.25 for each head of a family, taken in one year absolutely from his earnings by the power of the Government beyond its necessities.

This is the condition of which the President speaks, and with which the country is now confronted. Financial disaster last year was averted by the wise policy of purchasing the bonds at a premium, by which a sufficient amount of the hoarded surplus was again put in circulation to avert temporarily the threatened disaster, but the cause of the evil remains. This policy ought not to be forced upon the Administration of paying, not only principal and interest, but a premium on the indebtedness of the Government, simply because we have money in the Treasury and it must be put in circulation. Let the policy be adopted of reducing the revenue so that this surplus money shall not come into the Treasury, but shall be left to circulate among the people, retaining only that amount of revenue which is necessary to support the Government economically and honestly administered. Then there will be no danger of a financial panic. There is not sufficient circulating medium in the country. If we had none of it locked up there would not be enough for the demands of this great country, with its constantly and rapidly increasing population, expansion, and development of business. What we need is less taxation and greater volume of money—circulation.

The present condition of affairs is one which it takes no prophet to foretell will certainly lead to financial trouble in the near future if persisted in. It is simply a question of time under the present policy, when a sufficient amount of the currency of the country will be locked up in the vaults of the Treasury to cause general panic and disaster in all parts of the country. If you start and continue the process of withdrawing from the human body, however slow the process, its life-blood, we all know what must be the certain result. The body must succumb and perish. The result to the business interests of the country of the process of absorbing its circulation is no less doubtful or uncertain—it is only a question of time. If we will not, as I believe we should, increase largely the volume of money or that which represents it, let us at least revise the tax laws so as to leave what there is beyond the actual wants of the Government among the people to perform its proper functions.

The policy of paying a premium upon our bonds in order to discharge them before due can only be justified upon the ground of the existing surplus. Would it be good business policy for an individual to make great sacrifice in order to raise money to pay the principal and accrued interest in full and a premium besides to discharge a note before maturity? By reason of the unwise legislation of the past most of our outstanding bonds are not payable until the year 1907—nineteen years. It is not pleasing to him who admires even-handed justice to all to see the favors that have been shown the few at the expense of the many in relation to the bonds of the Government. First, the non-interest-bearing greenbacks, worth not more than 60 cents on the dollar, and for which the Government did not receive more than that in actual value, were funded in interest-bearing bonds, non-taxable. Then the interest was made payable in coin. Then silver was demonetized so that the interest became payable during the period of demonetization in gold. And now when the Government desires to pay off any of the bonds before maturity, so as to put into circulation part of this surplus so necessary to the business of the country, it can only do so by paying principal and accrued interest and premiums. The true business policy is to cease the collection of excessive revenues, and then the necessity for paying premiums will cease—pay the bonds, principal and interest, only as they mature and not before.

Shall we then blindly go on and quibble over the question whether the Democratic majority in this House or the Republican majority which gentlemen on that side hope will be in the next House shall perform this duty? Why shall we not all of us, as American citizens, not as partisan politicians, engage in this patriotic work and do our duty as the trustees of the American people?

A few days ago the gentleman from Pennsylvania [Mr. O'NEILL], an honorable and distinguished member of this House, admitted in his place on this floor that the tariff needed revision and reduction, and that the work of revising and reducing it ought to be done. But the partisan spirit which seems to actuate that side of the House as a party of antagonism is fairly illustrated in his remarks, from which I read:

Mr. O'NEILL, of Pennsylvania. Mr. Chairman, I do not favor what is called the review of the tariff to-day. I want to review the tariff and revise it when we have a Republican President and a Republican House of Representatives. [Applause on the Republican side.]

Mr. CATCHINGS. We would have to wait too long for that.

Mr. O'NEILL, of Pennsylvania. I want to have it done in a House of its friends, not in a House of its enemies. [Applause on the Republican side.]

You condemn President Cleveland for recommending that which in a large measure was recommended by President Arthur. Secretary Folger and other Republican officials have repeatedly made recommendations very much in the same direction. In the tariff debate in the Forty-seventh Congress many Republican Representatives admitted the necessity of revision and reduction. The Tariff Commission, a majority of whom were Republicans and who were appointed by President Arthur, after traveling over the United States and hearing from all classes of people, the beneficiaries of protection as well as others, under oath, and a very careful and intelligent study of the whole question, recommended a reduction of about 20 per cent. In the Republican national platform of 1884 there appears the following promise:

The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus, not by the vicious and indiscriminate process of horizontal reduction, but by such methods as will relieve the tax-payer without injuring the laborer or the great productive interests of the country.

You taunt us with the charge of incapacity to reduce and revise taxation, and yet in the face of repeated official utterances and platform pledges and in the face of your present admission of the necessity of such legislation you seem content to propose nothing yourselves and only find fault with the President and the pending bill.

The Democratic majority is only seeking to carry out the Democratic pledge and to reduce the unnecessary burdens that bear not on Democrats only, but upon all the people, and which keep constantly on hand the great and demoralizing evil of a surplus inviting extravagant and

profligate legislation and expenditures. Republican Representatives in this House are not without responsibility, though they are in the minority.

Mr. Chairman, is it not possible for gentlemen to meet the actual situation? Can they not forget the Confederate constitution and slavery and dead issues and deal with this vital question affecting the interests of all the people of this country. The Republican party is pledged to a policy of this sort. The Democratic party is trying to redeem its pledges. The gentleman from Michigan [Mr. BREWER] said in his speech the other day that—

For three years the executive department of the Government, as well as this House, has played fast and loose upon this great question until the necessities of the Government have compelled the administration to take some position upon the tariff question.

The gentleman forgot to read the plank in the Republican platform of last year, in which—

The Republican party pledges itself to correct the inequalities of the tariff and to reduce the surplus.

In reply to the gentleman from Michigan, who charges that the President has "played fast and loose" on this question, I would ask him to read the messages of the present Executive. The recommendation for revision and reduction of the tariff has found a place in each one of those messages. There has been no "playing fast and loose" on this question or any evasion of it. Now, will gentlemen come up and fulfill their pledges made to the people in their platform prior to the last Presidential election? Mr. Chairman, if it were possible for gentlemen to forget to what political party they owe allegiance and that there is some possible hope of securing political advantage on questions of this sort, we might have a patriotic, careful, conscientious disposition of these propositions and a decision in the interest of the whole country.

But let me return to the charge made by the gentleman from Michigan to show that the President has consistently urged upon Congress the necessity of action from the beginning of the Administration.

I read from his first annual message, of December 8, 1885:

The proposition with which we have to deal is the reduction of the revenue received by the Government and indirectly paid by the people from customs duties. The question of free trade is not involved, nor is there now any occasion for the general discussion of the wisdom or expediency of a protective system.

The fact that our revenues are in excess of the actual needs of an economical administration of the Government justifies a reduction in the amount exacted from the people for its support. Our Government is but the means established by the will of a free people by which certain principles are applied which they have adopted for their benefit and protection, and it is never better administered, and its true spirit is never better observed, than when the people's taxation for its support is scrupulously limited to the actual necessity of expenditure, and distributed according to a just and equitable plan.

Now hear what he said in the second message, of December 6, 1886:

There is also a suspicion abroad that the surplus of our revenues indicates abnormal and exceptional business profits, which, under the system which produces surplus, increase, without corresponding benefit to the people at large, the vast accumulations of a few among our citizens, whose fortunes, rivaling the wealth of the most favored in anti-democratic nations, are not the natural growth of a steady, plain, and industrious republic.

Our farmers, too, and those engaged directly or indirectly in supplying the products of agriculture, see that day by day, and as often as the daily wants of their households recur they are forced to pay excessive and needless taxation, while their products struggle in foreign markets with the competition of nations which, by allowing a freer exchange of productions than we permit, enable their people to sell for prices which distress the American farmer.

* * * * * * *

The income of the Government, by its increased volume and through economies in its collection, is now more than ever in excess of public necessities. The application of the surplus to the payment of such portion of the public debt as is now at our option, subject to extinguishment, if continued at the rate which has lately prevailed, would retire that class of indebtedness within less than one year from this date. Thus a continuation of our present revenue system would soon result in the receipt of an annual income much greater than necessary to meet Government expenses, with no indebtedness upon which it could be applied. We should then be confronted with a vast quantity of money, the circulating medium of the people, hoarded in the Treasury when it should be in their hands, or we should be drawn into wasteful public extravagance, with all the corrupting national demoralization which follows in its train.

It is needless to remind gentlemen of his last annual message, against the truth and force of which they are vainly striving; but I will read a few sentences from it:

This condition of our Treasury is not altogether new; and it has more than once of late been submitted to the people's representatives in the Congress, who alone can apply a remedy. And yet the situation still continues, with aggravated incidents, more than ever presaging financial convulsion and widespread disaster.

Of course it is not expected that unnecessary and extravagant appropriations will be made for the purpose of avoiding the accumulation of an excess of revenue. Such expenditure, beside the demoralization of all just conceptions of public duty which it entails, stimulates a habit of reckless improvidence not in the least consistent with the mission of our people or the high and beneficent purposes of our Government.

Though the situation thus far considered is fraught with danger which should be fully realized, and though it presents features of wrong to the people as well as peril to the country, it is but a result growing out of a perfectly palpable and apparent cause, constantly reproducing the same alarming circumstances—a congested national Treasury and a depleted monetary condition in the business of the country. It need hardly be stated that while the present situation demands a remedy, we can only be saved from a like predicament in the future by the removal of its cause.

What becomes of the charge of inconsistency on the part of the Executive in the face of these repeated recommendations?

But gentlemen say that the reduction of taxes proposed in the pending bill will destroy American industries. This is the wail that is always heard when the effort is made, not to destroy property or interfere with a right, but simply to diminish the special advantages of the few enjoyed at the expense of the many.

It is amusing to hear some of the doleful predictions of the calamities that are to befall the country, particularly the South, as it is beginning to bud into prosperity by manufacturing, etc. We are told that if we tear down this system of protection we will bring ruin on these new industries.

I want, as a sample of these prophecies, to read a few lines of a speech delivered in the Forty-seventh Congress on the question of quinine, which had been put on the free-list in 1879. When a Republican Congress was trying to revise the tariff, or at least pretending to do so, in the Forty-seventh Congress, there was a proposition to put 10 per cent. back on quinine. In the discussion of that question Mr. KELLEY said:

All that is said in general about cheapening these vital drugs I assent to; but I say to the gentlemen on this side their whole theory in reference to protection, as has been said on the other side, is a sham, a snare, and a delusion, for moderate protection will give you pure quinine and cinchonidia and keep down its price.

I say to gentlemen on that side of the House who prate of a revenue tariff that we are entitled to some revenue from these costly and important drugs. The letters from druggists already read hold that this duty distributes over four hundred and thirty-five grains to the ounce, can not be felt by the consumers, and it is merely transferring the guaranty, so the manufacturer may have a chance in his own market, for the retailer who buys at whatever price he can buy sells at the same rate, because no coin will measure the reduction of duty.

Now I will read the prophecy of Mr. BINGHAM on that occasion:

We have fostered this industry until it is almost able to stand alone and compete with other countries. This bill recommends but 10 per cent. duty. The gentleman's amendment would strike out this small protection, and by so doing strike down a manufacture that has grown and developed and been fostered for sixty years under our generous laws, and thus destroy and throw aside all that has been gained. Under the protection given, cinchonidia—now 40 per cent., but by the bill fixed at 10 per cent.—is included in the gentleman's amendment to wipe out. In consequence of this limited protection upon cinchonidia the five American houses have been enabled to run about half time or half capacity. If the amendment prevails I announce with regret that every American manufactory will be compelled to close.

Hear what George K. Hopkins & Co., dealers, at St. Louis, said:

ST. LOUIS, *January* 26, 1883.

DEAR SIR: Allow us to call your attention to the bill soon to come before the House in regard to the duty on quinine and cinchonidia. We believe that a 10 per cent. duty on quinine and the present duty of 25 per cent. on cinchonidia and thin salts are no injury to the consumer and only just to the manufacturers of this country. We believe that putting them on the free-list will eventually destroy the manufacture of them in this country, and we shall be at the mercy of European manufacturers, and prices will be higher than with a duty to protect our home manufactures. Also in case of a war with any European power, our supply will be cut off and we will be great sufferers without it. We ask your influence to maintain the duty of 25 per cent. on cinchonidia and its salts and have a duty of 10 per cent. placed on quinine.

Respectfully,

GEORGE K. HOPKINS & CO.

Hon. J. H. MCLEAN,
House of Representatives, Washington City.

This sounds very much like a great deal of the argument that our mails are daily loaded with now, from the parties specially favored by existing laws, and who desire to retain their advantages. Mr. Alexander H. Jones, of Philadelphia, interested in the manufacture of quinine, said, while before the Tariff Commission, July 25, 1882:

I do not know a class of manufacturers in the United States who would say that they would be willing to submit to a duty of 20 per cent., if they could get a higher rate. They would say that they could not live on that rate of duty. We went before the Ways and Means Committee and said that we were willing to accept 10 per cent., that that was better than nothing. There was such a howl all over the country, that we said make it 10 per cent. But they did not make it anything.

This was rather a frank admission. I suspect it is true that the favored interests will accept all advantages that the law will give them.

That was a sad state of things pictured by the leading protectionist Representatives on this floor, representing districts in which the manufacture of quinine was carried on to a larger extent than anywhere else in the country. Now, what has been the result of the reduction of the duty? At the time it was put on the free-list, quinine was worth $3.50 or $3.60 per ounce. To-day it is worth, I believe, about 55 or 60 cents an ounce. The year before it was put on the free-list, 1879, the amount produced was said to be a little over a million ounces. The amount produced now is 2,200,000 ounces. So we see that the production has been increased more than 100 per cent., while the price has been cheapened to the consumer until the money that then would buy 1 ounce will now buy 6.

And all this has followed in the face of these predictions that the whole business would have to be closed out in this country, predictions made by the ablest and most distinguished representatives and advocates of protection on this floor. The laborers employed in its manufacture receive as high wages now as they did before. The argument to the people of this country by those who insist upon this prohibitory tariff is the protection of labor. That is their cry everywhere. Now we all know how that has been heretofore. Aggregated capital, under these tariff laws adopted in past years, has sought protection in every possible way that it could.

At the same time the capitalists have gone into the cheapest markets of the world for their labor; they have imported it under con-

tract, and they have employed it when it did not come in under contract, until they have brought a large percentage of the pauper labor of the Old World into this country in order to have cheap labor here; yet all the time they have been asking the American Congress to keep up a prohibitory tariff for them, and even going as far as the gentleman who spoke last [Mr. BRUMM], who said he would have the iron that was produced in England dumped into the sea rather than have it brought here to deprive the American laborer of his wages. Yet, as I have said, notwithstanding all these protestations, we find these gentlemen getting their labor as cheaply as they can, by contract or otherwise. The employer gets the cheapest labor he can, even if he has to employ armed detectives to keep the labor-union men of America from revolting against his exactions. That is the practical illustration of these protectionist professions of sympathy for labor.

The following statements contained in press dispatch show how American laborers are dealt with by and the sympathy they receive from one of the great establishments which is protected for the sake of labor:

MR. CARNEGIE AND THE KNIGHTS—THE GREAT MANUFACTURER PREPARING TO RUN HIS STEEL WORKS AT BRADDOCK.

[Special.]

PITTSBURGH, *April* 20.

When the Carnegie Steel Works at Braddock start up on Monday there will be 100 armed guards on hand to prevent any interference by strikers with the non-union men who return to their places. The manager, Captain Jones, completed all arrangements with the sheriff this afternoon. While no actual violence is feared, it is deemed best to adopt these measures. The Robinson House, a vacated hotel at Braddock avenue and Thirteenth street, has been rented by the firm. This will be fitted up with cots for the use of the employés. The firm to-day appointed Corbin Francis to have charge of the house, and will employ cooks to-morrow. The guards will escort the men to work from the hotel every day. Everything indicates Mr. Carnegie's determination to run his mill in spite of the strikers.

All last night the bosses of the different departments were making their rounds among their former men and requesting them to return. In response to this call about two hundred men turned out to-day and are now at work.

The report that four hundred men were at work to-day is denied by Captain Jones, though he says he can have that many the moment he calls them. The Knights of Labor are as firm as ever and threaten to have all of Mr. Carnegies Pittsburgh mills called if the Edgar Thomson is started with non-union men. At their meeting last night the following circular was prepared and is to-day posted on every prominent corner of the town:

"All persons formerly employed at the Edgar Thomson works and furnaces are requested to stay away from there until the difficulty between them and the company is settled."

Captain Jones was asked to-day whether one thousand new men were to be brought from New York, Philadelphia, and Johnstown. He replied, "I do not know what Mr. Carnegie may have done personally, but I have made no special effort to bring men from other cities. It is not necessary, because the news that our big steel works are about to start up is known all over the country, and steel-workers will gather at Braddock from all points of the compass by the hundreds. A large number of these may come from Johnstown, for all I know. There is one thing certain, there will not be any trouble about securing any number of competent men.

Mr. Carnegie, I am informed, has a magnificent castle in Scotland. I believe, also, that Mr. Blaine, the late Republican candidate for President, had very recently enjoyed a somewhat protracted stay with this gentleman at his Scotland home when he fulminated his protective platform in the professed interest of labor last winter in the shape of an interview on the subject of the President's message.

Again, Mr. Chairman, all this discussion about the benefit of the tariff to labor has been confined to those classes of laborers commonly known as mechanics and those who work in the mines and in the various workshops. The great millions in the fields and upon the plantations, not only in the West and Northwest, but in the South, are forgotten in this great race for profit and for wealth. In order to shut out foreign goods, to enhance the price of American goods, you will keep upon the American farmer, North and South, a tax of five or six dollars for each head of a family, producing a surplus over and above that which he pays for the legitimate expenses of the Government and also the four or five times that amount which, by reason of the prohibitory tariff, he contributes to the manufacturers. It is not the amount which is taken by the Government and which it needs of which he complains; for, I repeat, it is the four or five times that amount which he is compelled to pay from day to day upon the necessaries of life, and which goes into the pockets of the manufacturers.

Therefore, the farmer, the laborer of this country, stands as the guarantor, as the insurer to the manufacturer of clear and handsome profits. But where is the guaranty, where is the insurance to the man who toils, who cultivates the ground, who depends upon the rain of heaven and the sunshine and his own work for his living? Who insures profits to him? He is brought in competition with the cheap products of the whole world when he goes to sell the products of his farm. Gentlemen talk about labor unions and organized labor being peculiar to the North and being unknown in the South. Why, gentlemen simply show that they are uninformed as to the facts when they talk in that way. There is being organized everywhere throughout the South the "Farmers' Alliance" and, in some parts of the country "Farmers' Federations," and we have had labor unions of one kind and another there. These organizations are the necessary and natural outgrowth of the condition in which the American farmers and laborers are placed to-day under the existing system of taxation. They rise up everywhere.

They are not peculiar to one section. They are peculiar to the cause of the discontent and distress that surround the laboring people of this country. The working people of the country are seeking in these ways and in every possible way that human ingenuity can devise, to improve or at least to palliate their condition. Are they not entitled to a free and equal race in life? Are they not entitled to a fair and living chance in the struggle for existence and for profits?

Many misleading tables of figures and comparative statements have been presented in this debate. For instance, the tariff is credited with the admitted fact that many goods are cheaper now than before the war under a lower tariff, allowing nothing for the unparalleled growth of inventions, the unexampled improvement and use of labor-saving machinery, etc., in the manufacture of goods, whereby one person now does the work of many persons then. The case of steel rails, which have fallen from $139 a ton to about $31 under the tariff, is cited as an argument for protection; but this great reduction in price is due to the reduction in cost of manufacture by reason of the discovery of the Bessemer process. It is no more just to credit the tariff with this than it would be to credit the removal of the tax from quinine with the entire fall in the price of that.

It is insisted that protection stimulates investment and manufacture and causes overproduction, and consequently cheap goods. But the great interests built up and fostered by the process of absorption of the products of others combine against the very competition which their friends say protection will stimulate and cause cheap goods.

Thus they form the trust, so called, to protect themselves against protection. The rapid multiplication of trusts is one of the threatening evils of this age. Why they should be given that name "trust" I do not know, unless upon the idea that every scheme of evil should take a good name for a disguise. Thus, tariff taxes are called duties. The process of transferring the earnings of one man to another by law is called protection, and the conspiracy of combined interests of the same kind against the whole people to prevent competition, limit production, increase prices, and put labor out of employment in order to make the full profits demanded is called a trust. The people need more competition in many respects, less restraint upon trade, and a greater volume of circulating medium. What is the character of relief offered in this bill? It is estimated to reduce taxes about $75,000,000. Articles now dutiable and producing a revenue of about $22,000,000 are put on the free-list. These are salt, hemp, flax, wool and woolen goods, blankets, etc., cotton-ties, tin-plate, soap, and many other articles of universal and daily use among all classes of people.

The effect of the bill, if it passes, must be to cheapen all these articles and reduce the revenue to the extent named. Then there is a reduction of the tariff on the dutiable list from 47 per cent., the present rate, to 40 per cent. This is surely conservative and not radical. It is estimated that this will dispense with nearly $30,000,000 of the revenue, and it would beyond doubt cheapen all the goods of the kind affected by it, whether manufactured in this country or abroad. To illustrate, there was imported last year cotton-ties, or hoops for baling purposes, $345,997 worth; the duty, 35 per cent., amounted to $121,098.95; this is paid by the importer, and of course is added to the cost of production, the cost of shipping, and the profit he must make, so that the cotton-planter pays it all. If it is removed he will be relieved to this extent and will be able to buy cheaper ties. It is persistently contended that the farmer sells his ties by weight with the cotton in gross and therefore receives for it the same price per pound that he does for his cotton. This is not true; nothing could be more absurd or ridiculous than this statement. The buyer of cotton in Liverpool, where the market is fixed that governs our markets, knows what the average weight of the ties and bagging to each bale of cotton is, and estimates those as dead weight, and fixes such price as he can afford to pay for the net cotton, and the farmer receives nothing whatever for the ties and bagging.

The tax on bagging also is reduced, but I can not enumerate the many articles affected by the reduction. Then the entire tobacco tax is reduced by the bill, except on cigars and cheroots, amounting to about $24,000,000, so that the farmer, dealer, and manufacturer, as well as the consumer, will be unmolested by the internal-revenue laws except as to cigars and cheroots. The bill is a compromise. There can be no legislation upon this subject affecting so many interests in this great family of States, among so many conflicting views, except by concession. Various schemes have been suggested. One says repeal the whole internal-revenue system. To do this would leave a deficiency of about $60,000,000, and would require an increase of taxes on the necessaries of life. Some would increase duties, and thereby prevent importation and diminish the revenues; but this would make higher goods and increase the bounties paid by the consumer to the manufacturer.

This bill reduces both the tariff and the internal revenue, and contains important provisions preventing abuses in the destruction of stills and other property by internal-revenue officers without process of law as heretofore practiced. Should the bill pass it will, in my opinion, demonstrate in a short time the feasibility in the near future of further reduction or partial abolition of these taxes. Much has been said of the needs of the South and what protection will do for her. Has she not been under the same tariff laws all these past years that have applied to the whole country? Have they enriched her? No; they have helped to retard the general prosperity there by withdrawing the money necessary for business and by taking daily a part of the earnings of the people

to insure the prosperity of Northern and Eastern manufacturers. It is true that there is rapid progress in diversified business pursuits in the South. This is due to several plain causes, and is so not by virtue of but in spite of the present burdensome taxation. Immigration has filled up the Northwest. Lands are high there, while in the South lands have been cheaper and the climate is more genial.

But the recent advance in the prosperity of the South is due mainly to the establishment of confidence in the security of property, business, and investments there since the disgraceful military and reconstruction policy of the Republican party towards the South has passed away. What the people need is protection in the possession and enjoyment of that which they earn. They ask no bounties or favors. They demand even-handed justice, and no more. What the country needs is equal taxation, and that limited to the honest needs of the Government, and that the policy of favoritism, discrimination in favor of the few, and profligacy in expenditures be abandoned—a policy which has squandered the public domain and put it in the control of railroads and syndicates, foreign and domestic; a policy which impoverishes the many to build up the few, and which has created oppressive trusts and enables a few men to make corners, so called, upon the necessities of life. This all tends to the establishment of a comparatively small but strong creditor class and a large debtor class—not a desirable or justifiable state of society in this Republic.

Mr. Chairman, I ask the Clerk to read a paragraph which I send to the desk, embracing some figures with reference to the mortgages upon the farms in this country. The publication referred to in the article is the New York Times—good authority on this subject. I know that my friends on the other side will say "That is mugwump authority," but everything which does not accord with their theory of protection is discredited in some way.

The Clerk read as follows:

THE FARMERS' PROTECTION.

Lexington Transcript: Twenty-five years of very high protection have had anything but a good effect upon the farmers of the country. The New York Times, which is good authority upon such subjects, computes the mortgages upon the farms in the ten most prosperous farming States—Ohio, Indiana, Illinois, Wisconsin, Michigan, Minnesota, Iowa, Kansas, Nebraska, and Missouri—to amount to $3,422,000,000, on which more than $200,900,000 is required to meet the annual interest. It would seem that the farmers have had about enough of this kind of protection.

I do not object to the incidental protection afforded by necessary taxation, but the present high and prohibitory tax is leading to the aggregation of money in the hands of a few, which is not production of wealth, but simply the transfer of it. The laborer, the man who toils and takes wealth out of the earth, is the man who produces it. It is not produced by a system of transfer, absorption, and accumulation. Yet this is pointed to as evidence of thrift and prosperity, because it results in great manufactures at particular places, forgetting that the masses of the people from whom it has been taken are lingering and struggling along for a bare subsistence. What is the effect? The result is that we have already inaugurated in this country a system which will make the debtor class, in the North as well as in the South, dependent alike. Money is loaned upon mortgage on real estate through money-loaning associations all over the country. The rate of interest, large itself, is doubled by commissions paid to men who negotiate the loans. These mortgages rest upon men who have little farms without other means than their labor to pay the indebtedness, and who, under this system of protection, get deeper and deeper in debt each year as the interest accumulates. The result will be that this class will be turned out homeless, and the real estate of the country, as well as the money, will be largely aggregated in the hands of the favored few through a system of oppression upon those who will become pauper tenants like the tenants in Ireland. [Applause.]

The Tariff.

SPEECH

OF

HON. C. R. BUCKALEW,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 15, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. BUCKALEW said:

Mr. CHAIRMAN: In any revision of the existing tariff legislation of the United States it is my desire, as a Representative of a great State, that the particular interests in which the people of that State are interested shall have fair play. Undoubtedly all bills of this character have a double aspect. First, they are to be considered with reference to their effect upon the general or common interests of the United States, not only as to the revenue to be derived from them, but as to their influence in reference to lines of public policy which from time to time are adopted in the legislation of the country. From another point of view bills of this character are of local interest, as they may bear upon or affect particular States or sections or the occupations of people in particular localities of the United States. Therefore a Representative on this floor has a double duty when he comes to the consideration of such a bill. He will consider, in the first place, and mainly, what the effect of the measure will be upon the country as a whole. Will it give to the Treasury that adequate revenue without which the Government can not be properly conducted and administered? Will it also promote what I have described as those lines of policy which wise statesmanship and wise administration have adopted or which may be proposed for adoption? The pending bill ought to be mainly interesting to members of the House from this point of view, namely, its general effect and operation upon the public and common interests of the whole people and upon the revenues which are derived from the two great sources of taxation with which this bill deals, namely, duties upon imports and internal taxation. It is only in a subordinate or secondary degree that gentlemen on this floor will look to their own immediate neighborhoods and States and consider what will be the effect of the bill upon the particular interests there located. All that they ought to ask in this respect for the local interests with which they are particularly identified as Representatives is, that those interests shall have fair play; that no injustice or oppression shall characterize the bill in its application to them. But no member has a right to ask that the particular interest with which he is identified, which he represents, shall receive special favor, undue advantages, privileges, or immunities from the scope and effect of general, uniform, and just legislation.

In considering this bill with regard to its effect upon my own State, I find no serious cause of complaint. Upon the one topic on which I intend to address the committee I conceive that this bill will be largely advantageous to the people of my State; and I shall give my reasons for that opinion. As to the other questions arising on the bill, regarding local interests in my State, I shall leave them to the discussion of others.

Certainly, they are subordinate to the great question of taxation upon wool and woolens, which relates to a common necessity for the whole country, and is equally as important to the good people of Pennsylvania as to their fellow-citizens everywhere else.

This bill deals gently and tenderly with the metal duties. It does not abolish the duty upon iron ore, which is one that is fairly open to debate; nor does it abolish the duty upon soft coal, with which incidentally the great production of anthracite coal is connected. Now, before I go to the main point of my argument, I desire to say this:

It was inevitable, when the necessity for a reduction of the revenue came upon us, that there should be dispute, and earnest dispute, no matter in what direction we attempted to reduce existing taxation, as to the mode of doing it. If we struck at one article upon the tariff schedules complaint would be made. If we chose an alternative and went to another, complaint would equally be made. If, passing over the tariff schedules, we went to the internal-revenue system—no matter where we struck, objection would be encountered. Now, I take it for granted that by the common sense and common judgment of the people of the United States we would have been justified in accepting this proposition in the outset, namely, that we should take off two-thirds of the proposed reduction of revenue from duties upon imports, and one-third from the receipts from internal revenue—the revenue from duties upon imports being last year, I believe about $217,000,000, and from internal-revenue sources about half that amount.

The ordinary judgment and common sense of the people, without going into the subject profoundly, would have been satisfied, therefore, in my opinion, with a reduction of two-thirds from the larger and one-third from the smaller source of our public income.

Well, now, sir, this bill—the Mills bill—approximately reaches that result; and therefore, at the first blush, it is not open to the special objection that it strikes wholly at one source of revenue, leaving the other untouched. I desire to make another preliminary remark, and it is this: that if this bill were much more objectionable than it is, if more provisions contained in it were doubtful and open to debate, I would still vote for it, and for two reasons. In the first place, the necessity upon us for a reduction of the revenue is an overwhelming necessity. We can not disregard it; we can not put it aside; it presses upon us with infinite force. We must reduce the taxation upon the people in order to save this Government from demoralization; in order to save the business interests of the country from panic and distress; and in order that the hand of industry, instead of being checked, may be upheld in all the channels of production; and that trade everywhere may be prosperous, active, and satisfactory to all our people.

We can not resort permanently to the device which the Treasury is now practicing and which we authorized by a solemn vote recently, the device of buying in our bonds not yet due. We can not depend upon it for relief to any considerable extent. It is only a slight palliative; it does not reach the seat of the disease. The amounts purchased do not, I understand, even equal the amount of surplus income which

reaches the Treasury through the sources I have mentioned, and it is only a hard resource, at best, for the Government, when it goes into the market and pays 26 or 28 per cent. premium upon its own debt in order to redeem it, thereby paying the interest for seven years at 4 per cent. in advance of the lapse of time within which that interest would accrue, giving to the holders of our bonds the opportunity to raise their demands month by month and year by year during the interval before the bonds become due, making to the holders of the bonds enormous, illegitimate, and improper gains and inflicting upon the Government, as a debt-paying Government, inevitable sacrifice and loss.

I say we can resort to this device only for a little while, and to a limited extent, and we must regret that we are compelled to resort to it at all. What other course is proposed or possible, then, except to reduce taxation, to reduce it heavily, to reduce it with a firm hand, without shrinking from the task? Therefore, sir, if this bill were much more defective than it is, if it were much more open to objection and to complaint, as to its provisions, I would still vote for it, because the necessity for reducing taxation is so pressing upon us that we can not resist the demand for legislation. And I have another reason for saying this. I know whatever bill may pass this House affecting the revenues of the Government has to pass another branch of Congress, and challenge searching debate and examination there; and I am perfectly convinced, as most gentlemen doubtless are, that ultimately any bill which shall pass both Houses will be a compromise bill. The House will be obliged to yield upon some points, perhaps, and the other branch upon others; and ultimately, by a patriotic effort, on consultation between the two Houses, we will get a tax-reduction bill that I hope will relieve us largely from present burdens and remove from the public Treasury that accumulation of money which is a public peril and menace to the business of the country.

Now, Mr. Chairman, the vital point of this bill, the very heart and life of this bill, so far as regards the reduction of tariff taxation, is the wool and woolen goods reduction. In my State the growing of wool has been substantially abandoned as a leading business enterprise. During the last decade the number of sheep in the State has decreased. It has been said that the reduction last year was at least 10 per cent. As the State becomes more and more settled, as the waste lands are taken up, as agriculture encroaches upon the forests, there is less and less room for sheep walks and pastures, and naturally enough the production of wool becomes more and more costly. Carried on in connection with the raising of sheep for the slaughter-house for food to supply the necessities of the interior and of cities and towns, it may go on and doubtless will go on indefinitely in the future; but as a great industry, as a leading industry of that Commonwealth, it is impossible that it should exist or at least increase in the future.

It is estimated by the Philadelphia Times that in my State the amount expended every year upon woolen goods is no less than $60,000 000. What does this bill do? Taking wool and woolens together, it reduces a taxation of 69 per cent. down to 40 per cent.; not so much upon woolen goods alone, but by the abolition of the wool duty and taking wool and woolens together. The reduction is, therefore, 29 per cent. And it is estimated that upon a purchasing expense of sixty millions a year a reduction of 20 per cent. at least will result. That gives for the State of Pennsylvania a saving of no less than $12,000,000 in connection with the wool industry, cheapening by that enormous amount the yearly outlay which our people pay, or will pay, for the clothing which they use and for the other uses to which woolen products are applied.

Compare that with the bill to refund the direct State tax which we had here in the early part of the session and about which some people in my State were greatly interested, perhaps are deeply interested yet. Why, sir, that tax to be refunded, as far as Pennsylvania is concerned, was less than $2,000,000; while here upon the products made from wool Pennsylvania will save $12,000,000, not once for all, but yearly, next year, the year after, and in future years; so that those who are coming on the stage of action as well as we who are now occupying it will enjoy the advantage of this beneficent change in our revenue system.

I speak advisedly, then, when I say that my State is deeply interested in this bill as a State which purchases the goods to be cheapened by it in the line of woolen-manufacture production; and I assert also that the woolen manufacturers of the State, whose affiliations heretofore in business life and in political association for a time have kept them silent on this subject, will enjoy great advantage and most salutary results in their industry by means of this bill, which gives to them free wool.

Mr. JACKSON. Will my colleague yield to me for a question?

Mr. BUCKALEW. I must once for all decline to yield to any conversational discussion on this occasion.

Mr. JACKSON. Does the gentleman decline to yield?

Mr. BUCKALEW. I do, generally.

Now, sir, passing from my own State—I do not care to linger longer upon it—let us consider this subject of the abolition of the duty upon wool and the reduction of the duties upon woolen goods in connection with other States of the North, particularly the State of Ohio, from which we have had, not in the present year only, but in former years, warm and earnest appeals in favor of protective duties upon wool. Can anything in the view of an intelligent man well informed about the industries of our country and with the slightest power of penetrating the future be more clear than that the Northern States of our Union are not by nature adapted to the production of wool, to produce those supplies which will be necessary for the manufacturing industries in our country, much less to those increased industries of wool manufacture which may be expected to arise in the future?

Why, sir, one of the gentlemen from Ohio on this floor [Mr. JOSEPH D. TAYLOR] has told us that the wool-producing industry of that State is now, under the existing law, greatly depressed, and that little or no profit is being made by those engaged in it. He imputes, in part, this state of things to certain decisions of the Treasury Department under the existing law, which he conceives to be unfavorable to the wool industry, although the presumption must be that the Treasury Department has made reasonable and just decisions on questions under the law, and beyond all doubt that law was passed by men friendly to the wool-growers of the Northwest. However this may be, the wool industry of Ohio, we are informed, is not profitable, nor is there any promise of prosperity to it in the future. In fact, those concerned in it, who were represented here in the Wool-Growers' and Manufacturers' Convention last winter, made a most preposterous demand upon Congress to increase the wool and woolen duties. Their manifesto, which ought to have excited surprise, was laid before Congress and the country. They say they can not go on without increased duties. Is not this proof positive that the industry is not adapted to the location; that under the natural conditions which exist it can not be carried on with success and with profit; that even the present legislation made by its friends is found inadequate and must be enormously increased in order to continue the production of this article in that section?

What is the explanation of all this? It is furnished by a single word. It is the word "winter." Nature has interposed a barrier against indefinite wool production in Pennsylvania or in Ohio or any other Northern State with similar climatic conditions.

Therefore the present state of affairs is fully explained. The farmer devotes his rich cultivated lands to raising different kinds of produce during the spring and summer months, which he gathers in the fall and stores in barns, sheds, and cellars, and then he places his flock of sheep under shelter and he feeds them five months of the year merely to continue their existence.

What an enormous cost this is! Nearly half the time his animals are a burden to him for their support. They can not gather their food in the open fields or upon waste lands. He must care for them precisely as he cares for his horse or his cow, those valuable animals with whose services he can not dispense. In competition with countries without winter, those regions can not produce wool. They can not produce it in competition with places where winter does not scourge the earth. Still, as in the case of my own State, the people of Ohio and the people of other Northern States will continue to grow large numbers of sheep, but they will grow them for human food, for home consumption to a large extent, and for sale to the slaughter-houses that will supply the towns and cities that are growing up rapidly all over the North.

Sheep will continue to be raised in the North for that purpose, and, of course, the skin and the wool upon the skin will be additional elements of value to the sheep-grower. This, Mr. Chairman, I believe to be the law of the future.

Now, if we are to adapt our revenue system upon lines of protective policy, is it wiser to adapt it to industries that can be maintained or to industries that must inevitably fail? To those sources of supply of trade and commerce which will swell and increase and prosper in the future, or to those which are doomed to remain stationary or to retrograde? This, from my point of view, is the wool problem in the Northern States.

But, sir, there is another section of the Union where wool can be produced, and no doubt produced with profit, at least for the present.

In California and in the States and Territories which adjoin her large numbers of sheep can doubtless be raised for the purpose of producing wool. Why? Most of us, I presume, have received lately a strong circular from California explaining to us that the Government does not survey the public lands with sufficient rapidity; that they are kept out of the market; that settlement is thereby checked; that waste lands are basking there under the California sun which might be peopled by industrious immigrants and settlers. I do not know whether this complaint against the Government is true or not; but however that may be, there is undoubtedly a vast amount of Government land yet unsettled there. The fruit-growers have not invaded those lands; the agriculturists have not extended their improvements over them; so that settlers in California may well pasture their sheep upon the public lands. In that climate there is no rigorous, severe winter, except in the highest mountain regions. The sheep there is not a burden during half the year for its entire support upon the farming industries of the State. Therefore for the present, and for some time in the future, sheep can be raised and wool produced without a contest against the laws of nature. The same remark applies to a certain extent to Arizona, New Mexico, and the higher portions of Texas, and perhaps to a part of Oregon.

These are the portions of our country, and the only portions, where

wool can be grown at a profit. It can not be produced in our Southern States to any considerable extent. The climate is too warm. The sheep tells us by his very covering that he is a cool-country animal. Nature gives him a covering which shows that he is intended to resist cold; but he needs an equable climate, one where he can roam freely the year round and take his food from the surface of the earth, as he did and still does in his native countries under Asiatic skies. Wool can be produced, I repeat, in some portions of the Southwest, but it is an industry that can not have indefinite expansion, because as the public lands pass into the hands of private owners and are brought under cultivation, as the ordinary pursuits of industry intrude upon the waste spaces, the sheep-walks will be contracted and sheep-raising decline. I can not, therefore, as an independent observer, pronounce that California and the adjoining States and Territories which can now produce wool will be able to produce it in large quantities and indefinitely in the future. But while the present condition of things exists, while these waste lands are open and available for pasturage, wool can be produced there, and I for one am not disposed to deal harshly or hardly with any section of our common country with reference to any local interests in which they may be concerned.

What I would say to our friends in that section of the country is, do not tie yourselves up for the future to an act of Congress; do not connect any of your interests with legislation which may change in the future; with interests which will be in perpetual peril while depending upon the changing whim and pleasure of men who make laws at Washington, who may disregard you in future because they will be pursuing lines of policy alien to your own. To the people in that portion of our country, those who talk and speak and think upon this particular subject, I would say, above all things establish manufactories for yourselves; do not undertake to raise wool and ship it to New England, to the Atlantic seaboard, or any other point remote from your own territory. Establish your own manufactories, make your own goods, and, as far as you can produce material for the purpose, God speed you in its production!

But suppose that be accomplished, you will even then be obliged to buy a large part of your manufacturing wools from abroad. Wool goes by grades. On the higher grades of wool our present law imposes a tax of 12 cents a pound; on good or medium grades, 10 cents a pound; and on the coarse carpet wools which approach the character of hair—wools taken from unimproved breeds of sheep—the duty goes down as low as 2½ cents per pound. So in California, when you have set up your manufacturing establishments in connection with the wool growth, you will buy from abroad grades of wool other than your own, and buy them largely. You will require wool from South America and from Australia in addition to your own. Remember, your section will not produce the wool necessary to supply the manufactories in the United States, even if you attempt it, nor, as I have already pointed out, will your own product supply all your needs at home, if you will turn to manufacturing as you ought. "But," says some one, "you must find us a market; you must tell us where we shall sell our woolen goods when we have manufactured them." Why, is not the Northern Pacific open to trade? Can you not send your woolen goods North? Can you not send them to the islands of Japan, to Corea, and to Northern China? Do not the people of the North Pacific and the Asiatic countries, with their unnumbered millions and their indefinite demands, call upon you to supply what they want and what you can produce? Look to yourselves and not to Congress, and you have a future of your own, not dependent upon the shifting scales of legislation.

You can have a market also for your woolen goods in South America. Why should you not have a steam line of your own down the west coast from San Francisco to Valparaiso, instead of relying upon an English line most of the way? You will have such a line when you have something to send by it, and you can send something by it when you have arranged for reciprocal trade. Take off, for instance, the stupid prohibitory tariff-tax of 4 cents a pound on copper and you can buy some copper from Chili and send her your manufactured goods in return.

Do not stand shivering away back in the past of fifty or sixty or even thirty or forty years ago. We are living in a new age. The iron and the steel rail have come among us, and they are threading our country from ocean to ocean. Great inventions and improvements have come among us year by year, until, in many pursuits, one man can do the work which was formerly done by twenty. The electric telegraph has come to us, so that we can put our finger on a key and in a few moments talk with remote portions of our own country; nay, we can with like speed, send to and receive messages from remote countries.

We are not living in that former period when Government was to aid "infant industries," the period of 1824 and 1830, when the argument was that Government should temporarily assist the industries to which we were naturally adapted to locate themselves.

You gentlemen of California need trade with your neighbors of South America in connection with manufactures on your own coast. Australasia sent to this country last year $931,000 worth of raw wool, and we sent her over $1,400,000 worth of wool and woolen goods. This trade in raw wool from foreign countries pays well, as the figures produced by the gentleman from California [Mr. MORROW] prove.

Yes, I repeat, the United States bought from the several countries of Australasia during the last year $931,620 worth of raw wool, and exported of wool and woolens to those countries—nearly all being manufactures of wool—$1,440,596 worth.

In like manner do we not want to buy wool from the Argentine Republic—that great country of the south, beyond Brazil, in a temperate climate, where sheep thrive? Why, sir, on the pampas of Argentina there now roam, according to the best estimate I have from credible sources, 90,000,000 sheep, 14,000,000 horned cattle, and six or seven million horses. There is a railroad from Buenos Ayres westward toward Chili, which is already completed to Mendoza, at the eastern base of the Andes, 600 miles across the pampas; and the Andes are being bored in order to establish railroad communication with Chili. Four or five years will be occupied in boring through that monstrous mountain barrier, and then Santiago will be reached, 80 miles from Mendoza, and near by is the port of Valparaiso, so that the productions of Argentina can come to you by way of Chili and the western coast.

From that section of South America you can bring wool, hides, and all animal products in full supply to your own doors. In those South American regions animals need no food stored up; they live upon the plains from year's end to year's end. Nothing is necessary upon the pampas except the sinking of a few wells, which may be artificially worked by wind power, as in Spain and Portugal, for an occasional time of drought. Thus, with slight cost innumerable masses of animal products are now obtained, and vastly more will be hereafter obtainable and thrown into the channels of the commerce of the world.

Where does the wool of that country now go? It goes mainly to Germany and England. Those countries are the customers of Argentina. They buy of her a great part of what she has to sell and sell to her three-fourths of what she buys. Even our tobacco reaches there by way of Germany, where it is manufactured. Germany and England have lines of steamers running to that country, and handle most of her export and import trade.

About sixteen years ago what occurred? Our tanners and leathermen came to Congress and they were influential in securing a law for the importation of hides into this country duty free, thereby exciting the same character of clamor against free hides that we now hear against free wool. Why, the farmer was to be ruined, the butchers were to be ruined, by taking off $1.25, on an average, from the value of every animal slaughtered in the United States; our industries were to be very greatly injured by decreasing the market value of domestic hides. But Congress passed the law for free hides. Now our exports of leather and leather manufactures are eight or ten times greater than they were before the passage of that law [applause], and the farmers and butchers are not injured, because they buy cheaper boots, shoes, and other articles which they need. Everybody is benefited by the change.

That is the result of buying free hides down in Argentina, which are brought here and worked up, and the products of which not only supply in part our home demand, but go out into the commerce of the world under the American flag wherever there is one. [Laughter and applause.]

The city of Buenos Ayres, which in 1855, when I was there, had but forty or fifty thousand population, has now 450,000. The town of Rosario, on the Parana River, which was then a village with three or four thousand population, has now 80,000.

Now we buy some cheap carpet-wool, produced in the province of Cordova and shipped at Rosario, which comes to Boston under a 2½-cents-per-pound duty. There we stop. Why? Because our tariff prevents us buying pampa wool; we can not buy a dollar's worth under it.

The congress of the Argentine Republic at their last session repealed their export duty on wool. They had a small export duty, but they found, as all nations under similar circumstances will always find, that it was an improvident tax; therefore they repealed it. But we can not buy any portion of the good wool of Argentina; it is beyond our reach. You impose a duty of 10 cents per pound on Pampa wool imported. When scoured that wool yields 32 per cent. of clean wool. Australian wool, with the same duty of 10 cents per pound, when scoured produces 48 per cent. of clean wool. Therefore our merchants and manufacturers can not buy Argentina wool; it is excluded from our market by the specific duty imposed upon it by our laws.

Take off this duty on wool from Argentina; buy from her and send her what she wants. [Applause.] Trade with her and you will both prosper.

If you shut up your ports, as China did in former times, and shut yourselves off from the world, you become stationary and stagnant amongst nations. You have a future before you if you will reach out and seize it. You ought to abandon the old obstructive methods of the past and look on the face of the world as it is, with all the industries of all the nations spread out before you.

I would not lift the barriers of commercial taxation absolutely. I would consider existing conditions in my own country, and along with my party I would accept the doctrine that duties should be levied so as to equalize the cost of articles from abroad, so far as labor is concerned, with those produced at home—a doctrine to which the Democratic party is pledged, and which is maintained substantially by the provisions of the present bill. [Applause.]

EXTENDED REMARKS.

The future commercial relations of our country with South America is a subject of high importance and merits all the attention which has

been given to it in recent years, and all the interest which it continues to excite in commercial circles and among public men. I propose now to speak of those relations as they may be established or promoted by land communication; to point out a railway enterprise which will unite the two Americas by bonds of mutual interest, securing to both immense development in production and prosperous trade.

Our main lines of internal communication being already established, including three railways to the Pacific coast, there is the greater reason for turning our attention to the countries south of us and seeking that connection with them which is invited by natural conditions, by similarity of political institutions, and by commercial interest. Already our railway communication with the city of Mexico is an accomplished fact, and a line from that city to the capital of Guatemala is about to be constructed, and its extension through the Central American states and the Isthmus of Panama to the heart of New Granada ought not to be long delayed. The engineering difficulties of this enterprise will in a great measure disappear upon an examination of the route to be followed, and the great expediency of it will become manifest to any one who will consider the natural capacities for production of the countries to be passed through and the certainty of trade and commerce to be reached by it in the far South. The line will follow the uplands of Central America throughout, far removed from the unhealthy coasts east and west of it, where dense populations can be maintained and various and valuable articles of commerce be produced. I will pause only to cite official proof upon these points relating to San Salvador, one of the Central American states:

[From report of L. J. Dupré, consul at San Salvador, to State Department, dated December 13, 1887.]

To avoid detention at the seashore in hot latitudes ships must anchor at wharves in land-locked harbors, whence passengers may be transported instantly by railways to the mesa, or elevated plateau, from 2,000 to 3,000 feet above the sea level and extending from one to the other ocean. * * * There is perfect immunity from climatic diseases the instant the traveler reaches an elevation of 1,000 feet above the sea.

According to him the climate of San Salvador is one of great equability of temperature; "the thermometer never falls below 70, or rises above 80 degrees."

San Salvador is also a populous state, and its productions abundant and valuable. He estimates the population along a line of proposed railroad, from La Union on the Pacific to a port on the Mexican Gulf, at 100 to the square mile, 92 per cent. Aztecs and 8 per cent. Spaniards. They toil industriously, and produce rice, tobacco, indigo, sea island cotton, coffee, sugar, cocoa, India rubber, and Peruvian gum.

The railway would regenerate the Central American States, Guatemala, San Salvador, Nicaragua, Honduras, and Costa Rica, establishing among them solid and enduring peace; stimulating industry, and securing rights of property, improved education, and prosperous trade.

But it is the great continent beyond the isthmus and the importance of our intimate connection with it commercially in future times to which I desire to direct particular attention. In that division of the globe are located future markets for our surplus productions, and there also will be found most valuable sources of supply for our manfacturing industries, and for many things which we shall greatly need but can not ourselves produce.

Now, after a railway shall reach the southern continent in New Granada, a line carried eastward will reach Venezuela and open an immense region to improvement and progress. But the main line of extension has its proper course defined for it by nature—toward the south. Passing the valley of the Cauca, it will enter the great valley of the Andes and traverse that valley its entire length into Upper Peru, and thence extend to Sucre, in the Republic of Bolivia. At that point it will gain sure connections with Chili, with the Argentine Republic, and with Paraguay. Already a railway of 500 miles, projected to lead from Sucre to the capital of Paraguay along the Pilcomayo River, has enlisted the support of foreign capital, and its construction in the near future may be assumed.

The Andine Railway which I have indicated will be a trunk line, with many connecting roads leading to it from the Pacific coast and from points east and south, thus commanding a great part of the trade of that continent with Central America, with Mexico, and with the United States. The gentleman from Kentucky [Mr. McCREARY] hopes for a railway connection with South America by way of Central America within twenty or twenty-five years. Perhaps he contemplates a consideration of the subject by the representatives of all the countries concerned, including our own, when they meet for consultation in this city in April, 1889, under the recent act of Congress. But we can not afford to wait twenty or twenty-five years. We have waited too long already in taking steps to secure trade and intercourse with our neighbors of the South.

We should now move promptly and resort to all legitimate means to secure this prime object of national policy. A readjustment of our tariff duties will greatly aid in securing Southern trade; steam lines upon the Pacific and Atlantic coasts will naturally follow, and a great railway line leading to and threading the Andes will complete the work. Everything else may be left to the sure operation of causes with which government need not interfere.

At first view these remarks may be thought to be irrelevant to the present debate. Not so; they lead directly to my object, which is to point out the Andine countries as the future home of the sheep—as among those best fitted by nature of all known regions of the earth for the permanent production of wool.

Take the long stretch of high land from upper Peru northward into Colombia, along the course already mentioned for railway location, and particularly that part which holds the great valley of the equator—hundreds of leagues long—within its embrace. The valley is itself greatly elevated, rising from seven to ten thousand feet above the level of the sea, with a width of 10 to 20 or 25 miles, and bounded east and west by gigantic masses of mountain, upon which at irregular intervals rise mighty peaks known to geographers as Chimborazo, Cotopaxi, Antisana, Cayambe (cut by the line of the equator), and many others. The snow line on the highest peaks comes down to 16,000 feet, but on the great ranges, as well as in the valley, there is complete exemption from severe cold. The temperature at Quito (9,500 feet above sea) changes but 20 to 22 degrees during the year, ranging from 45 or 47 to 67, with an average of 58. There is perpetual spring, and there is no more healthful region known.

In the time of the Incas, before the Spanish conquest, a stone road extended over 1,000 miles between the two Inca capitals, Quito and Cuzco; and at intervals along it were erected tambos for refreshment and repose in times of royal progress from one capital to the other. No data exist for computing the Indian population of the mountains in those days, but it must have been immense.

The Indian of the Andes is a natural herdsman—hardy, patient, temperate, persevering; loving out-door life, and trustworthy. Perhaps his very virtues have made him contemptible in the eyes of his haughty masters, but they give promise of an honorable future for him when peonage shall be abolished in his native mountains, and the earnings of his labor shall be thoroughly made his own.

The uplands upon both sides of the great valley are of immense extent, consisting of the mountain slopes and of broad table-lands, grass-covered throughout the year, affording natural pasturage without practical limit for the support of animal life. The plateau of Antisana, visited by Humboldt in 1802, which is upon the eastern cordillera or range of mountain, with an elevation of thirteen to fourteen thousand feet, may be mentioned by way of illustration. It is an immense, irregular plain, without forest, and grass-covered throughout.

Being above the limit of cultivation, no plow will ever vex the surface nor human pursuit ever encroach upon the pastoral domain. It is devoted by nature forever to the herder, to the shepherd, and to the thousands of animals they shall have in charge.

Upper Peru and the adjacent countries north and south of it in the mountains have native animals suited to the climate and to all surrounding conditions. There are found the llama, the alpaca, the guanaco, and the vicugna. I will call them the congeners or fellows of the sheep, for they, like sheep, flourish best on open, enduring pastures in a cool but equable temperature, and most of them, like the sheep, contribute the hair or wool of their bodies for the clothing and comfort of man.

The Andine mountains and valleys have been almost shut off from communication with the outside world. From most lines of approach the traveler is repelled by the difficulties of the way—great heights to scale, ravines to cross, forests to penetrate, and everywhere rude, primitive roads or paths. Even the Inca highway in the high valleys has been suffered to go into dilapidation and decay.

But all those difficulties in the way of intercourse will speedily disappear. A Peruvian railway already penetrates the interior from the coast, and other improvements will follow; civil wars will cease, industry will waken to life, population will increase, and all the natural resources which there exist will be brought to light and made available for the production of wealth and the progress of civilization. And among the results in the near future, an immense wool production in Bolivia, in Upper Peru, in Ecuador, and in Colombia will be certain to come. The crook of the shepherd will be seen in all the Andine valleys and upon all the *paramos*—the uplands or table-lands of those great mountains. From the highlands of Colombia that overlook the waters of the Caribbean Sea to Potosi in the far south, everywhere nature invites the wool-bearing wanderer from Asiatic lands, after many migrations, to a delightful and enduring home.

THE WHISKY TAX.

There is involved in this debate, as an alternative to the reduction of customs duties, the question of the repeal of the internal taxes on spirits and beer, that on whisky being the most considerable.

I am of opinion that the internal-revenue taxes should be reduced, but not abolished; and this is no new opinion with me, begotten of recent debate, but one long entertained and (I may add) deliberately formed.

We need a more stable, uniform, and reliable support to Government credit than is afforded by customs duties, which fall off and partially fail when most needed, in times of panic and public distress. Importations decrease at such times, for the people are unable to buy and mer-

chants afraid to import, and as the customs revenue becomes greatly reduced Government credit suffers and new devices of taxation must be resorted to for its support.

Now, at such times, the consumption of whisky, beer, and tobacco will not be much diminished, and consequently revenue income from them will be maintained at nearly the ordinary amount, furnishing a basis for loans on fair terms or for a temporary issue of Treasury notes. An income of fifty or sixty millions from such internal taxes is therefore a proper object of Government policy and may be properly maintained in future. Besides, as war taxes for war outlays, they will subserve their original purpose so long as a war debt remains and heavy war pensions are to be paid. But, in my opinion, the whisky tax of 90 cents per gallon is very greatly too high. To tax at that rate an article which costs the maker but 20 or 30 cents to produce is unreasonable if not unjust, and the tax may be fairly described as excessive and exorbitant. Vast quantities of spirits are used in manufactures, in the arts, in compounding medicines, and for other uses, besides that consumed as drink.

The tax is so high that it causes evasions of the law and some illicit distillation, and, what is still more important, it produces monopoly in production and sale. The influence and power of whisky manufacturers and holders of great stocks have been no doubt greatly exaggerated, but it is plain that the enormous whisky-tax requires large capital to carry heavy stocks on hand and makes necessary combinations and control of the market. The plain and effectual remedy for this evil is to reduce the tax and bring it within reasonable limits.

But it is equally clear that this remedy can not be suddenly applied. That would be utter ruin to those who have stocks on hand, and therefore when the change is made it must be accompanied by a system of drawback or by some other device to prevent intolerable wrong. But as a plan of drawback is one of great difficulty in practical operation and its complete application perhaps impracticable, it appears to me that we could best invoke for our purpose the salutary but effectual operation of time.

Let the act reducing the tax take effect at a future date—long enough removed to permit stocks on hand to be worked off in the natural course of sales and consumption. So great is the amount on hand that the interval of time between the enactment of the law and the date for its taking effect would have to be a considerable one; but by interposing such an interval the change of rate would go into operation without disturbing any right of property or producing any inconvenience in the channels of commerce and trade.

One inevitable effect of this arrangement would be that no tax would be paid to the Government during the interval. If deposits in bond were permitted, with deferred payment of tax, no taxes would be paid until the time when the reduced rate of tax would come into operation. The Treasury would be without incoming whisky-tax moneys during the interval, unless from stocks in bond, on which payment should be coerced.

It will be seen, then, that the reduction of this tax can not reasonably be accomplished by an amendment of this bill which shall simply reduce the tax rate. There must be in connection with any repeal or reduction careful provision made as to the time and manner of carrying out the change proposed, so as to save existing interests from ruinous loss and to adapt the change to the revenue demands of the Government during the transition period to the lower rate.

At present the whisky tax will not be repealed or reduced in rate; but I think the question of reducing it will come up for consideration in the next Congress or at the next session of the present Congress. For I apprehend that there will be no sufficient reduction of revenue provided for at the present session, and that the subject will recur until all necessary reduction shall be made.

Some gentlemen have proposed that spirits used for manufacturing, medicinal, and scientific purposes shall be exempt from tax. He will be a wise man who shall frame a law to discriminate in taxation between spirits to be used as a drink and spirits to be used for the purposes just mentioned, and he will be a still wiser one who shall devise convenient and effectual means for the enforcement and execution of such a law.

Again, some gentlemen favor the turning over of this source of revenue to the States, to be drawn upon by the States for purposes of local expenditure. In other words, they propose that we shall repeal our taxes upon the manufacture of spirits and beer, and allow the States to impose such taxes in addition to the license taxes now imposed by them upon sales. But taxes paid upon the production of spirits pass into prices of sale, and are borne by those who use or consume the spirits taxed; in other words, the consumer virtually pays the tax. But in the case of whisky, a few States—Kentucky, Illinois, Ohio, Pennsylvania—produce the greater part, perhaps three-fourths of it, and might get a like proportion of the whole revenue derived from its taxation by the States. If the States in which it would be produced should tax its manufacture at the same rate, an equal, uniform rate, this result would be inevitable.

It is equally clear that while the revenues from the whisky taxes would go to the States of production, the burden of those taxes would be borne by the States of consumption, that is, by all the States. It follows that when whisky is taxed by the United States the revenue derived from it inures to the common advantage of all the States in which whisky is consumed or used, but when subjected to State taxation the certain result is injustice and wrong.

I will conclude by saying that, for the reasons I have stated, I am in favor of reducing the whisky tax to 40 or 50 cents per gallon, and for retaining it at such reduced rate as a permanent source of income to the Government of the United States.

At the expiration of the hour allowed to the speaker by the rule of the House, an extension of time was proposed but declined, as follows:

Mr. BLAND. If the gentleman from Pennsylvania desires to occupy further time, I ask unanimous consent that he be permitted to proceed.

Mr. BUCKALEW. I must decline to occupy further time. I could speak much longer upon this subject, but would feel most uncomfortable in doing so, as I would know I was encroaching upon the time of others. [Applause.]

The Tariff.

SPEECH

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 15, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. JACKSON said:

Mr. CHAIRMAN: At the beginning of the present session of Congress the President of the United States, in the performance of a constitutional duty which requires that he shall "give to the Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary and expedient," communicated to the two Houses what may be called his annual message.

This paper is remarkable for the reason that it refers to only a single subject-matter, and that in it the present occupant of the Executive office omitted to give full information of the state of the Union and the relations which our Government sustained with other nations of the world. No satisfactory reasons for this exceptional and extraordinary course were given by him, and up to this time no Senator or Representative in Congress has either seen fit or been able to explain or defend it.

No President preceding him has ever omitted in an annual message to give full information of the state of the Union. A long line of illustrious predecessors for a hundred years, in following as they thought the mandates of the Constitution, had never failed to communicate to Congress full information concerning all the Departments of the Government and our relations as a nation with other nations of the earth. This was done alike in times of prosperity and commercial depression, during the many years of peace that blessed our land and in the darkest days of all our wars. But at almost the end of the third year of its existence this Administration has but one matter worthy of giving information about. The message to the present Congress refers alone "to the amount of money exacted" from those who import foreign goods into our country, and which is accumulating in the Treasury to an amount which exceeds the sum "necessary to meet the expenses of the Government."

This is a full statement of the substance and facts of the communication, if we omit the very brief reference made to moneys going into the Treasury from internal taxes levied on tobacco and liquors, and about which taxation the President says "there appears to be no just complaint."

We have, therefore, before us in considering this message the single question of protection by the imposition of tariff duties. I am not unmindful of the great importance of this question, and how intimately connected it is with the welfare of all our people and the prosperity of the whole country. But as the subject is not a new one and has been under discussion and consideration at almost every session of Congress, from the administration of Washington to Arthur, I am the more surprised that the present Executive considered it the only question necessary to give information about.

We seek in vain for any condition of affairs, either in the commercial business of the country or in the national Treasury, to justify the singling out of this one question for a message. It is true there is a surplus in the Treasury beyond an amount needed for current expenditures. But the Government is still in debt and previous administrations, without any additional legislation, had made use of much larger sums in a most satisfactory manner in payment of the liabilities of the Government. Our tariff laws, under which the money is being paid into the Treasury, have been on the statute-book for many years, during

which time the country made great advances in wealth and population and the people enjoyed unusual prosperity and happiness.

Mr. Chairman, there is but one meaning to be taken from the President's message. He is opposed to our system of protection and desires to see it abandoned, and that we shall adopt in the place of it a system of free trade. It is plain that the leaders of the party that elected him have determined on this new departure in politics, and that he and they are in accord on this subject.

The honorable gentleman from Kentucky [Mr. CARLISLE], who has for so long a time presided with great ability and fairness over the deliberations of this House, is a leading member of the President's party, and, as is well known, is on intimate, friendly terms with him.

The day before this message was received, he, on being re-elected Speaker, made an address which he himself characterized as "somewhat out of the usual course." In that address, as you will well remember, he fully anticipated the recommendations of the Executive and announced that he was ready for a change in our protective system.

Under our form of government the Speaker, by the authority given him to appoint committees and control the deliberations of the House, has more power to influence and determine legislation than any other man, not excepting even the President.

No one was therefore surprised, when the Speaker announced the committees of the House in the present Congress, to find that he had appointed a majority of the Committee of Ways and Means, to which all matters relating to revenue and protection must be referred, of gentlemen who were well known to be opposed to protection.

The result of the deliberations of that committee is the bill now under discussion, popularly known as the Mills tariff bill. This is the remedy for the evils set forth in the President's message. This is the new industrial policy Congress is asked to adopt—a policy not in the line of protection, but a new departure with free trade for its destination.

Mr. MCMILLIN. Does the gentleman regard the Morrill tariff act of 1861 as a free-trade tariff?

Mr. JACKSON. So far as its provisions are for protection, it can not be called a free-trade tariff.

Mr. MCMILLIN. That is not the question I asked. Do you regard the Morrill tariff act as a free-trade law?

Mr. JACKSON. Any tariff which embodies protection to the leading industries of the country, as the Morrill tariff acts do, can not be called free trade. It may not go as far in favor of protection as I would be inclined to go.

Mr. MCMILLIN. Then you do not say that that tariff act is a free-trade law?

Mr. JACKSON. Not in and of itself; it contains protective provisions.

Mr. MCMILLIN. Then if that was not a free-trade tariff how is it that the bill now pending in this House, which gives higher rates of duty than the Morrill tariff did, is a "free-trade bill?"

Mr. JACKSON. It is a free-trade bill because the men behind it propose to reduce the tariff. It is a free-trade bill for the very reason that its authors want to strike down our industries and are against protection, and have framed it with that end in view.

Mr. MCMILLIN. Then our opinion of a measure of this kind is to be formed not by an examination of the act itself, but by observing the men who are behind it?

Mr. JACKSON. We may learn much of the purpose of legislation in this way. The gentleman and I do not seem to understand the Morrill tariff bill alike. I am quite sure it protected many things this bill puts on the free-list. I think it has been denounced here within two weeks by advocates of the Mills bill as a high-tariff bill. But it is not so important what other bills have been as what is the present bill.

We can all understand how a tariff passed at one period of time might greatly increase prior duties and thus be a tariff for protection, and the same rate of duty twenty or thirty years afterward might lower the then existing rates and be in the direction of free trade. You have avowed here the policy that you propose of cutting down duties. You say you are opposed to the whole theory of a tariff for protection. You expect eventually to dispose of all of it, I have no doubt. One of your leading speakers here, when interrogated on this point, said it would not do to go all the way now. Another said, if protectionists are not content with this bill, they will get one millions worse for them in another year. That is your purpose; you go now as far as you possibly can, and call it only a step in the right direction. [Applause on the Republican side.]

By this bill a distinct issue is made up that the people must finally determine. It is free trade against protection, and no amount of sophistry or declamations by the advocates of the Mills bill can change this. Let the Democratic party whose President and leaders have given us this measure stand up and meet the issue squarely. I know that in the debate on this floor advocates of the bill deny that it is a free-trade measure. This is done from motives of policy to reconcile the people to its passage, but such statements ought not to deceive any one. Every free-trader in Congress is its friend and advocate, and every free-trader out of Congress, so far as heard from, urges its passage.

The gentleman from Kentucky [Mr. MCCREARY], who is so ardent a free-trader that he speaks of the American system of protection as a "hobby" by which legislation has "been controlled to the prejudice of the people," says this bill is "not all he wants, but that it is a movement in the right direction." Then he at once proceeds to eulogize the bill and enumerate the blessings that he thinks will follow from putting wool and many other articles on the free-list. He says that under this bill, however, the contest is not between protection and free trade, but between a high tariff and a reasonable tariff.

If, then, this bill which threatens so many industries of our country with injury is still a reasonable tariff, and only a movement in what he calls the right direction, I should like to know if the next step in that direction will not land us in full and absolute free trade?

Mr. Chairman, so far as I recollect not a single advocate of this bill upon this floor has announced himself as being in favor of a tariff for protection, and most of them take trouble to say they are not. For different reasons they generally reluctantly concede that we must, for the present, have some kind of a tariff bill. They will allow one for revenue only, and I believe the gentleman from South Carolina gave as a reason for the Mills bill not going further in direction of free trade that it would not do to destroy certain industries. None of them go further than to favor a tariff for revenue only. Then their President says we do not need any revenue, and it follows logically that we shall have free trade just as soon as their party is able to force it upon the country.

The animus and feeling of these gentlemen toward the American system of protection is well shown in the extreme and harsh language in which they are accustomed to speak of it, as "robbery, oppression, injustice;" "taxes wrung from the poor," and such like expressions.

Mr. Chairman, it is well known that England is the great champion of free trade, and has long desired that our tariff laws should be repealed that she might fill our markets with her goods, manufactured with her poorly paid labor. Let us see whether her people consider the President's message and the Mills bill as a movement in the direction of free trade, and whether they think that free trade is the policy of the leaders of the Democratic party.

I quote a few extracts from her leading papers of recent date:

[From the Saturday Review.]

It may be taken for granted that the President has not acted without previously consulting the leaders of the Democratic party and securing their approval. He and they have taken up again the old free-trade policy of the South Carolina politicians, unconnected with what, in the jargon of American politics, was called the sectional question.

[From the People's Journal, Dundee.]

A great sensation has been created by President Cleveland's message, and if the policy which it indicates be carried out it will produce almost as much effect in this country as in America. The tariff reform which the President recommends goes as far, at least, as the abolition or reduction of the duties on raw materials. Should Congress give effect to this proposal, its immediate result would be an enormous stimulus to English industry.

[From the Haddingtonshire (Scotland) Courier.]

This much is certain, that another fierce contest is pending in America over the principle at issue. If it terminates, as it may be hoped it will do, in the direction of a relaxation of those imposts that now so vexatiously hamper commercial intercourse between Great Britain and the United States, we may look to an impetus being given to our home trade that will go far to make up for the depression of late years.

[The London Iron and Steel Trades Journal.]

The facts set forth in the President's message, though by no means new, are now brought so prominently under the notice of the American Congress and of American citizens that a violent stimulus must be given to the party which advocates entire freedom of trade.

[From "A member of Parliament" by cable to the free-trade New York Herald.]

To convert the United States is indeed a triumph. The Cobden Club will henceforth set up a special shrine for the worship of President Cleveland, and send him all its publications gratis. Cobden founded free trade; Cleveland saved it. Such is the burden of the song all through England to-day.

THE DEATH-KNELL OF PROTECTION.

The New York representative of the London Daily News telegraphs: "Reports from Washington are increasingly favorable to the passage of the tariff-reform bill. It is to be reported to the House early this week, and its passage without material modification is now generally expected. The sentiment in favor of tariff reform is steadily growing in all parts of the country. A notable demonstration will be made here on April 13, when the Reform Club, organized after the message was published, will open the temporary club-house. Mr. James Russell Lowell has accepted an invitation to preside at a public meeting and make the principal speech. The club has over six hundred members. Its sudden growth is only one of many signs that American intelligence is at last awake. Nothing in American politics is more obvious than that Mr. Cleveland's message has sounded the death-knell of protection."

We find the foregoing in the Iron and Coal Trades Review, of London.

There is no doubt that the President's message is hailed with delight in England, for the very reason that it threatens destruction to American industries; and if English manufacturers had the power the Mills bill would soon become a law.

Mr. Chairman, I am opposed to the Mills bill. I am a protectionist; or, if you like the expression better, I am in favor of a high tariff to protect all the industries and labor of the people of the United States. The gentlemen who favor this bill want the opposite, and the opposite of what I have stated is free trade. Then, gentlemen, be candid, accept the name you ought to bear, and fight under your true standard. You can not long deceive the people of this country. Your policy means now, or very soon at farthest if you succeed, free trade; it means a change in our entire system of development, manufactures, and enterprise.

It is a proposition to govern our 60,000,000 people under ideas and theories which originated in the cotton States, and were born of a system of human slavery.

I desire to call the attention of the country to the fact that it is only because of the accidental success of the Democratic party that this bill is brought before us. I go further and say were it not that the Democratic party is, in its organization and officials, controlled and directed by that same section of the country to which I have referred, the old slave States, no one supposes we would have ever heard of the Mills bill.

Take from the Committee on Ways and Means the members that came from the old slave States, and this bill could not be reported to the House. Take from its supporters on this floor the members who come from the same States, and it could scarcely muster sufficient advocates to compel a calling of yeas and nays on its passage.

I regard this, Mr. Chairman, as a contest between two systems of labor and civilization as marked and well-defined as the contest between freedom and slavery. I had hoped that the new South we have heard so much about recently would have shown a disposition to abandon her old ideas, to diversify her industries, to develop her rich resources, to improve the condition of her laborers, and to enter upon an era of prosperity that only free and well-paid labor can give her. We have satisfactory evidence that many of her people do desire this, but unfortunately for her and for the whole country the politics of that section is controlled by a comparatively few, who stand by the old traditions.

For more than half a century the cotton-growing States have favored free trade. They have done this knowingly and expecting it to have the same effect upon the country that I believe it would have. They wanted and still want everything cheap and low priced in this country. They want to sell cotton abroad and buy everything cheap at home. They want cheap grain, cheap pork, cheap clothing, and cheap manufactured articles. They have always known as well as I do that that this means inevitably cheap and poorly-paid labor. But they had slaves with "unrequited toil" and could more than compete with the pauper labor of Europe. Their slaves are gone, wrested from them by force, but I regret to have to say that there is not much evidence that the ruling classes of the South desire to have the laboring freedmen elevated much above their former condition.

I fear too many yet think the colored man will be easier managed and controlled if kept poor and humble on low wages. They do not comprehend or feel like the people of other sections of the country, that the prosperity of a nation depends on the prosperity of its laboring classes.

I regard the poorly-paid, degraded laborers of these States, whose toil is brought in close competition with all the labor of our country, as the greatest menace and danger we have to the rights of laboring men. If Mississippi had as intelligent, well-paid laborers as Ohio, she would have as few representatives in Congress favoring free trade. That cheap labor and free trade go hand in hand was well shown when the cotton-growing States undertook to found a confederacy whose corner-stone was based on human slavery. They at once placed in their constitution a section forbidding their congress to ever enact a tariff law for the protection of any industry in the so-called Confederate States. Their highest conception of a country was to make the South one vast plantation, dotted with huts for slaves, with here and there a mansion for the owner who owned and drove them.

Mr. Chairman, it is occasionally said that free trade is theoretically right, even if it is found to be practically wrong in its effects; but I am not willing to admit this proposition. All natural rights under a civilized government require the protection of positive laws. Governments are formed "to promote the general welfare," and I regard it as the first duty of a government to provide for the welfare of its own citizens. Self-preservation demands this, and Christianity inculcates the duty of first caring for those of our own household.

I recognize the duty of government to deal honestly and fairly with all nations, but the first and highest duty of Congress is to legislate so as to promote the welfare and best interests of the people of the United States.

I have also heard it said that the tariff is a local question, but I do not believe this is true. I consider it a national question, and one that can alone be defended on the broad ground of being for the general welfare. There is a plain, simple rule by which we should be guided in the enactment of tariff laws. It is this: Protect every industry and product of the United States that can by development be made to reasonably supply the people of the United States. Follow this maxim and you aid all, and the system of protection is national and a blessing to all the people. The protection of any one industry or product coming within the description I have given is a benefit to all, but we can only enjoy the full advantages of the system by making it general.

All necessary and useful articles that are not found or can not reasonably be produced in the United States sufficient to supply the demand should be admitted free, and if any one can point out any such articles not now on the free-list I will agree that they shall be put there.

Mr. HERBERT. Are you in favor of cutting down anything embraced in the present tariff?

Mr. JACKSON. I do not know of anything. If the gentleman will mention anything we can not produce here perhaps I may agree with him as to a reduction of duty. But I do not know anything under our present tariff that I would reduce.

Mr. HERBERT. I can not tell you of anything that you are in favor of cutting down. I do not believe your party intend to relieve the country of tariff taxation in any respect, notwithstanding they stand pledged to it in their platform.

Mr. JACKSON. I have given you my rule. If there be anything that we can not produce in this country in sufficient quantities to meet our reasonable needs I will agree to reduce the tariff on such an article or put it upon the free-list. But the free-list is now very large. For years the Republican party searched carefully for articles that might go on the free-list without injury to our own industries. The Republican party never pledged itself to a reduction of tariff. It promises when it gets again full control of the Government to revise the tariff so as to lessen the income from tariff. But with very few exceptions it will do this by making the tariff higher and by protecting some industries that are now neglected.

Mr. HERBERT. I wish you would tell me of something as to which you favor a reduction.

Mr. JACKSON. At present I can not name anything. Lower duties, it is well known, increase imports, and would of course increase the money in the Treasury. You say you do not want that. But lower duties also mean the injury of our own industries, and I am opposed to that. It is the free-trade men who are trying to strike down these duties; I am on the other side. [Applause on the Republican side.]

Mr. HERBERT. That is your proper place.

Mr. McMILLIN. You think, then, that there should be no reduction in cottons that bear a 200 per cent. duty?

Mr. JACKSON. No, sir; I do not.

Mr. McMILLIN. Why not?

Mr. JACKSON. Because I think that competition here will give us cotton goods as cheap as they ought to be, and that we ought to make all our own cotton in this country. [Applause on the Republican side.] I am opposed to the theory of economics that sets up as a standard for a workman the old slave labor of the cotton-field in this country, and can not look beyond that. I want when we legislate to think of the laborer as an intelligent citizen, a skillful mechanic, and a prosperous farmer. I want when we legislate to keep in view the fact that our laborers are skillful enough to make anything we need, and that they are deserving of good enough pay to support themselves and families in comfort. That whilst there are no cotton-mills in my immediate neighborhood, it is an industry important to other portions of the country.

Mr. McMILLIN. Does the gentleman know the fact that according to the census report the entire labor cost in cotton goods is but 16⅔ per cent. in price; and does he think that the Government ought to grant a subsidy of 50 to 200 per cent. to protect that?

Mr. JACKSON. Yes, sir; I think the duty in that respect is exactly right, and why? Because I want to keep every yard of foreign-made cotton out of the United States. [Applause on the Republican side.] I want our own people to make every yard that we use.

Mr. McMILLIN. Then, after all, your consideration and anxiety do not seem to be so much for the laboring man, and your party's protest is not true?

Mr. JACKSON. Ah! I do not say that. I say it is true. Labor gets by far the greater part of the advantages of protection in this country. It gets this because the principal cost of every manufactured article is the toil of the laborers who produce it, and I want them to have every fair advantage that can be given to them by law. [Applause.]

Mr. McMILLIN. Then you ought to be willing to make a fairer division of the profits.

Mr. JACKSON. Mr. Chairman, to follow up somewhat my answer to the gentleman from Tennessee [Mr. McMILLIN], who said that there was only 7 per cent. of labor in the manufacture of cotton——

Mr. McMILLIN. I did not state that.

A MEMBER. Sixteen per cent.

Mr. JACKSON. Sixteen per cent., was it?

Mr. McMILLIN. In some grades 16, and in none over 20. In woolens the percentage is 16 and a fraction. In some classes of iron it is from 20 to 22 per cent., and in no class of cotton goods, according to the report of Mr. Seaton as I now remember it, does the proportion exceed 20 per cent., although we are called upon to give 50 per cent. protection.

Mr. JACKSON. Again I am compelled to differ with the gentleman as to the facts. He seems to have some system of cheap labor where they manufacture at small cost as to labor. I think there is a much larger part of the cost of manufacturing cotton goods attributable to labor than he does.

Does the gentleman think Mr. Edward Atkinson is a man of repute as a statistician?

Mr. McMILLIN. Mr. Atkinson is a great statistician, but I give my statistics from the official report made by Mr. Seaton as Superintendent of the Census, and I give them for the census year 1880.

Mr. JACKSON. Then I will give you what Mr. Atkinson says on this subject.

Mr. Atkinson says, in his Margin of Profits, page 23, that of the $1,100,000 of product of a cotton-mill the division of the proceeds of the product would be substantially as follows: 91.62 per cent. goes to the laborer, 7 per cent. to the owners, and 1.38 per cent. to the payment of taxes.

Mr. McMILLIN. I spoke of the entire labor cost. I did not propose to follow it any farther, and did not do so; but what the gentleman gives there is the profit.

Mr. JACKSON. No; the gentleman is mistaken. It is the proceeds of the product. I give the quotation as I find it, and the authority is a good one the gentleman has admitted.

Mr. Chairman, I have no doubt that in the old cotton-growing States, and possibly in some portions of the State the gentleman represents, you can find people who still cling to the opinion that wages had better be low, because a laborer is easier managed when poor than when well paid and in good condition.

Mr. McMILLIN. That is because my friend does not know anything about it.

Mr. JACKSON. Well, I claim to know something about it. I have been through your country as often as you have been in mine.

Mr. McMILLIN. Hardly, perhaps, for I have been in the gentleman's town.

Mr. JACKSON. And I have been in the gentleman's part of the country, and more than once. [Laughter and applause on the Republican side.] I think I am pretty well acquainted with the State of Tennessee; at least I crossed it in a good many directions, and spent considerable time in it.

Mr. Chairman, the trouble with the gentlemen on the other side is they think it will be best for them to have almost everything cheap. They want cheap cotton; no, I will take that back; they do not want cheap cotton, nor do they want rice and sugar cheap. But right there they draw the line. They would like to have bacon low in price. They want pork and all kinds of grain low, for they need to buy it. They do not raise sufficient of these things for themselves, and they want to get what other people raise at the lowest possible figure. They have but little to sell except cotton, rice, and sugar raised by cheap and poorly paid labor. They do not expect to be able to manufacture iron, nails, glass, and such things, and of course they would like to buy them cheap. They want to get them at the least possible cost, and hence it is we find them taking the ground they do here.

Mr. McMILLIN. I know my friend from Pennsylvania would not misrepresent facts if he knew it.

Mr. JACKSON. Certainly not. But does the gentleman deny the statements I have made?

Mr. McMILLIN. Does the gentleman not know that my State is making pig-iron and selling pig-iron in Pittsburgh by the thousands of tons? Did he know that fact when he spoke of our not manufacturing iron?

Mr. JACKSON. Certainly. I know that portions of Tennessee and several other of the old slave States have latterly made great advances in the way of manufactures. In my own town at home the hot-blasts, ovens, and stationary engines for a large number of furnaces have been made and sent into these States. It is also true that these furnaces can supply Pittsburgh market with some grades of iron.

But all that is yet done rather proves these sections an exception to the rule. And I would remind my friend that it is these enterprising localities alone of all the South that favor protection.

Mr. McMILLIN. Well, then, you knew the fact when you stated that we were not making iron?

Mr. JACKSON. The gentleman knows very well that my statement is correct; that the old slave States, especially the cotton-growing States, never made any pretense of engaging in manufacturing; that with but few exceptions their representatives during this debate have said they are still agricultural States; that they give this as a reason why they are opposed to protection.

The manufacturing to which the gentleman refers is not yet large enough to make any great change in their character. I have also an impression that it is mostly done by Northern capital, and not by native citizens.

Mr. McMILLIN. I say it is. Our people are making it themselves. There are Tennessee people engaged in it, making it of Tennessee ore with Tennessee capital.

Mr. JACKSON. Well, are not those men in favor of protection?

Mr. McMILLIN. Some are; some are not. They have their own opinions about it.

Mr. JACKSON. Mr. Chairman, the advantages of protection are twofold. First, it encourages the development of our own resources, and gives a diversity of employment to our own people. Second, it preserves our markets from the foreign competition of poorly paid labor, and enables our own labor to secure better wages and more steady employment. I consider that the preservation of our own markets for our own people is now the most important question that can come before Congress.

To give a foreigner who pays neither taxes nor wages in this country the same right to sell in our markets that we give the man who builds his works in our own country, pays taxes to the town, the county, and the State, and pays wages to people here, is unfair and unjust to our own citizens.

That all portions of our country have not fully accepted the advantages of protection is the fault of the people and not of the system. It is a matter of history beyond dispute that it has only been by the aid of protection that our manufacturing industries have been built up. By manufactures the nation has been made stronger, and millions of our people have been given employment at good wages and made happier.

Without manufactures we would be a nation of agriculturists, selling only grain and raw materials to Europe at low prices, and buying wares and merchandise from foreigners at high prices. No nation can be strong and independent that does not have a large diversity of employment for its people. This is so apparent that a marked difference can be seen in our own country between different localities in that respect. Land is more valuable and farming pays better where there are manufacturing establishments near than where there are not. Every one knows that the building of a shop, a factory, or a furnace in a neighborhood adds at once to the value of the property in it, and gives every man, no matter what his trade or business may be, a better chance to make a living.

There are no stronger advocates of protection in Pennsylvania to-day than the farmers, mechanics, and others not directly engaged in manufacturing pursuits. The farmer and gardener knows that his best purchasers are the employés of the mills and factories. The mechanic knows he gets the best wages and most certain employment where manufacturing is most flourishing. The professional man, the laborer, and the tradesman know that their pay and income depend very largely on the men in the mills, works, and factories getting good wages. All are bound together by a common interest, and each contributes to the prosperity of the other.

The friends of this free-trade bill in all their speeches on this floor have insisted that protection only benefits the capitalist and owners of the factories, and that the employés and all other citizens get no good from it, and are in fact opposed to it. How often have we heard it asserted here in the last two weeks that protection does not raise wages. The men who make these assertions, if sincere, are entirely mistaken. They are certainly not much acquainted with the class of laborers that live in the manufacturing portions of our country.

The Congressional district, composed of the counties of Beaver, Lawrence, and Washington, in the State of Pennsylvania, which I have the honor to represent on this floor, has within its bounds probably a larger number and greater variety of interests than can be found elsewhere in the same amount of territory in this country or in any other. It has a mild and healthy climate, is well supplied with railroads, good water, and a fertile soil, and has the Ohio and Monongahela Rivers for transportation. More wheat, corn, oats, potatoes, apples, peaches, small fruits, dairy products, grass, and vegetables are raised than are consumed by all the inhabitants, including the towns and cities. It has for years furnished fine and thoroughbred sheep, cattle, hogs, and horses to many of the States in the Union, and has in a single year grown over 4,000,000 pounds of wool. It is rich in minerals, such as coal iron ore, and limestone, furnishing the larger part of the limestone for the blast-furnaces of Pittsburgh and the Shenango and Mahoning valleys, and ships immense quantities of coal by boat and barge down the Ohio River and by rail to the Great Lakes. It has one of the greatest oil fields in the world; and no territory for supplying natural gas for fuel has been discovered superior to it. The amount of its production of pig-metal, bar and sheet iron, nails, steel, and glass is only exceeded by a few districts.

It has manufactories of steam-engines and other machinery, saws, stoves, pottery, fire-brick, tumblers, cutlery, flax, twine, plows, chains, shovels, and other industries such as are generally associated with these, many of them extensive works and all worthy of mention. It has five colleges, a large number of select schools and academies; a good system of public schools; is well supplied with churches, and publishes twenty weekly and five daily newspapers. The citizens are to a large extent native-born, many of the farms having been in the same family for three or four generations, and an unusually large number of the workmen about the mills and factories own their homes. Most of the manufactories I have named have been established for from fifteen to twenty-five years, and quite a number of them much longer. The schools, colleges, and churches were established at an early day, and it is no exaggeration to say that the people in point of morals and intelligence will compare favorably with those of any part of the country. Those who have come there from a distance seeking homes and employment have generally been intelligent, skilled workmen, who have made the best of citizens.

Mr. Chairman, I have made these statements for the purpose of showing that if it were true that protection is only a benefit to the owners of factories and mills, it is probable that the thousands of laborers of the Twenty-fourth Pennsylvania district would know it; that if the tariff robs and oppresses the farmer that that community ought to have discovered it; that if labor gets no advantage in increased wages by

it, the men I have described would likely be heard from on the subject.

Yes, Mr. Chairman, the laboring men of my district are the kind of men to make themselves heard when their rights are being interfered with. And I say to you if the Ways and Means Committee had given the people of my district an opportunity to be heard before them all classes would have protested against the passage of the Mills bill. The Amalgamated Association of Iron and Steel Workers would have sent men of their own number here, intelligent, well-informed men, men who could have debated these questions the equal of any man on this floor. They would have demanded a tariff for protection against the pauper labor of Europe, one that would secure them a fair day's pay for a fair day's work. The glass-workers would have sent men here who would have informed you that the tariff on window-glass was now so low that one-fourth of the window-glass used in the United States was imported, when we had men and materials sufficient to make it all at home. They would have told you that since the reduction of the tariff in 1883 they have been compelled to work at low wages. They would also have told you that if the proposed Mills bill, still further reducing the tariff, should become a law, with the low wages in Europe, and the cheapness of ocean freights, there will be no other alternative for the American workman but to accept a reduction in wages or surrender our own markets to the goods imported from abroad.

Men from the numerous other factories, works, and shops would have sent representatives here who, without a dissenting voice, would have protested against the passage of this bill. The wool-growers and sheep-breeders of my district would have shown by conclusive arguments the surpreme folly of putting wool on the free-list. The men who are now making a good living and supporting their families by their labor in the twine and flax mills would have informed you that this bill would deprive them of their occupations and compel them to seek other employment.

The farmers through their associations would have informed you that this was a move in the wrong direction, and would work them irreparable harm. But, Mr. Chairman, hearings, as you well know, were denied the men most interested and most affected by this bill. I was compelled to inform these people that contrary to past practice and custom the Ways and Means Committee refused to hear them. Why was this, Mr. Chairman? There can be but one answer. The President and leaders of the Democratic party had determined in advance to make this move in the direction of free trade. They did not want to hear this bill discussed by men opposed to it, and least of all did they want to hear from the people most affected by it.

The citizens of my district, denied an open hearing before the committee having this bill in charge, availed themselves of their constitutional right, and have petitioned against its passage.

All classes and callings have by numerous petitions presented their protest against this bill. I have, as you well know, from time to time presented these petitions to Congress.

Mr. McMILLIN. Yes, I believe I recognized the gentleman for that purpose.

Mr. JACKSON. I acknowledge the courtesy with which I have always been treated by my friend from Tennessee when he occupies the Speaker's chair, as well as his uniform fairness at all other times.

Mr. Chairman, here again I call the attention of members to these petitions, believing they represent the sentiment of the whole people of my district. I say the whole people, for, outside of a few men whom Government patronage may control, with us it is not a party question, and it ought not to be anywhere. No speaker of any party has ever advocated in my district the free-trade principles of this bill. In the very last Presidential campaign the burden of Democratic speakers was trying to prove to our people that the Democratic party was as much in favor of protection as the Republican party. They quoted the public writings of Presidents Jefferson, Madison, Monroe, and Jackson, all in favor of protection; and as these distinguished men have the reputation in our country of having been Democrats, I think they made out a pretty good case. They could do more; they had a way of reading and inflecting Democratic platforms that they seemed to at least favor protection, or, in fact, rather inclined to the high tariff and war taxes that our friends on the other side have such a dread of.

But the decree has gone forth from those who are to-day the real masters of the party that Democrats must support the free-trade bill, willing or unwilling. As the gentleman from Missouri [Mr. HATCH] says every Democratic knee must bow to the bill; and I await with some anxiety to see what Democratic speakers will say in Pennsylvania this fall. I have no doubt the plan of 1884 to deceive the people will be again attempted. In fact, it is already openly avowed as the policy in leading Democratic papers, as will appear by the following extract which I will ask the Clerk to read.

The Clerk read as follows:

THE DEMOCRATIC SITUATION.

[From the Atlanta Constitution.]

President Cleveland is the inevitable—indeed, as matters now stand, the only possible—candidate of the Democratic party in 1888. In his person, his prestige, his ability, and his record are to be found the elements of victory in the coming campaign. And they are to be found nowhere else.

He will be nominated by the Democratic convention not in response to his own seeking, but through the clear and admitted necessities of the party. This being true, he should undoubtedly have the power to dictate the platform upon which he makes the race thus forced on him. No thoughtful Democrat will press his personal views to the embarrassment of a convention that has so narrow and plain a duty, or a candidate who must take the brunt of the battle or desert his colors.

The Constitution disagrees with the tariff policy laid down by the President in his message. We do not believe there is sound, economic, or political sense beneath it. It endangers success in New York, New Jersey, and Connecticut, where success was certain, and lends only the highest hope for gains in Minnesota and Wisconsin, where success is hardly possible under any circumstances. It will check, if it does not permanently stop, the industrial growth of the South, without which the South can never have even or general prosperity. These are our views earnestly and profoundly held. Whenever and wherever there is opportunity to promote them without endangering more essential interests we shall give all that in us lies to their promotion. But if by a single word we could convert the Georgia Democracy to our views on the tariff we should decline to do so. To send the Democracy of any State into the national convention with instructions sharply dissenting from the expressed and emphatic views of the only possible standard-bearer would be to embarrass the party and to send it into the next important political campaign of our history torn and divided. What is good in our convictions on the tariff will strengthen with time, and, we very much fear, will be evolved from political disaster or wrought in national panic. In the mean time, as always, these opinions are subordinated to the clear necessity of party union and enthusiasm. When President Cleveland, wisely or unwisely, wrote his tariff message the Democratic party was committed beyond recall, for this campaign at least, to the views therein expressed. We shall not, though inducements to do so multiply, breed factional bitterness out of personal pride of opinion.

The free-trade New York World stated four years ago that Mr. Samuel J. Randall saved New York to the Democratic party; that it was his personal influence and speeches that brought victory out of disaster. Mr. Randall performed this duty earnestly and heroically at the beseeching of the national committee, which had taken the former precaution of keeping Watterson, Morrison, and their crowd carefully out of New York. He will be called on to bear the brunt of battle again this fall in the great central field of New York, New Jersey, and Connecticut, where the issue must be lost or won And he will do it while the men who have denounced him as an ally of the Republicans will be lying low in the swamps and by-ways with the hope of repairing by absence and silence the ruin they have invoked.

Mr. JACKSON. Mr. Chairman, I can not at this time point out all of the particular provisions of this bill that I consider wrong. When it is taken up for consideration by sections I hope to avail myself of the opportunity to speak farther in that direction. There are some features of the bill, however, that with your indulgence I desire at this time to call attention to.

WOOL.

So far as the great wool industry of the country is concerned the Mills bill is not a movement towards but has actually reached absolute free trade and, wool is placed on the free-list. That free wool means the practical destruction of that industry, and that sheep-raising and wool-growing will be abandoned in most of our States and Territories is so apparent and has so often been demonstrated it needs no argument. No nation can be independent and prosperous that does not raise its own clothing. Woolen clothing is a necessity to the health and comfort of our people in peace, and essential to our defense in time of war. We can all remember that in 1861, at the breaking out of war, woolen clothing and blankets were in as much demand by the Government as guns and ammunition, and almost as hard to get. Our country is well adapted to this industry, and with proper protection we can readily grow all the wool we need. Yet here is a bill that deliberately proposes that we shall make ourselves dependent on foreign nations at all times for our supply, and also it must be remembered at prices to be fixed by them after our own people are driven out of the business. In time of war, with the ocean in control of our enemies, this would be a calamity. In peace it would operate as a hardship and injury to all the people of the country as must readily appear from an examination of the facts. There are over one million persons in the United States engaged in sheep husbandry, either as owners or masters of flocks. No important industry of the country is so evenly and generally distributed throughout the States and Territories. The very fact that it is so distributed, whilst it is a strong argument in favor of its protection, renders united action on the part of wool-growers more difficult, and is, I have no doubt, the principal reason why free-traders have selected it as one of the first industries to be doomed to destruction. They consider that wool-growers are so evenly distributed through the country that they can not have many representatives in Congress specially interested in their welfare, and that having few friends they can afford to make this attack. The gentlemen who in the last two weeks on this floor have so freely denounced the wool-growers of this country, and have spoken of their industry so often in jest, will allow me to say to them that the wool-growers of this country are an intelligent and very independent body of men. There is coming a time when they will be heard. A million of such men smarting under the wrongs of a Mills free-trade bill may yet determine the election of a President and a majority in this House who will pay more respect to their interests.

Wool-growing in the United States can not be made fairly profitable in open competition with Australia, South America, and some other countries. The cheap lands, mild climate, and especially the cheap labor of those countries enable them to raise wool much cheaper than we can, and if our markets are left free and open to them, they can flood them with wool at prices that will drive our own people out of the business.

The importance of protecting this industry was recognized by the framers of our Government, and among the very earliest acts passed

by Congress was one levying an import duty on foreign wool, both recommended and approved by Washington himself. This friendly legislation was of great use, and sheep soon increased in number, and from year to year additional attention was given to their breeding, herding, and care.

Congress from time to time passed different laws protecting this industry, varying it with an occasional unfriendly act that did great harm.

The tariff act of 1867 was the most favorable to sheep-raising of any that has been placed on the statute-book. Acting under its beneficent provisions, and relying on the expectation of its being permanent, great attention was given to this industry. The business prospered as it had never done before except under the stimulus of war prices.

The revision of the tariff in 1883 took away a part of the protection from wool, and since then this industry has been on the decline. Many men have already sacrificed their flocks and abandoned the business.

The repeal of the act of 1867 was unjust to the men who, relying upon it, had invested their time and money in sheep-raising, was bad policy for the Government, as it crippled the industry, and in the long run a great injury to the people.

Free wool would no doubt at first make wool cheaper in the United States, but it would be but a short time until sheep-raising would be practically and generally abandoned in the United States; then foreigners, having control of the market, would put up prices to suit themselves, and in a few years, even in peace, we would pay dearer for wool than if we sustained the industry among ourselves by protection. The abandonment of sheep-raising means a loss of the flesh for food, and higher prices for other kinds of meat, and worse living for all the laboring people of our country. It is a great mistake to suppose that sheep-raising and wool-growing is an industry that can readily be taken up again if once abandoned. There is no industry, not even the finest and most delicate manufacture, that requires more special care and special facilities for its success. Sheep require the tender care of the shepherd, and great outlay of money in buildings for their shelter that can not be used for any other purpose. But more than all, it has taken long years of the most careful experiment and breeding to produce the flocks we now have. Wool is not raw material. No one ever heard of a flock of Merinos, Southdowns, or Black tops in a natural state. Nature gave us the little Mexican ewes and the kind of sheep owned by the Hottentots in Africa. But it has taken a hundred years of the most expensive and careful breeding to advance the breeds of sheep from the common variety we had here in the time of the Revolution to the fine breeds now owned in Pennsylvania, Ohio, and Vermont.

Pass this free-trade bill and send the flocks we now have to the slaughter-pen, as it certainly would, and I assure you that it will take the full time of a generation of protection to put the industry in the condition it is in to-day in this country. On the other hand, what are we to gain by putting wool on the free-list? We are told it is to give our manufacturers cheap wool from abroad so they can manufacture and sell to foreigners. The manufacturers know there is nothing in this and do not want free wool as they informed the Treasury Department of this administration in reply to a letter sent them. They understand very well that with wool free we can not get it any cheaper than other countries, and before we can manufacture and sell abroad we must reduce the wages of our laborers below what they are paid in foreign countries. More than that, most of the countries abroad have protective tariffs, and we would need to put our labor still lower so we could afford to pay the tariff and still undersell foreigners at their own homes after we have paid for bringing the wool here and also for sending the manufactured articles abroad. We have free cotton, raise it at home, yet foreign countries buy our cotton, and with their cheap labor can manufacture and sell cheaper than we can, and the result is they almost monopolize the foreign markets in cotton goods, and we only export about 5 per cent. of what we manufacture, and actually import more than we export even with our protective tariff.

After the President's message was sent to Congress the buyers and growers of wool met in convention at Washington and mutually agreed that wool should be protected. They published together an address protesting against putting wool on the free-list, and indignantly repudiated the reason given by the President for recommending that is should be done. I take the following statistics as collected by associations of wool-growers and manufacturers:

In 1880 there were 1,020,728 owners of flocks of sheep in this country. Their flocks were valued at $119,902,706, and their other investments in property required in their industry at $408,291,200. The change in the tariff laws made in 1883 has reduced by 5,867,312 the number of sheep; whereas, on the basis of increase under the tariff of 1867, there should have been an increase of 6,000,000. This, then, makes a loss to the country of about 12,000,000 sheep, and a loss of wool of 48,000,000 pounds, worth $14,000,000. In 1882, the year before the existing tariff went into effect, the imports of wool were $67,861,744. In 1887 they were $114,038,030, an increase of $46,176,286, when under fair protection there would have been a decrease of $40,000,000.

Under efficient protection the production of wool rose from 60,000,000 pounds in 1860 to 308,000,000 pounds in 1884, the year after the change of duty. It has since declined to 285,000,000 pounds in 1886, and according to estimates of the Agricultural Bureau to 265,000,000 pounds in 1887. Meanwhile the stocks of domestic wool unsold at the close of 1887 are greatly increased; 31,974,000 pounds are on hand, an increase of 6,620,157 pounds at Boston alone. To the mischief done by reduced duty there is added, first, the great fraudulent importation of Donskoi and other washed wool, under pretense that it is unwashed, a systematic fraud by which the United States consul at Odessa reports to the State Department that the Government has been defrauded for years, and of more than $15,000,000 in duties. Each pound of foreign wool thus fraudulently imported, already scoured and shrunken, takes the place of two to four pounds of American wool in natural condition.

The wool-growers have especial reasons at this time to appeal to their brother farmers for support. At a time when their industry is depressed as it hardly ever has been before by foreign competition, permitted by a reduction of duties in 1883, by Treasury rulings since, and by systematic frauds in foreign ports, the President proposes in his annual message the repeal of all duties on wool.

From these facts we can see what a loss the country sustained by the reduction of the tariff in 1883, and can estimate what is in store for the wool-growers when all protection is removed. Instead of putting wool on the free-list we ought as an act of justice and good policy to restore the tariff of 1867. We ought to legislate so that the million flock-masters should be able to continue in their honest calling, instead of forcing them to seek other industries which are already overcrowded. Better encourage our people to raise all the wool we need than force all farmers to raise grain, of which there is already more raised than can find good markets at fair prices.

FLAX AND HEMP.

The linen industry of the United States is small to what it should be, but it is safe to say that the passage of the Mills bill will practically end it, and close all the factories, unless it may be a very few on the seaboard. By this bill flax, hemp, and kindred fibers are placed on the free-list, and duties on manufactured articles are greatly reduced. Much of our country is well adapted to the raising of flax and hemp for fiber, and we ought to raise and manufacture all we use. This industry never has been adequately protected; it is not now in a prosperous condition, and it goes without saying that with the passage of this bill it will be abandoned.

In 1885 we produced 12,000,000 bushels of flax-seed. The fiber of this seed, amounting to 150,000 tons, and that ought to have been worth to the farmers $34,000,000, was burned up. Why, do you ask? Because it requires a large amount of skilled labor to treat the fiber and manufacture it, and without protection sufficient wages can not be paid to obtain it. Here is an industry that if protected should give employment to thousands of skilled laborers and would enable the farmers of the West, and especially the Northwest, to farm their lands with more profit than they can in wheat and corn.

There is in my district an establishment for the manufacture of twine and yarns from American hemp and flax, commenced on a small scale many years since, and enlarged from time to time until it now employs 200 hands. The workmen get good wages, are a contented and happy community, most of the men with families, owning their homes. But I say to you that the bare possibility of the passage of this bill is regarded by both owners and operatives of this mill with dread and apprehension. They very well know that if it becomes law the mill must stop and they must seek other employment, they know not what; that it will utterly ruin their business, and that under its effect not a pound of flax or hemp will be grown in the United States; that 200 hands will be thrown out of employment, and the savings of two generations invested in buildings and machinery would be rendered worthless. I give this as one of many instances that might be cited in different parts of the country of the evil effects of this free-trade legislation.

To manufacture linseed or flax-seed oil there are over eighty mills in the United States, mostly in the Western States, representing an investment of over $5,000,000. This bill puts flax-seed oil on the free-list, and England can manufacture oil from seed obtained in the East Indies and sell it here so low that all our own mills will be driven out of the markets and our farmers must abandon the cultivation of flax for the seed.

Our free-trade friends delight to quote England as an example, and I will call their attention to something they are not likely to speak about. England protected and encouraged her flax and linen industries by bounties and tariffs far higher than any one ever asked in this country. The British Government published in 1783 a volume of some three hundred pages, entitled "A Collection of the Acts of Parliament now in force relating to the Linen Manufacture." Among the laws therein contained I find the following: One passed in 1743, granting additional duties on cambrics imported, and allowing a bounty on linens exported; one in 1745, allowing additional bounties on linens exported; in 1748, one prohibiting the wearing and importation of foreign cambrics and lawns; in 1750, one containing bounties on exportations of linen and appropriating money to pay the same; still later, an act granting the king additional duties on linens imported, and to establish a fund for encouraging the raising and dressing of flax and hemp.

As an example of the purpose of these acts, which are numerous, I quote the preamble of a few of them. One is as follows:

Whereas the advancement of the linen and hempen manufactures in that part of the United Kingdom called Scotland (which are now under great discouragements) will not only employ great numbers of poor, but will be a general good to the United Kingdom by adding to the wealth of the realm.

Another is:

Whereas the encouragement of the cultivation of hemp in the Kingdom of Ireland, and the importation thereof from thence, will be a means of furnishing this Kingdom with sail-cloth and cordage, so essentially necessary for the supply of His Majesty's royal navy, as well as for ships employed in the merchant

service, and be a means of introducing trade, manufacture, and industry by employing many of His Majesty's subjects: Therefore,

Be it enacted, etc.

This is as good protection doctrine as I want, and I commend it to the gentlemen on the other side. As a further illustration I quote from a historical paper on the subject, prepared by Mr. Abram Bentley, of Pennsylvania, the following:

ENGLAND'S PROTECTIVE LEGISLATION.

As early as the reign of Ethelred the idea of protection was entertained and certain laws were enacted providing for payment of customs on imports, either in money or in part of the cargo. The German merchants of that time, "worthy of being treated with favor," were not only required to pay "dues," but "were not to forst all the market to the prejudice of the citizens."

From the most ancient record, which presents a general view of the foreign trade of England, the amount of customs in 1254 is shown to be a little more than $400,000 of our money.

Of these imports mentioned, woolen cloth constituted a very considerable part, and was required to pay the heavy duty of £6 per piece, containing from 40 to 60 yards each.

An act of Parliament made in 1504 regulated the importation of silk and its manufacture. All persons were prohibited from bringing into the realm to be sold, "Any manner of silk wrought by itself, or with any other stuff, into ribbons, laces, girdles, cauls, or points."

Parliament enacted in 1678 that no French wine, brandy, linen, cloths, silks, salt, grapes, or other product or manufacture of the dominions of the King of France should be imported into any part of England; and that the importation or vending of any such French goods should be adjudged to be a common nuisance to this kingdom in general and to his majesty's subjects thereof.

In the earlier part of this period duties were imposed on foreign cambrics, linen imported from Russia, and French lawns, but finally the importing or wearing of such materials was entirely prohibited.

Before the revolution of 1688 there was little other than brown paper made in England. The war ensuing and duties being laid from time to time on foreign paper, it gave such an encouragement to the paper makers that most of them began to make white paper fit for writing and printing.

There is no doubt that a variety of resources strengthens the independence and unity of a people. A nation which would have peace and harmony, both at home and abroad, must adopt a policy which shall develop the infinitely various faculties of its people—the plow, the loom, and the anvil working together, each for the welfare of all others.

History proves that the nation which depends on the export of raw products and is dependent on other nations for its regular supplies of manufactured fabrics becomes a comparatively poor nation.

It is said that one cause of the prosperity of manufacturing industries in Great Britain, France, Germany, and other European countries is that they stand in no apprehension of unfriendly legislation from their respective governments; that they can arrange their plans for the future, knowing that before any laws will be passed affecting them the legislative bodies will consult and advise with the persons interested.

We do things rather differently in this country, where the greatest danger to an industry arises from the fact of Congress being in session. And it is even said that bills vitally affecting great industries of our country are sometimes referred to legislators not particularly acquainted with the subject, and who further qualify themselves for their duties by utterly refusing to hear suggestions from the parties most interested. It is a sad commentary on our legislation that all industries materially affected by this bill are without exception, so far as I know, protesting against its passage. And there is the further fact that this bill is principally advocated by members who represent districts that have little or no interest in those industries.

Mr. Chairman, if time permitted I could point out other industries than those I have already named, of great importance, that this bill will either greatly injure or entirely destroy. We ought to make all the window-glass we use, but since the reduction of the tariff in 1883 we import large quantities, and this bill proposes a further reduction that will make its manufacture at fair wages to the laborers an impossibility.

The establishment of plate-glass factories in this country in a few years broke up the foreign monopoly in that article; but this bill will again turn us over to their tender care. We have the material and the skilled labor ready to supply all the tin-plate needed in this country, but this bill puts it on the free-list for the benefit of British manufactures and to give their workmen employment whilst our own remain idle. We shall have in addition, under various pretexts, an importation of all kinds of sheet-iron free, which means the closing of every sheet-mill in the United States. So I might continue almost indefinitely, but I reserve the opportunity of calling further attention to other industries injuriously affected until the bill is taken up by sections.

The CHAIRMAN. The gentleman has only one minute of his time left.

Mr. JACKSON. I only wish to occupy a few minutes longer.

Mr. OWEN. I am entitled to the floor to follow the gentleman, and will yield out of my time whatever he may need to conclude his speech. You can take fifty-nine minutes out of my time, if you please.

Mr. JACKSON. I thank the gentleman and will occupy a part of the time he offers me, but do not expect to use it all.

PROTECTION TO LABOR.

Mr. JACKSON. Mr. Chairman, the principal part of the cost and the real value of every manufactured article is made up of the wages paid to produce it. Coal, iron-ore, and limestone in the ground are the raw materials and they cost nothing; they are the gift of the bountiful Creator of the universe. What makes the change?

They are uncovered, mined. and quarried by labor. By the strong arms and willing hands of labor they are wheeled, carted, and transported to the furnace. By labor the furnace is charged and heated, the mill is run, and the iron is puddled, rolled, and finished for market. You may follow this product from the crude metal, worth fifteen or twenty dollars per ton, through every change till it becomes the most useful bars, the finest steel, serviceable nails, or the most costly and delicate machinery, and it is labor that constitutes every change and every addition to the value of the article, and it is the man who bestows that labor who should receive and enjoy the fruits of it.

Mr. Chairman, there is one reason why we should have protection, that in my judgment is over and above all others, and it is that the laboring men of America may be saved from competition with the poorly-paid and pauper labor of Europe and Asia. We can not make iron, nails, glass, pottery, and machinery as cheap as foreign countries where labor is paid less than half, and in many cases less than one-fourth the wages paid to American laborers for the same class of work. Without speaking of the fearfully low wages of the starving millions of Asia that steam-ships, telegraphs and railways are even threatening to bring in competition with our people, there is sufficient in Europe to create the greatest alarm, when we contemplate the fact that free trade means eventually to reduce our mechanics and laborers, so far as wages and manner of living is concerned, to a level with those of other countries. Our Government, for the last twelve years or more, through its consuls, has from time to time collected and published statistics of foreign countries, showing the pay and condition of their laborers.

These facts are accessible to all and not to be disputed. From them I learn that to-day you will find in England her streets thronged with a badly fed, poorly clothed, and destitute people seeking a few hours' work to buy bread for hungry wives and children. In Germany, Italy, and Switzerland you will find women who are wives and mothers working with their husbands at the hardest and most laborious work in the fields, about furnaces, in quarries and mines, wheeling clay and stone at the merest pittance of wages. They are driven to this from necessity, to obtain sufficient food to keep them alive. The very last number (No. 89) of the consular reports published by our Government in February of this year, says that there is of late a great increase in the percentage of women that in Germany are compelled to work at industrial pursuits. From this work, which is largely a copy from the report of inspectors made to their own governments in Europe, I quote a few extracts for the purpose of showing that there is in those countries a large body of laborers ready and eager for the hardest kind of work at the very lowest wages—wages that will barely support life.

GERMANY.

The inspector for the Dresden district gives the following as the average wages paid in his district:

		Cents.
Hand-workmen	per hour	3¾ to 5
Factory operatives	do	5 to 7½
Female workers	do	2½ to 3½
Young persons, fourteen to sixteen years old	do	1½ to 2
To a child twelve to fourteen years old	do	½ to 1

At piecework 20 to 25 per cent. more is made.

These wages he considers are ample for them, as is evident from the kind of food they live upon and the character of their clothing.

The factory operatives are said to be better compensated than working people who labor in the house industries, that is, making things at home, who live and work in low and small rooms, badly ventilated and poorly lighted, for trifling wages.

The committee report shows that it is customary in a very large number of establishments for work to be done on Sundays.

The result is that a very considerable part of the German working people get little rest on Sundays. The inspector for the Oppeln district says that in 98 works in his district belonging to these industries, including ore-raising, there are 24,818 persons employed, of whom 20,517 are males and 4,301 females, and that 32 per cent. of all the women are employed in the zinc furnaces, and at certain seasons of the year as many in the raising of ore, while in the iron and steel works and furnaces 23 and 17 per cent. are found. At the zinc works they are used in different ways. The kind of labor rendered by the women is attendance on the "blende" and clay-mills, bringing of ore and coal to the furnaces, and removal of the ashes from the ash-canals under the furnaces. In some furnaces women are used in taking the zinc from the receivers, and in taking out the ashes that remain in the molds after the termination of the distillation processes, which takes place between the hours of 3 and 11 in the morning.

In the vicinity of Oppeln and Gross-Strehlitz 677 females are employed in the manufacture of cement and lime. They carry limestone to the kilns and heavy loads of bricks from the presses to the drying-rooms, which is entirely too trying for them. They also work in the clay and sand pits.

The inspector for the Potsdam-Frankfort on the Oder district calls attention to the manner in which women are employed in railroad construction. He says they can be seen, with their legs bare and their dresses tucked high up, pushing wheelbarrows in mud and wet sand.

Female work in the brick-kilns is objected to, because it is hard, and because the women have to work with their lower limbs bare.

In one respect, at least, is the workingman, unfortunately, badly off, and that is in the lack—yea, the great lack—of suitable dwellings. The poorer people live wretchedly crowded together, and have to pay out a large percentage of their earnings for unfit and disgraceful habitations. A sad tale could be rehearsed on this subject. The workingman who has two rooms all to himself and family seems to be a fortunate individual. The factory women of Baden are said to be much more poorly fed than the men. Very many of them have at their different meals only some bad coffee with bread or potatoes. The men suffer less in this way, especially in their food, because they either get a better and nourishing meal once a day at least from their homes or in the eating-houses.

The same condition of working people is shown to exist in Italy, Switzerland, Austria, and many parts of Great Britain. The ordinary condition of working people in these countries is such that meat is a luxury, and the idea of saving money to own a home is unheard of.

The most they hope to do is to save enough money to carry them to America. They are most appropriately described as pauper laborers.

Are the American people willing to reduce this country to a condition similar to that of European countries, where labor is so poorly paid and where the pall of poverty hangs over the land so that wives and mothers go with their husbands to the hardest kinds of labor, working for 12, 15, 18, or 20 cents a day, wheeling clay in the brickyards, carrying ore and coal at the furnaces in baskets upon their shoulders or their heads, working at still lower wages in still more servile employment, where women are hitched up with dogs, compelled to associate with the coarsest and roughest of men in the coarsest and roughest labor? This is the feast to which gentlemen on the other side are inviting us.

Mr. SPRINGER. The countries to which the gentleman is now referring are highly protected, much more so than our own.

Mr. JACKSON. My friend from Illinois [Mr. SPRINGER] is not perhaps aware that a country may have protection and still be poor. There may be many causes making it poor. I do not claim that protection alone makes this country what it is. We have a goodly land, a rich heritage given to us. Our land is wealthy in minerals, in soil, in climate, in everything that should make a people happy and contented. But I do claim that it is the protective tariff which has enabled us to enjoy the benefits of this country—to develop our industries, to give higher wages to labor than those that obtain elsewhere; it has enabled us to save for ourselves our own home markets. Under this beneficent policy of protection, our country with its constantly developing resources should be enableed for years and years to be happy and contented.

My purpose in pointing out the poor wages paid in Europe and the scarcity of work there is to show that if we will allow them to be sold free in our market, Europe can manufacture goods so cheap that our people must quit the business or manufacture as cheap. As labor is the principal cost of every manufactured article, that of course means cheap labor.

Mr. Chairman, the advocates of the Mills bill say we must have free trade and free material so we can manufacture iron, nails, glass, and woolen and cotton goods so cheap that we can carry them abroad and sell them cheaper than goods manufactured by the pauper-paid and pauper-fed labor I have described.

Foreign trade in this sense is a delusion and a cheat. I sincerely trust necessity may never compel us to make goods on wages so low that we can undersell these countries.

Our own home markets are what we need, and should be preserved for our own citizens. They are always the best, and with but slight exception they are sufficient for us. We never have exported one-tenth of our farm products in any year and never need expect to.

We have exceptional productions we can export, like anthracite coal, coal oil, cotton, and lumber; but importing free would not help us to sell these any more than our buying tea from China and Japan helps us to sell our goods to those nations. Some few things, the superior skill and intelligence of our people will enable us to make and send abroad, because they are better than can be made elsewhere.

We can for a while export wheat and meat, but our farmers can not long rely on a foreign market for these. Our exports of wheat are falling off rapidly, and Russia and far-off India with its cheap labor, by reason of their newly-built railroads, are supplanting us in the foreign markets, as the following tables will show:

Total American wheat exports yearly since 1879.

Years.	Bushels.	Value.
1879–'80	153,252,795	$190,546,305
1880–'81	150,565,477	167,698,485
1881–'82	95,271,802	111,929,718
1882–'83	106,385,828	119,879,341
1883–'84	70,349,012	75,026,678
1884–'85	84,653,714	72,933,097
1885–'86	57,759,209	50,262,715
To December 6, 1887	43,604,883	36,775,228

Wheat exported from British India since 1879.

Years.	Bushels.	Value.
1879–'80	4,109,495	$5,396,491
1880–'81	13,896,168	15,952,105
1881–'82	37,078,571	41,871,765
1882–'83	26,402,893	29,534,467
1883–'84	39,118,791	43,202,651

If we had enough of our citizens employed in manufacturing and mining to supply the needs of all our people, the farmers would find at home better markets than they will ever get abroad. Some assert we are overproducing now, but that is a mistake easily answered. Last year foreigners paid millions of dollars of tariff duties for the privilege of getting to our markets, and then imported and sold us many million dollars' worth of iron nails, glass, cotton, and woolen goods, and even wool and farm products, all of which we could just as well have supplied at home. With free trade or lower duties these imports will largely increase. Our mechanics and laborers must have better wages than are paid those of any other country, for they are a different kind of people. They will not be content, and they ought not to be content, unless they receive wages that will enable them to support themselves and families in comfort. I want to say to the gentlemen from the cotton-growing States, who are advocating this bill, that in my district many of the men they call laborers are among the most intelligent men in the community. They own their homes, they educate their children, they see their wives at church well dressed, and their daughters are refined, intelligent women. Without protection the labor of these men comes in competition with the pauper-paid labor of foreign countries and their wages would go down. The welfare, and in fact the stability, of this Government depends on the happiness and prosperity of the laboring people. That they can not be happy and prosperous without a fair day's pay for a fair day's work is too plain for argument.

The men who assert on this floor that the benefits of the tariff all go to the capitalists and do not increase wages are evidently not familiar with the subject. They do not seem to know that the wages in the great industries of our country to a large extent are fixed by mutual agreement from time to time; that many have a scale fixed by agreement in which the wages are regulated by the selling price of the commodity; that in most if not all of the associations of skilled laborers there are men as well informed and familiar with the cost of production as the owners of the works. Gentlemen, I assure you that if iron, nails, glass, and other manufactured articles bring a good price next year the Americans who perform the labor in producing them will get better wages than if they bring a poor price. It is true that labor often does not get as large a proportion of what it produces as it should. That is a difficulty that has always existed the world over. But I can safely say that American labor at the present day, by reason of its intelligence and enterprise, and very largely, I believe, by reason of its associations of workingmen, is in better condition to assert its rights and to get a fair share of its production than any laborers in any other country ever have been.

Another assertion frequently made on this floor, that owners of factories and mills have all grown rich under protection, has no better foundation. Some few have grown rich and a large number have made a living and accumulated a moderate return on their investments. But the statistics will show that manufacturing is a hazardous business, requiring a high degree of care, ability, industry, and foresight, and by far the larger part of the men who have invested their capital in it have lost money and failed. This I know to be the case during the last thirty-five years in the iron, nail, and glass industries, and I am assured that it is true of other industries.

Mr. MCMILLIN. Have you any millionaire laborers in your section of the country?

Mr. JACKSON. No, sir; nor millionaire manufacturers either. We have quite a number of both pretty comfortably situated so far as this world's goods are concerned. Manufacturing is more hazardous than mercantile pursuits, and the statistics show that by far the larger part of merchants fail. The first bar-iron made in Pennsylvania west of Pittsburgh was made in my town of New Castle about seventy years ago, by John Carlisle Stewart. More or less has been made there ever since, and for many years last past it has been our most important industry. It is considered a desirable point to unite the iron ore, limestone, and coke used in its manufacture, yet without doubt the larger part of the men who have invested their capital in the business have lost money. Some few have accumulated money.

Mr. MCMILLIN. Your industries have failed notwithstanding protection.

Mr. JACKSON. No, sir; not failed. They have been a great success, notwithstanding the fact that much capital invested in them has been lost. I was simply referring to that as an answer to the oft-repeated speeches made on your side, that protection was simply to make wealthy capitalists and enrich the owners of mills and furnaces.

But I can tell the gentleman how our industries have been a success. They have given employment to our people; they have paid good wages for labor; they have enabled our laborers to support their families comfortably and educate their children; they have enabled many of their employés to lay by a little, to save some money, to get good homes. There are many of the employés of the mills, factories, and works in my town that out of their wages have saved money, and own houses good enough for either the gentleman from Tennessee [Mr. MCMILLIN] or myself to live in.

We count a man a good citizen who will put $50,000 or $100,000 in a furnace or other kind of works and employ a hundred laborers and give them a good living for themselves and for their families. They are the real benefactors of a community. We want men who are good citizens of that sort. [Applause.]

I can assure you that men who spend their lives about such industries are not only prosperous but well-informed, patriotic men. It

made them familiar with the question of protection long before the President's free-trade message was ever heard of.

Mr. BRUMM. And make them all voters.

Mr. JACKSON. Yes; makes them intelligent men, and of course you can then have a pretty good idea which side they vote on.

The gentleman from Tennessee seems to think the laborers of the country up there are not in favor of protection. He does not read the petitions sent down here. No, I know he does not read them, nor does his committee permit them to be read.

Mr. McMILLIN. Right there let me ask the gentleman this question on the subject of iron and steel. To-day's paper announces that the iron and steel works in the gentleman's own State have given notice that they will reduce wages 10 per cent. Now, you say the laborer is well taken care of and that this is a matter of mutual concession. Have the laborers agreed to that?

Mr. JACKSON. I do not know the particulars of the case of which the gentleman speaks, nor whether the reduction is a just one or not, but, judging on general principles, when he asks, why has such a notice been given? I should answer, simply because there is danger of the passage of this Mills bill. [Applause on the Republican side.] They are afraid of its paralyzing effects upon business, which threatens bankruptcy and ruin. And all over this country owners as well as laborers are standing in dread of this measure and the threat which the offer to pass this bill holds over them. They know there is grave danger.

Mr. McMILLIN. But this notice has been given and the bill has not yet been passed; it has not even been considered yet.

Mr. JACKSON. But they dread the possibility of its passage, and the uncertainty concerning it has already done great harm to the business of the country. There may be no real danger of the passage of this bill, but it is possible that it might pass; and this great calamity come upon the country. If the gentleman's party had full control they know this bill would likely be forced through. They see the power of the party lash. They know what it has done here when it whipped men into the party traces, and they feel as it is, some natural apprehension of the result. They have heard prominent leaders of your party say in course of this debate that if manufacturers can not run with the Mills bill a law let them stop, and that if this bill is not accepted without complaint a far worse one will be offered next year. They have nothing to hope for if your party succeeds. The reduction of wages you speak of is but a slight indication of the hard times we may expect if this bill becomes a law.

Mr. Chairman, the difference between free trade and protection, so far as our country is concerned, may fairly be stated in this way. The free-trader says, let us buy where we can buy the cheapest, that is, from foreigners. To pay for it we must send our money out of the country, or, so far as they will take them, we can exchange cotton, meat, and grain. The effect of this must of course be to stop manufacturing unless we are willing to manufacture at lower rates and cheaper prices than foreigners. The money we send away will not come back, and every year the country must get poorer and poorer. The President says that locking up one or two hundred million dollars in our own Treasury withdraws money from circulation, makes times hard, and may bring on a panic. What, then, must be the effect if we send that much to foreign countries every year to buy goods and never get it back? Is the surplus so dangerous we want to send it to Europe and Asia to get it out of the road? Is that a good way to dispose of it? The protectionist says anything we buy abroad that we can produce or make at home is dear at any price. We have coal, limestone, and ore; let us build furnaces and rolling-mills, employ our own people, make our own iron, and keep our money at home. It is better for the farmer to sell his wheat, potatoes, and meat to his neighbors who are making the iron than to have to pay railroads and ships for carrying it thousands of miles to find a foreign market.

Some of our people would rather work at making cotton and woolen goods, glass, nails, pottery, saws, and machinery than farm. Let us encourage them in what they want to do. We have the necessary material for all. Our people are skillful and can make the best of everything, and we will buy from them. The men employed in manufactures at good wages will be good customers for the farmer, mechanic, professional man, and tradesman. To diversify our industries and develop our own country will make us strong and independent as a nation and our people intelligent, happy, and contented. This question of a diversity of industries is important now, but will become more so every year. The great difficulty of old nations is to find employment for their people. This is fast becoming a serious question even in the United States. What good will it do a man to have foreign goods offered to him cheap if he has no means of earning money to buy them? Other nations have considered it wise statesmanship to devise new employments for their people, but here is a bill whose effect must be to lessen the number of industries in our country. Our people have so prospered during the last twenty years under a protective tariff that our sixty millions buy and consume as much as two hundred millions in Europe.

Let us keep our people in this condition and we shall have at home the best market in the world. England is a small island full of workshops and densely populated. To her it is a necessity to have markets abroad. She can not sell at home what she manufactures. The United States is a continent in itself. Our climate, our resources, our productions, and our materials are almost as varied as all Europe combined. Between the different States composing our Union we can and do have the freest trade, for no matter how the balances stand between the different States the money is always kept within the nation, and protection is only a defense against foreigners.

If this country adopts free trade, and prices of labor and all commodities become lower, as they certainly will, the burden will fall heaviest on the poor and debtor class. Debts will not become smaller but it will be harder to raise the money to pay them. When you reduce the currency of the country you make debts harder to pay, and this result will follow a general reduction in prices and values. This will suit the bankers of the country, for their money will remain the same, whilst a dollar of it will buy twice as much as it does now. The farmers of the Northwest whose lands are mortgaged, as well as all other debtors, will feel this increased burden as one of the effects of free trade. This administration combines the cotton-growing States, the great corporations of the country, and the money of New York City, to control the Government. To secure just laws for all the people, the farmers, the laborers, the friends of the Union soldier, and all interested in protecting the industries of the country, should unite against it.

Our Democratic friends seem to take a great pleasure in calling the tariff a war tax, referring to the war for suppressing the rebellion, and insisting that the war tax must be removed. Just why they give it the name of war tax it would be hard to tell. For Washington in his administration not only recommended protection, but approved tariff bills passed by Congress. During three-fourths of the time the Govment has existed we have had tariff laws for protection to a greater or less extent, and it is perhaps well in this connection to observe that when the tariff was materially lowered we suffered with financial panic and disaster. The great panics of 1837, 1857, and 1873 were each preceded by a large reduction in the tariff. The tax on alcohol and tobacco was for the express purpose of raising money to carry on the war, and yet our friends on the other side always speak of it in the kindest terms, because to retain it furnishes them an argument against protection.

There is a sense in which the tariff is a war tax. It was the tariff that developed and sustained the industries of our country, that to a large extent enabled the Government to subdue the rebellion. It enabled our loyal people to bear the great loss and exhaustion of the war, and actually to come out of it stronger and in greater industrial prosperity than when it began.

Possibly, however, the easiest way to explain the bitter hostility of the other side to tariff laws is on the ground that they consider them war legislation. For it is their purpose, as stated by a distinguished Democrat, now the junior Senator, then a member, from Kentucky, on the floor of this House in 1879, to wipe from the statute-book the last vestige of Republican war legislation. What is meant by this threat and declaration in the light of what has already occurred under the present Administration it is well worth while for the people of the loyal North to inquire.

SURPLUS.

Mr. Chairman, whilst it is evident that the President wants the tariff laws repealed or duties lowered because he is opposed to protection, he gives in his message as a reason why it must be done that there is too much money accumulating in the Treasury.

I do not believe there is anything like so large a surplus above the wants of the Government as he assumes. That part of the question has been but little argued in this debate, and in my judgment too much has been conceded on this point.

We have bonds coming due in 1891, amounting to $228,000,000. that our surplus revenues can scarcely be made to pay, and if reasonable appropriations should be made in the mean time other means must be devised for their payment. But if there be those who think that there is more money coming into the Treasury than is needed; the amount can very well be reduced by repealing the internal-revenue taxes on tobacco and on alcohol used in the arts, and the special tax on druggists. If you want more taken off, which I do not think is necessary, remove all taxes on liquors and let the tariff alone.

But, Mr. Chairman, this surplus is but an excuse; and so far as it really exists, it has been created for a purpose. This Administration, instead of trying honestly to avoid an accumulation of money in the Treasury, has taken the very opposite course. It wants a surplus to urge as an argument for free trade. The Democratic Executive and the Democratic majority in Congress have been the cause of retaining much money in the Treasury that should have been paid out. Let me call your attention to some facts. A Democratic Postmaster-General refused to contract and pay out $400,000, appropriated by the Forty-eighth Congress, for carrying foreign mails. A Democratic House of Representatives deliberately neglected to pass a deficiency appropriation bill at the last session of Congress. Just and reasonable pension laws have been vetoed. For two years our rivers and harbors were almost neglected. We have no navy worthy of the name. Our coast cities are sadly in need of defenses. A Democratic majority in this Congress filibustered for many days to prevent the passage of a bill to justly refund loyal States the direct tax. They have repeatedly voted

to dispense with private-bill day, whilst hundreds of just claims against the Government were pending and could not be paid without the passage of private bills. They have refused to repeal the tobacco tax, which a large majority wanted done, and which would reduce the revenues thirty millions a year. They have refused to make reasonable appropriations in aid of common schools. They have neglected to do justice to the Union soldiers.

I firmly believe, as I said on this floor in February last, that—

If this Government will promptly pay its honest debts; will pass laws to do justice to the soldiers and dependent relatives of those who, under God, saved its existence in its time of peril, and will make proper and reasonable appropriations for needed public improvements, I can promise you that at the end of the year, without either waste or extravagance, there will be no surplus in the Treasury to complain of.

On the contrary, I have no doubt that if the income of the Government was reduced the very same men who are giving the surplus as a reason for repealing our tariff laws would then oppose reasonable appropriations and all pension legislation on the ground that the Government could not afford it.

It is true that this bill is not free trade for all things, but its sectional character and Southern origin are well shown in its selection of articles to be first sacrificed. We do not make the one-tenth of the sugar we consume, and its protection can scarcely be justified. It is an article of necessity in every family, yet it is protected by a high tariff. Rice is imported in large quantities, and it has the benefit of protection and the duty on it largely increased by this bill. Even the peanuts of the Carolinas are protected.

But the Northern farmer is treated with wool, flax, flax-seed, potatoes, and most kinds of fruits and vegetables on the free-list. Whilst the Northern farmer is shut out of Canadian markets by a tariff, this bill allows the Canadian to send to our markets most of his products free.

Mr. Chairman, during the course of this debate it has occasionally been said and frequently intimated that a tariff for protection was a Pennsylvania invention; that it was especially in the interest of Pennsylvania, that had too long enjoyed its benefits, and it was time to give other States a chance. I admit that the passage of this bill would be a great injury to Pennsylvania, and that all our people would suffer greatly from it, but Pennsylvania is so situated that in the long run all the other sections of our country must suffer more. The blight of free trade would seriously injure most of the great industries of Pennsylvania, but whilst it was doing this the same industries would be utterly destroyed in most other States.

The grand old Commonwealth of Pennsylvania is an empire within herself. There is no spot on earth that can at all compare with her in all those things that give material wealth and strength to a people. In the East she has the greatest deposits of anthracite coal in the world, the value of whose output exceeds annually that of all the gold, silver, and copper mines of the United States. In the West are mines of bituminous coal that for ages will supply all her own people and enable her to sell to the millions of the South and West. In twenty years the product of her oil wells have sold for more than sufficient to pay off the national debt. To her wonderful supply of coal nature with a lavish hand has added for fuel the mysterious supply of natural gas, that places her in manufacturing absolutely beyond competition. She is favorably situated near the ocean and Great Lakes, and has water ways connecting with the great rivers of the West and South. She is near the great center of population of the country, and no State is so well supplied with well-equipped railroads, which traverse every valley and reach every hamlet and village in her borders.

She has iron-ore, limestone, building stone, fire and pottery clay in abundance, forests of timber, plenty of fruits, good water, and a most productive soil. If Pennsylvania will turn her attention to agriculture she can raise all the wheat, corn, rye, oats, and potatoes that her five million of people need to consume, and to some extent, at least, by reason of her favored situation as to transportation, compete with the great West for supplying the markets of the seaboard. One county of Pennsylvania, Lancaster, produces agricultural products of greater value than any other county in the United States. Another county, Washington, has more money invested in sheep and houses and lands for their pasture and shelter than any other in the country.

Whilst in many things Pennsylvania is so favorably situated as to be beyond competition, yet she is not selfish. She says let all the industries of our country—North, South, East, and West—have the benefits of protection.

Mr. Chairman, it is possible, though I think not probable, that this country may for a time be subject to free trade, but it can not be long. In the mutation of politics a party may temporarily get power that is false to the great American system of protection, but a very few years' experience of free trade and its injurious effects will determine the question in favor of protection for many generations. This would be a costly price to learn what we ought to know now, and I still have confidence that the intelligence of our people will enable us to settle it without the experience of panic and disaster, which will assuredly follow in the wake of the passage of a free-trade bill. I think it worthy of comment that the advocates of this bill have never urged its passage on the ground of the general welfare. No one has even claimed that it would tend to develop our country; make it stronger or better, diversify our industries, or give greater employment to our people. The arguments in its favor, as you will bear me witness, have been sectional and full of appeals to the selfishness of portions of our people—appeals that by reason of its passage certain classes of people would be able to get some things cheaper—complaints that, by reason of protection some parts of the country that had engaged in manufacturing had grown strong and rich and powerful, whilst others, who had depended on agriculture alone, had not done so well.

But, Mr. Chairman, it is a complete answer to all this, that under thirty years of protection to manufactures they have so developed and multiplied that competition has greatly reduced the price of all manufactured articles. On the other hand, manufacturing has given such good markets to the farmer that the products of agriculture have in the same time increased in price.

It is true we can not manufacture and sell as low as they can in Europe, but that is because we pay labor better wages. I have not the least doubt that if wages were as low here as in Europe that the superior skill and enterprise of our people would enable our manufacturers to produce goods cheaper than anywhere else in the world. We invent machinery to save labor that is used the world over.

Mr. HERBERT. Before the gentleman takes his seat will he allow me to say a word?

Mr. JACKSON. With pleasure.

Mr. HERBERT. I understood the gentleman to say that he never heard a Southern man say he was glad that slavery was gone.

Mr. JACKSON. I said I never heard a Southern man say he wanted slavery to go.

Mr. HERBERT. I have said I am glad slavery is gone. I have said that often on the stump in my own district.

Mr. JACKSON. Would you have said in 1860 that you wanted it to go?

Mr. HERBERT. Oh, no; but I say now I am glad it is gone.

Mr. JACKSON. Nor would you have said it in 1863.

Mr. HERBERT. But I say it now.

Mr. JACKSON. You are resigned now because you have to be. [Applause.]

Mr. HERBERT. I understood you to say that we were not glad now that slavery was gone.

Mr. JACKSON. The gentleman misapprehended me. I used the expression "you did not want it to go." That was my expression. And if any gentleman on the other side can rise and say that in 1861 or thereabouts he wanted slavery to go I will give him the opportunity to rise and make that statement. I will add further that I have never heard any Southern man make any admissions on this floor that he thought slavery wrong.

Mr. HERBERT. It seems I misunderstood you entirely.

Mr. JACKSON. A good Democratic Senator the other day was understood to state that in 1860 he wanted slavery got rid of; but when it was brought to his attention, he repudiated the sentiment and said, like you, he only meant he was now glad it was gone.

As no gentleman rises to say he ever wanted that "sum of all villainies" removed before it was blotted out, allow me to add that I did not expect any one would. But I am not complaining of this. I do not want confessions. What I complain of is that you do not accept the new situation and legislate in the interest of free labor. Is it because the slave code made it a crime to teach black men to read that you will not accept an appropriation in aid of common schools? Twice the Senate has sent to the House a bill giving such aid; it is believed a large majority of this House favor the measure, but you control the proceedings and will not even allow it to be voted on. But after education has changed the character of your illiterate laboring people and made them happier, better citizens, then I presume you will be willing to say you are glad of it. By and by your people will develop their industries, labor will receive better wages, and rejoicing in the general prosperity that the American system of protection gives all your people, I have no doubt you will then be willing to say you are glad of it. But you will never be able to say that you aided or helped on the good work. History will record that all these things were accomplished against your protest and with your strongest opposition.

Mr. HERBERT. Right here let me say another thing in that connection. The gentleman made the statement that we want all these things cheap. Now, as in the slavery time, we are compelled to sell our cotton abroad, and to compete there with the labor of the world; just as the West is compelled to sell its surplus wheat and surplus provisions abroad and to compete there with the labor of all the world. Inasmuch as our free labor to-day is compelled to do that just as the free labor of the West is compelled to compete with all the labor of the world abroad, we think we ought to be relieved a little from unnecessary tariff taxation.

Mr. JACKSON. The gentleman from Alabama and I do not agree at all. I do not want our labor to compete with the labor abroad. I want our labor protected from that competition. The South and West both want to look more to our home markets. You ought not to depend so much on raising cotton. You have wonderful resources of coal and iron. If you would manufacture much that you now buy you

would grow rich, and it would greatly improve the character, intelligence, and happiness of your laboring people. There is no reason why it should be compelled to compete with foreign labor.

Mr. HERBERT. I can not help that.

Mr. JACKSON. Yes you can if you want to. One of you gentlemen said he wanted to get his labor where he could get it the cheapest. I do not agree with that sentiment. I am in favor of high-priced good things. If we employed all the labor we could in this country and did not import so much from abroad we could use much more of the food we raise and you could sell much more of your cotton at home; and we could send the surplus only of food and cotton abroad and get pay for it in money. We would not need to trade it off as we do now.

Mr. HERBERT. And the price abroad regulates the price of your wheat.

Mr. JACKSON. Rather the supply regulates the price. You gentlemen in the South have got the labor and the materials; why do you not manufacture more?

Mr. HERBERT. We do manufacture a great many things. The South sent over 100,000 tons of iron North last year.

Mr. JACKSON. I am glad you are proud of that, although that is a small quantity to what you ought to make. I wish you were proud of doing a great deal more. I wish to see your country develop. I think it would be better for all of us. I wish you had in your district a few thousand laboring men—skilled mechanics—such as work in the factories, shops, and mills in my district. If you had, your people would be as much in favor of protection as we are; not as a matter of theory merely, but because of its good effects. You would then feel that protection is the very life-blood which gives vitality to all the industries of the country. [Applause.]

Mr. Chairman, I do not claim that protection alone has been the cause of the prosperity of this country. Many other things have contributed to it. We have a goodly land, favorably situated and richly endowed with natural wealth. Our fathers were an industrious, economical, and God-fearing people, who transmitted to their children at least some of their virtues, and much of the enterprise and love of liberty that brought them to the new world. We have lived to reap the reward of their toil in reclaiming the country from the wilderness, and to enjoy the benefits of their foresight and wisdom in establishing this great and good Government. But I do claim that the system of protection has enabled us to secure and enjoy the benefits and advantages of our land and Government: that without it we could never have prospered as we have done. Its blessings have fallen upon our people so mildly, so gently, so universally that they are scarcely appreciated. But the question of the continuance of this policy of protection is now in issue. Of one thing I am glad, the issue is squarely made.

The Democratic party, through its leaders and representatives, has placed itself in opposition to this policy and on the side of ultimate free trade. As the gentleman from Missouri [Mr. HATCH], one of its leaders and spokesmen, said in this debate, that to the doctrine of opposition to protection every Democratic knee will be made to bow. The power of the Administration, the influence of offices and patronage, the hope of political preferment, are all to be used to compel every doubting and protesting Democrat to accept the doctrine of free trade. On the other hand, the Republican party stands by the policy of protection, and submits the issue thus made up to the decision of the voters of the United States. It claims protection to be the policy that has converted the wilds of the forest into fruitful fields and happy homes; a policy that has opened the mines and given us the treasures of the earth; a policy that has kindled the fires of thousands of furnaces, mills, and factories; a policy that made us strong in war and prosperous in peace; a policy that has raised the wages of labor above those of any other people; a policy that invites our country to a grand and glorious future of still greater prosperity.

The Tariff.

SPEECH

OF

HON. EDWARD P. ALLEN,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 16, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. ALLEN, of Michigan, said:

Mr. CHAIRMAN: I shall not try to traverse ground so ably occupied during the three weeks this discussion has been proceeding. It would be monotonous thus to do, and I call attention to one or two matters not so fully dwelt upon.

The excitement occurring in this Hall at times during this debate is but a small reflection of that now broadcast in the land. People are running to and fro and inquiring, "What is the matter?" One man is evidently frightened because another runs; and, as a result, the whole crowd is running together. At such times as these cool-headed men stop and inquire what is the cause of this? Does the cause justify the effect so far produced? I inquire, first, who is it that began this stampede? and, secondly, having begun it, whether he is a sufficient guide to let the people know when they ought to run? Who fired the shot upon the picket line? Who is it that exclaimed, so that the American people heard, "There is a lion without; I shall be devoured?" It was the President of the United States. He, by his warnings, as he calls them, attracted attention to dangers that he thought he saw and aroused the present state of public excitement.

If this had been the first time the President had warned us, and correctly, we would be inclined to give more heed than we shall do to-day; but it is the third or fourth occasion that he has notified the people that they were in the presence of impending dangers; yet they did not materialize, and seem to have been forgotten by himself and every one else.

What was the first lion the President met in his path? He met him before he was elected, in the shades of the woods of Central New York, when he wrote his letter of acceptance. Right then and there, in the jungles of the Empire State, he crossed the pathway of the then candidate for the Presidency. I desire to bring to the attention of the House his description of that lion. I ask the Clerk to read from a book which I have here, published by authority of the national Democratic committee in 1884, entitled "The Political Reformation." This book contains the President's letter of acceptance, and in order that nobody shall make any mistake, it is divided up, like the Bible, into chapters and sections, and each chapter or section has a head-line indicating what follows. I ask the Clerk to read a portion of this letter, which is headed, by authority of the national Democratic committee, "No Second Term." [Laughter] Please read it, Mr. Clerk, with your accustomed vigor. Remember, Mr. Chairman, that this is lion No. 1.

The Clerk read as follows:

When an election to office shall be the selection by the voters of one of their number to assume for a time a public trust, instead of his dedication to the profession of politics; when the holders of the ballot, quickened by a sense of duty, shall avenge truth betrayed and pledges broken, and when the suffrage shall be altogether free and uncorrupted, the full realization of a government by the people will be at hand. And of the means to this end not one would, in my judgment, be more effective than an amendment to the Constitution disqualifying the President from re-election. When we consider the patronage of this great office, the allurements of power, the temptation to retain public place once gained, and, more than all, the availability a party finds in an incumbent whom a horde of office-holders, with a zeal born of benefits received and fostered by the hope of favors yet to come, stand ready to aid with money and trained political service, we recognize in the eligibility of the President for re-election a most serious danger to that calm, deliberate, and intelligent political action which must characterize a government by the people.

Mr. ALLEN, of Michigan. Mr. Chairman, the President, in the recesses of the woods of New York, when he saw that lion cross his path, must have had in mind Washington, Jefferson, Madison, Monroe, Jackson, Lincoln, and Grant, the only men who have ever been re-elected to the Presidency. Yet the methods of their re-election were not such as to justify the fears he so earnestly expressed.

But, sir, what have we to-day? Exactly that state of things existing in this country which the President prophesied would occur if a President undertook to use his high office to re-elect himself. There has not been a State convention in the United States from Maine to California to send delegates to St. Louis that the Federal office-holders appointed by the President have not come up and devoured everything before them like the locusts in Egypt. To-day, in every State of this great Union where conventions have not been held, these men are manipulating the wires and deciding who shall be delegates, in the main regardless of the wishes of the Democratic masses.

To show you, sir, how to-day the deplorable dangers seen by the writer when that letter of acceptance was penned are in full view to every eye that will look, I send to the Clerk's desk and ask to have read an extract from the Washington Critic, and to follow it by having read an editorial from the Post, the Washington organ of the Administration.

The Clerk read as follows:

INFORMATION FOR THE INNOCENT.

Four weeks from to-day Mr. Cleveland will be renominated for the Presidency. Whatever his views may be as to the propriety of accepting the candidacy of his party for a second term or as to the expediency of adopting a constitutional amendment making the Chief Magistrate ineligible for re-election, he will consider the unanimous call of a national convention as peremptory and obligatory.—*Washington Critic.*

This is great rubbish. Mr. Cleveland is a candidate for the renomination—an earnest, eager, anxious candidate, armed and equipped at all points and possessed of all the advantages of a great number of friends and a powerful machine.

And why should he not be a candidate? He likes his office and he is satisfied that he has made a good President. And does not his party need him just now? He knows it does.

Look out for the Cleveland machine, fellow-citizens. You may hear of it in Georgia to-day and in Maine to-morrow, but wherever it is you will find it in beautiful order and working as smoothly and as effectively as a Corliss engine. It has yet to meet an obstruction, and the delegates are pouring out of the hopper at all hours of the day and night. When they get to St. Louis they will make the nomination unanimous. They will have nothing else to do.

This being the truth, why not proclaim it? There is no mystery at the White House. The gentleman in possession there knows a good thing when he sees it as well as the rest of us.—*Post*, May 10.

[Applause on Democratic side.]

Mr. ALLEN, of Michigan. My friends on the other side clap their hands with joy. Now I am not going to denounce them. I love them as David loved Jonathan, but I wish to ask them quietly and honestly whether they think the picture of the letter of acceptance set over against the picture in the print just read does not show a falling off somewhere and somehow of that sterling virtue which in 1884 possessed the soul of our good President? And would not every Mugwump be entitled to bring an action against him for obtaining his virgin vote under false pretenses?

Mr. Chairman, I am not an artist, but if I could suggest a picture for Puck to publish, a full-page cartoon, it would be this: I would picture the candidate in the woods, up in the wilds of York State, seated and penning that letter of acceptance. He would be surrounded by the three graces. His face would shine like that of John at Patmos, and as he indicted those words warning the American people of the danger of allowing a man even to think of being re-elected let him be painted with the pencil of a Raphael. But on the other side of the page, in view of the editorial of the Post, I would suggest to the artist to put a large-sized gentleman with his carpet-bag in his right hand marked "St. Louis," and in his left a streamer with the legend, "Preaching against practice." [Laughter and applause.]

I have no idea Puck will publish any such picture as that, however, and evidently the second-term lion has taken to the jungles.

A MEMBER. But Judge will.

Mr. ALLEN, of Michigan. The second lion the President met, Mr. Chairman, was in December, 1885. He then discovered a lion which overshadowed all others, and he took the shape of a silver dollar, aye, the Bland silver dollar. Why, Mr. Chairman, the President devoted scarce twenty lines in his message of 1885 to the question of the surplus. He dismissed it with a sentence almost, and nearly the entire message was taken up with the danger that threatened the country because of the coinage act coining $2,000,000 of silver a month. He used strong language. Listen to it. my Democratic brethren:

Nothing more important than the present condition of our currency can claim your attention.

No "second-term" lion about that.

His argument for the suppression of silver coinage sounds exactly like the speeches of our Democratic brethren on the other side of the House to-day in favor of the abolition of the tariff, although the "lions" sought to be hunted down have no possible resemblance. It is a clear case of opposite texts for the same sermon. He says, referring to the disaster threatened by continued coinage of the silver dollar:

That disaster has not already overtaken us furnishes no proof that danger does not wait upon a continuation of the present silver coinage. We have been saved by the most careful management and unusual expedients, by a combination of fortunate conditions, and by a confident expectation that the course of the Government in regard to silver coinage would be speedily changed by the action of Congress.

Prosperity hesitates upon our threshold because of the dangers and uncertainties surrounding this question. Capital timidly shrinks from trade and investors are unwilling to take the chance of the questionable shape in which their money will be returned to them, while enterprise halts at a risk against which care and sagacious management do not protect.

As a necessary consequence labor lacks employment, and suffering and distress are visited upon a portion of our fellow-citizens especially entitled to the careful consideration of those charged with the duties of legislation. No interest appeals to us so strongly for a safe and stable currency as the vast army of the unemployed.

But, sir, the "labor" that "lacks employment" never has and does not now ask for a repeal of the silver-coinage act. On the contrary, the great army of laborers in this country would vote to-morrow for a law compelling the coinage of double the amount now authorized. The law was not repealed or modified, hence it became necessary to find another scape-goat upon which to load calamities seen and unseen, and in due time the third lion appears in the shape of a sheep; and the President makes his onslaught upon the surplus in the Treasury by taking the farmers' sheep as a text.

In 1886, I ought in justice to the President to say, the message was nearly silent upon the great questions before discussed, though neither had been settled. It went into details as to our relations with the entire world. I can see no reason why these questions were then avoided unless it be in the fact that the House of Representatives had then been reduced from seventy Democratic majority to a beggarly thirteen, and three of those were brevet Democrats only. I am inclined to think that changed condition of affairs had some effect. But now a word as to the facts about the surplus. The President tells us it is estimated that it will amount at the end of this fiscal year to $113,000,000. The facts of the case, as I draw them from the reports of the Treasury, are as follows (let me premise by saying that the surplus is what is left after paying all of the lawful demands against the Government): On June 30, 1885, this surplus was $17,859,735.84. In 1886, June 30, the surplus amounted to $49,405,545.20, and June 30, 1887, it reached the sum of $55,567,849.54. The estimated surplus on June 30, 1888, in round numbers, is $66,000,000, and for the year ending June 30, 1889, $56,000,000.

Now, Mr. Chairman, instead of being $113,000,000 the estimated surplus on June 30, 1889, will be less than $60,000,000, as this report shows, and there will not be a dollar if we continue to pay our honest debts. But how did the President, as he says, avert the calamity impending in 1887, because of this great surplus? He says:

During the six months prior to June 30, 1887, the surplus revenue had grown so large by repeated accumulations, and it was feared the withdrawal of this great sum of money needed by the people would so affect the business of the country that the sum of $79,864,100 of such surplus was applied to the payment of the principal and interest of the 3 per cent. bonds still outstanding, and which were then payable at the option of the Government.

Indeed! Why, it is actually true that the President took the surplus and paid a part of the public debt that was then due. What other way would you take to reduce the surplus? What business have we with a dollar of surplus as long as we owe a debt? Is not that the only possible way of reducing it, by paying what we owe and shall owe? And instead of being frightened on account of the surplus in the Treasury, we ought to thank God that we have the money there to pay our debts. We have a law authorizing the payment of bonds with the surplus at any time. It has been upon the statute-books for years, a dead letter. This House, at this session, passed a resolution saying that in its judgment the law was sufficient to take the surplus to pay our bonds. But we made no new law, and gave no additional power to the Treasury Department. Yet since the passage of that resolution, which at the best was but an extra-judicial opinion by a body without exclusive jurisdiction of the subject-matter, the Secretary has bought and canceled millions of dollars' worth of bonds and thus reduced the surplus by paying what we owe. Had this been done during the last three years our bonds could have been purchased at a premium not exceeding the interest saved, our debt made so much the less, and our surplus wiped out.

But in addition to that resolution the House passed a bill which went to the Senate, and was there amended by the Senator from Kentucky, providing that every dollar of the national banks which is retired and kept retired for a period of thirty days, shall be substituted by a round silver dollar; and that bill with the amendment is now smothered by a committee of this House, and why? Because if it is passed and the President signs it the gold-bugs will be upon his back; whereas if he vetoes it the men of the West will rise in their might and smite him at the polls.

Mr. BYNUM. In regard to the statement of the gentleman that this bill has been "smothered," permit me to say that he does not understand the facts. Nothing of the kind has been done.

Mr. ALLEN, of Michigan. I venture the prediction that that bill will never be brought to a vote here. If it is I am going to vote for it.

Mr. BYNUM. The gentleman does not state the facts; and that is all I desired to say.

Mr. ALLEN, of Michigan. I have stated exactly the facts.

Mr. MASON. Has the bill been reported by the committee?

Mr. BYNUM. It has been referred to a subcommittee, and will be reported in due time.

Mr. ALLEN, of Michigan. I repeat to my young and good-looking friend from Indiana that that bill is now smothered and is being smothered; and whether they will ever let air enough into it to revive it, I think is not altogether likely. I think it sleeps there permanently.

Mr. BYNUM. I desire to say that that statement is not true.

Mr. ALLEN, of Michigan. It lies there undergoing the process of dissolution.

Mr. BYNUM. The gentleman need not give himself any concern. We will take care of that when we come to it.

Mr. ALLEN, of Michigan. Yet, sir, in view of the power under law to have reduced the surplus to nothing, we are told that the situation (too large a surplus) "still continues with aggravated incidents more than ever presaging financial convulsion and widespread disaster." Have we not seen during the last forty days how easy it is to avert a "disaster" by simply going into the market and buying our bonds and thus paying our debt before due?

Mr. Chairman, the unwillingness to buy bonds and the steady refusal of the Treasury Department to do so until the threatened Beck silver amendment passed the Senate, together with the fact that $228,000,000 of our bonds become due in a little over three years from now, leads me to believe that the purpose exists to refund those bonds, thus perpetuating the national debt for an indefinite period.

Sir, a national debt is a standing menace to a republic. We want none of it here. The ship of state is sailing upon calm seas to-day, to-morrow it may be tempest-tossed, and our safety in danger is in freedom from debt and an unlimited credit. If national banks can only exist by continuing the national debt, the banks must go. If Wall street and the vast army of bondholders must still have them in order that they may "buy and sell and get gain," then the people who owe those bonds will insist that they be paid when due. If we pay our debts there will be no "surplus" and the money will return to the people, where it belongs.

But, sir, this can be done, and at the same time the tariff be modified so as to deal fairly with all interests and not precipitate the confusion and disaster that lies just ahead of the "Mills bill" should it become a law. Its unfairness to different interests and partiality to sections are so manifest that "he who runs may read." I propose to point out a few of these further on.

Mr. Chairman, in opposing this bill I am trying, first, to conserve the interests of my own district, as is my right and duty. I want, however, before going further, to read to you what kind of a district mine

and similar ones are in the estimation of one of the leading free-trade journals of this country, the New York Evening Post, a paper that is supporting the Mills bill with an energy only equalled by its ability.

The Post, in commenting editorially and favorably on the speech of my young and brilliant colleague [Mr. FORD], proceeds to tell the farmers of the West how mistaken they are, and how little they know about what is really good for them, closing with a free-trade estimate of their common sense in the following gem:

> Yet we find clubs of greenhorns in the rural districts still holding weekly meetings and passing resolutions in favor of a higher tariff on potatoes and hops and garden vegetables and two or three other things of which we import a small quantity now and then when we have an unfavorable season and a short crop at home. To these self-deluded grangers the tariff debate in Congress will prove helpful, since it can not fail to put the other side of the case before them and compel them to read it and talk about it in their neighborhood meetings.

I represent a district of farmers mostly. They are the men that the editor of the Post describes as "greenhorns in the rural districts" and "self-deluded grangers." And yet that district, containing only four counties, and over which you can ride in one day, has a population of 160,000 people and casts more votes at a Congressional election than a half-dozen of those free-trade districts whose members are depended on to carry the Mills bill through. In it is the University of Michigan, with 1,700 pupils. There are students at that great school from every State and Territory of the Union and from nine foreign countries, 40 per cent. of whom are the sons and daughters of "greenhorns in the rural districts" and "self-deluded grangers." It has the Michigan State Normal School, with 800 pupils, 80 per cent. of whom are right off the farms of the State of Michigan. It has, besides, two great colleges. It has twenty-five union or graded schools, where the pupils range in numbers from 250 to 1,500. It has twenty-eight granges and a dozen farmers' clubs. And my district is made up largely of these "greenhorns from the rural districts" and "self-deluded grangers," such as the editor describes.

Why, sir, it is the grossest nonsense to suppose that a district with only these lights to aid its intelligence should know as much as the free-trade editor of the New York Evening Post. Within rifle-shot of the office of the Evening Post there is more ignorance, squalor, and crime than you can find in all the rural districts of the State of Michigan combined. [Applause.]

But who is it that calls my constituents "greenhorns in the rural districts and self-deluded grangers?" It is needless to say he is a free-trader and favors the Mills bill. The editor, or at least one of the editors of the paper is Mr. E. L. Godkin, a gentleman of great ability, whose writings I have been familiar with for years—a man who wields a pen that is as sharp as a scimeter. He belongs to the Cobden Club of England. The motto of the Cobden Club is, "Free trade, peace, good-will among nations; God save the Queen." Moreover, he is a member of the New York free-trade club which holds, among other fundamental principles, the following:

> That the only commercial policy which is in its nature permanent and unchangeable, and which, therefore, assures stability in all kinds of business, is free trade between nations as between the States of the Union.

A paper edited by men who subscribe to these tenets can not influence the "greenhorns in the rural districts and the self-deluded grangers" of Michigan. They read and think for themselves, and do not believe that free trade with the world is the best thing for them.

I come now to the question especially raised here, the question of the manner of reducing the surplus. The President recommends in his message that the surplus shall be reduced by reducing largely the duties on manufactured articles and raw materials, and especially the farmer's wool he would relieve from all duties, making it entirely free. He holds that the farmer who believes the protection to his wool aids him is laboring under a delusion.

I have a high regard for the President, but I do not believe he knows as much about what is best for the farmers as the farmers know themselves. Neither his early education nor his profession would lead him to that knowledge, and with his statement they take direct issue.

And I now and here charge that not a single petition from a single farmer in all the United States can be found in the room of the Committee on Ways and Means asking for the passage of the "Mills bill" or for "free wool." In the silence of that committee-room to-day, unread, "unwept, unhonored, and unsung," are petitions signed by thousands of farmers asking that this bill be not passed, or at least that the tariff on wool be not removed. These petitions have gone there, and there they slumber. They have not been heard of here officially as yet. These "greenhorns in the rural districts" and these "deluded grangers" have sent their petitions, innocently supposing they would be read and that some attention would be paid to them; but, in the language of Patrick Henry, the petitions and the petitioners have been "spurned with contempt from the foot of the throne."

And here let me remind the Ways and Means Committee that while the "spurning" the great Virginian denounced was done a hundred years ago, it was speedily followed by a change of administration, and history repeats itself. [Applause on the Republican side.]

But the Committee on Ways and Means in its majority report, in order to convince the farmers and manufacturers that they are mistaken, tells them:

> We say to the manufacturer we have put wool on the free-list to enable him to obtain foreign wool cheaper, make his goods cheaper, and send them into foreign markets and successfully compete with the foreign manufacturer.

Sir, if he gets his wool cheaper from the farmer, does the farmer make or lose money? If the manufacturer makes his goods cheaper, it must be, first, at the expense of the farmer who produces the wool, and, secondly, at the expense of the men who work in the mills, and especially, if he is going into the "markets of the world" to sell his goods, he can only do it when he can make his goods cheaper by getting cheaper raw material and cheaper labor than they have abroad. Unless he does that, the "markets of the world" will laugh him to scorn. Mr. Chairman, how can you control the "markets of the world" unless you offer as good an article at a cheaper price? And how can the American manufacturer, even with cheap raw material and by cutting down the wages of his operatives, compete with the manufacturers of Europe in the markets at their own doors?

Sir, why do you pay attention to the markets of Europe when you have here a market so grand, so profitable, that the whole world is trying to break in upon it and capture it from you?

"The markets of the world" are a "Will o' the wisp," a delusion and snare offered the American people in exchange for permission to make this the dumping-ground of the products of the pauper labor of Europe. So well is this fallacy shown by the gentleman from Ohio [Mr. EZRA B. TAYLOR] that I make his words delivered in this Hall mine:

> Can we sell glass in Belgium; silks and fine cloths in France; cutlery in Sheffield; cottons in Manchester; iron goods in Birmingham; or ships in Liverpool or Glasgow at our present rate of wages? We can as well reach that El Dorado of the free-trader's dreams, the market of the world, with our tariff on as off if we can sell needed commodities cheaper than others. We may stand in that market-place and cry our wares in vain in any case, unless we can sell as cheap as any. We may take our duties off iron and steel, woolens and fibers, but will England buy our cereals at greater prices than those of Russia and India cost her? Will kindly feelings control her on 'change, and will sentiment govern her bargains?

But the Ways and Means Committee further tell us that sheep culture will be more profitable under free wool than now. Facts do not warrant this statement. The tariff on wool was reduced in 1883, and in four years the number of sheep decreased by four and one-half millions, or nearly 10 per cent. This unfriendly legislation crippled and injured our sheep-owners to the extent named, and now it is proposed to strike down every barrier between the home and foreign product. Such sheep as our Michigan farms produce can not stand that competition which "free wool" means.

The chairman of the Ways and Means Committee never saw the flocks of Michigan and Ohio, I presume, and he may have had in mind the sheep of Texas. Now, sir, it costs money to raise sheep. The farmer has to give the best part of one-half the year in one way and another to his flocks. He has to care for them in the summer, and in the winter, house, feed, and carefully watch over them, and it takes time and money.

When I speak of valuable sheep, sir, I am not talking of the bare-legged fence-jumpers of Northern Texas, animals so wonderfully constructed that the naturalist can not tell where the sheep ends and the calf begins [laughter]; but I am speaking of the sheep that Michigan and Ohio produce upon their farms worth seventy and eighty dollars per acre. In Texas, while you will find some good sheep, they are for the most part of the kind I have described, roaming over the plains or browsing off the cactus. We do not have any such sheep nor any such pasture in our country. If we had, the wool would be very much cheaper, I suppose.

And just here let me say a word in answer to the gentleman from Massachusetts [Mr. RUSSELL]. He says, "You can not compete with land worth 21 cents an acre down in the Southwest." Of course we can not, and we do not want to, either. That 21-cent-an-acre land in the Southwest is under the same flag and the same laws that cover the farms of Michigan, and the Republican party does not propose to allow any discrimination anywhere under the flag. But we are not willing to compete with the 21-cent-per-acre lands on the pampas of South America, where the lazy shepherd has only to lie in his hammock, swung to the nearest tree, while his flocks feed upon "no man's land." Nor do we propose to compete with "the plains of Judea," "where shepherds watch their flocks by night, all seated on the ground." Neither our climate nor the price of our lands will admit of this; hence we draw the line of free competition at the boundary line of this country, and nowhere outside of it. Mr. Chairman, the intelligent farmers of Michigan demand that, instead of putting wool upon the free-list, the duty shall be restored to where it was in 1867, and political calamity will overtake the man or party refusing to the farmers of this country their just protection from foreign competition.

But, sir, the glaring inequalities of the bill as between different classes of farming are enough to condemn it in the minds of all fair-minded men. Wool, sheep—absolutely indispensable adjuncts to successful farming in the North—are struck down with ruthless contempt for the sufferers and absolute ignorance of the consequences, while rice, cotton,

and sugar—the great staples of the Southern farmer—are cared for with tenderness, and in utter disregard of the millions discriminated against. To prove this let us examine briefly the facts. There were 110,000,000 pounds of rice raised in this country in 1880, of which 100,000,000 were produced in the States of South Carolina, Georgia, and Louisiana. In the years 1885, '86, '87 we imported 304,500,000 pounds, upon which the duty was over $3,000,000.

Because of the narrow area in which it can be grown, it is impossible to raise here half the rice the country consumes. There are not to exceed five thousand farmers engaged in its culture. The crop is ready for the market within five months after the first stroke of work. It is produced by negro labor at an average expense of 50 cents per day. And yet this food, indispensable to millions, is so protected by this bill as to cost the consumers of this country at least $1,000,000 per year. Even "paddy," the rice in its hard, siliceous shell, is protected by a duty, no work having been done to bring it to this stage save threshing it from the straw with flails in the hands of cheap negro laborers. And yet, in the judgment of this sagacious committee, this slight labor takes it out of the list of "raw materials," while wool remains; the one to be protected by a duty, the other to be free.

If we examine the sugar schedule in this bill we find the partiality to the few at the expense of the many still more glaringly apparent. Sugar is one of the indispensable necessities of life. It is alike food to the infant and octogenarian. It is produced in a very narrow area, for the most part in the State of Louisiana. Not to exceed twenty thousand persons are engaged in it. In 1886 the State of Louisiana grew 165,000,000 pounds of sugar, while the country consumed over 300,000,000. From 1883 to 1887, five years, we imported 13,400,000,000 pounds, upon which the duty averaged over $50,000,000 per year. This vast sum is for the most part taken from the people direct, for, unlike wool, the domestic product can by no possibility supply the demand; hence there can not be that domestic competition that goes so far to regulate the price of commodities produced in abundance and over wide areas.

The value of the entire sugar "plant," including the soil, does not exceed $80,000,000, and the duties the people pay upon imported sugars in two years would more than pay for the whole industry, while the wool industry of the country, with an invested capital of $350,000,000, is, by this bill, to be compelled to face the competition of the world by making wool free and saving (?) to the consumer five and one-half millions. If anything deserves to go upon the "free-list" in this bill it is sugar. If we should place it there and pay the planter a fair bounty, still the country would save over $40,000,000 per year in the transaction.

Mr. Chairman, the gross inequalities with which the different agricultural sections of the country are treated in the Mills bill condemn it at the outset. And yet the majority of the Committee on Ways and Means, the authors of this bill, acted with fairness and honesty—as they were given to see those virtues.

Latitude rather than fitness had to do with the composition of the committee. "He that provideth not for his own household is worse than an infidel;" and the gentlemen of the majority have taken precious care of their own. And why not? Are they not to elect the next President, and do not the spoils belong to the victors? If no benefit is to come from solidity then they may well ask "What are we here for?" "Barren idealities" are all right in their place, but our friends of the committee have not been indulging in them to any alarming extent. With them it has been a matter of business, and they believe that the section which has the most "reform" votes in the next electoral college shall have the most of the preliminary dividends. From their purely party standpoint they are right, and I acquit them of any intentional wrong; but I appeal from them to their colleagues upon that side of the House to help us right the great injury threatened to the industries of that great section of our country which I have the honor in part to represent.

Mr. Chairman, this bill was framed by the majority of the Committee on Ways and Means. No man has a higher regard for these gentlemen personally than have I. I give them the credit of being what I claim for myself—honest in purpose. But when we examine the bill in its details and find, as we do, that its tendency—denied by few and proclaimed by many in this debate—is directly toward a free-trade haven, and that, too, by ways that are illogical and unjust to sections and interests, then I insist that it is within the province of legitimate criticism to inquire about their antecedents and ability, from previous training and belief, to handle so great a subject as is involved in this bill, affecting as it does, the industries of a nation.

I am safe in saying that the genial and determined gentleman from Texas [Mr. MILLS], the chairman of the Committee on Ways and Means, had much to do with it; that the gentleman from Tennessee [Mr. MCMILLIN], who ranks him in suavity and fairness, had something to say about it; that the gentleman from Arkansas [Mr. BRECKINRIDGE] was not a silent partner in its composition, and that the gentleman from Kentucky [Mr. BRECKINRIDGE] brought garlands of scentless flowers and gems of altitudinous rhetoric to the committee-room to relieve the dullness.

They are all gentlemen of ability and worth, and this bill, so far as it leans toward free trade, is the natural result of their previous training. What did they and their fathers believe? What have been the teachings given to these gentlemen from their earliest infancy? Not a "tariff for revenue," not "incidental protection," but free trade, pure and unadulterated. The economic beliefs and teachings of these gentlemen were epitomized and placed forever on record in the fundamental law of the Confederate States of America in section 8, paragraph 1, of their constitution:

> Nor shall any duties or taxes on imports of foreign goods be allowed to promote or foster any branch of industry.

This section, sir, is the essence of what was taught to three generations in that section of our country from whence my friends, the majority of the Committee on Ways and Means, come. That is not all. Each of these gentlemen had the courage of his convictions. As the soldiers of the Union fought for the Constitution as it is and the integrity of the national life, so these men each fought to establish a new government having as one of its basic principles the free-trade section I have quoted. Each imperiled his life for that principle because he believed it right. They bravely followed their States into rebellion in defense of it, except the gentleman from Kentucky [Mr. BRECKINRIDGE], who, when his State refused to follow in the mad dance, joined the Confederate and free-trade side. They did what they supposed to be right. I do not question their motives. I believe they were sincere, and certainly they dared risk their lives in defense of their belief. It is but natural that this belief should dominate all economic legislation under their control, and they now undertake to shape legislation upon this great question for that part of the country which never did, does not now, and never will be the friend of free trade.

But, Mr. Chairman, the remedy for a redundant surplus proposed here, a wholesale reduction of the duties, upon some things far more than others, is not a new one. It was tried under Franklin Pierce. He was elected President of the United States in 1852. That campaign was watched eagerly by our British brethren, and they had comments to make upon it You have heard the favorable comments of the British press upon the recent message of the President. I will send to the Clerk's desk to be read three extracts from the comments of the same press thirty-six years ago, when Franklin Pierce was a candidate for President against Winfield Scott. They were for free trade then—they are for free trade now, and know and command their allies here.

The Clerk read as follows:

> The triumph of the candidate of the Democratic party brought forward by the men of the South will secure, probably forever, the ascendency of liberal commercial principles.
>
> * * * * * * *
>
> In this respect and on this point we take General Pierce to be a fair representative of the opinions of Mr. Calhoun, and as such a valuable practical ally to the commercial policy of this country.—*London Times*, 1852.
>
> * * * * * * *
>
> As regards England, public sympathy, it is needless to say, is enlisted in favor of the Democratic candidate. Not that General Pierce is considered the better man. Far otherwise. He is merely accepted as the nominee of the great party in the Union who desire to push the principle of free trade to its utmost limits.—*Wilmer & Smith's Liverpool Times*, 1852.
>
> * * * * * * *
>
> The two parties of the Republic, Whig and Democrat, that is, conservative and progressive, protectionist and free trade, appear to have marshaled their forces and selected their candidates for the coming election. Every Englishman of almost every class rejoices in the expectation of success for the Democratic, free-trade party.—*London Dispatch*, 1852.

Mr. ALLEN, of Michigan. Mr. Pierce was elected President of the United States; and in his message to Congress in December, 1855, speaking of the surplus in the Treasury, which was then $16,000,000, he used the language I am about to read. He had discovered a lion:

> I think the exigency for such a reduction is imperative, and again urge it upon the consideration of Congress.

Congress heard what he said. This was in December, 1856. March 3, 1857, a new tariff law was passed, taking effect July 1, 1857, greatly modifying the law of 1846; and six months after the country was bankrupt; men were committing suicide because of despair over the loss of their property; everywhere there was suffering and sorrow. What was the result? In 1858, when Congress assembled, Howell Cobb, then Secretary of the Treasury, recommended—what? Here is his language:

> How shall we stop this panic? How shall we revive business?

Secretary Cobb said in his report that the deficiency in the running expenses of the Government would be about $8,000,000 by July 1, 1860, and added that—

> In view of the impending danger a revision of the tariff of 1857 and the imposition of additional duties is the only remedy.

But his advice was not heeded, and though the country was in profound peace, things went from bad to worse until ruin seemed to stare both the people and Government in the face, and the latter was compelled to issue bonds to pay its running expenses, negotiating them at a discount of from 12 to 15 per cent.

The surplus was reduced indeed! When the Republican party obtained control of Congress the Morrill tariff, so called, became the law of the land, and, with modifications, has remained the law ever since. Under its benign influence the nation has gone from strength to

strength, until to-day there is more wealth and less poverty, more universal comfort and less individual want than God ever before, from the foundation of the world, granted to any people. It made the prosecution of the war for national life possible and successful, although at a cost of untold millions in treasure and the supremest sacrifice of a million patriots, who to-day—

Sleep beneath their low green tents
Whose curtains never outward swing.

Mr. Chairman, who asks for the changes that the Mills bill contemplates? Do the farmers? I challenge you to produce their petitions. Do the manufacturers? They have been begging and beseeching that you will not strike this fatal blow at their industries. Do the laboring men? You will find from all parts of this country petitions signed by laboring men, as such, protesting against the passage of this bill. Does Texas ask for it? No, sir; even Texas does not demand that this Mills bill shall be passed, at least so far as concerns the district which is represented by the gentleman from Texas [Mr. MILLS], if the voice of the people as expressed in a convention held in his own district is any criterion. Listen to one resolution from the gentleman's own constituents:

Forsaken by our Representative, we urge upon our Senators and Representatives in Congress to work against the Mills bill, and we call upon all good men from other States to protect Texas, if her own Representatives fail to do so.

Mr. Chairman, in considering this question it would be suicidal not to watch and thwart the wishes and hopes of our business and commercial rivals. As thirty-five years ago England looked for the dawning of free trade under Pierce, so to-day she is watching and waiting for the passage of this bill with great hope. Canada is waiting also with great expectations. What the Dominion expects and hopes for in this bill would affect disastrously my own State at least. I hold in my hand the daily journal of the Canadian Parliament, labeled:

House of Commons Debates, second session Sixth Parliament, 51 Victoria. Official report of the speech of Hon. Sir Charles Tupper, G. C. M. G., C. B., Minister of Finance of Canada, and one of Her Majesty's plenipotentiaries at the Washington fishery conference on the fishery treaty; delivered in the House of Commons of Canada, April 10, 1888.

I am too much of an American, Mr. Chairman, to know just what all these abbreviations stand for; there are enough letters there to teach a child the alphabet; but I do know the gentleman to whose name they are attached is one of the leading men of Canada; that he is a statesman, a profound statesman. I know that he has the confidence of the people of Canada, and is worthy of all respect in every way. This gentleman made a speech on the date I have given in regard to the Mills bill; for this is not the only forum where the Mills bill is being discussed. It is being discussed by our neighbors in Canada quite as much as here, and perhaps more ably. In this speech Mr. Tupper, in answering to Parliament for his doings at Washington, explaining the concessions made to the United States and why made, said:

We have made concessions, as I have said, but we have made them with the avowed object of placing all our people, not only the fishermen, but the agriculturist, the lumberman, every man in this country, in a better relation with the United States than he was before. What is the result?

He then seems to put these words into the mouth of the Secretary of State for the United States:

As I have said Mr. Bayard told us, the American plenipotentiaries told us that there was but one way of obtaining what we wished. "You want greater freedom of commercial intercourse. You want relaxation in our tariff arrangements with respect to natural products in which you are so rich and abundant. There is but one way to obtain it. Let us by common concession be able to meet on common ground and remove this irritating cause of difficulty between the two countries out of the way, and you will find that the policy of this Government, the policy of the President and of the House of Representatives, the policy of the great Democratic party of the United States, will at once take an onward march in the direction you propose, and accomplish steadily that which you would desire, is the only way by which it can ever be attained."

Mr. Chairman, the "onward march in the direction you [they] propose" is straight in the direction of free trade with this country in all the products of mine, forest, and farm that Canada has to spare. This fully appears in the quotation following.

Continued Mr. Tupper:

Those were not empty words; those were the sober utterances of distinguished statesmen, who pointed to the avowed policy of the Government of the United States as the best evidence of the sincerity of what they said.

Then with joy at thought of the fulfillment of the free-trade promises, he said:

What has happened already? Already we have action by the financial exponent of the Administration of the United States—I mean Mr. MILLS—the gentleman who in the United States Congress represents the Government of the day, and stands in the position most analogous in the United States to the finance minister in this House, the chairman of the Committee on Ways and Means, who propounds the policy of the Administration in the House. How is he selected? The Democratic party, sustaining the Government, selects a man as Speaker of the House of Representatives who is in accord with the policy of the Administration for the time being, and Mr. CARLISLE, the Speaker of the House of Representatives, nominates the chairman of the Committee of Ways and Means and all the members of the committee; and therefore the chairman of that committee occupies the position of representing the Government in bringing forward such bills as will represent the views and sentiments of the Democratic party in the United States supporting the Administration. What have we seen? The ink is barely dry upon this treaty before he, as the representative of the Government and chairman of the Committee of Ways and Means, brings forward a measure to do what? Why, to make free articles that Canada sends into the United States, and upon which last year $1,800,000 of duty was paid.

If the consumer pays the duty, do you think the finance minister of Canada would rejoice in the fact that $1,800,000 his people pay to us in duties is to be removed by the Mills bill in return for some concession in regard to the fisheries? They understand it over there.

But this is not all Mr. Tupper said. He continued:

I do not intend to insult both the great political parties of this country, who have since 1854, and long before, maintained that the interests of Canada, the interests of British North America, were intimately bound up in obtaining free intercourse with the United States for our natural products; I do not intend to insult the two great parties in this country by telling them that they were fools; that they did not know what they were doing. Down to the present hour we have adopted the policy on both sides of the house, and we have pledged ourselves to the people to do everything that lay in our power to obtain a free market for the natural products of our country with the United States, and I say you must answer me the question as to whether that was an act of supreme folly or whether it was wise statesmanship on the part of both parties in this country to adopt that policy before you ask me such a question as "who pays the duty?"

I say that under this bill, which has been introduced, and which, I believe, will pass, for it does not require two-thirds of the Senate, where the Republican majority is only one in the whole House, to pass this bill; it requires a majority of one only, and I am very sanguine that this bill will pass during the present session. Modified it may be, but I am inclined to think the amendments will be still more in the interests of Canada than as the bill stands to-day. If this is the case, I think we may congratulate ourselves upon securing the free admission of our lumber, upon which was paid during the last year no less than $1,315,450. On copper ore, made free by the Mills bill, we paid, or there was paid to make it meet the views of the honorable gentleman opposite more correctly—$96,945. On salt $21,992 duty was paid. This is rendered free by the Mills bill. I am sorry to find, as I hoped would be the case from the first copy of the bill that came to me, that potatoes were not included amongst vegetables. I am sorry to find there is a doubt as to whether the term "vegetables not specially enumerated" will not exclude potatoes.

That is the only thing about the bill the finance minister of Canada does not approve. The only criticism our brethren in Canada make to this bill is that it is not certain whether potatoes are included in the free-list. How easily it can be gotten over! Let the majority of the Committee on Ways and Means send a soothing telegram to Mr. Tupper stating they regret exceedingly that any action of theirs should cause him and his people so much pain, and that potatoes shall go on the free-list, "by the eternal," in the language of General Jackson.

The finance minister of Canada continued:

Of wool we sent last year 1,319,309 pounds of one kind, and a variety of other kinds, upon which a duty was paid to the extent of $183,852. Now, as I say, on articles of prime importance and interest to Canada the removal of duty by the Mills bill amounts to no less than $1,800,193.

Will my brethren on the other side, who say that the consumer pays the tax or duty, tell me why the finance minister of Canada and the Canadian Parliament should rejoice together in the fact that $1,800,000 duties their own people had paid last year is to be paid no more forever after the Mills bill becomes law? [Applause.]

What a grand thing it would be for Michigan, for instance, to have free wool and free potatoes. My district is tributary to Detroit, and only the grand Detroit River separates Michigan from the province of Ontario, one of the finest belts of land on the planet. In that province the farmers pay their hands only about 90 per cent. of what we pay ours. They support their families for not to exceed 75 per cent. of what it costs the Michigan farmers to support theirs. Our Michigan farmers built railroads to Detroit, so that after supplying their own hamlets, villages, and cities the surplus might be shipped to the commercial emporium of that State; but if you give Canada the right to ship and bring in her wool, potatoes, and other farm products free of duty, I wish to ask you, do you think it the right way to enhance the interest of the men of Michigan who live and toil upon farms? Sir, so far as my district is concerned, we prefer to keep the bars up along Lake Huron and the Detroit River.

They are stubborn upon this point, too, even in the face of the alleged facts, charged by free-traders and the members of the Cobden Club, that they do not know "what is good" for them, and are only "greenhorns" from the rural districts, and "deluded grangers."

Mr. Chairman, when I use those words I put quotation marks about them; they are not mine; they could only spring from the brain of a free-trader, and instead of deserving their intended sting I challenge you to find a more intelligent, industrious, and patriotic people than live in those same rural districts of Michigan, Ohio, the great States of the West, and in the State of New York. They are farmers, too, for the most part. For them I more especially speak. They do their own thinking, and join issue with the idea that placing wool upon the free-list will inure to their benefit.

My friend from New York City [Mr. FITCH], who talked about the farmers, represents a great and rich district in the heart of the city of New York. He represents for one class the great importers of that city. They are the men who want a commission out of the farmers of this country, and not only do they want that, but they want to say how much that commission shall be. Every dollar these importers pay is so much taken from their profits. They can not add it to the cost to the consumer, because of the competition of the domestic article which is free of a duty charge. Hence the great body of importers, naturally and honestly, because their interests lie in that direction, are free-traders.

Mr. Chairman, the tariff is no magician's wand by which poverty can be turned into riches or beggars to millionaires. It is a business proposition embodied into law. It virtually says, as between the products

and labor of this country and any other, that where they compete, our own shall be cared for first, and as far as justice to all will allow. But if men and States refuse to take advantage of it by utilizing the opportunities and agencies around and beneath them, it will bring no aid. Our different commonwealths, so unequally prosperous, vividly illustrate this truism. All under one law, yet in States where brain and pluck and work have been utilized, we see marvelous prosperity. And in States where these factors have lain dormant and discouraged, we see the opposite.

To illustrate this fact let me compare three States: Texas, West Virginia, and Kentucky combined, with Michigan alone. The three first-named suffered the least from the war and are among the most prosperous of the States affected by the war. Comparison with those swept by the conflict would not be just.

The population of the three States combined in 1880 was 3,858,896. That of Michigan was 1,636,937, a difference in favor of the three States of 2,221,959.

The total number of manufacturing establishments in the three States was 10,699, in Michigan 8,873, or only 1,826 less in number than the three combined.

The wages paid out in the three States in these establishments was, in round numbers, $19,000,000. In Michigan alone $25,000,000, a difference in favor of Michigan of $6,000,000.

The number of hands employed in the three States in manufacturing was 63,901. In Michigan 77,591, a difference of 13,690 in favor of Michigan.

These workingmen in the three States received upon the average $302 per year. In Michigan $326 per year.

The three States were for the most part engaged in one industry, agriculture. Michigan took advantage of the tariff laws and diversified hers, as is shown by the following comparison:

The three States in 1880 had 68,470,769 acres in farms; Michigan had 13,869,221 acres.

The average value per acre in the three States was $8.80; in Michigan, $35.98.

In the three States where one person was engaged in manufacturing there were 61 persons engaged in other callings, while in Michigan for every person so engaged there were but 21 engaged in other pursuits.

Of persons over ten years of age in 1880, in the three States, 30 per cent. were engaged in farming; in Michigan only 20 per cent.

I have not the data for comparison between these three States and Michigan since 1880. If the speakers upon the other side have they have kept them scrupulously hidden. But as for my own State, her progress from 1880 to 1884, the date of our last census, was simply marvelous. The number of persons engaged in manufacturing there rose from 77,591 in 1880 to 128,986 in 1884, an increase of 51,395 in four years, or at the rate of 1,000 per month. The wages paid during the last year named was $44,000,000, and the average rate paid rose from $326 in 1880 to $342 in 1884.

During the same time the farm lands of Michigan increased in value by the sum of $81,000,000, and the farm personal property by the sum of $17,000,000, making a total increase in this industry of $98,000,000.

The entire wealth of the State rose from $1,800,000,000 in 1880 to $2,000,000,000 in 1884, or nearly $1,000,000 per week! Sir, this comparison answers the question so often asked in this debate, "If the tariff is such a good thing, why does it not benefit all parts of the country alike?" It does in any and all parts where industry and thrift take advantage of the protection it offers against foreign competition. It will take more than the gentleman from Texas to convince the farmers of Michigan that these ten thousand workshops with their hundred thousand workmen right at their doors, whose robust limbs are to be clothed and hungry mouths fed, are not better customers for them than "the markets of the world" with an ocean to cross to find them. And not even the President can convince them that they will be better off with the barriers that have made their prosperity possible removed or in any considerable degree changed. To the people of my State at least the tariff has not been that "iniquitous," "blighting," "unjust," "robber" so fearfully painted by our friends upon the other side of this question.

It is true, sir, and I state it in connection with this comparison that many farms in Michigan are mortgaged. But of nine-tenths of them it may be said they stand for either part of the purchase price of the land, farm improvements, like buildings, or have been given by one of several heirs, who buys their interests and keeps the farm. It is not true, as has been asserted here, that 47 per cent. of the farms of Michigan are mortgaged, but it is true that of the whole number not to exceed 19 per cent. are thus encumbered, and those for the most part for the sufficient reasons above given.

The CHAIRMAN (Mr. PAYSON). The gentleman's time has expired.

Mr. ALLEN, of Michigan. I ask for but two minutes more.

The CHAIRMAN. Is there objection? [Cries of "Go on!"]

Mr. ALLEN, of Michigan. I want but two minutes, if there be no objection, to conclude my remarks.

Mr. Chairman, the comparisons I have made have not been invidious, and are for the purpose of calling a halt to our friends upon the other side and spurring them to "go and do likewise." Sir, no man has a profounder regard or more heartfelt desire for the welfare of all the people of this country than I have, and my desires in this regard are those of my State. The men of Michigan to the number of 100,000 would to-day, if necessary, march to the defense of Mississippi or any other Southern State. But I want them to keep pace with us in the march of improvement. That is all I ask. The tariff will not make them rich, but the opportunity the tariff gives will make them rich if they will but accept it; and when that time comes, when their great farms shall be cut up and cultivated, their mines developed, their vast forests made into lumber, when they have villages, cities, and hamlets thickly strewn amongst them, as have Michigan and other Northern States, when the last vestige of everything provincial shall have departed, then will prosperity indeed and in fact be a reality to every man within the borders of this great confederacy. [Applause.]

In that swift-coming day of perfect union and brotherly love the sons of the sires who fell with Warren at Bunker Hill will stand hand in hand and see eye to eye with the sons of the sires of South Carolina, where rang the shouts of Marion's men, and followed quick the crack of the avenging rifle as they drove the alien enemy into the swamps and sea. In that day the Mississippi River will carry unvexed to the ocean the burdens of the great Northwest, an empire within a Republic.

The limpid waters of the great lakes will be united with those of the Father of Waters, a silver cord helping to bind the Union together forever, while bands of steel will unite the North to the South and the East to the West, and over and above all will float the banner of the nation which we all now love, and none other than which our children shall ever know. That banner with its red and white and azure blue shall stand for the power, for the courage, for the justice of this nation, and a beacon of hope and inspiration to the oppressed of all climes, to the wronged of every land. [Applause.]

The Tariff.

Protection to American enterprise and American labor against the rest of the world.

SPEECH

OF

HON. JACOB ROMEIS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 17, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. ROMEIS said:

Mr. CHAIRMAN: The people of the Tenth district of Ohio, who have twice honored me by an election to this House, are no strangers to the tariff question The beauties of free trade have been pictured to them in glittering colors by that great word-painter, my predecessor on this floor, who is one of the high priests of the philosophy of the Cobden Club. They have passed judgment on that picture, however, and while at first they were deluded by the splendid rhetoric and the deceptive arguments of that gentleman, they have finally perceived their fallacies and recognized the fact that the doctrine of free trade is inimical to all the best interests of our country. Instead of continuing in Congress the gifted advocate of free trade they have sent here a plain and unassuming Republican, a believer in this truth, that the protection of American industries against the free competition of the underpaid labor of the whole rest of the world is the corner-stone of the prosperity of our people.

The Tenth district of Ohio contains a number of cities and towns which flourish chiefly by their industries. Before the war Toledo was a city of 13,000 inhabitants. Now it has a population of more than 80,000. This wonderful growth is due almost entirely to the establishment of factories and workshops which employ many thousands of artisans and wage-workers, and to its splendid water and railroad facilities. The other cities and towns in the district owe their present size and prosperity also to the industrial establishments located within them, and their people recognize their value so fully that they are always ready to offer substantial aid in land and money to those who desire to establish new factories within their limits. The farmers of the district likewise understand that to be near industrial cities and towns with well-paid laboring populations means the very best home market for them, and so fully and thoroughly are they convinced of this, that while I have received numerous petitions from them for the preservation of the protective system, not one of them, Republican or Democrat, has ever asked me to vote for the bill now before us.

As all the petitions from my district were referred to the Committee on Ways and Means, which, I understand, never looked at them, I tried to have one of them inserted in the RECORD, but even that poor consolation was refused, and for that reason I now desire to incorporate in my remarks a copy of a memorial to Congress, sent to me from all parts of my district, so that the views and demands of my people may become known to the members of this House.

Mr. Chairman, the pending bill clearly discriminates against the North and in favor of the South. It proposes to abolish the duties on nearly all products which the Northern farmer raises, while it leaves protected Southern rice and Southern sugar, both as much articles of food and necessaries of life as any other product of the soil. Why shall the South have protection and the North have none? Because the bill is a sectional one, conceived in the spirit of sectionalism, and born of a sectional majority of the Ways and Means Committee, assisted in its labors by a couple of Northern midwives.

We have heard a great deal about "protection robbery" since this debate began, but none of the gentlemen who have inveighed against it have had a word to say against the tribute which the Southern "robber" exacts from the whole people of the North by means of the tax on rice and sugar. I am a protectionist, not for one section, but for the whole country, North and South, East and West. I am in favor of protecting every legitimate industry of the country against the unfair competition of the outside world.

The free-trade advocates demand the right to buy in the cheapest markets. This is the same old cry of the South that has led to so much sectional feeling and contributed no small part to the animosities that led to the war of the rebellion. To buy in the cheapest markets of the world and to import the purchased articles free of duty means either the destruction of the industries of this country or the reduction of the wages, and consequently of the condition of the workingmen to those of the workingmen not only of Europe, but of Asia also.

The people of the South, or their leaders at least, are still laboring under the delusion that the industrial prosperity of the North can be safely destroyed, or the wages of the Northern workingman can without detriment to the welfare of the whole people be reduced to those paid the labor of Europe or the cheap black laborers of the South without injury to themselves. They are grievously mistaken. The prosperity of the South depends upon the prosperity of the North. The interests of all the sections of this great country, as diversified as they are, are still common, bound indissolubly together, and none of them can be injured without injuring all. The South never knows her true and best interests so long as she believes that she ought to buy what she needs in England and Europe and that she has no interest in the welfare of the North. Southern orators have declaimed against the Republican doctrine that a home market is the best, but they themselves do not practice what they preach, for they believe in a home market for all such of their products as have the competition of foreign countries. Sugar and rice prove it. They want to secure to themselves a good home market for these articles, so that they may be protected against the pauper labor of the West Indies and China. And as the natural resources of the South are developed, as they must and will be, even though some of her statesmen almost weepingly regret that her mountains are rich in ore and her forests abound in useful timber, so will her industries multiply and increase, and with them the desire to protect them against the unfair competition of cheap labor, in order that the home market may remain for them.

The gentlemen who support this bill well know that our manufacturers can not compete with those of Europe if this bill becomes a law. The European manufacturer has cheaper capital and cheaper labor at his command, and also a government back of him that supports the ships which carry his freight to foreign countries, and in some instances even pays him a bounty on the goods he exports. What, then, is to become of our workingmen when the factories are closed? The country yet has a large and unsettled public domain, homesteads for millions of citizens, you may say. No doubt many of them would be compelled to become farmers, and the result would be that from consumers they would become producers of wheat, corn, and other products of the soil. What benefit would the farmer North and South, East and West derive from such a change? It would increase the overproduction of everything the farmer raises, and must cheapen the prices. The farmer would grow poorer, just as the workingmen who would remain in the industries and work for such low wages as would enable the manufacturer to compete with his foreign competitors.

You gentlemen on the other side talk about opening to us the markets of the world. How? They will be no more open to us after the destruction of the protective system than they are now, unless you mean that our workingmen will, after the destruction of our home market, be compelled to work for even lower wages than those of other countries, so that we may be enabled to underbid foreign manufacturers in their own countries. And England and such other countries as now buy our wheat and corn will pay us no higher price for these articles if we have free trade, with which my friend from Missouri [Mr. HATCH] threatens us if we do not accept this bill, than they pay us now.

The proposition to put wool on the free-list and to still pay a duty of about 40 per cent. on manufactured woolen goods is a cunning device to arraign the wool-grower and the manufacturer of woolens against each other. To the manufacturer this bill holds out the inducement to enrich himself at the expense of the wool-grower, but only for a while. If the manufacturers of woolen goods are no fools, they will see that free wool is only a bait for them, for their support of the Mills bill. If they should be foolish enough to swallow the bait and help to make wool free of duty, they would at once cause all farmers who grow wool to clamor for the repeal on all woolen manufactures, and that is precisely what the cunning managers of the free-trade party desire. The latter seek first to kill off wool-growing with the help of the woolen manufacturer and then to kill the woolen industry with the help of the farmers who can no longer raise wool in competition with foreign countries.

The woolen blanket has long had to do duty as a free-trade argument in this connection, but only by perversion of the facts. If there really was as much profit in manufacturing woolen blankets, as well as everything else, as these free-trade philosophers claim, everybody would want to go into the business and help "rob" the farmer and laborer. The fact is that the poor people in this country had no blankets until we had protection and commenced manufacturing them here, while now everybody has them, and at low and reasonable prices too. Since blanket-making was made possible by a protective tariff we have manufactured them and they are now being sold at much lower prices than they could be purchased for when no duty was paid on them. The same holds true of carpets; they are now so cheap that but few people are so poor as not to be able to carpet their floors. The same is also true of everything else, and there can be no truer saying than that the protective tariff has, by stimulating competition at home, reduced the prices of all commodities of life so that they are within the reach of everybody.

You gentlemen who advocate free trade, or, being ashamed of that term, claim to be in favor of a low tariff, have no appreciation of the condition of the working people in Europe, and of the doleful influence their miserable condition has on everything there. You know they come here by thousands and by hundreds of thousands every year to better their condition; still you will not take warning, but try to inaugurate the same conditions in this country that drove those people from their native lands. If you will go there and study the situation, see what free trade or a tariff that is not protective, but for revenue only, has done for them you will surely return with your free-trade philosophy all knocked out of you, unless you belong to that class that never learns or forgets anything.

How do the people live there? Look at the consular reports published by the State Department and you will find their chief articles of nourishment to be potatoes, bread, and thin soups. Meat with them is a delicacy, and those things which we call delicacies here are unknown to them even by name. To reduce our people to that condition, while this country is rich in resources and fertile, would be a crime indeed. History knows no people who have ever enjoyed as great prosperity as the people of this country have done and now do under the beneficent system of protection, which gives America to the Americans.

Mr. Chairman, the very formation of the Government of the United States, the adoption of the Constitution, were brought about by a desire, or, rather, the necessity of having free trade between the States and protection against the rest of the world. I have no time to relate how the young States of Virginia, Maryland, Delaware, and Pennsylvania were compelled to take steps to form a tariff union to be able to protect their infant industries as well as their revenues arising from that protection. And as it was then, so it is now, and will ever be. In Germany, while free trade or a tariff for revenue only prevailed there, the industries languished and the manufactures of that country, under the competition of all surrounding countries, had become so cheap as to be noted also for their worthlessness. The German commissioner to our Centennial Exposition at Philadelphia even said in his official report that to the exhibits of his country must be applied the censure, "Cheap and poor." Now, that has all changed since 1876 in Germany.

Since then the German Government, following our example, has enacted a protective tariff; the quality of German manufactures has been improved wonderfully, the quantity has increased, wages have steadily risen, and to-day the condition of the working classes in Germany is 50 per cent. better than ten years ago, as even free-trade consuls of the United States in that country testify.

I want to add to my remarks here what Bismarck said on the American tariff:

BISMARCK ON THE AMERICAN TARIFF.

On the 14th of May, 1882, Bismarck, speaking in the German Reichstag, uttered this indorsement and admiration of the American policy of protection:

"The success of the United States in material development is the most illustrious of modern time. The American nation has not only successfully borne and suppressed the most gigantic and expensive war of all history, but immediately afterward disbanded its Army, found employment for all its soldiers and marines, paid off most of its debt, given labor and homes to all the unemployed of Europe as fast as they could arrive within its territory, and still by a system of taxation so indirect as not to be perceived, much less felt. Because it is my deliberate judgment that the prosperity of America is due to its system of pro-

tective laws, I urge that Germany has now reached that point where it is necessary to imitate the tariff system of the United States."

The surplus in the United States Treasury is the great bugbear of orators to-day. Well, the Treasury had no surplus under Democratic rule. The conditions which have created the surplus are to be found in the general prosperity of the people, and to do away with the surplus the Democrats think it necessary to remove those conditions and with them destroy that prosperity.

The surplus can readily be disposed of. Remove the tobacco tax, the tax on spirits used in the arts, and on wholesale and retail liquor establishments, so as to allow the States to tax such establishments. Then repeal the duty on sugar, and a premium equal to the amount of duty taken off should be paid to encourage the production of sugar in all parts of the country. Germany, France, and other countries have given premiums until the production in those countries is larger than the consumption.

Then our 12,000 miles of sea and lake coast, including Alaska, ought to be put in a condition of defense. The Secretary of War reported to this House last December that he had no new gun with which to drill the cadets, or officers, and men; that they had to practice with the old guns, and which, in case of war, would be obsolete. What a condition the Democratic party is in on account of a surplus which it fears to use, even in defense of the country; not one modern gun with which to educate its future or present officers and men and with which to defend it shores. Our Navy, too, should be increased to at least decent size; and to provide a reserve for it we ought to encourage the building of ocean steamers which carry our trade and our mail in times of peace and guns in times of war. This could be done by reasonable expenditures; but whenever the proposal is made the howl of "subsidy" is raised. Plans for such ships should be drawn in accordance with the requirements of the Navy Department and with its approval. This would help to build up our merchant marine, and the ships that would carry our mails would also carry the Yankee drummer, who would soon be known in all the markets of South America and the east, if not in Europe. Care for the soldier, who needs protection from the poor-house and starvation, and keep on paying off the debt of the country, and when all these things are done, as wisdom and patriotism dictate, there will be no surplus, and with the surplus the pretext for free trade will have disappeared.

If our people would be more patriotic, and not so much English, you know—if they would patronize their own industries and import less—there would be still more employment for American labor. We purchase annually about $600,000,000 worth of commodities in Europe, at least one-half of which represent articles which can be and are being manufactured in the United States. But many people take more pride in boasting of wearing imported clothes, eating off imported china, and drinking imported wines and liquors out of imported glasses than becomes an American citizen, who should take the greatest pride in patronizing American industries.

Free-traders claim that if we would buy more of Europe, Europe would buy more of us, and they point especially to Germany and France, which countries have prohibited the importation of American pork, saying that it we purchased more there they would again admit our pork. This is foolish; they prohibit our pork for other reasons, and it Americans were really desirous of getting even with France and Germany on that point, all they had to do would be to drink no more German and French wines and liquors, for which we pay millions of dollars every year. There is nothing very enticing about most of these wines and liquors, as our consuls in those countries report in their descriptions of the adulterations of these articles of drink which are exported to the United States. French wines, for instance, are largely adulterated with German potato spirits, the vilest spirits made; and French brandies, for which immense prices are paid, are chiefly made of these same potato spirits. The residue of the potatoes from which the spirits are made, which go to fortify French wine and brandies, is fed to the hogs, and make the German pork.

[Here the hammer fell.]

Mr. SPRINGER. If the gentleman from Ohio wishes for a little more time I hope there will be no objection.

Mr. ROMEIS. I thank the gentleman from Illinois. I only wish to say in conclusion that the charge made by the other side of this Chamber about the farmer and laborer being "robbed" is, in my judgment, all bosh. To that class I claim to belong. I have and pay the expense of a farm in Ohio since 1869, and I know that I pay less to-day than I did in 1869 for every thing used about and on the farm. I paid $2 a barrel for salt in the spring of 1869, and now I can buy better salt for 60 cents a barrel. When my people use a pound of salt in making butter, for which they pay say one-quarter of a cent, and sell the salt in the butter for 18 or 24 cents, where is the loss? And if the manufacturers are all "robbers," as some gentlemen on that side try to make us believe, why do you want to give them free wool and 40 per cent. protection, and so make them richer and the farmer poorer?

I want to print with my remarks what Hon. Thomas H. Dudley, of New Jersey, said to the farmers of Lancaster, Pa., in February, 1887 in answer to Hon. Frank H. Hurd.

First, we want protection in the cases where we can compete so as to keep the manufacturing industry of all these commodities here in our own country in order to give our laboring people the benefit of making them. We want our own people to be employed so they can receive the wages. We think it more important that these wages should be paid to our own people than that they should be paid to the English people. We manufacture in the United States, one year with another, about $7,000,000,000 worth of commodities, and pay the laboring people each year who are directly employed in making them about $1,500,000,000. Now, if these goods are made in England these wages would be paid to the English work-people there, and not to our people. It is just a question whether they shall be paid here at home to our own people, or whether they shall be paid to the work-people over there.

But there is another reason why we require protection where we are competing: we do not want our country to be made the dumping ground for the overproduction of Europe.

PETITION FOR MORE EFFECTUAL PROTECTION OF AGRICULTURE.

To the Speaker of the House of Representatives:

The undersigned respectfully pray that agriculture may be more effectually protected—

By preventing fraudulent importation of cattle on pretense that they are for breeding only;

By a duty of 20 cents per bushel on barley, with proportionate increase of duty on malt;

By duties of 25 cents per bushel on potatoes and onions, $2 per hundred on cabbage, $3 per ton on hay, 10 cents per pound on hops, 20 cents on beans and peas, 5 cents per dozen on eggs, 30 per cent. on fowls and poultry and on "vegetables in their natural state or in salt or brine, not otherwise provided for," with no removal or reduction of duties on market-garden products now dutiable;

By such increased duties on flax and on linen goods as will effectually encourage the preparation of fiber and manufacture of goods;

By abolishing all duties on sugar, with a bounty to home producers;

By preventing imports of leaf tobacco suitable for wrappers at a duty imposed on other leaf tobacco, and repealing all internal taxes on tobacco; and

By restoring to wool-growing the substantial protection enjoyed under the tariff of 1867, so modified as to meet the later forms of foreign competition and evasion.

The undersigned represent, respectfully, that they are practical farmers of this locality.

Department of Agriculture.

SPEECH

OF

HON. J. H. ROGERS,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 21, 1888,

On the bill to enlarge the powers and duties of the Department of Agriculture and to create an Executive Department to be known as the Department of Agriculture.

Mr. ROGERS said:

Mr. SPEAKER: I send to the Clerk's desk to be read a joint resolution of the General Assembly of Arkansas, approved January 23, 1887:

The Clerk read as follows:

Whereas, recognizing the fact that agriculture is the chief feature of all American industries; that the farming classes comprise a majority of the voters of the United States, pay more than half the taxes, and cultivate 300,000,000 acres of land, valued at more than $10,000,000,000; that upon the proceeds of the soil our Republic is dependent almost entirely for her prosperity and the support of government; that the census of 1880 reveals the fact that of the entire exports of this country, 81 per cent. come from the farms, forests, mines, and fisheries, whilst only 16 per cent. is the product of machinery; that the cotton of the South and the grain of the West hold a dual control over our material prosperity; and

Whereas we believe that agriculture should be better fostered and more encouraged by the General Government, and that the Department of Agriculture should be elevated to the dignity commensurate with its great importance to the nation: Therefore,

Be it resolved by the senate and house of representatives of the State of Arkansas in General Assembly, That our Senators and Representatives in Congress be requested and urged to support the bill now pending in Congress to make the Commissioner of Agriculture a Secretary of Agriculture and Labor and a member of the President's Cabinet; also to favor the increase of appropriations to that Department to such an amount as to render it of more value to the people and the Government.

Resolved further, That the secretary of the senate be instructed to forward a copy of this resolution (after its passage by both houses) to each Senator and Representative in Congress from this State.

Approved January 23, 1887.

Mr. ROGERS. Mr. Speaker, but for that resolution I should content myself by voting against this bill, as I did in the Forty-eighth and Forty-ninth Congresses, without comment; but respect for the members of the Legislature requires, I think, that I give my reasons for non-compliance with their request. I shall not be understood, therefore, as supposing that these reasons, when assigned, will change a single vote or impede the passage of this bill any longer than the time I shall occupy the floor. And I confess that in the discharge of this duty I feel a sense of loneliness and reluctance. It would be far more agreeable for me to vote with the majority and let this bill go through without a word of discussion.

Mr. Speaker, in all candor I confess to some apprehension in mentioning the written Constitution in this presence. The most painful experience of my brief public life has been the witnessing of the repeated violations of that instrument. True, in times of high political excitement it was denounced as a "league with hell and a covenant

with the devil," and a party in this country sometimes denominated "the party of great moral ideas" has, I believe, at all times been disposed to treat it as subordinate to what has been termed the "higher law," which, correctly understood, means that whenever the Constitution did not authorize the doing of anything which in its opinion should be done, it was to be disregarded, or, to put it in a milder form, so construed as to authorize the thing to be done.

But the Democratic party for nearly a century adhered to the idea that the Constitution was intended by those who framed it to be, within the scope of the powers delegated by it to the Federal Government, the highest law of the land. It persistently repudiated the assumption, not always avowed, but not unfrequently acted upon, of the existence of any law in this country higher than the Constitution.

It also repudiated the idea that the Federal Government could rightfully exercise any power not expressly or by necessary implication delegated to it by the Constitution.

In Martin *vs.* Hunter's Lessee, Judge Marshall said:

On the other hand, it is perfectly clear that the sovereign powers vested in the State governments by their respective constitutions remained unaltered and unimpaired, except so far as they were granted to the Government of the United States. These deductions do not rest upon general reasoning, plain and obvious as they seem to be. They have been positively recognized by one of the articles in amendment of the Constitution, which declares that "the powers not delegatad to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people." The Government, then, of the United States, can claim no powers which are not granted to it by the Constitution, and the powers actually granted must be such as are expressly given, or given by necessary implication.

So said Judge Marshall.

Turn, then, to the Constitution and put your finger on that clause wherein the "power" is "expressly given," or wherein it is "given by necessary implication," for Congress to create an executive department of agriculture.

I have read with care the debates on this subject, and with one single exception no gentleman, so far as I know, has had the temerity to try it.

True, the idea that the power does not exist has been flippantly ridiculed by one, its existence has been boldly asserted by others, and the idea that Congress is to be bound by the written Constitution that we all take an oath to support and defend almost repudiated by another. Such was the character of the speeches in which the advocates of this scheme indulged in the Forty-ninth Congress.

What is the object, then, of this bill? Avowedly it is to make the Agricultural Department, which is now not an executive department, an executive department, and to create the office of secretary of agriculture and make him when appointed a Cabinet officer.

Mr. Speaker, to begin with, there is no such thing as a "Cabinet officer" known to our laws or Constitution. The words "Cabinet" or "Cabinet officers" are not to be found in the statutes or the Constitution of the United States.

True, for the sake of convenience, the Presidents from an early day called the heads of the several Executive Departments together from time to time for consultation upon grave matters of state, and custom or common parlance recognizes these officers, when assembled for such purpose, as the "Cabinet" and these heads of Departments as "Cabinet officers."

In point of fact, for some time after the Constitution was framed there was no uniform custom of assembling the heads of Departments for the purposes of consultation.

In a letter written by Thomas Jefferson, found in volume 4 of his correspondence, touching differences which had sprung up between the heads of the Departments at that time, he said:

The ordinary business of every day is done by consultation between the President and the head of the Department alone to which it belongs.

For measures of importance or difficulty a consultation is held with the heads of Departments, either assembled or by taking their opinion sseparately in conversation or in writing.

The latter is most strictly in the spirit of the Constitution, because the President in weighing the advice of all is left free to make up an opinion for himself. In this way they are not brought together, and it is not necessarily known to any what opinion the others have given. This was General Washington's practice for the first two or three years of his administration, etc.

In his Commentaries on the Constitution Judge Story says:

The next provision is as to the power of the President to require the opinions in writing of the heads of Departments. It has been remarked that this is a mere redundancy, and the right would result from the very nature of the office. Still it is not without use, as it imposes a more strict responsibility and recognizes a public duty of high importance and value in critical times. It has in the progress of the Government been repeatedly acted upon, but by no President with more wisdom and propriety than by President Washington. (2 Story on Con., sec. 1493.)

Mark the language of the Constitution:

He (the President) may require the opinion, in writing, of the principal officers in each of the Executive Departments upon any subject relating to the duties of their respective offices, etc.

Not that he may require the opinion of either or any of the heads of Departments otherwise than in writing, or upon any subject relating to any of the duties of any one or about anything other than the duties of his own office.

So that neither the Constitution nor the laws of the land recognize any such thing as a Cabinet. It is unknown to both, and is the creature of custom and custom only.

The President may, if he choose, never hold another Cabinet meeting, or he may, if he elect, hold them at his pleasure, and decline to have present either or any of the present heads of the Executive Departments. And why? Because the language of the Constitution is, "The executive power shall be vested in a President of the United States of America." Not the President and the heads of Departments, but in him and him only, is the executive power vested.

And if the Constitution has vested the executive power in him, who shall say that another shall share with him without his will the responsibility for the correct exercise of that power?

Is it provided in the Constitution that the heads of the Executive Departments shall exercise any executive power? Let us examine this. The word department is mentioned but three times in the whole instrument.

Section 2 of Article II provides that—

The President shall be Commander-in-Chief of the Army and Navy of the United States, and of the militia of the several States when called into the actual service of the United States; he may require the opinion in writing of the principal officer in each of the Executive Departments upon any subject relating to the duties of their respective offices, etc.

This is the second mention made of a Department in the Constitution. It is called not a Department, but an "Executive Department."

The connection in which it is used is deeply significant. The head of that Department, "its principal officer," is made to answer in writing the requirement of the President. But that requirement must relate, not to any subject that the whim or caprice of the President may suggest, it must relate to the duties of his office. Whose office? The office of the "principal officer" of the particular Department. But what is the character of duties these Departments perform? They are Executive Departments, and manifestly their duties are executive duties, or perhaps they may be more properly called "political duties." True, Congress may, where it has the constitutional power to enact the law, impose ministerial duties on Department officers. Such duties are not "executive" or "political," and, therefore, not under the exclusive control of the executive, but under the control of public law. (Kendall *vs.* United States, 12 Peters, page 609.)

But this bill provides for the creation of an executive department, and manifestly its duties are executive duties. Certainly they are not legislative nor judicial duties, for section 1, Article I, of the Constitution tell us that—

All legislative powers herein granted shall be vested in a Congress of the United States, which shall consist of a Senate and House of Representatives.

And section 1, Article III, tell us that—

The judicial power of the United States shall be vested in one Supreme Court, and in such inferior courts as the Congress may from time to time ordain and establish.

It must follow, therefore, that the functions and duties performed by the Executive Departments are executive functions or duties. But we have seen that the executive power of the Government is vested in the President. Manifestly, then, these Departments act under his direction, subordinate to him, and as instrumentalities merely, though provided for in the Constitution, to aid him in the execution of the powers vested in him by the Constitution. And what power can he exercise rightfully as the Executive that is not delegated to the Federal Government by the Constitution? Let Judge Marshal answer that question. I repeat it:

The Government of the United States can claim no powers which are not granted to it by the Constitution, and the powers actually granted must be such as are expressly given or given by necessary implication.

In what provision of the Constitution is any power expressly given over agriculture? In what provision is any power given by necessary implication over agriculture? Unless it can be shown that such power is given in either one or the other of the ways mentioned, Judge Marshall tells us, the Government can not claim it.

Mr. Speaker, have these Executive Departments any executive power not vested in the President?

This brings us to the third provision of the Constitution, in which the Departments are mentioned. Paragraph 2, section 2, Article II, provides that—

Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of Departments.

Certainly there is no power given in this provision over agriculture, and these Departments acquire nothing by it except to appoint such inferior officer as Congress may think proper to authorize them by law to appoint.

But if power has been granted to Congress to legislate in regard to agriculture, the Executive must enforce such legislation. This leads us to inquire, what power Congress has over agriculture.

Article I, section 8, of the Constitution contains eighteen distinct grants of power to Congress. It is not necessary to enumerate them now. The eighteenth grant is in these words:

The Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any Department or officer thereof.

This is the first mention of a Department in the Constitution. It will not be contended that any power has been vested in any Department or officer thereof, other than those named. If there is any power

over agriculture in any one of the seventeen preceding grants, will some advocate of this bill name it; specify which grant it is? There are some other grants of power in the Constitution, notably those in Article IV, but there is no pretense that they relate to agriculture.

Where, then, is this power to be found?

I have endeavored to show that the Departments contemplated by the Constitution are Executive Departments; that their duties are executive duties; that their functions are executive functions; that their powers are executive powers.

Mr. Speaker, what is agriculture? Is it the transportation of agricultural products from one State to another, or from one country to another? If so, by this process of reasoning, the man engaged in shipping cotton from Memphis to New Orleans, or from New Orleans to Liverpool, by this vocation becomes an agriculturist. The man likewise engaged in shipping the manufactured goods between the same points becomes a manufacturer.

Mr. Speaker, this is commerce, and is subject to the regulations of Congress under the commerce clause of the Constitution, but it is not agriculture, nor is it manufacturing.

In Telegraph Company *vs.* Texas, 105 U. S., page 464, Chief-Justice Waite, delivering the opinion of the court, said:

> A telegraph company occupies the same relation to commerce as a carrier of messages that a railroad company does as a carrier of goods. Both companies are instruments of commerce and their business is commerce itself.

We can not deceive ourselves, then, by trying to find the power to create this Department in the commerce clause. It is not there.

What is agriculture? It is defined by the lexicographers to be "the art or science of cultivating the earth." Who will pretend that this is a function of the Federal Government?

Mr. Speaker, the ablest gentleman, who by his vote and voice has advocated this measure, scrupulously avoided committing himself to pointing out the clause of the Constitution which confers any such power in Congress. But he did say:

> I do not understand that agriculture is a function of government.

What does he mean by the word "function?" It means "employment, office, occupation, duty, power." His real meaning then is that the art or science of cultivating the soil is not the employment, office, occupation, duty or power of government. I agree to this definition. I agree to the conclusion he reached, namely: "That agriculture is not a function of government," and I regret that at this point we must part company.

But let us analyze this sentence:

> I do not understand that agriculture is a function of government, and therefore entitled as a matter of right to be represented by a Cabinet officer, nor is this measure based upon any such assumption.

Transpose this sentence and it reads: "To be entitled to be represented by a Cabinet officer as a matter of right, agriculture should be a function of government; but I do not understand that it is a function of government, and therefore it is not entitled to be represented by a Cabinet officer." That is the logic of the position, and yet its author advocated the bill on the grounds stated.

But, Mr. Speaker, does the fact that the carrying the mails is a function of government entitle it as a "matter of right" to be represented by a Cabinet officer? Not at all. In point of fact, for years after the postal system was established the Postmaster-General did not attend Cabinet meetings, and never, until invited by President Jackson, though that Department was created contemporaneously with the others. The fact is, there is no such thing as a "Cabinet," legally speaking, and no function of government is entitled as a matter of right to be represented in the Cabinet meetings, as they are called.

The whole matter is summed up in the constitutional provision—

> That he (the President) may require the opinion, in writing, of the principal officer in each of the Executive Departments, upon any subject relating to the duties of their respective offices.

The President may do this, or not do it, and no one as a matter of right can demand access to his counsels. No such right was ever asserted, and I do not think that any such constitutional heresy was ever announced before.

Mr. Speaker, another gentleman ascribed the power to create this Executive Department, to the "general welfare clause" of the Constitution. It is as follows:

> Congress shall have power to lay and collect taxes, imposts and excises, to pay the debts and provide for the common defense and general welfare of the United States.

From the power here named—the taxing power, not the general welfare clause—sprung the Treasury Department. Why? Simply because some means had to be provided to collect, preserve, and disburse the finances of the Government, and Congress thought the Treasury Department an appropriate method for the execution of that power.

But it is said that this provision also empowers Congress to provide for the "general welfare of the United States," and therefore Congress may create an executive department of agriculture as an appropriate means of providing for the general welfare of the United States.

Mr. Speaker, if the agricultural department may be created under the general welfare clause of the Constitution, why might not all the other departments, the Treasury as well, and as many more as Congress shall see fit, and on as many subjects as it may see fit, be created under the same clause? And if all might have been created under this one clause, pray what fools our forefathers were to delegate any other power to the General Government than the general welfare power. Why did they delegate the power to regulate commerce, to establish post-offices and post-roads, to promote science and the useful arts, to create courts of justice, to declare war, to raise armies and navies? Do not the exercise of these powers all relate to the "general welfare" of the United States? Why was not Congress left to do all these things and anything else it chose, under the general welfare clause of the Constitution?

Mr. Speaker, I need not discuss what is meant by the words "general welfare." Suffice it to say they convey no independent, substantive power, unless it be to appropriate money, and I do not concede that. I insert on this point a remarkably clear and strong exposition of the general welfare clause of the Constitution, which, though not directed to this subject, bears with great force upon it.

> The Senators alluded to base themselves on what they call the "power" "to provide for the common defence and general welfare;" and claim wide discretion under "the sovereignty of the national government." Not only is there no such "*power*," but the very phrase in which it is said to be couched, was actually considered by the convention of 1787, to refer alone to the *purposes* for which the "power" was to be delegated. And the Journal proves this statement; while the Federalist, and Jefferson and Madison always so stated the matter, as I shall proceed to show.
>
> I will begin by quoting from the original Constitution in the Secretary of State's office, "the power of taxation," as the Convention in its proceedings characterized it.
>
> "Section 8. The Congress shall have Power To lay and collect Taxes, Duties, Imposts, and Excises, to pay the Debts and provide for the common Defence and general Welfare of the United States; but all Duties, Imposts, and Excises shall be uniform throughout the United States;
>
> To borrow Money on the credit of the United States;
>
> To regulate Commerce * * *;
>
> To establish an uniform rule of Naturalization * * *;
>
> To coin money * * *."
>
> Here is an ocular demonstration that "to pay the debts," and "to provide for" "defence" and "welfare" were understood as *purposes*, for which the power of taxation was delegated. The paragraph opens and closes with "the power of taxation," and the rest is, so to speak in parenthentical relation to it. *Noscitur a sociis.* Special authority for such purposes was not needed, for all the specified powers were intended to effect them.
>
> Now let us see how the matter appears in Madison's "Journal of the Debates of the Convention;" and in the official "Journal of the Convention."
>
> On August 5, 1787, the committee on detail reported the Constitution, with eighteen specified powers delegated to the legislature, the first being "to lay and collect taxes, duties, imposts and excises" [V Ell. Deb., 378].
>
> On August 25, Mr. Sherman moved to add these words: "*For the payment of said debts, and for defraying the expenses that shall be incurred for the common defence and general welfare*" [*Ibid.*, 476; also I Ell. Deb., 264]. The addition was then deemed unnecessary; but on September 4 Mr. Brearly, from the committee of eleven, reported the section with the suggestion of Mr. Sherman added [*Ibid.*, 506], with a slight change of phraseology, and none of meaning.
>
> And finally, the Convention, on the 14th of September, near the close of its work, removed all possible doubt, as follows:
>
> "Article I, sect. 8. The words '*but alll such duties, imposts and excises shall be uniform throughout the United States.*' were unanimously annexed to THE POWER OF TAXATION." [*Ibid.*, 543; also I Ell. Deb., 311.]
>
> The phrase under consideration, then, merely states the purpose and use of the revenue to be raised, but gives no hint of delegating power [*Ibid.*, 560]. Now after the Convention has characterized the authority delegated as "the power of taxation," can there be right, or propriety, or truth in calling it a *power of defence and welfare*, especially as there is no ambiguity or doubt in the language, justifying a resort to construction?
>
> It is this very idea that Madison signally refuted in No. 41 of the Federalist—an idea that was then *a charge by foes* to defeat the Constitution, and it was so treated by Madison, Hamilton, Jay. He treats of the so-called construction thus: "It has been urged and echoed that the power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defence and general welfare of the United States, amounts to an unlimited commission to exercise every power which may be alleged to be necessary for the common defence or general welfare. No stronger proof could be given of the distress under which these writers labor for objections, than their stooping to such a misconstruction. Had no other enumeration or definition of the powers of the Congress been found in the Constitution than the general expressions just cited, the authors of the objection might have some color for it. * * * But what color can the objection have, when a specification of the objects alluded to by these general terms immediately follows, and is not even separated by a longer pause than a semicolon. * * * For what purpose could the enumeration of particular powers be inserted, if these and all others were meant to be included in the preceding general power? Nothing is more natural or common than, first, to use a general phrase, and then to explain or qualify it by a recital of particulars."
>
> He winds up by characterizing as an "absurdity" this assumption or pretended construction, so suspiciously agreed on by ancient foes and modern friends.
>
> It has been intimated that Mr. Madison's views were afterwards modified; but this can not be so, because, late in life, while preparing his "Debates in the Federal Convention" for publishing, he reiterated the same view, and supported it by citations [see V Ell. Deb., 560, foot-note—very important].
>
> A single sentence from Jefferson will suffice: "To consider the phrase 'to provide for the general welfare,' as giving a distinct and independent power to Congress to do any act it pleases, which might be for the good of the Union, would render all the preceding and subsequent enumerated powers completely useless." See the whole passage in Jefferson's Works, vol. 4, page 525.
>
> I conclude, then, that as the words and ideas of the defense-and-welfare phrase equally suit each and all of the eighteen specified powers, the relation, meaning, *and intent* of them (the intent being the vital point) can be best shown by a slight change of the collocation of the phrase, while keeping the words and punctuation without change. It is thus made to read as follows:.
>
> Section 8. The Congress, to pay the debts and provide for the common defense and general welfare of the United States, shall have power
>
> To lay and collect taxes, duties, imposts, and excises; but all duties, imposts, and excises shall be uniform throughout the United States;
>
> To borrow money * * * ;
>
> To regulate commerce * * * ;
>
> * * * * * * *
>
> This argument is factual—made up of historical truths and records, and in no wise doctrinal; and I am confident that this statement exhibits the belief of all the original friends and defenders of the Constitution, so far as they reflected on the special point. For example, Jefferson thus expressed himself: "*Certainly*

no such universal power was meant to be given them. It was intended to lace them up straitly within the enumerated powers, and those, without which, as means, these powers could not be carried into effect." [4 J's Works, 525.]

Fortunately the advocates of this bill show how unlimited for mischief such Congressional action can be. They claim that in taxing the people and spending the revenues, they act by virtue of "the sovereignty of the government"; and have no other limit in expenditure than their judgment of "the common defence and general welfare." Jefferson said, as to this alarming claim, "they reduce the whole instrument to a single phrase, that of instituting a Congress with power to do whatever would be for the good of the United States, and as they would be the sole judges of the good or evil, it would also be a power to do whatever evil they pleased."

Note now Senator EVARTS's expression: "It is constitutional to devote every dollar in the Treasury to the purposes of this bill; and then it is constitutional, by your next taxation, to raise the money" "to supply the void" "thus created."

And Senator EDMUNDS says, the clause which prohibits the drawing of money from the Treasury except "BY LAW," (which phrase means, of course, constitutional *law*), does not limit the power of appropriation, or confine it to the specified powers and purposes of the Constitution.

These gentlemen and their coadjutors all seem to agree that they can vote federal money out of the Treasury for purposes which the people have actually kept out of the Constitution, and assigned to other agents; and they all seem to forget that their sovereigns and masters have premonished them that *all* "*powers not delegated* * * * are reserved," *i. e.*, kept back for other disposal.

Moreover, they seem not to consider what that plenary right of government, called sovereignty, is, and where it is. Daniel Webster said: "Sovereignty in government is unknown in North America. It dwells in the people." Said James Wilson, the greatest statesman of Pennsylvania: "The supreme, absolute, and uncontrollable power is in the people *after, as well as before*, a constitution is made. It never leaves them." No eminent "father" ever said or thought otherwise, because our form is entirely republican.

These Senators hold and wield "powers," not sovereignty; and they hold them in trust to use for the people. The single phrase of Article I, "All legislative *powers* herein *granted* shall be *vested*," etc., taken with the fact that the said powers can but be "*delegated*," should show them that the sovereignty is above them, and in their masters, the people; that they never do or can hold and wield it; that they are always subject to it as agents; and finally, that their authority is always derivative and never inherent.

The Bills of Rights of New Hampshire and Massachusetts, which are made up of universally accepted and everlasting principles, show the *status* of all whom the people choose for service, to be "substitutes and agents," as Messrs. BLAIR and HOAR can inform them. And they can read in John Jay's address to the people of New York in 1788 that they have "business to manage" as "*agents* and *overseers* for the people." And the great triumvirate, Madison, Hamilton, and Jay, cap the climax in the Federalist [No. 45], by saying that "*the federal and state governments are different agents and trustees of the people.*"

Finally, the *onus* of proving the "*power*" rests on these Senators. If it exist they can show it. If they leave it in doubt they fail, for no President can approve or court sustain the statute, because the doubt must be solved for the sovereign.

This is to me a painful subject. As one of the people who never held or desired office, I protest against "undue administration," and the use of "powers" we have withheld; and I pray for the Federal Union and strict construction, considering them as vital to American institutional liberty.

With great respect, yours truly,

B. J. SAGE.

Mr. Speaker, some of us profess to be Democrats, some of us profess to adhere to the teachings of Thomas Jefferson, but I assert that Alexander Hamilton, so far as I can find, never claimed any such Federal power as this bill contemplates.

In his report as Secretary of the Treasury in 1791 on manufactures, in discussing the general welfare clause of the Constitution, he said:

It is therefore of necessity left to the discretion of the National Legislature to pronounce upon the objects which concern the general welfare, and for which, under that description, an appropriation of money is requisite and proper. And there seems no room for a doubt that whatever concerns the general interests of learning, of agriculture, of manufactures, and of commerce, are within the sphere of the national councils so far as regards an application of money.

The only qualification of the generality of the phrase in question which seems to be admissible is this: that the object to which an appropriation of money is to be made must be general, and not local; its operation extending in fact or by possibility throughout the Union, and not being confined to a particular spot. No objection ought to arise to this construction from a supposition that it would imply a power to do whatever else should appear to Congress conducive to the general welfare. A power to appropriate money with this latitude, which is granted in express terms, would not carry a power to do any other thing not authorized in the Constitution either expressly or by fair implication.

I commend this language to the friends of this bill.

President Monroe, who it is now fashionable to quote from on this and kindred subjects, gave an emphatic negative of any such construction as is contended for now, of the general-welfare clause of the Constitution. He said of it:

That the second part of this grant—

Meaning the general-welfare clause—

gives a right to appropriate the public money, and nothing more, is evident from the following considerations.

He then proceeds to give the reasons, which I omit.

Mr. Speaker, another gentleman has said in substance that if we can spend millions of money to construct and maintain a costly library in the District of Columbia, it would seem that we could create an executive department of agriculture. That is a convenient method of discussion, but it is neither argumentative nor a fair way of dealing with a great constitutional question.

If there was no authority to construct and mantain the Library, does it follow that there is none to create this department? On the other hand, if there was authority to construct and maintain the Library, does it follow that there is authority to create this department? But I will let the able and distinguished Senator from Maryland [Senator WILSON] answer that proposition.

In a great argument recently delivered in the Senate he said:

Again, sir, I never supposed that any Senator could have any difficulty over the right of Congress "to exercise exclusive legislation in all cases whatsoever" over the District of Columbia, even to the extent of establishing a great library worthy of Congress and of the seat of government for 60,000,000 of people, or of erecting monuments therein to the memory of the Father of his Country, or of other illustrious dead. Nor could I doubt the power of Congress to grant pensions to men disabled in the Army or Navy service, even after a war is over, and without any previous express contract.

I believe that such laws, as well as those erecting monuments to great and heroic commanders, have a tendency to cultivate a wholesome military spirit, and to greatly aid Congress in executing its power "to raise and support armies." The Constitution only enumerates the powers granted to the Government, but does not attempt the vain task of defining everything that can be done under any one of them.

* * * * * * *

But, Mr. President, doubtless many other acts have been cited for which no sanction can be found in the Constitution, and probably least of all in a "general-welfare clause," if such a one could really be discovered in that instrument. Very many of them, to use the words of an old Revolutionary patriot, can only be properly cited to illustrate "the enormities towards which precedents travel." Congress has the ability, rightfully or wrongfully, to expend the people's money whenever and for whatever she pleases. But I am not one of those who believe that Congress, like an English king, can do no wrong.

Beyond question, Congress has spent millions of money in modes and for purposes not only utterly wasteful, but without any constitutional warrant. Having the ability and with no tribunal to restrain them, it would have been a miracle, indeed, if they had not done so. And it seems to me a dangerous and not a very patriotic act for a statesman of distinction to stand up in this Senate and quote many of these acts as done in the promotion of the general welfare, and thus attempt to implant in the Constitution a manufactured power, from which they would be as far removed as pole from pole.

Mr. Speaker, these words suggest again the leading case of McCullough *vs.* The State of Maryland, in which Judge Marshall said:

This Government is one of enumerated powers. The principle that it can exercise only the powers granted to it, would seem too apparent to have required to be enforced by all these arguments which its enlightened friends, while it was depending before the people, found it necessary to make. That principle is now universally admitted.

It is then universally admitted to be a government of enumerated powers.

What is meant by this word "enumerated?" It means "to mention; to count; to number; to compute; to tell; to relate."

It must not be lost sight of now, that it is the "power" over agriculture in the Federal Government that we are now in search of, and not the means to execute that power. For I concede that if the "power" exists in the Government to exercise any control over agriculture that the means of executing that power is a mere question of appropriate action by Congress. Judge Marshall tells us again that "that instrument (the Constitution) does not profess to enumerate the means by which the powers it confers may be executed." But it does enumerate the powers. I challenge and defy any man to point out any power enumerated in the Constitution over agriculture. I do not deny that in the exercise of the taxing power agriculture may be promoted or destroyed. The protective tariff system, which I believe to be the lawful mother of this and numerous other measures now pending, has cruelly taught us that lesson, *so that we shall never forget it.*

For the basis of that cruel system is the wanton and flagrant abuse of the taxing power of the Constitution, as the basis of this is the insidious perversion of the same instrument.

I do not deny that the products of agriculture may be affected by legislation under the commerce clause of the Constitution, as it may be under every other clause, to a greater or less extent. But the same is true of every other industry. And is it contended that the Federal Government has constitutional power over all the industries of the country? What then becomes of the States? What powers do they, or can they, rightfully exercise? What becomes of our educational system? What becomes of home rule? What becomes of our boasted local institutions? What is the office and what are the functions of our State governments? What is meant by that amendment to the Constitution which tells us that—

"The powers not delegated to the United States by the Constitution, nor prohibited to the States, are reserved to the States respectively or to the people.

What are these reserved rights? If this bill be constitutional, who will enumerate the powers reserved to the people, or to the States?

Sir, I can not vote for this bill. I am bound by the terms of an oath that forbids it. I am not unconscious or indifferent to the political peril which my action involves; I believe this measure has much popular strength everywhere; but I believe that sentiment behind it has been largely manufactured and is wholly erroneous. I believe with Judge Story, that—

It is a just observation that the people commonly intend the public good. But no one but a deceiver will pretend that they do not often err as to the best means of promoting it. Indeed, beset, as they are, by the wiles of sycophants, the snares of the ambitious and the avaricious, and the artifices of those who possess their confidence more than they deserve, or seek to possess it by artful appeals to their prejudices, the wonder rather is that their errors are not more numerous and more mischievous.

But if I am wrong it is a consolation that neither my speech nor my vote can affect this bill. It will pass, as it has always done, and as most measures do that are thought popular, and without much consideration as to the constitutional authority or the pernicious results.

Mr. Speaker, I turn for a moment to another aspect of this matter.

If this department were needed, who would most likely feel that need first? All these Executive Departments are but instrumentalities created by Congress, the better to enable the President, in whom, under the Constitution, the executive power is vested, to discharge his duties. Has he requested any new department to aid him in his work?

And pray, what aid will this proposed secretary give? About what duty or power or function of government will he be consulted? Will it be of taxation? That is referable to the Secretary of the Treasury. Will it be of pensions, lands, patents, or Indians? These are referable to the Secretary of the Interior. Will it be of war? This goes to the Secretaries of War and Navy. Will it be of foreign affairs? This goes to the Secretary of State. Will it relate to the judicial establishment? There is the Department of Justice and the Attorney-General. Will it be of the weather or the crops? If so, what executive power can the executive bring to bear?

Mr. Speaker, this Secretary is a voluntary tender by Congress. It is a suggestion that Congress understands better than the executive what he needs and what he must have. Nor is it a mere question of comity between the President and the law-making power. It may well be designated as the first message by Congress to the President on the state of the Union, but especially as to the scope and extent of his executive power. I know of nothing in the history of the Republic that illustrates so well, so truly, what Judge Story said of the veto power as this bill. Said he:

> In the first place, there is a natural tendency in the legislative department to intrude upon the rights and to absorb the powers of the other departments of government. A mere parchment delineation of the boundaries of each is wholly insufficient for the protection of the weaker branch, as the executive unquestionably is; and hence there arises a constitutional necessity of arming it with powers for its own defense.

Again he says:

> The tendency of the legislative authority to absorb every other has been already insisted on at large in the preceding part of these commentaries, and need not here be further illustrated. In governments purely republican it has been seen that this tendency is almost irresistible. The representatives of the people are but too apt to imagine that they are the people themselves, and they betray strong symptoms of impatience and even disgust at the least resistance from any other quarter. They seem to think the exercise of its proper rights, by the executive or the judiciary, to be a breach of their privileges and an impeachment of their wisdom.

I submit that it is forcing upon the Executive the consideration of a question involving in a peculiar degree his own constitutional rights and powers. I have examined as best I could into the history of the creation of the Executive Departments, and I find no precedent for any such action. Moreover, if it shall finally become law, I have no faith that agriculture will realize what its advocates anticipate. I warn gentlemen now that if it becomes a law it will only be a few years when this department will become, as the Interior Department did and still is, the great reservoir of innumerable other interests, interests having no affinity with agriculture, until the Agricultural Bureau, now devoting its energies and concentrating its powers for the promotion and education of agriculture alone, will be smothered by other things, its individuality lost, and its present independence destroyed.

It will pass from a scientific and industrial to a political department of the Government, and the simple, unostentatious commissioner, presumed, at least, to know and care something for agriculture, will at once merge into a full-grown statesman, supposed to be able to bring political power and influence to the administration and hedged about by all the paraphernalia of political distinction, not to say the "Poo Bah" ceremonies and inviolable conventionalities of high public office.

Straggling along, one by one, into this department will be commerce, railroads, mines and mining, education, manufactures, the Signal Service, and other things, each struggling in the great conflict for ascendancy and recognition, and all save agriculture organized for successful work. Who can not foretell what the result will be in this unequal struggle?

Mr. Speaker, the great conservative force of the Republic in peace and in war is the American farmer. Attached to home, devoted to the family circle, loving honesty and virtue, contented and happy in their enjoyment, independent in his own Heaven-imposed sweat, loving his ancestry, proud of his race, his personal liberty, and his country, he has contributed more to its purity, to its patriotism, to its progress, its development, and its civilization than all other classes combined. Chief among all these contributions has been his independent self-reliance, always expressed in his steady, persistent adherence to home institutions and local self-government, and his unwavering opposition to the slightest invasion thereof.

He is the reserve force and the hope of the Republic. I am bowed down when I witness this first tendency to turn his back on home rule, local self-government, and domestic institutions, and to join the innumerable throng whose eyes are all fixed on the spire of the Capitol. I know whence comes this tendency. This Government, intended to be purely a political fabric, empowered to perform certain great functions of government, enumerated and well understood, has been gradually transformed during the last three decades into a paternal government, so far as nearly all classes, save the farmers, are concerned. They alone have been left as "hewers of wood and drawers of water." They alone have been the neglected, hardworked, ill-fed, and cheated "step-children" of the Republic. They see it, they know it, and turning about for relief and protection they grasp at this shadow of an agricultural department as the panacea for all their ills.

Vain delusion. It will give them a fine secretary, with a high salary, in lieu of a plain and unpretentious Commissioner. It will give them an assistant secretary and numerous clerks and attaches. Will it reduce taxation? Will it take off any burdens? Will it revise our revenue system? Will it wipe out this infernal system of paternalism that robs all classes for the benefit of one? If so, I would strain the timbers of the Constitution to create it. This "protective system" is not the only evil from which they suffer. But it is the prolific mother of them all. It dissipated the happy dream and that beautiful realization of the fathers, that this political structure of ours, the people's own creation, would secure equal rights to all. It has robbed honest toil in every industrial walk of life and multiplied millionaires to revel in corrupt licentiousness. It has crushed out the hope and the confidence of the people in themselves and their local governments, and endangers their liberties by the maintenance and encouragement of monopolies. It takes from toil its earnings and hoards it in the Treasury. The public mind is debauched by its presence, and the dishonest and unscrupulous scramble to get it out, that room may be had for the continual accumulations, readily consents to recklessly squander it in wasteful extravagance or schemes and jobs devised by the devilish ingenuity of those who profit both by the perpetuation of the system and the illegal purposes for which the revenues derived by it are expended.

Mr. Speaker, that public man is indeed blind who can not see that we are frittering away the splendid inheritance of our fathers. Oh, that the farmers of America could realize that their safety, the safety of the Republic, the preservation of all liberty, is in an observance of the Constitution. It is the last refuge for individual liberty and protection. It is the only hope of the minority. It is the only guaranty for just and equal laws. Its abuse gave birth to the burdens which agriculture bears; its perversion has driven our merchant marine from the high seas; obstructed our commerce, filled our statute-books with class legislation and the country with tramps; built up monopolies and classes at the expense of the many, and well nigh shaken the faith of thinking men in the perpetuity of our form of government.

Everywhere unrest, disquiet, a spirit of change is visible. We are in the midst of a gigantic struggle to overthrow these abuses, to return to the simple practices of the fathers, to reinstate just and equal laws, to disenthrall honest labor, to enfranchise agriculture, to revive commerce, to overthrow class legislation. The last hope of the Democratic party in its unequal conflict with its organized and intrenched arch-enemy, "protection per se," is in the American farmer and his devotion to civil and religious liberty as guarantied by the Constitution, which is indeed the very ark of the covenant.

This bill is the enemy of that instrument. I love my party and its principles, for it and they were present at the birth of that sacred instrument which I have sworn to support and defend. I will never desert that party until it deserts the Constitution, and I can never support this bill until some man can point out in that instrument the power which authorizes Congress to pass it. I profoundly respect the will of the Legislature of my State, and I esteem the farmers of America, from the ranks of whom I sprung and in which my ancestry and all my kindred have dwelt; but I should despise myself and merit their endless contempt if I outraged my own conscience to secure their approbation or their support. I am done.

Department of Agriculture.

SPEECH

OF

HON. RICHARD GUENTHER,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

On the bill (H. R. 8191) to enlarge the powers and duties of the Department of Agriculture, and to create an Executive Department to be known as the Department of Agriculture—

Mr. GUENTHER said:

Mr. SPEAKER: I am heartily in favor of this bill. I hold to the opinion that the vast agricultural interests of our country are not only entitled to the recognition this bill gives them, but that in time it will prove to be of great practical and material benefit to the farming industry. I do not purpose to sing the praises of the farmers on this occasion, and to deliver myself of a speech reviewing the great importance of their industry. I know that the farmers of my State are in favor of this bill, and I believe that they know what is good for them, and that they never come to Congress with unreasonable demands.

I am in favor of turning the weather bureau over to this new department. The weather is of much more importance to everybody else in this country than it is to the professional soldier. I am in favor of taking everything out of the hands of the military branch of this Government that pertains to civil life.

I feel confident that if the chief of the Department of Agriculture will be a Cabinet minister, participating on an equal footing with the other members of the Cabinet in all discussions concerning the welfare of our people, the interests of the agricultural population will receive better, closer, and more intelligent consideration than they are now receiving.

I am glad to have a chance to cast my vote in favor of this bill—in favor of the farming community of the United States.

The Tariff.

The ambition which leads me on is an anxious desire and a fixed determination to * * * persuade my countrymen, so far as I may, that it is not in a splendid Government supported by powerful monopolies and aristocratical establishments that they will find happiness or their liberties protection; but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven, unseen and unfelt, save in the freshness and beauty they contribute to produce.—*Andrew Jackson.*

SPEECH

OF

HON. JOSEPH WHEELER,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 4, and Saturday, May 5, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of revenue—

Mr. WHEELER said:

Mr. CHAIRMAN: The gentleman who has just taken his seat [Mr. GUENTHER] devoted the latter part of his speech to a eulogy of the party to which he belongs, and to which he said he intended to adhere; and asserted that its legislation had been in the interests of the laboring people of the country.

I can not at this time enter into a general discussion of the recent past, but I may be permitted to say that while the Republican party were in power and responsible to the people they exempted those who had annual incomes exceeding $5,000 from the income tax, which some years brought into the Treasury more than $40,000,000. They also enacted other laws by which the wealthy and prosperous were relieved of various internal taxes, amounting in the aggregate to over $160,000,000. Not satisfied with that, they arranged the tariff so as to place substantially the entire burden upon articles which are used by people who work, and almost to exempt from taxation those luxuries which are bought only by the few who are wealthy.

The reform attempted to be accomplished by the bill under consideration is so important, and the benefits it seeks to confer upon our people are so far-reaching, that it should be approached with deliberation and caution. The discussion of a question involving the interests, and therefore the happiness and prosperity, of the great mass of the citizens of a free Government, should be characterized by calm and judicious impartiality and intelligent and conscientious sincerity of purpose to secure the highest possible good to the whole country. The conclusions to which I have been led as the result of my investigations are very clear that the present tariff laws are unequal and oppressive, and the statistics and other evidence which I have before me tend strongly to establish—

1. That a revision of our tariff laws is necessary to the best interests of all our people, including those engaged in manufactures.
2. That a prohibitory tariff creates and fosters trusts and combinations of capital.
3. That Republicans oppose tariff reduction in the interest of privileged classes.
4. That all their tax laws have benefited the rich and victimized the poor.
5. That Mr. Cleveland is sustained by the messages and public utterances of all our Presidents.
6. That his views regarding free wool have been entertained by the most prominent Whig and Republican leaders.
7. That for forty years the platforms of all parties have advocated revenue reforms which Mr. Cleveland now demands.
8. That the labor of the United States, though better paid, is the cheapest labor on earth.
9. That the United States should, and under proper laws can, control the cotton trade of the world.
10. That a protective tariff sometimes injures the very industries sought to be benefited.
11. That tariff reduction will re-establish our merchant marine and give us a large export trade.
12. That during the century preceding the establishment of our present Government, and before a tariff law was conceived, the colonial manufactories so successfully competed with those of England as to cause that government to prohibit their maintenance.
13. That Alexander Hamilton in his report to Congress contended that an ad valorem tax of from 7½ to 10 per cent. was ample to foster and protect American industries, and that even such a tariff should be only temporary.
14. That our products exceed our home markets by nearly $5,000,000,000, and that revision of the tariff is essential to secure a foreign market for the surplus.
15. That under the ad valorem revenue tariff of 1846 and 1857 we nade our greatest strides in prosperity.
16. That the United States is nearly equal to Great Britain in the production of coal and iron-ore and pig-iron, and exceeds that country in the production of finished iron and steel, and that the two countries together produce two-thirds of the coal and nearly two-thirds of the iron and steel made in the world.
17. That under proper tariff laws the United States would control the trade of the world and become the center of wealth, power, and civilization.

THE PRESIDENT'S MESSAGE.

President Cleveland in his message of December 7, 1887, informed us that—

The amount of money annually exacted, through the operation of present laws, from the industries and necessities of the people, largely exceeds the sum necessary to meet the expenses of the Government.

He stated that during the year ending June 30, 1887, the taxes collected from the people were more than $55,000,000 in excess of our entire expenditures, including the annual sum used for the sinking fund, and he estimated that for the year ending June 30, 1888, this excess would reach the enormous sum of one hundred and thirteen millions. The necessity of reducing taxation and thus relieving the people of unnecessary burdens was clearly manifested.

In discussing the methods to be adopted in reducing taxation, President Cleveland says:

But our present tariff laws, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty. So it happens that while comparatively a few use the imported articles, millions of our people, who never used and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles. Those who buy imports pay the duty charged thereon into the public Treasury, but the great majority of our citizens, who buy domestic articles of the same class, pay a sum at least approximately equal to this duty to the home manufacturer.

We are, however, admonished by him to approach this important matter with caution. He says:

The difficulty attending a wise and fair revision of our tariff laws is not underestimated. It will require on the part of Congress great labor and care, and especially a broad and national contemplation of the subject, and a patriotic disregard of such local and selfish claims as are unreasonable and reckless of the welfare of the entire country.

Mr. Cleveland's statement as to the effect of high tariff upon prices is criticised and questioned. Several gentlemen have endeavored to show that many articles highly protected are now made in the United States and sold cheaper than they can be bought in Europe. There is no doubt that in many instances this is correct. This was predicted by Democratic Presidents forty years ago. The reason is that the manufacture of these articles was so stimulated that the supply far exceeded the demand, and prices have fallen, in many cases, lower than in foreign markets.

TARIFF REVISION NECESSARY.

The very fact that this condition often obtains, and that it exists today with regard to many articles on which there is a heavy duty, is an unanswerable argument in favor of revision of the tariff laws. If any article is made and sold cheaper in this than any other country our manufactures in that line do not need protection. In answer to those who say that tariff on those articles does no harm, I would suggest that such laws are sometimes made a pretext of by other nations to justify them in enacting laws which impose similar duties, under which our trade with those countries is restricted, and in many instances destroyed.

I recollect illustrating this while speaking on tariff in the Forty-seventh Congress. I opposed a duty on cotton-seed oil, a Southern production, and showed that France and Italy, which countries prior to 1882 bought nine-tenths of our exports of that article, had retaliated and put a tax amounting to about 1 cent a pound upon it, and in one year we lost three-fourths of our exports.

Again, common cotton cloth can be made in this country for less than the same quality can be made anywhere else on earth, and yet we have put a duty on this cotton cloth from 50 to 100 per cent., and possibly patterning after us, those peoples who ought to be our customers have subjected this class of goods to import duties which in some cases are almost prohibitory, while England, our great rival in that line, seems to have reciprocal relations with those countries by which her goods are entered much cheaper than ours.

I have taken some pains to investigate the duties of our sister states of the American continent. They are generally specific; the metric system is often adopted, and their laws are quite complicated. The ad valorem equivalent upon cotton goods I find runs from 25 to 200 per cent., and I think I am correct in saying they average at least 70 per cent.

TRUSTS DEMAND HIGH TARIFF.

It may be inquired why is it that manufacturers come here and ask for the retention of high duties amounting to almost prohibition on ar-

ticles which can be made and sold cheaper in this country than elsewhere? During the last twenty years manufacturers have combined in more or less compact organizations, the purpose of which has been to prevent low prices by limiting production. During the last ten years we have frequently seen notices that the nail or some other association had met and agreed to shut down all their works for a certain period of three or four months, the object being to stop the manufacture of articles which have been produced in excess of the demand.

These organizations have more recently taken the form of trusts. They seek to monopolize and absolutely control the business in which the members of the organization are engaged. By mutual compact they can limit production in this country, and in a measure control the price, but when they have run it above the cost of importation they are met with competition from abroad. It is to prevent this competition that they ask for high tariff, and if their request is granted we will place everything in their hands. The sugar-trust combination have already raised the price of sugar about 1 cent a pound. This takes $30,000,000 every year from the people and gives it to the "trust." The lowest duty on sugar is now 56 per cent., the highest is 90 per cent., and the average is 82 per cent. Maintain the present duty and the "sugar trust" will have it in their power to again raise the price, and the poople will be compelled to submit.

We constantly hear of new trust combinations. The most prominent of these trusts are the coal-oil, sugar, salt, gas, beef, coal, rubber, lead, copper, lead-pencil, potato, cotton-duck, steel, whisky, cotton-seed oil, military arms, envelope, oil-cloth. The power of these organizations can be estimated by their wealth. The $90,000,000 capital of the Standard Oil Trust is worth $1.40, making the total over $125,000,000. The Sugar Trust is reported at $50,000,000. The weakest of any of these trusts has sufficient strength to crush competitors, and it is done with unfaltering hand. Already most of the necessities of life are controlled by combinations of this character. Their power and influence exceed that of the nobility of all monarchical governments. It was plain to the President that something must be done for the people. In his message he asks us to lighten their burdens, and this Congress must not adjourn until the work is accomplished.

I think I shall be able to show that the recommendations of Mr. Cleveland have been sustained by all our Presidents in their messages to Congress, by all our political parties in their declarations of principles, and by all the great statesmen to whom we point with pride, and who, during the century of our country's existence, have adorned its history. If I prove to be correct in my conclusions that the wisdom of such suggestions as are contained in the President's message has not been questioned, we must seek in some other direction the reason which causes nearly all the Republican members of this House to combine in denouncing, not the message alone, but also the distinguished author.

WHY REPUBLICANS OPPOSE TARIFF REDUCTION.

The reason for this needs no explanation. It is thoroughly understood by the country at large. A party, which controlled this Government for a quarter of a century, are directed by their great leader, Hon. James G. Blaine, to adopt this question as an issue in the impending struggle for supremacy.

A question like this, so purely economic in its character, and directly affecting, as it does, the prosperity of our country and the welfare of all the people, should be considered with calm deliberation and the highest order of statesmanship. Instead of this, a determination appears to have been arrived at by the Republicans to abandon their oft-repeated expressions and make this their battle-cry, regardless of the weal or woe of a confiding people.

For political purposes it was, very probably, necessary for them to differ from the party in power, and, therefore, notwithstanding their doing so places them in direct opposition to their oft-repeated pledges and against the expressed convictions of many of their greatest leaders, they obey the order in the hope that the false cry of English free trade will call back some of their former adherents who have left their dissolving ranks, and are espousing the principles, and the great cause of the people.

If Mr. Cleveland had only advised an entire repeal of the tax on whisky and tobacco, what a godsend it would have been. Then they would have had an issue which their able leader, Mr. Blaine, could have used with terrific and overpowering force.

We would not have heard anything about free trade, but from eloquent tongues denunciations would have been poured upon us.

BLAINE VERSUS CLEVELAND.

Mr. Cleveland suggests a moderate reduction of taxation on the necessities of life. Mr. Blaine characterizes this as free trade, and recommends instead that tobacco be relieved from taxation.

Mr. Cleveland recommends a less tax upon wool, which enters into nearly every article of clothing worn by the people. This is denounced by Mr. Blaine, although in doing so he is antagonized by Presidents Grant, Garfield, Arthur, and such great men as Webster, Sumner, Wilson, and Seward.

Mr. Cleveland reminds us that the present law imposes a burden on those who consume domestic produce. Mr. Blaine seeks to construe this as an assault upon the manufacturing interests of the United States.

The Democratic party accepts the challenge, and will fight the battle upon the field chosen by its adversaries.

Combined capital, under the guise of trusts, on one side, and an army of honest toilers on the other! Cheap whisky and cheap cigarettes are offered by the Republicans; cheap sugar, cheap salt, cheap clothing, cheap blankets, cheap farming implements, and cheap necessaries of life are promised by the party of the people.

INTERNAL REVENUE.

I would be very glad to see all internal-revenue taxes abolished, including the tax on tobacco; but I can readily see that if we should do so it would be quite impossible to make other reductions which are more to the benefit of the people at large.

To perpetuate the American idea of advancement we must make our laws all tend toward the production of the highest type of civilization; and the history of our country gives abundant proof that the log cabin and plain country house have produced substantially all the men who have made our annals glorious.

The honest, industrious man who supports his family by daily labor is entitled to the highest consideration, and in framing laws we should endeavor to so lighten his burdens as to enable him to clothe, feed, and shelter those dependent upon him, and also to educate the children God has committed to his care. We have already reduced the tax on tobacco, and much as we may desire its total abolition—inconvenient and annoying as the tax may be—all will admit there is much force in the argument that before this is done we should reduce the tax on clothing, blankets, salt, sugar, medicines, trace chains, and other articles which make up the daily life of such a worthy and exemplary family.

Tobacco is no doubt a great comfort to some persons, and there are people to whom it has become an actual necessity; but even they are not put at a disadvantage by a tax on this article when the tax on tobacco enables them to reduce the tax on other articles which they are compelled to purchase.

The internal tax on tobacco is as follows:

Chewing and smoking tobacco	$15,995,019.46
Cigars	11,364,916.83
Special tax	1,430,909.48
Cigarettes	792,319.60
Snuff	524,942.50
Total	30,108,107.87

It will hardly be contended that any of these articles are necessaries of life, and all will admit that some of them are so injurious as to have received the condemnation of a large part of the medical profession.

I contend that the first step towards a repeal of the internal-revenue laws should be to exempt from taxation the product of the personal toil of the farmer and his immediate family. Early in this session, in order to carry out this view, I introduced the following bill:

Be it enacted, etc., That from and after the passage of this act any farmer who raises tobacco by his own personal labor, or by the aid of the personal labor of his wife or children, shall be permitted to sell said tobacco without paying any tax thereon; and any such farmer who by such labor produces spirits from fruits raised by him shall be permitted to sell such spirits without paying any tax thereon.

This bill was referred to the Committee on Ways and Means, and will have their careful consideration. It is in line with the law we have already enacted to exempt tobacco raised by farmers to the amount of $100 worth. The principle of this bill is democratic and just, and no one will question its wisdom and propriety. To those who insist that all the reduction of taxes should come from the internal revenue, I would suggest that Congress has already reduced internal-revenue taxation from $309,226,813 in 1866 to $118,823,391 in 1887, while during the same period the tax on imports increased from $179,046,652 to to $217,286,893, and the general sentiment of the country now insists that some of the reduction should be on imports. The bill as reported by the committee makes a reduction of $24,455,607 on internal revenue, and they estimate the reduction will be $53,720,447.22 on customs.

TRIUMPHANT BOAST OF REPUBLICANS.

In presenting to the House the tariff bill now under consideration, the Republican members of the Committee on Ways and Means, Messrs. KELLEY, BROWNE, REED, MCKINLEY, and BURROWS, made a separate report, in which they enumerate the internal-revenue taxes which have been abolished while the Republican party was in supreme and unhampered control of every branch of the Government.

They are studiously careful not to inform us exactly what character of taxation their party has reduced, or what class of tax-payers have been thus relieved of their burdens. To inform myself upon this interesting point I have investigated the acts under which this boasted enormous lightening of the loads of the laboring poor have been effected, and have prepared a table which will be found very instructive as an exemplification of Republican sympathy with, and concern for, tax-burdened workingmen.

The table shows the character of the tax, the amount collected by virtue of the tax, and the year in which it was so collected.

Year.	Character of tax.	Amount.
1866	Income tax	$72,982,159.03
1868	Gross receipts, express companies	671,949.62
1866	Gross receipts, railroad companies	7,614,448.13
1867	On gross receipts of premiums or assessments made by insurance companies	1,326,014.38
1866	Gross receipts other than express, railroad, and insurance companies	1,832,490.00
1882	On deposits of State banks and private banks and bankers	4,096,102.45
1882	On capital of State banks and private banks and bankers	1,138,340.87
1882	On deposits of national banks	5,521,927.47
1877	On capital of national banks	660,784.90
1870	On legacies and successions	3,091,825.00
1867	On articles of luxury	2,116,674.00
1870	Stamp taxes	16,544,043.00
1866	Special taxes other than those relating to spirits, beer, and tobacco	14,144,418.00
1870	Sales other than those of spirits, tobacco, wines, etc	8,837,395.00
1866	Passports	31,149.00
1866	Tax on manufacturers, which was paid by capital	64,827,165.70
	Total	205,436,886.55

The last item of $64,827,165.70 is obtained from the records of the Commissioner of Internal Revenue in this manner.

In 1866 there was a law which imposed a tax upon manufacturers, which that year amounted to $104,827,165.70. This law has been repealed. It may be contended that the repeal of the law was of some benefit to laboring men. Some people estimate the benefit to them as high as $10,000,000, but to do my Republican friends no injustice, let us admit that it benefited them four times that amount, or $40,000,000, and the balance $64,827,165.70 inured to factory owners, making a total reduction of this character of $205,436,886.55.

It is to be hoped that the oppressed toilers of the land who have been so generously relieved of this $205,000,000 will be duly grateful for the boon conferred upon them by their friends of the Republican party.

REPUBLICAN LEGISLATION ANALYZED.

The first item in the table is $73,000,000 income tax, for which only those were liable who rejoiced in annual net incomes, less interest on debts and various other deductions, of $600 and over. If any laboring man has been benefited to the value of 1 cent by this reduction in taxation, I hope the Republican party will file proof of the fact before the 6th of November.

The next four items were taxes upon railroads, express and insurance and other companies, and the aggregate tax reduction was about $12,000,000, all of which, I presume, our Republican friends would have us believe was taken from the pockets of the wage-workers of the country.

The next four items, aggregating nearly $12,000,000, comprise the taxes paid by banks and bankers and those who have to build banks to have safe places in which to keep their surplus millions. It was very kind in the Republican party to relieve these poor workingmen of these $12,000,000 of burdensome taxation.

The next item is $3,000,000 taxes upon legacies and successions. Of course the Republican orators will insist next fall that every cent of this was paid by stevedores, hod-carriers, poor miners, and other toilers.

The next item represents the taxation, amounting to over $2,000,000, which was paid in 1867 on articles of luxury. I suppose it will be asserted that fine paintings, yachts, gold and silver plate, pianos, statuary, diamonds, expensive jewelry, etc., were all owned by poor seamstresses and day laborers. If this be true, then taking off this tax was a benefit to day laborers.

The next three items represent the taxes derived from stamps, special taxes, and sales other than those relating to spirits, tobacco, wines, etc., amounting to within a fraction of $40,000,000. I suppose no one will deny that most of this was paid by corporations and business establishments.

These items represent a portion of the taxes which these five distinguished Republican leaders boast that their party has abolished. The aggregate amount of this taxation was over $205,000,000, and the persons relieved of this burden were, it seems to me, those whose protection and relief is the special mission of the Republican party.

I have seen some of these tax-burdened protégés of the Republicans. They live in palaces in the winter; their summers are spent in seaside cottages, whose splendor and lavish luxury would have mortgaged the estates of Antony and Cleopatra. Sometimes they sail in fleets of yachts; sometimes they visit Europe, and I see that in 1866 they paid over $30,000 for passports, and even this expense has been taken from the shoulders of these poor creatures (?).

These are the poor laborers who cut coupons from their untaxed bonds, and whom the Democratic party has repeatedly demanded should be forced to pay a fair proportion of the expenses of government, but which demand has ever been thwarted by the Republican party.

It is almost inconceivable that such legislation was possible in a republic; but it must be remembered that the Republican party was then intoxicated with power. It seemed to consider itself above and not responsible to the people. Its political capital was the boasts of the part borne by its leaders in the war, despite the fact that it was Democrats who did most to give the country its victories and its war triumphs. With the star-spangled banner in one hand and the bloody shirt in the other, it forgot what was owing to the laboring people of the country.

With the negro politically enslaved, the Republicans were confident of perpetual power in all the Southern States, and with the factory hands apparently subjected to the dictation of their employers, they reasonably supposed that all the manufacturing States of the North would be equally subservient to their political behests. It is therefore not surprising that the leaders of the then dominant party concluded that wealth had the power to control the votes of all the every-day people to an extent sufficient to enable them to perpetuate their control of the Government, and this expectation accounts for their pandering to capital by the enactment of these unjust laws.

Men who by their talents, energy, or inventive genius have acquired fortune and fame are worthy of the esteem of mankind, and are generally accorded a full meed of admiration, and they should be scrupulously protected in the possession and enjoyment of their gains. Most of the wealthy men of to-day have accumulated their fortunes by pursuing their avocations with industry, foresight, and good judgment, and we are indebted to many of them for the marvelous developments which have characterized the history of our country during the last score of years.

They are, to the youth of the country, living examples of the advantages our institutions afford to human endeavor, guided and controlled by energy, foresight, and prudence.

> The heights by such men reached and kept
> Were not attained by sudden flight,
> But they, while their companions slept,
> Were toiling upward in the night.
> —*Longfellow.*

These men did not ask Congress to pass laws for their benefit. They have never asked nor desired legislation which shifted burdens from their shoulders to those of the laboring people of the country. Nearly all of them were once poor themselves and would never have been parties to such unjust measures. They have always been willing to pay their full and just share of taxation. Such men can not fail to distrust the wisdom and integrity of a political party which has relieved them of all the burden of government at the expense of those who are so illy able to bear this taxation.

THE WORKINGMAN VICTIMIZED.

When this annual tax of $205,000,000 which had been paid by the rich was abolished an equal amount was placed upon the honest, worthy toilers who fight the battles of the country in war and struggle for daily food during periods of peace.

The Republicans abolished taxes on incomes and made it up by taxing sugar, rice, and salt, an average of 100 per cent. They swept away the taxes on banks, insurance, express, and railroad companies, and replaced the deficiency thus created by levying a tax of from 70 to 200 per cent. on every dress, and coat, and blanket which shielded the poor man's family from the cold of winter.

They repealed the tax on bankers and bank deposits, and imposed an equal amount on farming and mechanical implements. They took the tax from legacies and successions, and in place thereof taxed every coffin and shroud.

They repealed the laws which taxed articles of luxury and collected stamp duties, and filled the gap thus occasioned by collecting taxes on every article which is found in the cottages and tenements of the people who work.

This is the party which comes here and denounces Democrats because they seek to relieve the actual laboring people from a portion of the burden imposed by harsh and unequal legislation, for which the Republican party is alone responsible.

> Ye friends to truth, ye statesmen, who survey
> The rich man's joys increase, the poor's decay,
> 'Tis yours to judge how wide the limits stand
> Between a splendid and a happy land.

A land with a few princely edifices in which millionaires reside may impress with its splendor those who do not see the miserable hovels where vast populations are striving to eke out an existence; but a land covered with neat, cheerful homes is a happy land, and such can exist only where laws are equal and just and therefore democratic.

It may be contended that the result of the Presidential elections since most of these un-American laws were enacted shows that this has been condoned by the people. But the facts do not justify this conclusion.

Assuming the statement to be correct that the colored vote was so influenced by sentimental devotion to the governing party, or was so controlled by Republican officials and party machinery that it in no wise expressed either approval or disapproval of the methods of taxation, the white vote alone is left to afford us any guide as to the opinion of the people on this important question.

Although the Republican party availed itself of the eminent services and consequent exceptional popularity of that great soldier, General Grant, as its standard bearer in 1868 and 1872, Governor Hayes, whose career, military and civil, had been so blameless that censure or criticism were hardly attempted, to lead their hosts in 1876, and Garfield, equally popular as a general in war and a statesman in peace, in 1880,

and had the Knight of the White Plume to magnetize and electrify the popular mind in 1884, the vote cast by the white people was as follows:

Year.	Presidential candidates.	Democratic.	Republican.
1868.....	Seymour and Grant.....	2,709,613	2,525,719
1872.....	Greeley and Grant.....	2,834,079	2,796,401
1876.....	Tilden and Hayes.....	4,284,757	3,197,297
1880.....	Hancock and Garfield	4,442,035	3,640,310
1884.....	Cleveland and Blaine.....	4,911,017	3,979,275

I do not think that any one will question the proposition that every Democratic vote of this large majority of the white voters of the country should be accepted as the voluntary expression of the preference of the citizen. But this statement can not be said to apply to the bulk of the votes which make up the white voting strength of the Republican minority. The proof is too conclusive to be doubted that in the manufacturing districts the practice prevailed of giving the employés to understand that unless they voted as their employers desired their services would be dispensed with.

GOVERNMENT NECESSITATES TAXATION.

All admit that a government can not exist without taxation, and all should admit that there is nothing which so directly and forcibly affects the prosperity of a people as this important subject.

Laws may be enacted and maintained which, upon their face, appear to be wise and just, but which in their practical operation gradually sap the very foundations of general prosperity, and finally so classify and divide a free people that we find the masses toiling for daily bread on the one side, while on the other the beneficiaries of these laws are accumulating millions of money, together with power at once irresponsible and most dangerous.

To understand this intricate matter it is of the first importance that we should carefully examine the operation of such laws during the period our country has existed. We should also learn what laws have been to the advantage of the people and what character of laws have operated to their detriment.

While it is impossible to discuss so extensive and momentous a subject very fully, yet I feel that so far as I am able I should briefly allude to the declarations of the great political parties as enunciated in the platforms they have promulgated when asking the suffrages and confidence of the people.

I may be pardoned, I hope, if I also refer to the recommendations on this subject which our several Presidents have made in their messages to Congress; and lastly, I may with propriety, I trust, speak of the numerous laws which have been enacted for the purpose of regulating tariff taxation since the establishment of our present form of government.

WASHINGTON ON TARIFF.

The first tariff law under the Constitution was enacted July 4, 1789. Under this law, books, cabinet-ware, clothing, gloves, iron, leather, paper, and tea were taxed an ad valorem duty of 7½ per cent. China-ware, shoe and knee buckles, and gunpowder paid 10 per cent. Raw sugar paid 1 cent per pound, and all cotton goods and raw wool were free.

There was no tariff tax on necessaries above 7½ per cent., and the tax on luxuries was sufficiently high to make the average tax on all dutiable commodities something less than 15 per cent. The duties were both specific and ad valorem, the latter ranging from 5 to 15 per cent.

On January 8, 1790, Washington sent his first annual message to Congress, in which he used these words:

The advancement of agriculture, commerce, and manufactures, by all proper means, will not, I trust, need recommendation; but I can not forbear intimating to you the expediency of giving effectual encouragement, as well to the introduction of new and useful inventions from abroad, as to the exertions of skill and genius in producing them at home.

On August 10, 1790, and on March 2 and 3, 1791, May 2, 1792, June 5 and 7, 1794, and January 29, 1795, the tariff laws were somewhat amended, the average tax on all goods, dutiable and free, being about 11 per cent. The act of August 10, 1790, made changes in the rates, the ad valorem rates under the law being from 3 to 15½ per cent. The act of March 3, 1791, seemed to be designed to change the tax on spirits. It materially increased the tariff tax upon spirits and wines, all of which were required to pay a specific duty ranging from 12 to 40 cents per gallon. The act of May 2, 1792, increased the tax on many articles, so that under the bill the ad valorem duty ranged from 7½ to 15 per cent. The act of June, 1794, raised the duties so that the duties ranged from 10 to 20 per cent. ad valorem on dutiable goods. The act of January 29, 1795, affected only a very few articles, the duties imposed being both specific and ad valorem.

On December 8, 1795, Washington in his seventh annual message, congratulated the country on the unexampled prosperity of the Union under light taxes, in these words:

Our agriculture, commerce, and manufactures prosper beyond example. * * *
Every part of the Union displays rapid and varied improvement, and with burdens so light as to be scarcely perceived. * * *
Is it too much to say that our country exhibits a spectacle of national happiness never surpassed, if ever before equaled?

TARIFF OF 12 PER CENT. FOSTERS MANUFACTURES.

And with the average import taxes still as low as 11 to 12 per cent., Washington, on December 7, 1796, transmitted his eighth annual message to Congress, from which I read these words:

Congress have repeatedly, and not without success, directed their attention to the encouragement of manufactures.

I desire to specially impress it upon the comprehension of those who oppose tariff revision that Washington told Congress that an average tariff tax of 11 to 12 per cent. had successfully encouraged manufactures.

And I desire also to call their special attention to the fact, which they have studiously ignored in all their quotations from his writings, that the Father of his Country, while properly solicitous for the judicious encouragement of commerce and manufactures, earnestly insisted upon the superior importance of agriculture as an agency whereby the general prosperity was to be promoted. In this same message we find this significant language:

It will not be doubted that, with reference either to individual or national welfare, agriculture is of primary importance. In proportion as nations advance in population or other circumstances of maturity, this truth becomes more apparent, and renders the cultivation of the soil more and more an object of public patronage.

Let me ask, if the gentlemen on the other side of the aisle are sincere in their professed anxiety to follow in the footsteps of the immortal Washington, why do they not prove it by bestowing some thought upon the welfare of the agricultural industry of the country instead of making it, as they have done, abjectly subservient to the prosperity of the millionaire mill-owner and railroad magnate? Do they suppose that Washington would ever have approved of or sanctioned a system of legislation which has the effect of increasing the price of everything the agriculturist must buy and simultaneously diminishing the value of everything he must sell?

On March 3 and July 8, 1797, and May 13, 1800, further changes were made in our tariff laws, increasing the import duties to about 16 per cent. The acts of March 3, 1797, and May 13, 1800, changed the tax on only a few articles. That of July 8, 1797, increased the tax on salt from 12 to 20 cents a bushel.

Mr. Adams, in his four messages to Congress, avoided any direct expressions on the subject of tariff, except its incidental bearing towards commerce and the fisheries—industries in which the people of New England were very much interested. In his first annual message, November 23, 1797, in speaking of commerce, he said:

Our agriculture, fisheries, arts, and manufactures are connected with and depend upon it.

JEFFERSON ON TARIFF.

The platform adopted in Philadelphia at the Congressional Caucus which named Mr. Jefferson as the candidate of the Republican party laid down as a cardinal principle of the party, "free commerce with all nations."

December 8, 1801, Mr. Jefferson, in his first annual message, said:

Agriculture, manufactures, commerce, and navigation, the four pillars of our prosperity, are the most thriving when left most free to individual enterprise.

It will be observed that Jefferson also gives agriculture the first place in enumerating the agencies upon which we must rely to establish our prosperity. Note, too, the early enunciation of the sound Democratic doctrine that all the agencies of prosperity will thrive in proportion as they are unimpeded by legislative interference. Upon the very threshold of his Presidential career he deprecates any legislation designed specially to discriminate in favor of any of the interests upon which so much depends. He does not wish any one of them to be abnormally stimulated by governmental protection and assistance, but would have each and all of them developed by the intelligence, sagacity, and enterprise of the citizens just so fast as their individual wisdom and foresight satisfies them such development will be profitable.

The sentence immediately following that which I have just read is in these words:

Protection from casual embarrassments, however, may sometimes be interposed.

This expression from Mr. Jefferson clearly expresses the views which were entertained at that time.

WHEN PROTECTION IS ADMISSIBLE.

It clearly admits that protection may be justifiable, but the admission is very guarded. He holds that it may be permissible, but for what purpose? Not to create or foster any special industry or enterprise at the expense of another, but only to shield and guard established interests against "casual embarrassments." It is not to be a continuous and persistent system, but the questionable remedy may "sometimes" be resorted to in emergencies, and it can be "reasonably" resorted to only in extreme cases, and then merely as a means of "protection from casual embarrassments."

The succeeding sentence of the same message is sometimes quoted as justifying the statement that Mr. Jefferson was an advocate of the protective theory. This sentence is in these words:

If in the course of observations or inquiries they should appear to need any aid within the limits of our constitutional powers, your sense of their importance is a sufficient assurance they will occupy your attention.

Note carefully the express limitation within which the question of legislative aid is to be considered—"within the limits of our constitu-

tional powers." And what is the power to impose taxes conferred upon the Congress by the Constitution? What is the limit of that power? Clearly to raise the revenue necessary to the economical administration of the Government. Any tax, whether a tariff tax, a direct tax on land, or a capitation tax, that does more than this is levied in defiance of constitutional limitations of the taxing power.

Thus did the great founder of the Democratic party lay down and expound the doctrine of tariff taxation which the Democratic party to-day is striving to re-establish and enforce; and that very doctrine is the underlying principle of this bill. Protection by the National Legislature may sometimes be resorted to as a means of guarding established enterprises against "embarrassments," but the tariff tax designed to afford such protection must be levied under constitutional limitations, and those limitations require that taxes shall be imposed only for the purpose of raising revenue, and that the necessary revenues should be raised in such a manner as to afford incidental protection to the individual industries and enterprises in our midst which it may affect.

If our Republican friends can derive any comfort from Jefferson's position on the protection policy, they are welcome to it, and if they would only agree to enforce it with the limitations to its exercise which he recommends, this bill would pass without opposition.

On March 26 and 27, 1804, other changes were made in our tariff laws, the "Mediterranean fund" being created, which added 2½ per cent. to the duties on many articles.

JEFFERSON OPPOSES DUTY ON NECESSARIES.

Mr. Jefferson was not slow to perceive that the tax on salt was a burden upon the poorer classes, and in his sixth annual message, December 2, 1806, he urged the abolition of the duty. I will read an extract from that message:

The duties composing the Mediterranean fund will cease by law at the end of the present season. Considering, however, that they are levied chiefly on luxuries, and that we have an impost on salt, a necessary of life, the free use of which otherwise is so important, I recommend to your consideration the suppression of the duties on salt and the continuation of the Mediterranean fund instead thereof.

Gentlemen will observe that the first Democratic President insisted in 1806, as do his followers to-day, that Congress, in the exercise of its constitutional power to levy taxes for revenue, should impose such taxes on luxuries and suppress or abolish the duties on the necessaries of life.

The justice of the President's views was recognized by Congress, and for the first time since the establishment of the Government under the Constitution salt was admitted free of duty by the tariff laws of March 3, 1807, and March 4, 1808.

It would appear, however, that Jefferson was not satisfied with this announcement of the Democratic principles of taxed luxuries and untaxed necessaries, and as if he feared that Congress might not fully understand it in its full meaning and widest scope, in the same message he recurs to the subject, and emphasizes the idea that taxation should be governed by the consideration that—

the great mass of the articles on which impost is paid are foreign luxuries, purchased by those only who are rich enough to afford themselves the use of them.

And this is the identical principle for which the supporters of this bill are contending; that, so far as practicable, the necessaries of life, which every one, rich and poor, must have, be relieved of taxation, and the luxuries which they consume or do without, at the option of each individual, be made to supply the revenue required by the Government.

MADISON ON TARIFF.

Following in the footsteps of Washington and Jefferson, we find that Mr. Madison also ascribes to agriculture the leading part in securing the prosperity of the country, but mentions manufactures as of equal importance. In Madison's second annual message, December 5, 1810, we find these words:

I feel particular satisfaction in remarking that an interior view of our country presents us with grateful proofs of its substantial and increasing prosperity. To a thriving agriculture and the improvements relating to it is added a highly interesting extension of useful manufactures, the combined product of professional occupations and household industry.

During the year in which the President wrote this our imports amounted to $61,008,705, the import duties collected on which aggregated $8,583,309, making an average tariff tax levied on the people of only 14 per cent., and under this low rate of tariff taxation Mr. Madison tells Congress that there has been an "interesting extension of useful manufactures."

The war of 1812 necessitated high taxes of all kinds, direct as well as import, as is shown by the laws of July 1, 1812, which imposed doubled duties known as "war duties," and the laws of February 25 and July 29, 1813, by which the tax of 20 cents a bushel on salt was restored. Immediately upon the return of peace, however, the duties upon many articles were reduced by the act of March 3, 1815, and the imports during that year reached the large sum of $106,457,924, yielding a customs revenue of $7,282,942, an average of something over 6 per cent.

MADISON ADVOCATES INCIDENTAL PROTECTION.

Mr. Madison's seventh annual message, December 6, 1815, is emphatic in its advocacy of a tariff for revenue, so arranged as to give incidental protection to our manufactures, as will be seen from the language I will now read:

In adjusting the duties on imports to the object of revenue, the influence of the tariff on manufactures will necessarily present itself for consideration.

Mr. Madison was then known and referred to as the "Father of the Constitution," and he probably comprehended the widest scope of the powers conferred by that instrument as understood and intended by its progenitors more thoroughly than any man who assisted in framing it, and he assumes that in "adjusting the duties on imports to the object of revenue" Congress had unquestioned authority to so arrange them as to foster and protect our manufactures.

That was sound Democratic doctrine then, it has been sound Democratic doctrine ever since. That was in substance the doctrine announced in the Democratic platform of 1884, and this is the principle of taxation which has met the approval of the people.

There is, however, another clause in this message to which I desire to allude.

A year had elapsed since the signing of the treaty of peace, during which there had been very little to restrict imports, and, with the exception of one year, they were greater during 1815 than they were again for a period of twenty long years; and yet those free and unrestricted imports had not apparently checked the growth of our factories to any serious degree, as in this same message Mr. Madison uses this language:

Under circumstances giving a powerful impulse to manufacturing industry, it has made among us a progress and exhibited an efficiency which justify the belief that with a protection not more than is due to the enterprising citizens whose interests are now at stake, it will become at an early day not only safe against occasional competition from abroad, but a source of domestic wealth and even of external commerce.

The war of 1812 and the difficulties then experienced in procuring many articles necessary for defense had deeply impressed the people, and Mr. Madison says:

In selecting the branches more especially entitled to the public patronage, a preference is obviously claimed by such as will relieve the United States from a dependence on foreign supplies, ever subject to casual failures for articles necessary for the public defense or connected with the primary wants of individuals.

Cotton was then beginning to be an important agricultural staple, owing in a great measure to the improvement of the cotton gin, and Mr. Madison says:

It will be an additional recommendation of particular manufactures when the materials for them are extensively drawn from our agriculture, and consequently impart and insure to that great fund of national prosperity and independence an encouragement which can not fail to be rewarded.

CALHOUN, CLAY, AND WEBSTER.

Mr. Calhoun was fully understood at that time to support Mr. Madison in his recommendations that in adjusting the duties for revenue the influence of the tariff on manufactures should be considered.

Mr. Clay went further, and insisted that the question of protection should no longer be secondary to revenue, but should be regarded by Congress as a matter of primary importance.

It has been stated that the position of Mr. Lowndes and Mr. Calhoun on this subject was in some degree influenced by the action of England in imposing heavy duties upon raw cotton.

Singular as it may appear Alexander Hamilton's advocacy of the tariff was then quoted by Southern statesmen, while Mr. Webster supported the opposite view.

The laws of February 5 and April 27, 1816, had materially changed the tariff duties, the latter law fixing the ad valorem rates at from 7½ to 30 per cent. But, notwithstanding this, imports continued to be large, and on March 5, 1817, Mr. Monroe delivered his inaugural address, in which he said:

Our manufactures will likewise require the systematic and fostering care of the Government. Possessing as we do all the raw materials, the fruit of our own soil and industry, we ought not to depend in the degree we have done on supplies from other countries.

The necessity for this policy seemed still to continue, as in his first annual message on December 2, 1817, he used these words:

Our manufactories will require the continued attention of Congress. The capital employed in them is considerable, and the knowledge required in the machinery and fabric of all the most useful manufactures is of great value. Their preservation, which depends on due encouragement, is connected with the highest interests of the nation.

The average per cent. of duty on all imports during the three years 1816, 1817, and 1818 was less that 26 per cent., and as this was denominated a protective tariff we see that views upon protection were very different then from what they are to-day.

Mr. Lossing, in his History of American Arts and Manufactures, says:

The policy was defined in his [Alexander Hamilton's] report of December, 1791, on the manufactures of the country, in which he proposed a tariff for revenue so high that it would operate practically as a tariff for protection. It was not, however, until 1816 that a tariff was established avowedly for protection.

It is a singular fact, which I submit to the consideration of this House, that this paper of Alexander Hamilton recommended a tariff of 5 per cent. on many articles, 10 on a few, and 12½ per cent. on one single article. And this is the tariff referred to by Mr. Lossing as an avowedly protective tariff.

TARIFF FOR REVENUE PRIOR TO 1816.

All the tariff acts passed prior to 1816 were for revenue. Mr. Lossing says:

In the spring of the year [1816] the first of a series of tariffs for the protection of American manufactures was established under the sanction of President Madison. It was the progenitor of all the subsequent protective tariffs.

Mr. Greeley, on page 247 of his work on Political Economy, speaks of the law as "unquestionably a tariff for protection." In discussing it he used these words:

The tariff of 1816 was made undeniably and stringently protective in its duties on cotton fabrics and on some manufactures of iron.

Mr. Webster certainly understood the law of 1816 to be protective. In referring to it in a speech in the House of Representatives in 1824, he said:

We hear of the fatal policy of the tariff of 1816, and yet the law of 1816 was passed avowedly for the benefit of manufacturers, and with very few exceptions, imposed on imported articles very great additions of tax, in some important instances, indeed, amounting to a prohibition.

Mr. Greeley also said that the bill of 1816 was framed by John C. Calhoun, and that the protective features of the bill were such as to justify him in speaking of Calhoun as advocating protection while a member of the House of Representatives.

Mr. Blaine, in speaking of the tariff of 1816, says:

New England was radically hostile to high duties, for the reason that they seriously interfered with the shipping and commercial interest in which her people were largely engaged.

Mr. Blaine also says that—

Mr. Clay, from an extreme Western State, was urging a high rate of duties on cotton fabrics, while his chief opponent was Daniel Webster, then a Representative from Massachusetts.

On page 190 Mr. Blaine explains Mr. Webster's position in these words:

Mr. Webster's opposition to protection was based on the fact that it tended to depress commerce and curtail the profits of the carrying trade. The tariff of 1816 was termed "moderately protective," but even in that form it encountered the opposition of the commercial interest.

When Mr. Webster became a protectionist and felt called upon to explain his conversion to that theory, he made a speech in Congress in which he gave his reasons for his advocacy of protection, and in doing so he quoted very freely from Mr. Calhoun's speech of 1816, many of the citations being in harmony with the position Mr. Webster had so recently taken. The latter, in closing, turned to Mr. Calhoun, and said:

Mr. President, in all this I may be wrong and in error, but if so there sits my seducer.

The law of April 20, 1818, rearranged the duties on a few articles paying specific duties, and also on a few other articles paying ad valorem rates, and increased the duties on some articles, notably on iron, glassware, and cotton goods, but reduced the tariff tax on raw cotton to the old rate of 3 cents per pound, the law of the year previous having fixed that tax at 6 cents per pound.

The law of March 3, 1819, effected a material reduction in the duty on wines and spirits.

THE TARIFF IN CONGRESS, 1824.

The question of tariff taxation and its relation to the protection of American industries was very freely discussed in Congress during the winter of 1823 and 1824.

The debates were largely devoted to constitutional construction, one side contending that the right to impose taxes for the purpose of protection was not among the granted powers, but even they admitted that since the first tariff of 1789 protection had been incidental to the exercise of this power. The opposite side, under the lead of Mr. Clay, who formulated what was known as the "American system," was ably supported by many distinguished speakers. Daniel Webster and John Randolph were among the leading speakers against the idea of protection and vigorously contested the propriety of high or prohibitory duties to stimulate industry and manufacturing enterprises. Especially did Mr. Webster insist that such laws were not necessary in the active and intelligent state of the world which characterized the civilization of that period.

Mr. Blaine says (page 191):

The act of 1824 was avowedly protective in its character, and was adopted through the influence of Mr. Clay, then Speaker of the House of Representatives. * * * Mr. Webster again appeared in the debate arguing against the "obsolete and exploded notion of protection," and carrying with him nearly the whole vote of Massachusetts in opposition.

The distinguished gentleman from Michigan [Mr. BURROWS] quotes an expression from Mr. Clay, which I will read:

If I were to select any term of seven years since the adoption of the present Constitution which exhibited a scene of the most wide-spread dismay and desolation, it would be exactly that term of seven years which immediately preceded the establishment of the tariff of 1824.

These few words are put before us so tersely that one would expect that during those years the most terrible condition prevailed and that the entire country was aroused; that the messages of our good President, Mr. Monroe, would have treated principally of this subject.

I hunted up this distinguished gentleman's messages, and nerved myself to peruse the heart-rending passages. I first read his message of December 3, 1822, thinking that surely the wide-spread dismay alluded to by my friend from Michigan must then have been about to culminate, and as the gentleman was speaking specially of manufactures I felt that they would certainly be the central figures and principal victims of this almost universal destruction and desolation which he and Mr. Clay asserted then existed.

MONROE COUNSELS CAUTION.

But, Mr. Chairman, what was my surprise to read these words:

From the best information that I have been able to obtain it appears that our manufactures, though depressed immediately after the peace, have considerably increased and are still increasing under the encouragement given them by the tariff of 1816, and by subsequent laws. * * *

Satisfied, however, I am likewise that the interest of every part of our Union, even those most benefited by manufactures, requires that this subject should be touched with the greatest caution, and a critical knowledge of the effect to be produced by the slightest change.

But, fearing I may have been mistaken, I looked forward to the message of 1823, but was unable to find any allusion to a lack of prosperity. I then looked further on to the very year mentioned by Mr. Clay, and I read these bold words from Mr. Monroe's message of December 7, 1824:

Our revenue under the mild system of impost and tonnage continues to be adequate to all the purposes of the Government. Our agriculture, commerce, manufactures, and navigation flourish.

These distinguished gentlemen certainly could hardly be right in their word-picture of the desolation of the country during the seven years from 1817 to 1824. I do not understand why my friend from Michigan has been so anxious to impress the House with the idea that the period from 1816 to 1824 was one of depression; it would be better for his high-tariff theory to take the opposite view. I think I have shown that it was during these years that we were for the first time in the history of our country testing the efficacy of moderate protection.

It seems to me the test was in its favor, but the distinguished gentleman [Mr. BURROWS] would have us believe that the first protective-tariff law enacted under the Constitution brought about wide-spread dismay and desolation. But my friend from Michigan makes another assertion, and I can not do better than quote his exact language:

But this era of protection was followed by the tariff of 1824 and 1828, which enthused new life into our languishing industries and brought to the country a period of marvelous prosperity.

My friend then attempts to sustain himself with another quotation from Mr. Clay, so decided in its language as to make it almost audacious to question it. The extract from Mr. Clay's speech is in these words:

If the term of seven years were to be selected of the greatest prosperity which this people have enjoyed since the establishment of their present Constitution it would be exactly that period of seven years which immediately followed the passage of the tariff of 1824.

Let us now look at this seven years of great prosperity, which is so forcibly described.

Certainly here we shall read expressions of no doubtful significance.

JOHN QUINCY ADAMS.

John Quincy Adams was then President, and I could readily imagine the glowing and exultant tones in which he would announce this intensified prosperity.

But, alas, we are doomed to disappointment. Instead of prosperity, I read this desponding expression from the second annual message of Mr. Adams, which he transmitted to Congress December 9, 1826:

In adverting to the present condition of our fiscal concerns and to the prospects of our revenue, the first remark that calls our attention is that they are less exuberantly prosperous than they were at the corresponding period of last year.

The tariff law of May 22, 1824, so much extolled by the gentleman from Michigan, had been in operation two years and a half, and, to put the matter in its best light, its fruits were of a very unsatisfactory character. This law exacted duties which were specific, compound, and ad valorem, the latter being from 12 to 50 per cent. It is quite true that two years later Mr. Adams speaks of prosperity, but unfortunately for the gentleman's argument Mr. Adams attributes it to causes very different from high tariff. It is a matter of history that the prosperity of that time was due almost solely to the famine in Europe, and the consequent demand upon us for provisions, which enhanced the price of our exported agricultural products.

The act of May 19, 1828, increased the duties so that the ad valorem tax ranged from 20 to 50 per cent., and that of May 24, 1828, only affected wines and spirits, increasing some and decreasing others.

In his message to Congress of December 2, 1828, Mr. Adams especially attributes our prosperity to the famine. He says:

It has happened in the vicissitudes of the seasons that the harvests of all Europe have, to the late summer and autumn, fallen short of their usual average.

The President then refers to our exports, and says:

This new element of prosperity to that part of our agricultural industry which is occupied in producing the first article of human subsistence is of the most cheering character to the feelings of patriotism. Proceeding from a cause which humanity will view with concern, the sufferings of scarcity in distant lands, it yields a consolatory reflection that this scarcity is in no respect attributable to us.

After alluding to this dispensation of Providence, Mr. Adams says—

that in pouring forth from the abundance of our own garners the supplies which will partially restore plenty to those who are in need, we shall ourselves reduce our stores and add to the price of our own bread.

RECIPROCITY NECESSARY.

It is very clear that our statesmen of that time had perceived that some reciprocal relations of trade were essential to our prosperity. It was apparent to them that nothing but absolute wants, caused by the scarcity of provisions, had forced England to relax the inhibition which had been imposed in retaliation for what that country regarded as undue discrimination against her manufacturers.

Mr. Adams certainly felt the force of these conditions, and he alludes to the laws of England and says that the legislation of one nation is sometimes intentionally made to bear heavily on the interests of another.

Mr. Adams then says:

That legislation adapted, as it is meant to be, to the special interests of its own people, will often press most unequally upon the several component interests of its neighbors.

Thus, the legislation of Great Britain, when, as has been recently avowed, adapted to the depression of a rival nation, will naturally abound with regulations of interdict upon the productions of the soil or industry of the other which come in competition with its own; and will present encouragement, perhaps even bounty, to the raw material of the other State, which it can not produce itself, and which is essential for the use of its manufacturers, competitors in the markets of the world with those of its commercial rival.

These and other considerations caused our wisest statesmen to hesitate in acceding to the demands of the extreme protectionists; and others beside the President opposed prohibitory tariff laws. Mr. Adams proceeded with his message in these words:

Such is the state of the commercial legislation of Great Britain as it bears upon our interest. It excludes, with interdicting duties, all importation (except in time of approaching famine) of the great staple productions of our Middle and Western States; it proscribes with equal vigor, bulkier lumber and live-stock of the same portion, and also of the Northern and Eastern part of our Union. It refuses even the rice of the South, unless aggravated with a charge of duty upon the Northern carrier who brings it to them.

Mr. Adams had been a student of the political and fiscal history of the world, and he saw very clearly the baneful effect of such laws upon the profitable exchange of our surplus commodities. He asks if there is no power to counteract the bias of this foreign legislation; if the self-protecting energy of the nation is so helpless—

that the growers of grain must submit to this exclusion from the foreign markets of their produce; that the shippers must dismantle their ships, the trade of the North stagnate at the wharves, and the manufacturers starve at their looms, while the whole people shall pay tribute to foreign industry, to be clad in a foreign garb; that the Congress of the Union are impotent to restore the balance in favor of native industry, destroyed by the statutes of another realm?

PREVAILING INFLUENCES, 1824 TO 1831.

All this does not sound like a period of "marvelous prosperity," as pictured by the gentleman from Michigan, nor, to use the language of Henry Clay, the period—

of the greatest prosperity which the people have enjoyed since the establishment of the present Constitution.

It seems to me this period abounded in apprehension, and that this apprehension arose from the very law which the gentleman from Michigan speaks of with so much commendation; and it also appears to me it was clearly admitted that such prosperity as was enjoyed arose almost entirely from the misfortunes of others whose crops had failed, and who, to avoid starvation, were compelled to buy the surplus products of our farms.

Mr. Adams was regarded as an advocate of protection, and I wish to commend to the opponents of this bill some of his views as expressed in his message, which I will read:

In our country a uniform experience of forty years has shown that whatever the tariff of duties upon articles imported from abroad has been, the amount of importations has always borne an average value nearly approaching to that of the exports.

Mr. Adams also said:

The extent of the prosperous commerce of the nation must be regulated by the amount of its exports.

The events preceding the year 1828 had evidently convinced Mr. Adams that unless our agricultural interests were prosperous other industries would necessarily languish.

In his message of that year he used these words:

The great interests of an agricultural, commercial, and manufacturing nation are so linked in union together that no permanent cause of prosperity to one of them can operate without extending its influence to the others.

It will be observed that Mr. Adams's messages show that the prosperity he alludes to was in spite of the increase of tariff, and he does not in any way claim that the change in the tariff has caused the prosperity.

When we come to examine the changes which were made in the law of 1824, it is quite apparent that Mr. Clay's speech was not well considered, but was a mere *ad captandum* remark by a man who was at that time a candidate for the Presidency against the regular nominee of the Democratic party.

HENRY CLAY'S UNACCOUNTABLE MISTAKES.

The mistakes of Mr. Clay, into which the gentleman from Michigan [Mr. BURROWS] has naturally fallen, illustrate the fact that when men attempt to argue that protection, carried to the extreme of prohibition, can benefit the country, they are compelled to adopt erroneous premises in order to reach a conclusion which appears to support their theories.

Mr. Clay was generally very accurate in his statements of fact, and was never betrayed into error except in arguments designed to uphold his pet theory of prohibitory protection; and even in that particular kind of argument he has always been much more accurate than any others who have espoused these extreme views. I will therefore take this speech of Mr. Clay as the nearest approach to exactitude which has been reached in this class of argument.

The speech in question was delivered in the Senate February 2 and 3, 1832, and the extracts quoted by the gentleman from Michigan [Mr. BURROWS] are found on page 440, volume 1, Colton's edition of Clay's Speeches.

Mr. Clay's evidence of the existence of dismay and desolation during the seven years prior to 1824 is stated by him to be—

1. The people were oppressed and borne down with an enormous load of debt.
2. The value of property was at the lowest point.
3. That a deficit in the public revenue existed.
4. That our commerce and navigation were threatened with a complete paralysis.

With regard to the first two assertions, as to the state of affairs then existing, it must be remembered that the war with Great Britain terminated in 1815, and the history of all countries shows that the inflation in some industries caused by war and the stimulation in others, which always occurs just after the return of peace, is necessarily followed by depression and reduction in values. It is therefore evident that the condition depicted in these two statements, even if they were literally exact, can not be justly attributed to the effects of our tariff laws, high or low.

Had the distinguished statesman examined the archives of the Government he would have found that his last two statements regarding a deficiency in the revenue and the decline of commerce and navigation are directly contradicted by the records, as will be seen by these figures.

The receipts of the Government from 1816 to 1823, inclusive, aggregated $196,997,798, and the expenditures, civil and miscellaneous, war, Navy, Indians, pensions, and interest, during the same period, only amounted to $156,560,030, which shows a clear excess of receipts over expenditures of $40,437,768, an average annual excess of $5,054,821, instead of a deficit, as stated by Mr. Clay.

The figures I give include eight years, so it can not be said that a deficit was brought over from the preceding year; but as I take the average, and show that during all those years the average annual receipts were more than five millions above the expenditures, it is difficult to account for Mr. Clay's statement that a deficit existed, and still more difficult to realize how he could contend that the tariff of 1816 could have tended to bring about such a result.

The tonnage of our shipping in 1816 was 1,372,219; in 1824 it had increased to 1,389,163, and in 1825 it had further increased to 1,423,111 tons. We therefore see that our commerce and navigation, instead of being paralyzed, actually made substantial gains.

On page 441 Mr. Clay exultingly gives as his proofs of the great prosperity which, he says, existed during the seven years which immediately followed the passage of the tariff of 1824:

1. The vast amount of revenue produced by that [Mr. Clay's] system;
2. Every branch of navigation has increased;

and, 3, he devotes nearly a full page to showing an increase in the wealth of New York from $52,000,000 to $95,000,000.

In reply, I will state that the records of the Government show that the receipts of the years 1825 to 1831, inclusive, were $169,914,850, an average of $24,273,550, and the expenditures during that time were $110,993,063, an average of $15,856,152, showing an annual excess of $8,417,398.

Here is a small increase, but it is not due to the tariff, as the records show that during the first period, prior to 1824, the payments for interest averaged over five millions a year, and pensions one year were as high as $32,000,000, while during the second period, from 1824 to 1831, the interest ran below two millions, and pensions averaged only about one million a year. It appears, therefore, that the little surplus in the Treasury was not in any way due to the tariff.

Now, as to commerce: The tonnage of our shipping, which was 1,423,111 in 1825, instead of increasing, as contended by Mr. Clay, actually decreased, and was only 1,267,846 in 1831.

Mr. Clay is no doubt correct in his assertion that under a high tariff there was some concentration of wealth in New York City, and most probably the same was true of other large cities. One of the effects of a high tariff has usually been to concentrate wealth, and that is one of the arguments we make against that system. What Democrats want is diffusion of wealth and many happy homes. The exports of domestic products constitute another element of commercial prosperity and are intimately connected with the welfare of our shipping, and in this matter also the figures are fatal to Mr. Clay's assertions.

Our exports of domestic products for the seven years which Mr. Clay depicts as years of widespread dismay and desolation aggregated $385,529,796, an annual average of $55,095,685. During the seven years from 1825 to 1831, which Mr. Clay characterized as the period of the greatest prosperity which the people have ever enjoyed, our domestic

exports amounted to $406,031,094, an annual average of $57,003,887, hardly any greater than the exports during the former period.

But we must consider that during the first period our population, according to the census of 1820, averaged about 9,633,822, while during the second period, according to the census of 1830, it was 12,866,020, an increase of one-third.

Now, the prosperity ought to have increased as the population increased, and as it did not we find that every assertion put forward by Mr. Clay to establish the superiority of the tariff of 1824 in its effect upon our revenue, commerce, and navigation is actually opposed to the facts of the case when tested by the official reports and figures of the Government.

ERRORS EVEN MORE GLARING.

Astonishing and glaring as these errors are, they are mild and inconsiderable when compared with the phenomenal inaccuracies with which we are now confronted by many persons in their arguments in support of protection by prohibitory tariff.

The tariff law of 1824 put a tax upon beef, bacon and hams, oats, wheat, butter, and oils, all of which had previously been free of duty. These were articles of which we produced a large surplus and desired to export in large quantities; and it is difficult to see how putting on this tax could have any beneficial effect, while it is clear beyond question that our doing so enabled European nations to use such action as a pretext to enact similar tariff laws regarding their imports, and thus of necessity operating very seriously to our detriment. It was probably such laws which Mr. Adams had in his mind when he penned his message of December 2, 1828, in which he said that the legislation of Great Britain, when—

adapted to the depression of a rival nation will naturally abound with regulations of interdict upon the productions of the soil or industry of the other which come in competition with its own.

RETALIATION.

Now, bear in mind that only four years had elapsed since the law was enacted placing a tariff duty on provisions, and already it appeared that Great Britain had opened a vigorous retaliation.

Mr. Adams also informed Congress that Great Britain excluded, with interdicting duties, the great staple productions of our Middle and Western States, lumber and live-stock of the same section and of the Northern and Eastern States, and even the rice of the South.

I think it can not be doubted that the feature of the law of 1824 which placed a duty upon provisions had much to do with the retaliation of which Mr. Adams so bitterly complained. It had become apparent even before that early date that injudicious and indiscriminate tariff taxation was attended with evil. Mr. Monroe feared that a tariff on some articles would not bring about any good to the country or to our industries, and that in some instances it was injurious to the very interests it was intended to foster.

The sagacity and foresight of Mr. Monroe caused him to anticipate such results, and it may have been this consideration which led him to warn Congress against such legislation. He told the country there were strong reasons which imposed upon us the obligation to cherish and sustain our manufactures, but in doing so he explained that to attain advantageous results required that the subject should be treated with caution. In his message to Congress December 3, 1822, Mr. Monroe said:

Satisfied I am, whatever may be the abstract doctrine in favor of unrestricted commerce, provided all nations would concur in it, that there are other strong reasons applicable to our situation and relations with other countries which impose on us the obligation to cherish and sustain our manufactures. Satisfied, however, I am, likewise, that the interest of every part of our Union, even of those most benefited by manufactures, requires that this subject should be touched with the greatest caution and a critical knowledge of the effect to be produced by the slightest change.

It is very clear that the foresight and admonitions of Mr. Monroe were not fully regarded by the Congress which enacted the tariff laws of 1824, and that the evils which he anticipated as a result of such legislation came upon us with even greater force than he apprehended.

The tariff laws enacted by Congress February 11, 1825, and May 19 and 24, 1828, were not framed with such sagacity and knowledge of the subject as to produce an amelioration or mitigation of the evils entailed upon the country by the law of 1824.

The law of 1828 imposed a specific duty upon many articles which had previously been subject only to an ad valorem tax. This law decreased the tax upon many kinds of wine, but augmented the tariff upon articles manufactured of iron, lead, and also upon hemp, indigo, carpets, blankets, and some other articles.

These changes in the tariff-tax law do not seem to have been very material, as, after careful examination, I can not find that the tax upon any of the articles named in the schedule was increased or dimished to any great extent. In support of this view I would mention that the records of the Treasury show that the average tariff tax for the last half of 1828 and the whole of 1829 was not substantially greater than it was prior to the passage of the act of May 24, 1828.

LAW OF 1828 NOT BENEFICIAL.

The history of the period clearly shows that this law did not operate beneficially upon any part of the country, and it appears to have proved decidedly unsatisfactory to those for whose special benefit it was enacted. This was admitted, and inferentially deplored, by so staunch a protectionist as Mr. Adams, as will be seen by a portion of his last annual message, which I will now read:

The tariff of the last session was, in its details, not acceptable to the great interests of any portion of the Union, not even to the interests which it was specially intended to subserve.

Let me ask the uncompromising and persistent advocates of the theory that the greatest prosperity follows the highest tariff to consider carefully this significant official assertion as to the failure of their views when reduced to practice in this instance. This law, says Mr. Adams, benefited no part of the Union, and was not even advantageous to the interests which it was specially designed to promote.

But Mr. Adams did not stop with the bare assertion of such failure of the law in question to accomplish the beneficial effects which were expected to have inevitably followed its enactment; he proceeded to specify the disastrous results it had entailed in the direct and unequivocal terms I will now read:

Its object was to balance the burdens upon native industry imposed by the operation of foreign laws, but not to aggravate the burdens of one section of the Union by the relief afforded to another.

Is it not clear from this language that Mr. Adams, one of the earliest as well as one of the foremost and ablest advocates of the protective theory, regarded a law that relieved one industry at the expense of others as unwise and pernicious?

He saw very plainly that it was impossible to maintain the healthy prosperity of the country by the operation of laws which had the effect of adding to the burdens borne by any important enterprise that others might be benefited.

He then calls the attention of Congress to the necessity of revising the tariff act of May 24, 1828, so as to remove the inequalities to which he had referred. In making this recommendation to Congress he used these emphatic words:

If any of the duties imposed by the act only relieve the manufacturer by aggravating the burden of the planter, let a careful revisal of its provisions, enlightened by the practical experience of its effects, be directed to retain those which impart protection to native industry, and remove or supply the place of those which only alleviate one great national interest by the depression of another.

"OLD HICKORY."

During the campaign which resulted in the election of General Jackson the question of tariff taxation formed a prominent issue. Like his predecessor, General Jackson was deeply impressed with the necessity for such a revision of the tariff laws as would make them, so far as practicable, equally beneficial to all the great interests of the country in their effects, and in his inaugural address he expressed those views in these words:

With regard to a proper selection of the subjects of impost, with a view to revenue, it would seem to me that the spirit of equity, caution, and compromise in which the Constitution was formed requires that the great interests of agriculture, commerce, and manufactures should be equally favored.

Let me now recall to your remembrance the fact that on December 3, 1822, President Monroe in recommending a revision of existing tariff laws insisted that "this subject should be touched with the greatest caution and a critical knowledge of the effect to be produced by the slightest change." After the lapse of seven years, imbued with the same spirit and animated by the same purpose, President Jackson tells Congress that the tariff laws must be revised in a spirit of equity, caution, and compromise. Caution was the admonition of the thoughtful and painstaking Monroe, "caution" was the key-note of the policy upon this important question recommended by the impetuous and dauntless Jackson, and "caution" is now insisted upon by President Cleveland.

On December 8, 1829, President Jackson sent his first message to Congress, and comments upon the effect of the tariff laws in these words:

No very considerable change has occurred during the recess of Congress in the condition of either our agriculture, commerce, or manufactures. The operation of the tariff has not proved so injurious to the two former or as beneficial to the latter as was anticipated. Importations of foreign goods have not been sensibly diminished, while domestic competition, under an illusive excitement, has increased the production much beyond the demand for home consumption. The consequences have been low prices, temporary embarrassments, and partial loss.

"Caution" had not been observed in framing these tariff laws, and the President informs Congress that so far from being beneficial to the manufacturers for whose special advantange they had been enacted, the opposite effect had resulted, and these very establishments had been subjected to "temporary embarrassments and partial loss."

Let me again ask my eloquent friend from Michigan [Mr. BURROWS], where does he find in this picture the evidence of that marvelous prosperity which he claims was the result of the tariff laws of 1824 and 1828?

Reiterating the idea that caution is indispensable in dealing with this delicate and important question of a revision of the tariff laws in the interest of agriculture, commerce, and manufactures, President Jackson, in this same message, goes on to say:

To regulate its conduct so as to promote equally the prosperity of these three cardinal interests is one of the most difficult tasks of government. * * *
Under these impressions I invite your attention to the existing tariff, believing that some of its provisions require modification.

JACKSON INSISTS UPON CAUTION.

But General Jackson seems unwilling to leave the subject without again emphasizing the necessity of caution in legislation of this character, which he does in these words:

When we reflect upon the difficulty and delicacy of this operation it is important that it should never be attempted but with the utmost caution.

President Jackson shared the views entertained by Washington and Jefferson relative to the superior importance of our agricultural interests as compared with commerce and manufactures. This will be evident from the passage in this message I will now read:

The agricultural interest of our country is so essentially connected with every other, and so superior in importance to them all, that it is scarcely necessary to invite to it your particular attention. It is principally as manufactures and commerce tend to increase the value of agricultural productions, and to extend their application to the wants and comforts of society, that they deserve the fostering care of the Government.

In the same message the President dwelt upon the importance of reducing the tariff tax upon articles of necessity, and specially recommended a reduction in the tax on tea and coffee. In speaking of articles upon which he recommends a reduction and which do not come in competition with our own products, he says:

Of these tea and coffee are the most prominent; they enter largely into the consumption of the country, and have become articles of necessity to all classes. A reduction, therefore, of the existing duties will be felt as a common benefit.

TARIFF REDUCED ON NECESSITIES.

Probably it was pursuant to these recommendations that Congress passed the tariff laws of May 20 and May 29, 1830. The act of May 20, 1830, is found in volume 4, page 403, of the Statutes at Large. It reduced the duty on coffee from 5 cents to 2 cents per pound, and provided that after December 31, 1831, it should be but 1 cent per pound. This act also increased the discrimination in the duty on teas imported in American vessels. The general purpose of the law appears to have been to fix the duty on teas imported from China or other places east of the Cape of Good Hope in American vessels at about two-thirds the tax imposed upon the same article if imported from other places or in foreign bottoms.

One act of May 29, 1830 (*ibid*, page 419), reduced the tax on molasses from 10 cents to 5 cents per gallon, and another act, approved the same day, reduced the tax on salt from 20 cents to 15 cents per bushel, and after December 31, 1831, to 10 cents per bushel.

The price of coffee at that time was about 11 cents per pound; molasses was about 30 cents per gallon, and salt was selling at about $2.50 per sack. All of these commodities fell in value after the new duties went into effect.

In the famous veto of the Maysville road, read in Congress May 27, 1830, President Jackson referred to the tariff-tax law of 1828, and asserted that—

many of the taxes collected from our citizens through the medium of imposts have for a considerable period been onerous. In many particulars these taxes have borne severely upon the laboring and less prosperous classes of the community, being imposed on the necessaries of life.

In his message of December 7, 1830, General Jackson asserts that the power to adjust duties with a view to the encouragement of domestic branches of industry is conferred by the States on the General Government, but holds that the then existing law "is considered by almost all as defective in many of its parts." He therefore recommends that it be revised, and states—

that the difficulties of adjustment, although great, are far from being insurmountable.

In the same message he further considers the effect of the tariff laws then in force, and concludes that it is—

doubtless overrated, both in its evils and advantages.

JACKSON ADVISES INCIDENTAL PROTECTION.

Jackson also says:

While the chief object of duties should be revenue, they may be so adjusted as to encourage the manufacturers.

But he strictly adheres to his demand for light taxes on necessities, and tells Congress that—

the present tariff taxes some of the comforts of life unnecessarily high.

And in discussing the adjustment of duties so as to afford protection he said:

I am well aware that this is a subject of so much delicacy, on account of the extended interests it involves, as to require that it should be touched with the utmost caution, and that while an abandonment of the policy in which it originated—a policy coeval with our Government and pursued through successive administrations—is neither expected nor desired, the people have a right to demand, and have demanded, that it be so modified as to correct abuses and obviate injustice.

The act of July 13, 1832, sought to carry into effect the convention, between the United States and France, and provided that the tax on French wines should be 6 cents per gallon on red, 10 cents on white in casks, and 22 cents per gallon on all sorts in bottles.

On the following day a general law was enacted (Statutes at Large, volume 4, pages 583–594) which was designed to be a general revision of the tariff. It imposed specific, compound, and ad valorem duties, the latter running from 5 to 50 per cent.

On March 2, 1833, three tariff laws were approved which affected but a few articles paying ad valorem duties.

The important feature of the tariff legislation of that session was the enactment of what was called the compromise act of March 2, 1833. (Statutes at Large, volume 4, pages 629–631.) Section 1 of this act provided that all duties exceeding 20 per cent. should be reduced by annually striking off one-tenth of the excess, and after 1841 one-half of the residue should be deducted, and after 1842 the other half shall be deducted.

AGAINST MONOPOLY.

President Jackson was so strenuously opposed to any system which might by any possibility tend to establish monopolies that on April 15, 1834, he used this forcible language:

The ambition which leads me on is an anxious desire and a fixed determination to * * * persuade my countrymen, so far as I may, that it is not in a splendid Government supported by powerful monopolies and aristocratical establishments that they will find happiness or their liberties protection; but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven, unseen and unfelt, save in the freshness and beauty they contribute to produce.

Is not this the true, the only method by which we can hope to realize the idea of "a people's government, made for the people, made by the people, and answerable to the people?" Under such a government the citizens can not be subjected to the rule either of aristocrats or plutocrats, but a happy people, protected in their liberties, under an unpretentious and unostentatious system of government would select their rulers from their own body, thereby securing protection to all and granting favors or special privileges to none. Under such a system the unavoidable burdens of Government would be proportionately, if not equally, distributed according to the benefits derived from it. Protection to the person being enjoyed by all alike, the burdens of that protection would be equally borne by all, while the protection to property would fall most heavily upon those most benefited by it; that is, the citizen would be called on to contribute to the Government in proportion to the amount of the property he owned.

General Jackson still adhered to the principle that protective duties should be levied on luxuries, and the necessaries of life be left untaxed. And in his message of December 6, 1836, he admonishes Congress in these words:

The duty on salt was laid as a war tax, and was no doubt continued to assist in providing for the payment of the war debt. There is no article the release of which from taxation would be felt so generally and so beneficially.

It will be observed that the bill now before the House conforms to this view of the taxing power, as it places this article (salt) of prime necessity on the free-list for the first time since the Democrats surrendered the administration of the Government nearly thirty years ago.

THE POOR SHOULD NOT BE BURDENED WITH TAXES.

In the same line of Democratic policy of guarding and protecting the more necessitous classes of our people from the oppressions of taxation which must prove more burdensome to them than to their more fortunate fellow citizens, the President continues:

To this may be added all kinds of fuel and provisions. Justice and benevolence unite in favor of releasing the poor of our cities from burdens which are not necessary to the support of our Government, and tend only to increase the wants of the destitute.

And in his last official utterance, in his farewell address to the people of the United States, this great statesman, this eminent and steadfast Democrat, this true friend of the mechanics and laboring men of the country, again urges the idea upon the attention of the country in these words of wisdom:

The tax imposed on goods enhances by so much the price of the commodity to the consumer, and as many of these duties are imposed on articles of necessity, which are daily used by the great body of the people, the money raised by these imposts is drawn from their pockets. Congress has no right, under the Constitution, to take money from the people unless it is required to execute some of the specific powers intrusted to the Government.

And in the same address, as if to caution the people, he points out that only certain classes of the community can be anxious for a different system of taxation. I will read his words:

The corporations and wealthy individuals who are engaged in large manufacturing establishments desire a high tariff to increase their gains.

On the 4th of September, 1837, Mr. Van Buren sent his special message to Congress, in which he treated the double evil of heavy taxation and a surplus revenue in these words:

To burden the country with increased taxation when there is in fact a large surplus revenue would be unjust and unwise.

PARTY PLATFORMS.

With the exception of the demand for "free commerce with all nations," formulated by the Congressional caucus which in 1800 named Mr. Jefferson as the candidate of the Republican party, the platforms of all parties were silent on the subject of the tariff up to 1840. The only approach or pretension to a platform on this question is to be found in the resolutions adopted by a ratification meeting held in Washington May 11, 1832.

In 1840 the Democratic platform expressed the principles of the party on the tariff in these words:

Resolved, That justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another.

On this platform Van Buren carried the manufacturing State of New Hampshire by 6,386 and Pennsylvania went for Harrison by a majority of only 2 votes.

It is well known that Van Buren's defeat was occasioned by causes entirely different from the tariff, and this is evidenced by the fact that the same words regarding the tariff were incorporated in the Democratic platform of 1844, and upon that platform Polk was elected, carrying by large votes the following States, whose Representatives here to-day are almost unanimous for protection, namely, Pennsylvania, New York, New Jersey, and Maine, defeating the great Sage of Ashland upon a platform which demanded—

A tariff for revenue to defray the necessary expenses of the Government, and discriminating with special reference to the protection of the domestic labor of the country.

In 1848 the Democratic party platform reiterated the tariff views of 1840 and 1844, and repeated these words:

Resolved, That justice and sound policy forbid the Federal Government to foster one industry to the detriment of another.

and asserted further that:

The fruits of the great political triumph of 1844 have fulfilled the hopes of the Democracy of the Union in the noble impulse given to the cause of free trade by the repeal of the tariff of 1842 and the creation of the more equal, honest, and productive tariff of 1846.

In this campaign, though opposed by General Taylor, the hero of Monterey and Buena Vista, the Democrats carried Ohio and Maine, and Taylor's clear majority in Pennsylvania was only 3,074 votes.

In 1852 the Democracy reaffirmed the tariff resolutions of 1840, 1844, and 1848, and with General Pierce as their candidate they carried Rhode Island, Pennsylvania, Ohio, New York, New Jersey, Maine, Delaware, and Connecticut.

In 1856 the Democratic party again, and for the fifth time, incorporated the anti-protection sentiments of the platforms of 1840, 1844, 1848, and 1852, to which they added this forcible and impressive declaration:

Resolved, That there are questions connected with the foreign policy of this country which are inferior to no domestic question whatever. The time has come for the people of the United States to declare themselves in favor of free seas and progressive free trade throughout the world by solemn manifestations to place their moral influence at the side of their successful example.

And, mark you, it was on this platform that they elected Mr. Buchanan, carrying the manufacturing States of Pennsylvania, New Jersey, and Delaware.

From 1834 to 1842 the imports of goods on which no duty was collected—namely, goods on the free-list—was almost equal to the importations of goods on the dutiable list.

TIPPECANOE AND TYLER TOO.

President Harrison died before transmitting any message on the tariff, but President Tyler, like all of his other predecessors, discussed the tariff laws, and in his special message of the 1st of June, 1841, we find this language:

The act of the 2d of March, 1833, commonly called the Compromise Act, should not be altered, except under urgent necessities, which are not believed at this time to exist. One year only remains to complete the series of reductions provided for by that law, at which time provisions made by the same law, and which then will be brought actively in aid of the manufacturing interests of the Union, will not fail to produce the most beneficial results.

Notwithstanding this earnest and urgent objection to any alteration of the tariff laws then in force, Congress did change them, and we find that on the 11th of September, 1841, President Tyler approved a tariff act which imposed a duty of 20 per cent. on all commodities then on the free-list, as well as on all goods the duty on which was then below 20 per cent., excepting, however, a lengthy list of articles which were specified in the act.

This law does not appear to have been satisfactory to Mr. Tyler; for in his first annual message, submitted to Congress on the 7th December, 1841, he takes up the subject again, and announces his acquiesence in the theory of a tariff for revenue, with incidental protection, in these words:

In imposing duties, however, for the purposes of revenue, a right to discriminate as to the articles on which the duty shall be laid, as well as the amount, necessarily, and most properly exists.

TYLER FOR INCIDENTAL PROTECTION.

He then goes on to show that the Government would be greatly hampered if this right is not admitted, and says:

So also the Government may be justified in so discriminating, by reference to other considerations of domestic policy connected with our manufactures.

And in his tariff veto of the 29th of June, 1842, he discusses the subject again with reference to this particular idea, insisting that Congress had the undoubted right, in arranging the revenue laws, to—

so discriminate as to give incidental protection to manufacturing industry—thus to make the burdens which it is compelled to impose upon the people for the purposes of government productive of a double benefit.

This most of the reasonable opponents of protective duties seem willing to concede, and if we may judge from the manifestations of public opinion in all quarters this is all that the manufacturing interests really require.

The next tariff law was that of the 30th of August, 1842, which effected a general change in the tariff duties, fixing the ad valorem duties at from 1 to 50 per cent. It added 10 per cent. to the duties on goods imported in foreign vessels, and 20 per cent. if imported from places east of the Cape of Good Hope in foreign vessels. (Statutes at Large, volume 5, pages 548–567.)

On the 7th of December, 1842, President Tyler sent his second annual message to Congress, and tells them that Congressional action may be necessary to remedy the defects in the law I have just referred to, consequent upon its hasty and hurried passage, and after urging that such action should be undertaken in a spirit of moderation and wise discrimination which should cause the "people everywhere to feel and to know that the Government is careful of the interests of all alike," he puts the Congress on its guard in this forcible declaration:

Extravagant duties defeat their end and object.

And in his last message, the 3d of December, 1844, President Tyler again discusses the subject of taxation in this unpretending but forcible language:

This important power of taxation, which, when exercised in its most restricted form, is a burden on labor and production, is resorted to under various pretexts for purposes having no affinity to the motive which dictated the grant.

He then points out the evil consequences of the injudicious exercise of the power, and concludes:

It may be laid down as an axiom founded in moral and political truth, that no greater taxes should be imposed than are necessary for an economical administration of the Government, and that whatever exists beyond should be reduced or modified.

What was morally and politically true in 1844 can not be untrue or unsound in policy in 1888, and the underlying principle of the bill now under consideration is reduction or modification of the present system of unnecessary, excessive, and oppressive taxation.

POLK ADVISES INCIDENTAL PROTECTION.

President Polk, having been triumphantly elected on the platform of principles, including the part relating to the subject of tariff taxation, which I have already quoted, it was to be expected that he would address himself to this important question, and in his inaugural address he quotes as the true doctrine in the matter the official declaration of his party in 1840:

Justice and sound policy forbid the Federal Government to foster one branch of industry to the detriment of another.

And proceeds to explain his individual views upon the question in these words:

I have heretofore declared to my fellow-citizens that, "in my judgment, it is the duty of the Government to extend, as far as it may be practicable to do so, by its revenue laws and all other means within its power, fair and just protection to all the great interests of the whole Union, embracing agriculture, manufactures, the mechanic arts, commerce, and navigation."

To this he added his express sanction or approval of the present Democratic doctrine of a tariff for revenue, with incidental protection. On this point Mr. Polk said:

I have also declared my opinion to be "in favor of a tariff for revenue," and that "in adjusting the details of such a tariff I have sanctioned such moderate discriminating duties as would produce the amount of revenue needed, and, at the same time, afford reasonable incidental protection to our home industry," and that I was "opposed to a tariff for protection merely, and not for revenue."

He then considers the question of taxation in its constitutional aspects, and says:

In executing this power by levying a tariff of duties for the support of government the raising of *revenue* should be the *object* and *protection* the *incident*. To reverse this principle, and make *protection* the *object* and *revenue* the *incident*, would be to inflict manifest injustice upon all other than protected interests.

He then argues that a properly adjusted tariff for revenue will inevitably afford all the protection government can justly confer on any industry, and shows how injustice would result from the opposite practice.

The largest portion of our people are agriculturists; others are employed in manufactures, commerce, navigation, and the mechanic arts. To tax one branch of this home industry for the benefit of another would be unjust. No one of these interests can rightfully claim an advantage over the others, or to be enriched by impoverishing the others. All are equally entitled to the fostering care and protection of the Government. In exercising a sound discretion in levying discriminating duties within the limit prescribed, care should be taken that it is done in a manner not to benefit the wealthy few at the expense of the toiling millions, by taxing lowest the luxuries of life, or articles of superior quality and high price, which can only be consumed by the wealthy, and highest the necessaries of life, or articles of coarse quality and low price, which the poor and great mass of our people must consume.

If Mr. Polk's life had been prolonged to this time he could not have portrayed the injustice wrought by the law which the bill under consideration seeks to modify or amend more graphically than he did in this pre-vision of how such a law would inevitably operate. The very system of taxation which Mr. Polk tells Congress should be carefully avoided has been arbitrarily forced upon the country with just the results that were foreseen.

LUXURIES, NOT NECESSITIES, SHOULD BE TAXED.

In his first annual message, sent to Congress on the 2d of December, 1845, President Polk again endeavors to impress upon the National Legislature the necessity of equity, justice, and caution in exercising, the taxing power, to the end that all interests be equally guarded by the Government. Mr. Polk said:

The terms "protection to domestic industry" are of popular import, but they should apply, under a just system, to all the various branches of industry in our country. The farmer or planter who toils yearly in his fields is engaged in "domestic industry," and is as much entitled to have his labor "protected" as the manufacturer.

Attention is then called to the inequalities of the taxes exacted by the law of 1842, of which the President says:

They are prohibitory on some articles and partially so on others, and bear most heavily on articles of common necessity, and but lightly on articles of lux-

ury. It is so framed that much the greatest burden which it imposes is thrown on labor and the poorer classes, who are least able to bear it, while it protects capital and exempts the rich from paying their just proportion of the taxation required for the support of the Government.

I can imagine no more accurate description of the wrongs perpetrated by the present tariff-tax law which the Democratic party has for many years been trying to amend and modify.

And the President goes on with his merciless exposition of the enormities of the law of 1842. He says further:

Articles of prime necessity or of coarse quality and low price used by the masses of the people are, in many instances, subjected by it to heavy taxes, while the articles of finer quality and higher price or luxury which can be used only by the opulent are lightly taxed.

As in 1845 so in 1888 the Democratic party, the real party of the people, seeks to correct the flagrant iniquity of making the workingman pay heavy taxes on the common blankets and clothing he and his family must use, while the diamonds, the laces, the silks, and the satins of the capitalist have to pay a tax which, in comparison, is merely nominal.

Then, as now, the Democratic party disclaimed any hostility to the manufacturers. On this point, in the same message, Mr. Polk said:

In recommending to Congress a reduction of the present rates of duty, and a revision and modification of the act of 1842, I am far from entertaining opinions unfriendly to the manufacturers. * * * The advantage under any system of indirect taxation, even within the revenue standard, must be in favor of the manufacturing interests, and of this no other interest will complain.

RECOMMENDS AD VALOREM DUTIES.

The President then recommends the adoption of ad valorem duties as the most equitable system of indirect taxation which can be imposed. His views upon this point are thus explained:

By the ad valorem principle all articles are taxed according to their cost or value, and those which are of inferior quality or of small cost bear only the just proportion of the tax with those which are of superior quality or greater cost.

There can be but little doubt the opinions and recommendations of President Polk were largely instrumental in inducing the Twenty-ninth Congress to prepare the famous tariff-tax bill of 1846, which was ably, and in some instances acrimoniously, debated by the more prominent of the great men who then guided the destinies of the country.

July 25 and 27, 1846, Daniel Webster spoke upon the great tariff bill which became the law three days later. He explained his position on the tariff question, and defended himself from the charge of inconsistency. He said:

I have said many times, and it is true, that up to the year 1824 the people of that part of the country to which I belong, being addicted to commerce, having been successful in commerce, their capital being very much engaged in commerce, were adverse to entering upon a system of manufacturing operations. Every member in Congress from the State of Massachusetts, with the exception of one, I think, voted against the act of 1824.

Mr. Webster then explained that the bill of 1824, which increased duties, was passed principally by the people of the Middle States, but the enactment of the law induced New England to erect factories and that:

She went into the manufacturing operations, not from original choice, but from the necessity or the circumstances in which the public councils had placed her; and for one I resolved then, and have maintained that resolution ever since, that, having compelled the Eastern States to go into these operations for a livelihood, the country was bound to fulfill the just expectations which it had inspired.

Mr. Webster was, however, very moderate in his expressions. He said Mr. Clay's speech, which ushered in the bill of 1824, was called by him a speech for an "American system." He said he had investigated the subject and studied the Constitution, and—

the sentiments of the great men who framed it; I hope I have studied with more care the condition of the country when the convention assembled to form it, and yet I do not know that I have much, sir, to retract or to change on these points.

It thus seems that on the general question of tariff Mr. Webster had not materially altered his views since 1824, when he and his Massachusetts colleagues had voted side by side with the representatives of Virginia, the Carolinas, and other Southern States.

He dissented from the views of some of the opponents of the bill, who, he said, seemed—

to argue the question as if all domestic industry were confined to the production of manufactured articles; as if the employment of our own capital and our own labor in the occupations of commerce and navigation were not as emphatically domestic industry as any other occupation. * * *

One man makes a yard of cloth at home, another raises agricultural products and buys a yard of imported cloth. Both these are equally the earnings of domestic industry, and the only questions that arise in the case are two: The first is, which is the best mode under all the circumstances of obtaining the article? The second is, how far this question is proper to be decided by Government, and how far it is proper to be left to individual discretion. There is no foundation for the distinction which attributes to certain employment the peculiar appellation of American industry, and it is in my judgment extremly unwise to attempt such discriminations.

DALLAS'S VOTE CARRIES ACT OF 1846.

It would seem from this that Mr. Webster agreed with the Democratic idea that the manufacturer was not the only citizen whose pursuit could properly be distinguished as domestic industry. But notwithstanding his own unanswerable reasoning upon this point, Mr. Webster voted against the bill, and the Senate was evenly divided (28 to 28), which left the decision of the question with the Vice-President, Mr. Dallas, of Pennsylvania, who voted for the bill, thus passing it by the vote of a leading Democrat of the great manufacturing State whose Representatives, with one or perhaps two honorable exceptions, now clamorously demand the perpetuation of the inequalities and hardships which the tariff-tax laws now enforce.

The tariff law of the 30th of July, 1846, imposed ad valorem duties only, and as it thus taxed articles in proportion to their cost or value, its practical effect was to enforce the Democratic doctrine of a low tax on the coarser and cheaper articles consumed by the great body of the people and a heavier tax on the finer and higher-priced articles (luxuries), which none but the opulent could afford to buy.

In Mr. Polk's second message, sent to Congress on the 8th of December, 1846, he states that the tariff law of that year not having gone into effect until the 1st of December, no opportunity had been afforded to form an opinion of its probable effect on the revenue and the business of the country, but he proceeds to contrast the principles established by the recent law with those of the act of 1842, of which latter he said:

By it the taxes were imposed, not for the legitimate purpose of raising revenue, but to afford advantages to favored classes at the expense of a large majority of their fellow-citizens. Those employed in agriculture, mechanical pursuits, commerce, and navigation, were compelled to contribute from their substance to swell the profits and overgrown wealth of the comparatively few who had invested their capital in manufactures. The taxes were not levied in proportion to the value of the articles upon which they were imposed, but, widely departing from this just rule, the lighter taxes were, in many cases, levied upon articles of luxury and high price, and the heavier taxes upon those of necessity and low price consumed by the great majority of the people.

MANUFACTURERS BENEFITED.

Elsewhere in the same message the President predicts that another beneficial effect of the new law will be the permanent establishment of the system for the reason that capitalists who have made or shall make investments in manufacturing enterprises will be satisfied with the results, and will know what they can rely upon. This, he insists, could not be the case under the old system, because—

High protective duties, from their unjust operation upon the masses of the people, can not fail to give rise to extensive dissatisfaction and complaint and to constant efforts to change or repeal them, rendering all investments in manufactures uncertain and precarious.

The demand now resounding throughout the country for the modification of the existing oppressive system of high duties gives emphasis and point to this cogent reasoning.

By the opening of the Thirtieth Congress the law of 1846 had been in operation for twelve months, and the results had more than justified the expectations of its authors, and in his third annual message, transmitted to Congress on the 7th of December, 1847, President Polk refers to what it had accomplished in these terms of reasonable exultation:

Its effects are visible in the great and almost unexampled prosperity which prevails in every branch of business. While the repeal of the prohibitory and restrictive duties of the act of 1842, and the substitution in their place of reasonable revenue rates levied on articles imported according to their actual value, have increased the revenue and augmented our foreign trade, all the great interests of the country have been advanced and promoted. The great and important interests of agriculture, which had been not only too much neglected but actually taxed under the protective policy for the benefit of other interests, have been relieved of the burdens which that policy imposed on them, and our farmers and planters, under a more just and liberal commercial policy, are finding new and profitable markets abroad for their augmented products. Our commerce is rapidly increasing, and is extending more widely the circle of international exchanges.

The message then calls attention to the fact that the reduced taxation has been advantageous to the manufacturing as well as to other industries, and I think, Mr. Chairman, those who oppose the bill we are now considering on the ground that it will prove injurious to our manufacturing interests will do well to ponder the lessons of experience under a low-tariff law as taught in these words:

While the interests of agriculture, of commerce, and of navigation have been enlarged and invigorated, it is highly gratifying to observe that our manufactures are also in a prosperous condition. None of the ruinous effects upon this interest which were apprehended by some as the result of the operation of the revenue system established by the act of 1846 have been experienced. On the contrary, the number of manufactories and the amount of capital invested in them are steadily and rapidly increasing.

PRICE OF LABOR AUGMENTED.

Another point to which I wish specially to call the attention of those who profess to be the peculiar champions of labor is forcibly touched upon by Mr. Polk in these words:

While capital invested in manufactures is yielding adequate and fair profits under the new system, the wages of labor, whether employed in manufactures, agriculture, commerce, or navigation, have been augmented. The toiling millions whose daily labor furnishes the supply of food and raiment and all the other necessaries and comforts of life are receiving higher wages and more steady and permanent employment than in any other country or at any previous period in our own history.

I propose to consider this feature of the subject under discussion more fully at another part of my argument, but in passing I ask the self-appointed and vociferous friends of labor to note the fact that the tariff law of 1846—the embodiment of the idea of a "tariff for revenue, with incidental protection"—gave increased wages to labor in manufactories as well as in every other branch of "domestic industry."

The experience of the ensuing year fully vindicated the confidence of the Democrats in the wisdom and justice of the tariff-for-revenue law, and in his fourth annual message of the 5th of December, 1848,

President Polk again calls attention to the gratifying results of the law, in these words:

While by the repeal of highly protective and prohibitory duties the revenue has been increased, the taxes of the people have been diminished. They have been relieved from the heavy amounts with which they were burdened under former laws in the form of increased prices or bounties paid to favored classes and pursuits.

The President then points out that experience has falsified the predictions of the high-protective theorists. On this point Mr. Polk said:

Agriculture, commerce, and navigation are prosperous, the prices of manufactured fabrics and of other products are much less injuriously affected than was to have been anticipated.

TAYLOR INDORSES INCIDENTAL PROTECTION.

Dissensions in the Democratic party wholly disconnected with its policy on the tariff enabled the Whigs to elect their candidate, General Taylor, in 1848, and in his inaugural address the newly elected President declared:

It shall be my study to recommend such constitutional measures to Congress as may be necessary and proper to secure encouragement and protection to the great interests of agriculture, commerce, and manufactures.

And in his first annual message, December 24, 1849, he said:

I recommend a revision of the tariff and its adjustment on a basis which may augment the revenue. I do not doubt the right or duty of Congress to encourage domestic industry, which is the great source of national as well as individual wealth and prosperity.

Educated as a soldier, and never having bestowed any great study or reflection on political or economic questions, it is well-known that General Taylor was largely under the influence of certain leaders of the Whig party who had always been opposed to the doctrine embodied in the tariff-for-revenue law of 1846, which readily accounts for this recommendation to return to the policy of the law of 1842.

But his early death elevated Mr. Fillmore, a learned, thoughtful, and conservative adherent of the Whig school of politics, to the Presidential office, and in his first annual message of the 2d of December, 1850, he cautioned Congress against a return to the old system in language as plain and unmistakable as had been used by Mr. Polk. He said:

A high tariff can never be permanent. It will cause dissatisfaction and will be changed. It excludes competition, and thereby invites the investment of capital in manufactures to such excess that when changed it brings distress, bankruptcy, and ruin upon all who have been misled by its faithless protection.

FILLMORE OPPOSES A PROHIBITORY TARIFF.

In his third annual message, of the 6th of December, 1852, he reiterates his opinion as to the advisability of a protective tariff, but repeats his former caution:

Duties, however, should not be fixed at a rate so high as to exclude the foreign article, but should be so graduated as to enable the domestic manufacturer fairly to compete with the foreigner in our own markets, and by this competition to reduce the price of the manufactured article to the consumer to the lowest rate at which it can be produced.

With the triumph of the Democracy in the election of 1852 there was a marked change in the feelings and opinions of the Executive, and in the second annual message of President Pierce, of the 4th of December, 1854, we find these words:

I therefore renew my recommendation for a reduction of the duties on imports. The report of the Secretary of the Treasury presents a series of tables showing the operation of the revenue system for several successive years, and as the general principle of the reduction of duties with a view to revenue, and not protection, may now be regarded as the settled policy of the country, I trust that little difficulty will be encountered in settling the details of a measure to that effect.

This recommendation was renewed in the succeeding message (December 31, 1855), and the position of the country on the question of tariff taxation is thus stated:

It is now so generally conceded that the purpose of revenue alone can justify the imposition of duties on imports that in readjusting the impost tables and schedules which unquestionably require essential modifications, a departure from the principles of the present tariff is not anticipated.

The Congress to which the message containing these expressions were transmitted enacted the tariff law of March 3, 1857.

This law was exclusively ad valorem, the rates running from 4 to 30 per cent., and the free-list was extended so as to embrace many articles which under previous laws had been subject to duty. Under the operation of this law the average tariff taxation upon all dutiable goods was about 20 per cent., and upon the total net importations it averaged about 15 per cent. The vote in the House of Representatives was 122 for the bill and 72 against it. In the Senate the vote was 33 for the bill and only 8 against it. This vote was taken upon the bill as reported by the conferees of the House and Senate.

The shadow of impending events had already absorbed public attention to an extent which, in a measure, excluded matters of a purely economic character; but, nevertheless, neither of the platforms in 1860 were silent upon the tariff question.

PLATFORMS OF 1860.

Section 12 of the platform of the Republican convention which nominated Mr. Lincoln expressed the views of that body upon the tariff in these words:

That, while providing revenue for the support of the General Government by duties upon imports, sound policy requires such an adjustment of these imports as to encourage the development of the industrial interest of the whole country; and we commend that policy of national exchanges which secures to the workingmen liberal wages, to agriculture remunerative prices, to mechanics and manufacturers an adequate reward for their skill, labor, and enterprise, and to the nation commercial prosperity and independence.

Let me ask my Republican friends who now denounce the doctrine of a tariff for revenue with incidental protection, as disguised free trade, if they can find in this first authoritative utterance of their party upon the tariff—the Philadelphia platform of 1856 being absolutely dumb upon the question—let me ask them, I say, if they can find in these words any possible interpretation other than that protective duties should be levied to provide for the support of the General Government? What is it that has converted sound Republicanism in 1860 into free-trade heresy since that time?

Both the Democratic conventions of 1860, which nominated Breckinridge and Douglas, reaffirmed the declaration of principles adopted by the Cincinnati convention of 1856, thereby adopting and asserting the tariff principles which had governed the party since 1840.

In 1864 the platforms of both parties were silent upon the tariff, both organizations being absorbed in the struggle to secure the triumph of the Union arms, but in 1868 the question was again made a prominent one in the platforms of both parties.

The tariff acts of August 5 and December 24, 1861; June 30, 1864; March 3, 1865; March 16, June 1, July 28, 1866; March, 1867; February and July, 1868; February, 1869, July 14 and December 22, 1870; May 1 and June 6, 1872, were all enacted at a time when revenue was the absorbing question of the Government, and the influence of certain sections was such as to get tariff laws framed for their benefit. The effects of these laws were very unequal and they were not always in the interest of labor.

PLATFORMS OF 1868.

The demands for reform were so manifest that the Chicago convention of 1868 seemed to regard some pledges upon this subject as advisable, and probably it was due to this we find that the fourth resolution of the Republican platform upon which General Grant was nominated and elected declares:

It is due to the labor of the nation that taxation should be equalized and reduced as rapidly as the national faith will permit.

The difference between Republican professions and performance was never more strikingly exemplified than in this instance. In the platform the party professes to be solicitous for the reduction of taxation in the interest of labor, but when the workingmen had been gulled and duped by this high-sounding and fair-seeming profession, and the party was firmly intrenched in power, the systematic discrimination in favor of the rich and against the poor was at once inaugurated, and I feel justified in charging that it has been stubbornly persisted in ever since. One of the first enactments after the above declaration was to double the value of the bonds held by the wealthy and so arrange the scheme of taxation that the burden of their payment should fall only on the labor of the country. From the time this deceptive utterance was promulgated, to this date, the Democratic party has zealously but uselessly striven to force the Republican party to redeem its professions. They point now, with an effrontery that is almost sublime, to their reductions in taxation, and call upon the laboring men of the country to unite in their exultation, but when their boasted achievements in this matter are examined and analyzed, it is found that almost every tax reduced or removed has in effect relieved the wealthy classes of something of their fair share of the burdens of government, and the load laid upon the poor has been proportionally increased.

Let us turn now, Mr. Chairman, from this surprising example of unfulfilled political promises to the simple, straightforward, and upright course of the Democratic party upon this very question.

In May, 1868, the Republicans secured the support of the people by the profession I have quoted. In July of the same year the Democracy declared in favor of—

a tariff for revenue upon foreign imports, and such equal taxation under the internal-revenue laws as will afford incidental protection to domestic manufactures, and as will, without impairing the revenue, impose the least burden upon, and best promote and encourage, the great industrial interests of the country.

And ever since that declaration the Democracy, in a feeble minority in Congress and without a single Federal office, as in the majority in this Hall, and in possession of the administrative branch of the Government, has steadfastly and persistently endeavored to enforce this policy, and has been uniformly thwarted by the solid Republican opposition.

GRANT ADVISES MODIFYING THE TARIFF.

Probably the same conditions which impressed the Chicago convention influenced General Grant to make recommendations on this subject. In his first annual message, dated December 6, 1869, he says:

It may be advisable to modify taxation and tariff in instances where unjust or burdensome discriminations are made by the present laws.

At that time nearly every imported article was subject to duty, the reports of the Treasury Department showing that but 4 per cent of the importations of the preceding year were free from duty; and in his third annual message General Grant recommended that articles of consumption which were not produced at home shall be admitted free.

In 1872 the Liberal Republican platform, which was subsequently adopted by the Democratic party, declared:

We demand a system of Federal taxation which shall not unnecessarily interfere with the industry of the people, * * * and recognizing that there are in our midst honest but irreconcilable differences of opinion with regard to the respective systems of protection and free trade, we remit the discussion of the subject to the people in their Congressional districts and the decision of Congress thereon, wholly free from Executive interference or dictation.

In the same year the Republicans adopted a platform which declared—

That revenue, except so much as may be derived from a tax upon tobacco and liquors, should be raised by duties upon importations, the details of which should be so adjusted as to aid in securing remunerative wages to labor, and promote the industries, prosperity, and growth of the whole country.

What a falling off is here! In 1872 the Republicans expressly stipulated that part of the necessary revenue should be derived from taxes on tobacco and liquors, and now, sixteen years later, they have the boldness to refuse the general demand for reduction in taxation upon the necessaries of life, and they propose to win the confidence of the people by promising a reduction in the tax upon luxuries.

In his sixth annual message, dated December 7, 1874, General Grant said:

I would suggest to Congress the propriety of readjusting the tariff.

Those articles of manufacture which we produce a constituent part of but do not produce the whole, that part which we do not produce should be entered free also. I will instance fine wools, dyes, etc. These articles must be imported to form a part of the manufacture of the higher grades of woolen goods.

The tariff acts of June 22, 1874, February 8 and March 3, 1875, July 1, 1879, June 14, 1880, May 6 and December 23, 1882, and March 3, 1883, are so recent that most of the members of the House are quite familiar with the features of those laws. None of them were of any relief to the people, and in 1876, towards the close of General Grant's administration, there was an earnest and general demand for reform.

PLATFORMS OF 1876.

The Democratic platform of 1876 forcibly and vigorously asserted:

We denounce the present tariff, levied upon nearly four thousand articles, as a masterpiece of injustice, inequality, and false pretense. It yields a dwindling, not a yearly rising revenue. It has impoverished many industries to subsidize a few. It prohibits imports that might purchase the products of American labor. It has degraded American commerce from the first to an inferior rank on the high seas; it has cut down the sales of American manufactures at home and abroad and depleted the returns of American agriculture—an industry followed by half our people. It costs the people five times more than it produces to the Treasury, obstructs the processes of production, and wastes the fruits of labor. It promotes fraud, fosters smuggling, enriches dishonest officials, and bankrupts honest merchants. We demand that all custom-house taxation shall be only for revenue.

And on this masterly and unequivocal declaration of hostility to the system of governmental taxation for protection the Democratic candidate, Mr. Tilden, received a majority of a quarter of a million of the popular vote, and, in all probability, a million majority of all the Caucasian votes cast at that election.

The Republican platform of 1876 is remarkable in one feature, at least. It is the first authoritative utterance of the party in which one can find even an insinuation of the doctrine of tariff taxation solely for protection. But the new departure of the party on this question is not boldly announced; it is, as I have said, only insinuated, as will be seen by these words:

The revenue necessary for current expenditures and the obligations of the public debt must be largely derived from duties upon importations, which, so far as possible, should be adjusted to promote the interests of American labor and advance the prosperity of the whole country.

Four years later, however, they had become slightly bolder, and in the platform of 1880 the Republican party asserted:

We reaffirm the belief avowed in 1876, that the duties levied for the purpose of revenue should so discriminate as to favor American labor.

It will be observed that it is still admitted that duties are to be levied for the purpose of revenue, but it must be admitted that this party declaration is susceptible of the construction that the raising of revenue should be subordinated to the protection of favored enterprises.

Contrast this with the direct and positive declaration of the Democracy in 1876:

We demand that all custom-house taxation shall be only for revenue—

which demand that party renewed in 1880, in the brief, explicit, and comprehensive formula—

a tariff for revenue only—

and we see at once one of the essential antagonisms between the two parties. The one party, the Republican, by dubious utterances which admit of different constructions, induced the working classes, the wage earners, who cast the majority of the votes, to intrust them with power which has been exercised only to advance the selfish interests of certain favored classes and to secure advantages for the party. The other party, the Democratic, avows its objects in positive and unequivocal language, moves directly to the accomplishment of that object, and employs whatever power it obtains to advance the welfare and prosperity of the whole country.

GARFIELD FAVORS AGRICULTURE.

The demand for reduction in tariff had now become intense, and the farmers were demanding a revision which would give them some relief from the burdens to which they were subjected. Mr. Garfield seemed to appreciate their just demands, and in his inaugural address said:

The interests of agriculture deserve more attention from the Government than they have yet received. The farms of the United States afford homes and employment for more than one-half of our people, and furnish much the largest part of all our exports. As the Government lights our coasts for the protection of mariners and for the benefit of commerce, so it should give to the tillers of the soil the best lights of practical science and experience.

Preparatory to a general revision of the tariff the first session of the Forty-seventh Congress enacted a law creating a Tariff Commission, and this body, after a most thorough investigation of the character of the changes which were necessary to the best interests of the industries of the country, made a most elaborate report, in which they recommended a reduction of the tariff of about 20 per cent. After this, President Authur presented his message of December 4, 1882, in which he used these words:

The present tariff system is in many respects unjust. It makes unequal distributions, both of its burdens and its benefits. This fact was practically recognized by a majority of each House of Congress in the passage of the act creating the Tariff Commission. The report of that Commission will be placed before you at the beginning of this session, and will, I trust, afford you such information as to the condition and prospects of the various commercial, agricultural, manufacturing, mining, and other interests of the country, and contain such suggestions for statutory revision as will practically aid your action upon this important subject.

This advice of President Arthur, and the recommendation contained in the report of the Tariff Commission seems to have absorbed the attention of the Forty-seventh Congress in its second session. The influences against reform were, however, so powerful that the results were far from satisfactory, and the law enacted March 3, 1883, so far from reducing, actually increased the burdens of the people.

HOW THE TARIFF AFFECTS LABOR.

And this has been the peculiar and distinctive characteristic of Republican tariff legislation throughout the last twenty years. Their orators and political writers have vied with each other in their efforts to proclaim that they only sought the welfare and prosperity of the poor wage-worker.

The credulous mechanic, artisan, and farmer have been too easily duped and beguiled.

The absolute groundlessness of their assertions has been most clearly demonstrated in an address of Mr. Thomas G. Shearman, delivered in Detroit, January 11, 1883, from which I read these words:

The highest tariff taxes upon iron that were ever known in this country were levied from 1828 to 1840. During that period, as the manufacturers testified before a protectionist committee of Congress, they made no increase of wages whatever. Between 1840 and 1842 the duties on iron were reduced, with no perceptible effect upon wages. In the middle of 1842 the duties were more than doubled, and remained high until December, 1846. Official inquiries being made in the autumn of 1845, not one manufacturer pretended that he had increased wages.

The author of the address from which this extract is taken is a life-long Republican, and one of the leading lawyers of the New York bar.

Note the significant fact that from 1828 to 1846, a period of 18 years under high tariff, made higher in 1842, there was no advance of wages to the laborer. But I read further:

In December, 1846, the duties were cut down about one-third, and so remained until July, 1857.

The manufacturers during that period very largely *increased* wages in the iron trade as well as in every other. There never was before, and there never has been since, so rapid an advance in the wages of manufacturing workmen of all classes, estimated in gold value, as between 1846 and 1860; during which time the tariff taxes were lower than they have ever been at any other time since 1812.

Will the gentlemen who now overwhelm us with their eloquent, if not vindictive, animadversions upon all who dare assert the advisability of at least trying a lower rate of tariff taxation, please tell us how they reconcile the fact that wages did advance largely under the low tariff of 1846 with their pretensions? Again I read:

The census of 1880 shows conclusively that the highest wages are paid by those employers who are not, and can not be, benefited by protection, and that the lowest wages are paid by the protected classes. The average annual wages of all the persons employed in manufactures were $346. The average wages of employés in the protected cotton manufacture were $244, in the protected woolen manufacture $293, and in the protected silk manufacture $292, all being below the general average. On the other hand, the average is raised by the high wages paid in innumerable other branches of manufacture, all of which are oppressed and dragged down by the heavy taxes which the tariff lays upon their raw materials.

If our friends, the enemies of equal taxation, can answer the assertion and the logic of Mr. Shearman in this extract, why have they not done so during the five years it has been before the public? He says further:

Even in the iron manufacture, where women and children can not be employed, and where, therefore, wages average higher, the census shows that the average wages of iron workers were only $1.25 a day, while the unprotected carpenters all over the country earned from $1.50 to $2.50, and even farm hands earned an average of nearly $1.50 per day.

Here is "confirmation strong as proofs of holy writ" of the verity of the Democratic position that high wages can not be secured by subjecting the people to high taxation. And the proof is clinched in these words:

Thus the census returns (which, it must always be remembered, are made up from statements of the manufacturers themselves, whose interest it is to show a different state of facts) clearly establish that the more protection is given to any class the less wages that class pays to its workmen.

WAGES HERE AND IN GREAT BRITAIN.

Apparently satisfied with the wreck he has made of the pretension that a high tariff increases wages in this country, Mr. Shearman goes on to demolish the cognate argument that, at least, wages are higher here than in England because of the beneficent operation of the tariff.

Upon this point he says:

But it is constantly said that, at any rate, wages in this country are higher than in England, and that this is due to protection.

Now, nothing can be more clear than that protection never helped to make wages higher in this country than in England, because it is a fact, perfectly well established, that there was more difference between mechanics' wages in England and in this country *before* we had a protective tariff than there is to-day. In a statement made to the tariff commission by a strong protectionist, who manufactures the same goods both in Ireland and New Jersey, he admitted that, under our present stringent protective system, the wages of the workmen whom he employs in his American factory have been steadily going down, while the wages of the workmen whom he employs in his Irish factory have been steadily going up.

How is this, gentlemen of the high taxation idolatry? The same employer admits that in the same industry wages are going down in America and simultaneously going up in poor oppressed Ireland, whose very name has become a synonym of poverty, privation, and hardship.

Having disposed of the idea that protection increases wages generally, Mr. Shearman discusses some special industries.

Regarding the cotton and woolen manufactures he says:

An official report on these manufactures, issued by the State Department in October, 1882, states that the wages paid on average in England, compared with those paid in America for the same number of hours' work, shows the following result:

Wages paid for fifty-two weeks of sixty-four hours each.

	In England.	In America.
Cotton manufacturers	$286	$244
Woolen manufacturers	294	293

Thus it will be seen that already protection has attained its greatest triumph, and accomplished the purpose for which, in fact, it was intended, that of cutting down the wages of the American operative to a point lower than that of the Englishman. But even these figures do not show all that has been accomplished, for they show the English wages in 1881 and the American wages in the spring of 1880; since that time American wages have been reduced and English wages have been raised. An English expert, who examined the whole subject carefully in 1879, found that American workmen in cotton mills did about 25 per cent. more work than English workmen did for the same money. Surely protection has been an incalculable blessing to the poor working people in the cotton and woolen factories of New England.

HOW TO INCREASE THE PRICE OF LABOR.

There is but one practicable method to increase the price of any article, and that is to increase the demand for it. When the demand for provisions or any other article is active, we all know that the market price of that article advances.

Demand and supply have controlled and regulated the market value of every exchangeable commodity since men began to trade and barter with each other.

This is a rule to which there is, there can be, no exception. The value of any article or commodity is valuable in proportion to the prevailing desire to obtain it. No elaborate disquisition upon political economy or the value of exchangeable commodities can be needed to demonstrate the infallible truth of this proposition. It is self-evident—known to every man from his individual experience.

When the immediate demand for any article or commodity exceeds the available supply, its value or price rises; when the supply exceeds the demand, the price falls—just as inevitably as the tides flow and ebb.

Nothing on earth is so absolutely subject to the operation of this rule as labor.

Ninety-nine hundredths of the laborers of the civilized world are compelled to sell their labor each day for the best price they can get for it. Women and children need food daily, as does the laborer also, and the head of the family—the husband and father or the brother—having no accumulated capital to exchange for the necessities of daily life, as the bread-winner, must put his daily labor on the market for what it will bring. If the demand for such labor as he can perform be greater than the immediately-available supply, he will be well paid for his day's toil; if the supply of such labor be greater than the existing, the immediate, demand, he must accept what the employer of labor chooses to pay that day.

This is an inexorable law, which no legislation can alter or affect.

If a high-tariff law can insure high wages to the workingman regardless of this inflexible law of supply and demand, which regulates the values of all exchangeable commodities, why is it, let me ask, that miners in Pennsylvania work for 65 cents per day; why is it that strikes, boycotts, and lockouts are of almost daily occurrence, and these labor troubles are more frequent in the "protected" industries than in those not protected?

OUR DUTY TO THE WAGE-WORKER.

I feel, Mr. Chairman, that I can say there is no man in all this broad Republic more anxious than myself for its prosperity and happiness.

If it were true, as claimed by the advocates of a prohibitory tariff, that the beneficial results would follow which are insisted upon, I would be willing to submit to the hardship and expense which have been shown to be always attendant upon such legislation.

There is probably no subject upon which there have been such contradictory statements as upon the relative pay of labor in England and America. The wages paid boys and girls in England have sometimes been compared to wages paid to skilled adults in America. Weekly wages paid to persons who only work three days during the week in England have been put side by side with those paid the American workman who works six days. In 1879 our American consul wrote that it was currently reported that factory operatives in Manchester were receiving higher wages than American operatives.

Mr. BUCKALEW. Consul, where?

Mr. WHEELER. Consul at Manchester, England. This and other reports caused careful investigation, and the Hon. James G. Blaine, in his "Report on the Cotton Goods Trade of the World," gives an extended discussion to the subject. He quotes from Consul Shaw, who then represented our Government at Manchester. I read from page 95:

In commenting on the strikes then imminent in Manchester, Consul Shaw says:

"The plea that the factory operatives in Manchester are now receiving higher wages in proportion to the time they work than American operatives is urgently made by manufacturers here, and this, together with the increasing financial distress among mill-owners, is gradually allaying the discontent among operatives.'

Mr. Blaine appears to have appreciated the difficulties to which I have referred in obtaining accurate information about wages in England. On page 98 he says:

Owing to the different arrangements of the English and American tables of wages, it is difficult to give comparative analyses thereof which would show at a glance the difference in wages of the operatives of both countries.

BLAINE, FRELINGHUYSEN, AND EVARTS.

The demand for labor in England has at times been such that workmen were induced to leave this country and accept employment in English factories. The American consul at Bristol, England, presented a report upon this subject, and states that no laborer should be enticed to leave the United States to make his home in England, and that those who have been induced to do so have become dissatisfied.

In the report he says:

A number of such laborers, and also some mechanics, have, during the last two years, called upon this consulate for help to get back to the United States, cursing the day when they left America for Europe, where neither milk nor honey is flowing. *Compared with Europe the United States is a paradise for a sober and faithful workingman.*

In consequence of these varying reports, the State Department, with the aid of American consuls, commenced a thorough and exhaustive investigation of this subject. Numerous and detailed reports were received, carefully compared and verified. Mr. Blaine presented them to Congress, with his comments and recommendations. In this valuable and interesting paper Mr. Blaine gives most elaborate tables, showing the actual pay given to operatives in cotton mills both in England and the United States; and on page 98 he sums up in these words:

The wages of spinners and weavers in Lancashire and in Massachusetts, according to the foregoing statements, were as follows, per week:

Spinners: English, $7.20 to $8.40 (master spinners running as high as $12); American, $7.07 to $10.30.

Weavers: English, $3.84 to $8.64, subject, at the date on which these rates were given, to a reduction of 10 per cent.; American, $4.82 to $8.73.

The average wages of employés in the Massachusetts mills is as follows, according to the official returns: Men, $8.30; women, $5.62; male children, $3.11; female children, $3,08. According to Consul Shaw's report, the average wages of the men employed in the Lancashire mills on the 1st of January, 1880, was about $8 per week, subject to a reduction of 10 per cent.; women, from $3.40 to $4.30, subject to a reduction of 10 per cent.

The hours of labor in the Lancashire mills are 56, in the Massachusetts mills 60 per week. The hours of labor in the mills in the other New England States, where the wages are generally less than in Massachusetts, are usually 66 to 69 per week.

SECRETARY BLAINE'S CONCLUSIONS.

An analysis of these figures shows that the average wages paid men in Massachusetts cotton mills is $8.30 per week for sixty hours' work, while in England the average wages paid to men in cotton factories is $8 per week for fifty-six hours' work. Therefore, according to this official report, factory hands get 14 cents and a fraction per hour in old England, and for the same work in protected New England they get 13 cents and a fraction per hour.

In the same report, pages 98 and 99, Mr. Blaine uses this language:

Undoubtedly the inequalities in the wages of English and American operatives are more than equalized by the greater efficiency of the latter and their longer hours of labor. If this should prove to be a fact in practice, as it seems to be proven from official statistics, it would be a very important element in the establishment of our ability to compete with England for our share of the cotton-goods trade of the world.

Mr. BUCHANAN. Will the gentleman allow me a question? Owing to the noise and confusion incident to the crowded condition of the chamber, I was not able to ascertain the publication of Mr. Blaine from which the gentleman read.

Mr. WHEELER. I read from a document called the "Cotton Goods Trade of the World." It was published by the Department of State, and is dated June 25, 1881.

Mr. BUCHANAN. Compiled by whom?

Mr. WHEELER. Prepared by Hon. James G. Blaine; signed by him as Secretary of State.

Mr. BUCHANAN. Was it written by him?

Mr. WHEELER. I presume Mr. Blaine writes all his books and prepares all the public documents to which he puts his name. I believe he is never happier than when using his facile pen.

Mr. BUCHANAN. But I was endeavoring to ascertain whether this publication was simply compiled by subordinates, under Mr. Blaine's direction, or was a work of his own.

Mr. WHEELER. It is signed by him; and the fluent, elegant language clearly shows it was written by him.

Mr. BUCHANAN. Mr. Blaine is generally able to express himself with force and elegance.

Mr. WHEELER. He has, in this case, expressed himself with great force and great truth. This document, which Mr. Blaine put before the country, stands as a monument to the foresight of that profound politician.

Mr. BUCHANAN. I appreciate the gentleman's appreciation of Mr. Blaine.

Mr. WHEELER. In the same report, backed by elaborate statistics, Mr. Blaine estimates that the British mills consume 1,220,000,000 pounds annually, and that American mills consumed in 1880 724,800,000 pounds.

He estimates the output of piece goods that year in British mills at 5,439,645,000 yards, and the output of piece goods in American mills at 2,131,580,000 yards. He estimates that the British mills employed 500,000 operatives, while the mills of the United States only employed 181,000 operatives. And he puts the number of spindles in the United States at 10,920,000, and the number in Great Britain at 40,000,000.

Mr. Blaine then gives the relative value of the English and American cotton manufactures, and makes this gratifying assertion:

From these returns it is seen that every American spindle consumes 66 pounds of raw cotton, while each British spindle consumes only 32 pounds, or less than one-half the American consumption per spindle.

It thus appears that each American operative works up as much raw material as two British operatives, turns out nearly $1.50 worth of manufactures to the British operative's $1 worth, and even in piece goods, where the superior quality and weight of the American goods are so marked, the American operative turned out 2.75 yards to 2.50 yards by the British operative.

SECRETARY FRELINGHUYSEN ON LABOR.

I have also before me volume 25, miscellaneous documents, Forty-seventh Congress, which contains a report from Mr. Frelinghuysen, President Arthur's Secretary of State. On pages 43 and 44 are some tables showing the rates of wages paid for weaving printing cloth in some of the principal districts of England and America.

The report thus refers to them—

As one of the latest and fullest comparisons between English and American manufactures, I believe the following tables and remarks from his pen will be found reliable.

I present these tables without any comment, except that they go far to refute the many erroneous impressions which have been created regarding English and American factory labor.

The following is the rate of wages paid for weaving printing cloth in some of the principal districts of England and America:

England.

Description of cloth.	Ashton-under-Lyne.	Blackburn.	Stockport.	Hyde.	Average.
	Cents.	*Cents.*	*Cents.*	*Cents.*	*Cents.*
28-inch, 56 reed, 14 picks (60 by 64), 58 yards	24.68	25.04	25.04	25.28	25.00
28-inch, 60 reed, 16 picks (64 by 64), 58 yards	27.70	29.06	29.48	29.30	28.88

America.

Description of cloth.	Rhode Island.	Providence.	Fall River.	Lowell.	Average.
	Cents.	*Cents.*	*Cents.*	*Cents.*	*Cents.*
28-inch, 56 reed, 14 picks (60 by 56), 58 yards	16.82	17.26	19.96	19.96	18.50
28-inch, 60 reed, 16 picks (64 by 64), 58 yards	Unknown.	22.30	23.20	23.20	22.90

Summary of cost of manufacturing printing cloth.

Places.	Wages.	Sundry expenses.	Rent, interest, and depreciation.	Total.
	Cents.	*Cents.*	*Cents.*	*Cents.*
Fall River	6.907	3.111	4.1183	14.1363
Lowell	6.882	2.723	4.1183	13.7233
Rhode Island	6.422	1.834	3.7437	11.9997
Pennsylvania	6.44	5.04	4.1183	15.5983
England	6.9624	2.6256	2.572	12.16

The report goes on and says:

Your readers will gather from the figures given in the foregoing table of costs that, in the matter of wages, America is as cheap as England.

SECRETARY EVARTS ON LABOR.

I will now quote from another distinguished Republican Secretary of State.

On May 17, 1879, the Hon. William M. Evarts, Secretary of State, transmitted to the Forty-sixth Congress a report upon labor statistics, giving rates of wages, covering, as he says—I read from page 1—

the labor question in all its aspects in Belgium, Denmark, France, Germany, England, Ireland, Scotland, Wales, Italy, Holland, Spain, and Switzerland (which, with the United States, may be said to comprise the world of educated and progressive labor).

After giving numerous and most elaborate reports and various kinds of evidence, Mr. Evarts says, page 35, paragraph 1:

The rates of wages in the United States, roughly estimated, are more than twice those in Belgium; three times those in Denmark, France, and Germany; once and a half those in England and Scotland; and more than three times those in Italy and Spain.

But another important and gratifying point is brought forward by Secretary Evarts. I read from page 36, paragraph 9:

That the average American workman performs from one and one-half to twice as much work in a given time as the average European workman. This is so important a point in connection with our ability to compete with the cheap labor manufactures of Europe, and it seems at first thought so strange, that I will trouble you with somewhat lengthy quotations from the reports in support thereof.

Mr. Evarts quotes a number of authorities to sustain this statement, and then says:

For the first time our manufactures are now assuming international proportions. At a time of universal depression we have met those nations which held a monopoly of the world's markets, met them in their strongholds, and established the fact that American manufactures are second to the manufactures of no other nation, and that, with a proper and patriotic understanding between capitalist and laborer, we can command a fair share of the buying world's patronage, and command that patronage with larger profits to the capitalist and higher wages to the laborer than can be made or paid in any other country.

Mr. Evarts then speaks of the superior individuality and inventive genius of the people of the United States, and says, page 37:

One workman in the United States, as will be seen from the foregoing extracts, does as much work as two workmen in most of the countries of Europe; even the immigrant from Europe attains this progressive spirit by a few years' association with American workmen.

I desire to call special attention to this important and well-known fact, that immigrants, under the influence of our free institutions, soon become Americanized, become imbued with our progressive spirit, do twice as much work as they did in their native land, and thus rapidly acquire competence. The difference between the American workman and the foreign peasant is then expressed by the honorable Secretary in this terse language:

We have no oppressed and stupid peasantry, little more intelligent than the tools they handle. All are self-thinking, self-acting, and self-supporting.

In fact, our people more than any other appear to realize the idea of Carlyle that—

Without labour there were no ease. * * * Labour, wide as the earth, has its summit in Heaven.

And to appreciate Channing's idea of its beneficence:

Labor is discovered to be the grand conqueror, enriching and building up nations more surely than the proudest battles.

OTHER PROOFS OF AMERICAN SUPERIORITY.

This idea of the superiority of American workmen was most strikingly and forcibly confirmed by a statement made in this Hall last Saturday by the gentleman from Massachusetts [Mr. RUSSELL]. It will be remembered that the gentleman took issue, and not only questioned but denied the assertion that the laborers, the workingmen, the people of his State, required or requested to be "protected" to enable them to compete with the labor of any part of the world. And he gave us an absolutely convincing illustration of the correctness of his position. He told us how one of the great inventors of his great State had perfected a device for a sewing and heeling machine that turned out the finest boots and shoes that could be made, and automatically registered all the work done upon it. He told us that the inventor, having protected his invention by letters patent all over the world, refused to sell his machines, but leased them out upon a royalty of a stipulated amount to be paid for every pair of boots or shoes made upon them; that some of the machines were so leased for use in Great Britain and in Germany, and at the end of the year the owners were greatly surprised to learn from the returns rendered by the lessees in Great Britain that they had turned out only 47 per cent. of the amount of work done by the same machines in Massachusetts. Knowing that the machine must register all the work it performed, they suspected they were being defrauded, and sent a competent expert to investigate the matter and report the facts. The expert returned and reported that they were receiving honest returns, and that the secret of the apparently fraudulent returns of the work turned out by the machines was that the best labor in Great Britain could not possibly turn out more than 47 per cent. of the amount of work turned out by the ordinary labor of Massachusetts.

Mr. RUSSELL, of Massachusetts. The Englishman either could not do it or would not do it if he could. He hadn't the ambition.

Mr. WHEELER. There is something in our method of education and training, something in the spirit of our institutions, something in American civilization which makes our people superior to all

others in energy, genius, courage, manhood, and individuality. This is an element which is not sufficiently considered in making comparisons.

EVIDENCE OF A PROTECTIONIST.

In further proof of American superiority to the English workman I again quote from Mr. Shearman. On this point he says:

But, as usual, the most conclusive answer to the whole claim made for protection on the wages question is to be found in the statement of the protectionist organs. The New York Industrial League, the largest protectionist organization outside of Pennsylvania, employed Mr. Charles S. Hill, of the State Department, to prepare statistics and an address for the Tariff Commission. In this document, which was indorsed by the league, and triumphantly published by their organ, The American Protectionist, it is explicitly stated that the workmen employed by American manufacturers produce, on the average, 100 per cent. more than those employed by English manufacturers, man for man.

The exact language of Mr. Hill's report I read from page 1638 of the Report of the Tariff Commission, which is found in House Mis. Docs., second session, Forty-seventh Congress, volume 3:

One point further in regard to labor in Europe *vs.* America. Here are some figures that show a remarkable, but what seems to be an irrefutable fact, or let him who questions it produce further evidence. The following comparison speaks louder than any other argument:

Manufacturing industries.

Description.	United States.	Great Britain.
Hands employed	5,250,000	5,140,200
Value of product	$8,000,000,000	$4,000,000,000

Here is the positive proof that American mechanics in the aggregate accomplish exactly double the result of the same number of British mechanics. They are therefore very justly paid double in wages.

Bear in mind this is a statement furnished to the Tariff Commission, a body of gentlemen selected because of their known sympathy with the high protection theory, by an avowed and uncompromising protectionist, who had held the responsible position of statistician of the State Department under the administrations of Presidents Grant and Hayes. Mr. Hill probably had better facilities for collecting such information than any person in the United States. All the reports of our foreign consuls had been for years, and were at that time, at his disposal, and these consuls were all of them Republicans—most of them Republican politicians—who seemed to think their principal duty in preparing their reports was to furnish their party friends at home with only those facts that could be advantageously used in protection speeches. At least all who have read these reports will admit that they are arguments designed to sustain the political dogma of protection.

WAGES IN ENGLAND AND AMERICA COMPARED.

But to return to Mr. Shearman, who mercilessly exposes the fallacy of the great protectionist organ in these words:

It is not claimed, even in this paper, that American wages average more than 50 per cent, higher than English wages, all 'round; and not only do the facts already stated show that there is no such difference, but even the report of that packed and bigoted protectionist body, the late Tariff Commission, admits that the difference between English and American wages in cotton, woolen, linen, and silk manufactures, is very small. No one can honestly claim that manufacturing wages are, on the average, more than 25 per cent. higher here than in England. If then, our workmen produce, man for man, even 50 per cent. more than the English, is it not clear that wages are practically 25 per cent. cheaper here than in England?

There is no doubt that this conclusion, startling as it may seem, is entirely correct. This is a country of hard work. The average hours of an English workman are fifty-four to fifty-six a week; the average hours of American workmen are sixty-four to sixty-nine a week. The same class of merchants that in England attend at their offices on an average six or seven hours a day, with a half holiday on Saturdays, will be found at their offices in America every day, Saturday included, for ten hours in the dull seasons and fifteen hours in the busy ones. All classes of business men here, whether employers or employed, work harder and faster than the same classes in England. The very same man who in Manchester can not be persuaded to run more than three looms at once will manage five in Lowell, and he who in Lancaster runs five looms will run eight in Fall River. For this increase of 60 per cent. in their work they get, at the utmost, 20 per cent. advance in their wages. It is a well known fact that, a few years ago, bricklayers in Lancashire were forbidden by their trades-unions to lay more than one thousand brick per day, and that the same men came to New York and laid easily three thousand brick per day. Their New York employers paid them double their old wages, and even then got their work practically 30 per cent. cheaper than the English employers.

The error of the assertion that a high tariff inures to the benefit of the American mechanic or workingman, which is put forward by the Republican party to justify their patent-right device for augmenting the fortunes of the wealthy manufacturers of the country, is still further illustrated by Mr. Howard Mudge Newhall in an article entitled "A Pair of Shoes," published in the January (1885) number of Harper's Magazine, p. 259, who, from his own knowledge as a practical shoe manufacturer, asserts that—

American ladies' shoes wholesaling at $1.50 per pair cost for labor of making 25 cents. English ladies' shoes wholesaling at $1.50 per pair cost for labor of making 34 cents. American men's shoes wholesaling at $2.60 per pair cost for labor of making 33 cents. English men's shoes wholesaling at $2.60 per pair cost for labor of making 50 cents.

The duty on the English ladies' shoes is 45 cents, and on the English men's shoes it is 72 cents—more than double the entire amount paid the American workmen for making similar articles.

I shall now refer to an eminent English writer, who, as might be expected, fails to consider the superiority of Americans.

MULHALL ON LABOR.

Probably the most exhaustive investigation of this question is that of Hon. Michael G. Mulhall, Fellow of the Statistical Society, in his History of Prices, published in 1885.

To fully understand his tables, let us recall some of our schoolboy definitions of "unit of force," "foot-pound, foot-ton, and horse-power." They are used to express a definite amount of work conventionally fixed upon for the purpose of comparison.

A unit of force combines two elements—force acting and space through which it acts—and is the product of a unit of force and a unit of distance.

A foot-pound is the work or energy expended in raising 1 pound the height of 1 foot. I do not recollect ever having seen the word "foot-ton" until adopted by Mr. Mulhall, but we may assume that he uses it to express relatively the same idea as is expressed by the term "foot-pound."

Horse-power is the power which a horse is capable of exerting, and is used as the unit of force. It is equivalent to the work done by continuous exertion at the rate of 33,000 pounds raised 1 foot in one minute.

Mr. Mulhall states that the steam-power of the world had increased sixfold since 1850. At that time it amounted to 6,315,000,000, and in 1885 he puts it at 35,100,000,000. In 1885 this total of 35,100,000,000 horse-power was used to drive 71,000 locomotives, 9,200 steamboats, and 43,000 fixed engines. As steam can work by day and night, requiring no rest for sleep or food, its actual power is three times greater than if the work was done by horses; 10,540,000,000 horse-power was credited to the United States, 9,740,000,000 to Great Britain, and 14,820,000,000 to continental Europe.

Mr. Mulhall sums up the work accomplished daily among all nations by hand, by horse, and by steam power between the industries of agriculture, mining, manufactures, transportation, etc., that is to say, he allowed 300 foot-tons of energy to each able-bodied male, 3,000 to each horse, and 4,000 to each horse-power of steam-engines, and from this data he presents these figures as an expression of the sum of the industrial power of mankind:

	Million foot-tons daily.				Foot-tons per inhabitant.	Percentage of steam.
	Hand.	Horse.	Steam.	Total.		
United States	3,480	32,100	42,160	77,740	1,440	54
Great Britain	2,310	8,700	38,960	49,970	1,380	78
France	2,970	8,500	16,150	27,620	720	58
Germany	3,330	10,100	19,800	33,230	716	60
Russia	6,300	48,600	6,340	61,240	710	10
Austria	2,850	11,300	5,800	19,950	520	29
Italy	2,160	2,040	2,220	6,420	230	34
Spain	1,260	1,980	2,210	5,450	340	41
Portugal	360	210	280	850	205	34
Switzerland	210	330	1,300	1,840	670	71
Belgium	420	850	3,410	4,680	880	73
Holland	300	840	920	2,060	502	45
Scandinavia	630	2,900	1,830	5,360	630	34
Total	26,580	128,450	141,380	296,410		
Average					802	48
Great Britain	2,310	8,700	38,960	49,970	1,380	78
United States	3,480	32,100	42,160	77,740	1,440	54
European continent	20,790	87,650	60,260	168,700	610	36

These figures show that the steam-power of the United States is greater than that of Great Britain, that it constitutes nearly one-third the steam-power of the world, and in foot-tons per capita it excels all other nations.

Mr. Mulhall also takes the number of able-bodied men, putting their wages at the current rates of each country, he adds to this the cost of feeding the horses, puts the daily cost of steam at one shilling per horse-power, and thus estimates the total sum of daily expenditure for industry, and the cost of 1,000 foot-tons of energy in each country. From these figures this table is deduced.

Countries.	Daily cost of industry.				Cost of 1,000 foot-tons energy.	Workman's wage, daily.
	Hand.	Horse.	Steam.	Total.		
					Pence.	*Pence*
United States	£1,950,000	£1,360,000	£527,000	£3,837,000	9.8	40
Great Britain	970,000	360,000	487,000	1,817,000	8.4	30
France	1,105,000	350,000	202,000	1,657,000	14.2	26
Germany	920,000	420,000	247,000	1,587,000	11.6	20
Russia	1,040,000	2,100,000	80,000	3,220,000	12.6	12
Austria	800,000	470,000	70,000	1,340,000	16.1	20
Italy	360,000	85,000	30,000	475,000	17.8	12
Spain	205,000	80,000	30,000	315,000	13.8	12
Portugal	60,000	10,000	5,000	75,000	21.2	12
Switzerland	60,000	10,000	15,000	85,000	11.2	20
Belgium	120,000	35,000	43,000	198,000	10.1	20
Holland	80,000	35,000	11,000	126,000	14.7	20
Scandinavia	130,000	120,000	23,000	273,000	10.2	15
Total	7,800,000	5,435,000	1,770,000	15,005,000		
Average					12.0	21
Great Britain	970,000	360,000	487,000	1,817,000	8.4	30
United States	1,950,000	1,360,000	527,000	3,837,000	9.8	40
European Continent	4,880,000	3,715,000	756,000	9,351,000	13.3	16

This estimate is made by putting wages in the United States at one-third more than Great Britain. Should investigation develop that they are about equal, and also that the cost of food and fuel is less, it would become quite clear that the cost of energy as applied to useful industries is less here than in any other country in the world. Even with these figures it is but a fraction greater than in Great Britain, and they show that the cost of industrial energy in the United States is less than three-fourths the average cost on the Continent of Europe.

The rapidly-increasing development of steam will in a short time put us in this regard far ahead of all the other nations.

Since 1850 energy of work by horse has increased 33 per cent., energy by hand 39 per cent., and energy by steam 557 per cent.

THE COTTON QUESTION.

I read from Alexander Hamilton's report, made by him in compliance with an order dated January 15, 1790, from the First Congress, under the Constitution, found in his works, Vol. III, page 207. Speaking of the cotton mill invented in England in 1770, he says:

To this invention *is to* be attributed, essentially, the immense progress which has been so suddenly made in Great Britain in the various fabrics of cotton.

In the report to the Forty-seventh Congress, giving an account of the cotton goods trade of the world, some extracts from which I have read, in speaking of the immensity of the cotton manufactures of England Mr. Blaine said:

The British cotton manufacturing industry fills a larger space in commercial activity and history than any other single manufacturing industry of that or any other country. Taking into consideration the capital invested and the labor employed, the genius which it has evoked and the honors which have crowned that genius, the endless steam marine, the number of merchants, clerks, and sailors engaged in its world-wide distribution, and the British impress which it has left everywhere, and it is not too much to say that it has done more for the commercial greatness and supremacy of the United Kingdom than all other manufacturing industries combined. Hence it is regarded as peculiarly a British national industry.

If Mr. Blaine is correct in his statement that cotton manufacturing has done more for the commercial greatness of the United Kingdom of Great Britain than all other manufacturing industries combined—and there can be no doubt but the statement is correct—it is certainly our duty to do everything in our power to encourage the same kind of industry, and thus build up the commercial greatness and supremacy of the United States.

Mr. Blaine then says:

In the two prime factors which may be said to form the basis of the cotton manufacturing industry, namely, raw material and labor, we hold the advantage over England in the first, and stand upon an equality with her in the second.

I call special attention to the fact that Mr. Blaine here states that we stand upon an equality with England in the question of labor, and we all know how great our advantage is over her in the question of raw material. On this subject Mr. Blaine says:

Having the raw material at our doors, it follows that we should be able to convert it into manufactures, all things else being equal, with more economy and facility than can be done by England, which imports our cotton and then manufactures it in her mills. The expense of handling, transportation, and commission must be an important item in this regard, as compared with our turning in the fiber from the cotton fields to our mills and shipping it in the advanced form of manufactured goods. Add to this the secondary fact, that it costs us no more to handle and manufacture the same than it costs in England, and we stand on an undoubted equality thus far in the race of competition.

Mr. Blaine also says:

A question of the utmost importance, therefore, is to find out wherein the British manufacturers possess advantages over us, and then to ascertain whether we can offset them so as to produce that general equalization which will enable us to meet our competitors on even ground in the markets of the world.

And with regard to the effort which must be made to share this trade with England in the foreign markets Mr. Blaine says:

The manufacturers of the United States must be prepared to meet an opposition, in any serious effort which they may make for a division of this trade, which will be sustained by almost unlimited capital and directed by great ability and well-bought experience.

Mr. Blaine then mentions some of the advantages possessed by the British manufacturers.

1. Possession of the world's markets.
2. A system which has belted the world with *entrepôts*.
3. A steam-marine which covers every sea and gives direct and speedy communication with every port, and whose management and direction are solely in the interest of the British export trade, and against all competing trade.
4. Vast capital.
5. A far-seeing and far-reaching spirit.
6. An industry which has passed through its experimental and speculative stages.

I read from the same report:

In considering the trade of the United Kingdom, it is found that after supplying its home demands it has cotton manufactures for export, the output of 35,000,000 spindles and 410,000 operatives; more spindles than are run by the remaining manufacturing nations combined, amounting to $310,000,000 annually, an amount nearly equal to one-third the total domestic exports of the kingdom.

In order to more fully illustrate the character and extent of English cotton manufacturers, I have, with the assistance of the Bureau of Statistics of the Treasury Department, prepared a table showing the quality and value of manufactured cotton exported from Great Britain during the years from 1880 to 1887, inclusive:

Quantities and values of British and Irish manufactures of cotton exported from the United Kingdom during each year ending December 31, *from* 1880 *to* 1887, *inclusive.*

[From the trade and navigation of the United Kingdom.]

Articles.	Unit of quantity.	Quantities and values.

a Previous to 1884 large quantities of goods in which wool predominated were erroneously included in cotton mixed-goods. American money is calculated at the rate of $4.8665 to the pound.

OTHER FACTS FROM MR. BLAINE.

I will now return to the admirable report by Mr. Blaine. He says:

According to a recent English publication, the value of the cotton manufactures of the world is given as follows:

Of the United Kingdom	$561,170,000
France	97,200,000
Germany	106,920,000
Russia	102,060,000
Belgium and Holland	63,180,000
Austria-Hungary	63,180,000
Italy	24,300,000
Spain, Switzerland, etc	63,000,000
The United States	233,280,000
India	34,020,000
Total	1,348,310,000

The English publication referred to by Mr. Blaine, from which this was taken, was prepared by Hon. Michael G. Mulhall, and the title of the work is Progress of the World.

The foregoing estimate does not include the cotton goods manufactured on hand-looms, which is still extensively carried on by the Chinese, Persians, Africans, Japanese, and Arabians.

It is estimated that the Chinese supply themselves with cotton goods made in this primitive manner to an extent of over 7,300,000,000 yards annually.

In referring to this, Mr. Blaine says:

There is a very large field for the development of machine-made goods, for, as those isolated people are brought under the beneficent influence of advanced civilization, the primitive modes of manufacture must yield before the more modern methods. Therefore, those who fear that the supply will become greater than the demand should take into account the hundreds of millions of people who are

awaiting the advent of European and American civilization to avail themselves of our more perfect appliances for their daily wear; they should also take into account the increased ability to purchase, which every new invention creates, by bringing what were theretofore considered luxuries within the circle of ordinary consumption.

The product of raw cotton, which passes through commercial centers, and therefore is included in the reports, is given in Mr. Blaine's report, as follows:

The cotton product of the several countries is estimated at about 3,500,000,000 pounds, viz:

	Pounds.
Product of the United States	2,770,000,000
Product of the East Indies	407,000,000
Product of Egypt, Smyrna, etc	269,000,000
Product of Brazil	44,000,000
Product of the West Indies, etc	16,000,000
Total product	3,506,000,000

These figures show that cotton-manufacturing nations are largely dependent upon this country for their supply of the raw material.

Hamilton, in his report to Congress (page 243 of his works), states that the wool of Virginia is of better quality than that of any other State, and that—

the climate of the South is also better adapted to the production of silk.

He then proceeds to speak of the culture of cotton in these words:

The extensive cultivation of cotton can, perhaps, hardly be expected but from the previous establishment of domestic manufactories of the article.

He also says, page 273:

The present duty of 3 cents per pound on the foreign raw material is undoubtedly a very serious impediment to the progress of those manufactories.

It therefore appears that Hamilton assumed that we could not compete with cotton planters of Brazil and the West Indies in the markets of the world, and that in order to enable our planters to raise cotton the previous establishment of cotton factories would be necessary.

TARIFF NOT ALWAYS BENEFICIAL.

It is gratifying to observe how we have exceeded any estimate of that time in cotton production, and as raw cotton bears a relation to cotton mills that raw wool bears to woolen mills, it is interesting to see that Hamilton's idea of free raw cotton in 1791 was based upon reasoning quite in harmony with Mr. Cleveland's advocacy of free raw wool ninety-eight years afterward. Congress disregarded Hamilton's advice, and until 1846 they maintained an import tax of not less than 3 cents, and at one time 6 cents, a pound on raw cotton. Its repeal did not lessen our crops, but on the contrary, during the next thirteen years our net production of cotton increased 260 per cent., and is now four times what it was when encouraged, aided, and fostered by a protective tariff.

In 1846 we raised 2,100,537 bales, of 411 gross pounds each, and in 1860 the crop was 4,861,292 bales, of 461 gross pounds each.

Not only did the product increase, but the price was also enhanced. In 1846 the average price in New York of middling upland was 7⅞ cents per pound. It rose the next year to 11¼ cents per pound, and the average price of 11 cents per pound was maintained until 1861. This remarkable increase of cotton production has been reached under adverse circumstances and adverse legislation. The American cotton planter is taxed on every article used by him, from the moment he starts his 100 per cent. taxed plow until he rolls out his cotton bale covered with almost as heavily taxed iron ties and bagging. Extraordinary measures have been adopted by the British Government to increase the cotton product of their eastern possessions, but with very little beneficial effect. All our information tends to prove that the efforts made to stimulate the culture in India have not met with the encouragement which the English spinners anticipated.

The assistant secretary to the government of India, in his report upon the resources of that empire for the five years from 1874 to 1879, which was published by both houses of Parliament, says:

The most we can expect is that our cotton will be taken because its cheapness as compared with American cotton will maintain a demand for it for purposes for which American, Brazilian, and Egyptian cotton is too dear, for the weaving of coarse cloths, for lamp-wicks, for quilting and stuffing, for which purpose (quilting and stuffing) it is extensively used in China, and other ordinary purposes.

The assistant secretary in the same report says:

The average yield per acre for the whole country may be taken, if the local returns are to be trusted, at about 50 pounds to the acre. For 1877–'78 it was stated in Madras at 49 pounds; in Bombay, including the natives States, at 50¾ pounds; in the Northwestern Provinces, at 29; in the Punjab, at 58; in the Central Provinces, at 43; in Berar, at 71; in Nigam's country, at 61. At the general rate of 50 pounds to the acre the outturn would have been rather less than 4,000,000 cwt.

To facilitate the comparison of the productiveness of the cotton lands of the two countries, I have, from reliable data, prepared this table, showing the acreage and product per acre of cotton in British India and the United States, for the years ending June 30 for India, and August 30 for the United States, from 1880 to 1884, inclusive:

Years.	Acreage planted in the United States.	Pounds produced in the United States.	Average net pounds per acre in the United States.	Acreage planted in India.	Pounds produced in India.	Average net pounds per acre in India.
1879–1880	12,680,000	2,615,600,000	206⅛	10,708,002	586,638,640	54⅘
1880–1881	16,123,000	3,038,645,000	188⅜	11,204,630	569,152,528	50¾
1881–1882	16,851,000	2,455,221,600	145⅝	12,924,196	735,230,072	56⅞
1882–1883	16,276,000	3,266,075,290	200⅝	13,851,179	809,535,104	58⅓
1883–1884	16,780,000	2,639,498,400	157½	13,352,536¼	500,925,600 5/16	37⅝

From Mr. Blaine's report I find that in 1880 Turkey imported $20,000,000 of cotton goods and yarns; Russia, $15,000,000; Italy, $13,000,000; Roumania, $9,980,000; Belgium, $8,500,000; and Austria and Hungary, $8,000,000. France imported $21,000,000, but exported $11,500,000. The report also shows that included in the exports of English piece-goods were:

To Africa, $17,979,000; to America, $57,458,000; to Asia, $135,193,000; to Europe, $61,505,000; to Australasia, $6,565,000; not designated, $1,400,000; total, $280,100,000. It may be safely asserted that not more than $60,000,000 worth of these exports were pure goods, the remainder being low-priced goods into which adulterating materials entered more or less extensively.

It being admitted that English cotton goods are very far inferior to those made in America, it would seem strange that they are taken in preference to ours. This is explained by Mr. Blaine in these words:

The fact, however, that British manufacturers have held possession of those markets, and all the avenues leading thereto, for years, and that, in the words of the consul-general at Calcutta, "although American goods are decidedly superior, it would be no easy matter to substitute them for the British goods, since the importers and native middlemen are almost able to dictate to the poor consumer what he shall buy," must be taken into consideration in all calculations concerning these markets.

BRITISH INDIA'S COTTON GOODS.

In this connection I desire to call attention to the remarkable development of the exportation of manufactured cotton goods from British India.

In order to manufacture to the extent indicated by these figures India was compelled to import largely of long-staple cotton to work with her inferior grades.

The figures which I now read should be an admonition to Americans of what our superior facilities should enable us to do in this industry.

Values of exports of manufactures of cotton from British India for the years ending March 31, 1867–'87, *inclusive.*

[From British statistical abstract of India.]

Years.	Value.	Years.	Value.
1867	$5,634,726	1878	$11,169,002
1868	6,985,656	1879	12,564,442
1869	6,520,239	1880	13,324,068
1870	6,320,401	1881	15,125,209
1871	6,861,828	1882	16,231,169
1872	5,799,325	1883	19,308,374
1873	6,898,566	1884	20,969,920
1874	7,763,868	1885	22,320,854
1875	7,934,103	1886	24,773,055
1876	8,297,154	1887	20,840,811
1877	9,417,641		

I listened with great interest to the great speech of the leading Republican protectionist, delivered in this House April 15, 1884. This being a leading speech in behalf of a protective tariff, I expected, when the speech appeared in the RECORD, to read something upon that subject, but as others who have read that speech in the RECORD will remember, the first dozen pages are devoted to a very interesting account of the gentleman's tour in Europe. The gentleman's observations were so pleasantly and clearly presented, and the letters of his highly-intelligent and accomplished *compagnon de voyage* were so interesting that I forgot that the speech purported to be upon the tariff until I abruptly stumbled upon the subheading "India's wrongs."

PROTECTION SOMETIMES DETRIMENTAL.

The gentleman [Mr. KELLEY] here commenced discussing tariff questions. He says:

For many years the Indian tariff imposed a duty of from 3 to 5 per cent. on cotton goods imported in that country and admitted raw cotton free.

Under this system, Mr. KELLEY says, India mills were beating Lancashire. The gentleman further on says:

The viceroy, by an arbitrary edict, abolished the duty.

Now you will expect me to inform you that Mr. KELLEY next asserts that this action of the free-trade viceroy caused the mills to stop and bankruptcy of mill-owners to speedily follow. You will be certain of this when I say that the paragraph I am reading commenced with this assertion:

No measure that promised to prevent the diversification and restrict the quantity of Indian manufactures to which their powers might be extended has been omitted by either the British or the Anglo-Indian Government.

Now here are the English and Anglo-Indian Governments combining their power "to restrict the Indian manufactures." No power, says Mr. Kelley, was omitted by these powerful instruments to destroy or restrict Indian manufactures, and he also tells us that the cause of this abolition of the duty on cotton goods was doubtless to be found in instructions from the Home Government to the viceroy. In other words, it was done by one of these agencies at the suggestion of the other. The gentleman's speech would lead us to believe that these two great agencies devoted their talents and efforts to destroy the cotton-goods industry in India, and thus enable English spinners to increase their shipments to that country, as well as to China and Japan, which nationalities had been the principal purchasers of India goods. It would certainly be contended by Republicans that when India abolished the duty on cotton goods that country would have become flooded with English goods, and yet the statistics show that from that time English shipments to India decreased, while the exports of India cotton goods increased from $5,634,726 in 1867 to $7,934,103 in 1875.

Other means were now proposed by the Lancashire spinners. The inferior cotton of India can not be worked by itself, and the India spinners are compelled to import long-staple cotton from Egypt and other countries. Mr. Kelley tells us that pursuant to the demands of Lancashire spinners the viceroy imposed a duty of 5 per cent. on all raw cotton imported into India, and this was done against the protest of every chamber of commerce in that country. Now, in spite of this burden we see the exports of cotton goods increased 300 per cent. in eleven years, from 1875 to 1886. Substantially all this export went to China and Japan and displaced English trade, and is it not reasonable to suppose that the act of India in removing the tax on cotton goods and other articles aided that country in effecting reciprocal relations of trade with China and Japan which brought about this wonderful result? It would be well to give this matter careful investigation.

Possibly we might be able to establish reciprocal trade with those countries which purchase so largely of the kind of cotton goods we manufacture.

The figures of cotton production given by Mr. Blaine were for the single year 1880. I will now read a table showing the cotton crops of the United States, the supply of other countries, the total crop of the world, and the total consumption of cotton for the several years from 1866 to the present time, the bales being reduced to an average of 400 pounds each.

Years.	Crops.			Total actual consumption.
	United States.	Supply of other countries.	Total crop.	
1866–'67	2,230,000	2,178,000	4,408,000	5,085,000
1867–'68	2,718,000	2,107,000	4,825,000	5,058,000
1868–'69	2,652,000	2,564,000	5,216,000	4,979,000
1869–'70	3,431,000	2,113,000	5,544,000	5,259,000
1870–'71	4,733,000	2,025,000	6,758,000	5,820,000
1871–'72	3,241,000	3,036,000	6,277,000	6,312,000
Average	3,167,000	2,337,000	5,504,000	5,419,000
1872–'73	4,283,000	2,083,000	6,366,000	6,425,000
1873–'74	4,597,000	2,320,000	6,917,000	6,632,000
1874–'75	4,216,000	2,269,000	6,525,000	6,656,000
1875–'76	5,171,000	2,018,000	7,189,000	7,082,000
1876–'77	4,933,000	1,897,000	6,830,000	7,140,000
1877–'78	5,425,000	1,506,000	6,931,000	7,272,000
Average	4,771,000	2,022,000	6,793,000	6,868,000
1878–'79	5,637,000	1,398,000	7,035,000	7,223,000
1879–'80	6,536,000	1,894,000	8,450,000	8,081,000
1880–'81	7,519,000	1,837,000	9,356,000	8,646,000
1881–'82	6,073,000	2,510,000	8,583,000	9,035,000
1882–'83	8,058,000	2,350,000	10,408,000	9,499,000
1883–'84	6,485,000	2,434,000	8,919,000	9,290,000
Average	6,721,000	2,071,000	8,792,000	8,629,000
1884–'85	6,420,000	2,007,000	8,427,000	8,597,000
1885–'86	7,480,000	2,100,000	9,580,000	9,352,000
1886–'87	7,450,000	2,300,000	9,750,000	9,718,000

It will be observed by the above table that in 1886 the crop of the United States was nearly four times as great as that of all other countries on earth, while by looking back twenty years, to 1867, we find that at that time the crops of other countries were nearly equal to that of our own.

While other countries seem to have made but little change in their products of cotton, it is gratifying to observe the gradual and steady increase in the United States.

I also present another table of great interest and value. It shows the consumption of cotton from the year 1866 to 1887 in Great Britain, on the continent, and in the United States. The consumption in the United States is divided in two columns so as to show the progress of the cotton industry in the North and in the South. It is gratifying to see the surprising growth in this industry caused by the constantly increasing demand for cotton goods.

It will be observed that the increase of consumption during these twenty years was about 50 per cent. in Great Britain, about 100 per cent. on the continent, and about 250 per cent. in the North, and 600 per cent. in the Southern States.

AMERICA SHOULD LEAD.

Gratifying as this picture of the progress of the South is to the country, it is only a beginning of the great development which we have every reason to expect within the next ten years. These figures are not the takings of mills, but represent the actual consumption. For convenience the bales are all reduced to an average of 400 pounds.

[Consumption—bales 400 pounds.]

§ Decrease.

‖ This line gives the increased percentage in the consumption of 1883–'84 compared with the consumption of 1878–'79.

As it might be interesting to know what countries furnished this vast amount of cotton to Europe, I will add a statement showing the amount exported to Europe from the principal cotton-growing countries during the years 1884, 1885, and 1886:

	1884.	1885.	1886.
United States	4,170,150	3,850,760	4,417,570
Brazil	315,390	234,330	223,960
Egypt	425,160	482,340	419,870
West India, etc	141,970	148,210	124,050
East India	1,617,510	967,720	1,332,550
Total	6,670,180	5,683,360	6,518,000

It will be seen that we furnished nearly three-fourths of the cotton exported to Europe, while at the same time our mills worked up one-third as much cotton as was consumed by all the cotton industries of Great Britain and the continent.

That we have it in our power to become the great cotton manufacturing country of the world and to supply a full share of the demand for cotton goods in all the markets of the world there is not a shadow of doubt.

The world needs cotton goods annually to an amount of $2,000,000,000. It is estimated that each individual consumes from 20 yards to 60 yards a year. Take the lowest figure, 20 yards, and China requires 7,300,000,000 yards, India 5,000,000,000 yards. This is greater than the entire out put of all the mills in the world. The deficiency is now being supplied with hand-looms. Up to this time the Chinese, Persians, Africans, Japanese, Arabians, and many other nationalities supply their wants in this way, but when they can purchase machine-made goods they will do so. Our little experience

in this trade with all those countries has been most satisfactory. They like honest American cloth, and Mr. Blaine says, p. 104:

All our consular reports bear evidence of the fact that both India and China are growing tired of British adulterated goods.

Mr. BRUMM. Will the gentleman allow me to ask him a question for information?

Mr. WHEELER. Certainly, I will yield with pleasure to the gentleman for that purpose.

Mr. BRUMM. Will the gentleman tell me why it is we do not supply China with cotton goods?

Mr. WHEELER. There are two or three reasons why we do not. The principal one is the evil of the present tariff. It taxes machinery 45 per cent. and thus increases the cost of manufacture. It restricts our commerce and trade with all nations. Our shipping has been driven from the ocean, and if we send our goods abroad it must be done in foreign ships. England has her ships in every port, with her sailors, her captains, and her pursers whose special mission is to praise English and condemn American products.

THE REMEDY.

What we want is a revision of our tariff laws. We want our shipping restored. Under the tariff for revenue of 1846, as high as 77 per cent. of our imports and exports were transported in American ships, and under that law it never fell as low as 66 per cent., while under the tariffs enacted by Republicans the shipments of both our exports and imports in American ships has fallen until last year it was only 13¾ per cent., while 86¼ per cent. was carried in foreign vessels. Let us revise the tariff. Let us have laws so that we can ship our products in our own vessels, officered and manned by Americans, and we will defy every nation on the earth.

There are many things which should be done to bring about this desired end. We should reduce the tax on machinery, so that mills could be established at less expense; we should reduce the tax upon all necessaries of life; we should encourage reciprocal relations with all the nations whose trade we desire to obtain, so as to induce them to enact friendly tariff laws instead of the retaliatory measures now on the statute-books of those countries, some of which were provoked by unnecessary and unwise discriminations in our laws; we should build up our merchant marine, and have American sailors upon every sea and in every foreign port. The sailors of our country are its commercial missionaries; they meet the persons who are to handle, purchase, and use our goods in their own country and at their own homes. We must have American sailors in every port to uphold and defend our merchandise.

As it is now, even if we succeed in getting a bale of cotton cloth into a foreign port, there is no one to speak favorably of it and reply to the unfavorable comments and criticisms of those who seek a market for goods that are often vastly inferior to ours.

It is almost mortifying to do so, but nevertheless I will present a table showing the value of manufactured cottons which we have exported during the last twenty-two years:

Values of cottons of domestic manufacture exported from the United States from 1866 *to* 1887, *inclusive.*

Year ending June 30—	Colored.		Uncolored.		Other manufactures of.	Total.
	Yards.		*Yards.*			
1866	405,908	$88,742	3,041,715	$718,006	$973,427	$1,780,175
1867	674,426	139,964	6,020,731	1,142,451	3,325,820	4,608,235
1868	2,979,275	531,669	10,839,177	1,551,339	2,788,046	4,871,054
1869	----------	----------	----------	----------	5,874,222	5,874,222
1870	6,064,715	1,035,469	8,276,384	1,345,988	1,405,825	3,787,282
1871	5,083,923	724,841	14,832,931	1,776,694	1,056,601	3,558,136
1872	2,844,888	458,998	8,859,191	1,317,719	527,613	2,304,330
1873	3,585,629	596,912	10,187,145	1,655,116	695,500	2,947,528
1874	4,625,180	668,781	13,247,142	1,681,209	745,850	3,095,840
1875	7,593,723	929,061	21,224,020	2,313,270	819,551	4,071,882
1876	16,488,214	1,455,462	59,319,267	5,314,738	952,778	7,722,978
1877	29,601,304	2,484,131	76,769,147	6,437,223	1,314,489	10,235,843
1878	37,765,313	2,959,910	88,528,192	7,053,463	1,425,287	11,438,660
1879	45,116,058	3,209,285	84,081,319	6,288,131	1,356,534	10,853,950
1880	37,758,166	2,956,760	68,821,557	5,834,541	1,190,117	9,981,418
1881	68,184,293	4,983,312	80,399,154	6,624,374	1,963,701	13,571,387
1882	29,525,672	2,326,319	114,994,402	9,351,713	1,544,947	13,222,979
1883	34,066,292	2,648,278	103,634,459	8,629,723	1,673,144	12,951,145
1884	35,441,296	2,579,866	99,750,450	7,503,361	1,801,984	11,885,211
1885	32,738,123	2,230,567	114,806,595	7,919,670	1,686,354	11,636,591
1886	51,293,373	3,149,091	142,547,980	9,231,170	1,579,673	13,959,934
1887	67,793,013	4,003,772	136,809,074	9,256,486	1,669,084	14,929,342

From this table it is evident that we export much less manufactured cotton than we should, and I hope measures will be promptly taken to investigate this important matter and that means will be adopted by which this neglected industry may be put on a proper basis.

Mr. BUCHANAN. Will the gentleman yield for a question?

Mr. WHEELER. Yes, sir; I would be glad to answer any interrogatory suggested by the gentleman from New Jersey.

THE EFFECT OF TARIFF ON SHIPPING.

Mr. BUCHANAN. I understand one part of the answer of the gentleman from Alabama to the question of my friend from Pennsylvania [Mr. BRUMM] was that we on this side had destroyed our shipping. Will the gentleman be kind enough to give me the date of the navigation laws?

Mr. WHEELER. Many of our navigation laws were enacted in the early days of our Republic, and while many changes are advisable it can not be said that these laws destroyed our shipping. When they were enacted we had 123,893 tons of shipping engaged in foreign trade, and under these laws it increased until in 1861 it was 2,496,894 tons, an increase of over 2,000 per cent.

Mr. BUCHANAN. Was not there a law passed by the gentlemen on the other side of the House prohibiting the importation into America of foreign-built ships? And is not the law the same now substantially as it has been since the foundation of the Government?

Mr. WHEELER. The navigation laws have not been the serious obstacles. The difficulties we encounter have resulted from the tariff laws enacted upon your side of the House. In addition to the other troubles to which I have alluded those laws have rendered it impossible for us to compete with other nations in building iron ships, the kind now in vogue, and as wooden ships have gone out of use we have but little connection with distant foreign ports except by foreign vessels.

Mr. BUCHANAN. Then does the gentleman lay the whole difficulty on the tariff laws, rather than on the navigation laws?

Mr. WHEELER. I think the greatest trouble arises from injudicious and ill-considered tariff laws. The gentleman knows that under tariff laws which were in accord with our views of the Constitution, our shipping, foreign and domestic, rose from nothing in 1783 to 5,539,813 tons; and he also knows it has constantly decreased under the operations of the tariff laws enacted by his party. This unfortunate condition of our commerce can not be attributed to the war, because our largest decrease has been since its close.

Mr. BUCHANAN. The present navigation laws prohibit the importation into this country of foreign-built ships. Does the gentleman propose to repeal those laws?

Mr. WHEELER. We are not considering shipping matters, but I will say here and now that I am so impressed with the paramount importance of this question, that I will go so far in advance of most of my friends in advocacy of any constitutional measure to rehabilitate the shipping interests of our country——

Mr. BUCHANAN. Are you in favor of free-trade in ships?

Mr. WHEELER. That is not in the bill. [Laughter.] I am discussing the tariff bill now. I am in favor of any and all proper measures to put American shipping on a proper basis. I shall examine the ship bill before it comes up in the House. I will endeavor to give it my best and most intelligent consideration, and if I should conclude that it will re-establish our flag on the high seas, and restore our lost commerce I will certainly favor it.

Mr. BUCHANAN. I know it is not in the bill, but I wanted to ascertain whether you were governed by any principle in the matter.

AN ECONOMIC BUSINESS QUESTION.

Mr. WHEELER. I regard this as a great economic business question, one which affects nearly every American interest. In such matters I am governed by the highest principle. My effort has always been to advocate laws which will add most to the prosperity, happiness, and glorious progress of our country.

I can not see the objection to the bill which some gentlemen urge, especially since its amendment regarding coastwise, lake, and inland trade. I am certainly in favor of reducing taxation on everything that enters into ship-building. For many years it has been the policy of all parties to extend to ship-builders the benefits and privileges which are recited in the second section of the bill. This was the purpose of section 2513 of the Revised Statutes, and this bill merely enlarges its provisions, so as to adapt it to the changed conditions of ship-building, and thus carry out what was intended.

Mr. BUCHANAN. I asked that question simply because I understood that the gentleman was not in favor of admitting to American registry foreign-built vessels.

Mr. WHEELER. That is a question upon which I have never voted. I have as much desire as any one to see our ship-yards again active with the busy hum of joyous workmen, and I believe if you will aid us in a revision of the tariff this much-coveted result will be attained.

ALABAMA AND IRON SHIPS.

I believe we can then build ships cheaper than it can be done on the Clyde. I know it can be done in Alabama. The advantages of our Gulf coast over the Clyde are manifold and unquestioned. Coal and iron are cheap; timber for masts and spars abundant and immediately at hand. The mild and uniform climate permits work to be continued all the year through, which is not the case in the large ship-building centers of this day.

There is no reason why we should not surpass all other peoples as ship-builders. In 1790 Alexander Hamilton asserted—

Ships are nowhere built in greater perfection than in the United States.

Our superior excellence in this particular industry was fully maintained up to 1861, and there is no reason why, with the vast resources at our command, supplemented by the superior skill and ingenuity of our artisans, we should not establish a like pre-eminent excellence in the construction of iron vessels. That is, there would be no reason why we should not do this if we had just, equitable,

and reasonable tariff laws. That the ship-yards of the North can not do so under the prevailing system has been demonstrated. I believe that, with cheap Alabama iron and the other advantages I have mentioned, the South can do all I have indicated despite the obstacles. Correct the irregularities of our tax laws, and I am confident the United States will speedily become the ship-builders of the world. While I can not concur with all the views expressed by the distinguished gentleman from Pennsylvania [Mr. KELLEY] in his speech of April 17, I fully agree that in speaking of the South, and particularly of Alabama, he was right in referring to it as a "fertile empire," and he was also right in his statement that—

The utilization of its exhaustless supply of minerals for manufactures promised great wealth—

Greater, perhaps, to use the language of the venerable leader, than was—

Dreamed of in the palmy days when they counted their acres by thousands and their slaves by hundreds.

I am very glad the eminent Pennsylvanian has visited our country and learned from personal observation the extent and character of our resources.

It has been contended by more than one of the opponents of this bill that Southern men who once owned slaves or who lived in States where slavery existed should not be intrusted with the revision of the tariff. There is one very prominent Republican who appears to entertain a different view of Southern men. I read from Mr. Blaine's book, "Twenty Years of Congress," vol. 1, pp. 45–'6.

With one-half the Senate under the control of the slave-holding States, and with the Constitution declaring that no amendment to it should ever destroy the equality of the States in the Senate, the Southern leaders occupied a commanding position. Having before them the example of Jefferson, of Madison, and of George Mason in Virginia, of Nathaniel Macon in North Carolina, and of the Pinckneys and Rutledges in South Carolina, they gave deep study to the science of government. They were admirably trained as debaters, and they became highly skilled in the management of parliamentary bodies.

As a rule, they were liberally educated, many of them graduates of Northern colleges, a still larger number taking their degrees at Transylvania, in Kentucky, at Chapel Hill, in North Carolina, and at Mr. Jefferson's peculiar but admirable institution, in Virginia. Their secluded mode of life on the plantation gave them leisure for reading and reflection. They took pride in their libraries, pursued the law so far as it increased their equipment for a public career, and devoted themselves to political affairs with an absorbing ambition. * * * They were almost without exception men of high integrity, and they were especially and jealously careful of the public money. Too often ruinously lavish in their personal expenditures, they believed in an economical government, and throughout the long period of their domination they guarded the Treasury with rigid and unceasing vigilance against every attempt at extravagance and against every form of corruption.

Mr. BUCHANAN. The gentleman will pardon me. I was simply desirous of ascertaining whether he held the same views here which he had expressed before other public bodies.

Mr. WHEELER. I have never changed my views on this subject. I have steadfastly adhered to the advocacy of laws which would give us back the glorious prestige which we enjoyed during every year of the existence of the ad valorem tariff of 1846 and 1857. My latest utterance on this subject was this letter to the New Orleans shipping convention:

A BENEFICENT COMMERCIAL REVOLUTION.

WASHINGTON, D. C., *February* 9, 1888.

To the Presiding Officer National Convention American Shipping League, New Orleans, La.:

DEAR SIR: I deeply regret that pressing official duties here will deprive me of the pleasure I should have in participating in the proceedings of your convention, and becoming, if possible, more deeply imbued with sentiments of devotion to the cause in which you are engaged.

The re-establishment of our former supremacy as a maritime people I regard as one of the most important questions now demanding solution at the hands of American statesmanship and enterprise.

The successful accomplishment of the object to which our league is devoted means not only the saving of scores of millions of dollars now being annually paid to foreigners for carrying our exported goods, but it means also useful and profitable employment to thousands of our artisans; and the advantageous investment of capital now lying idle and comparatively unproductive.

It means greatly increased activity in nearly every one of the vast number of our diversified industries now languishing or declining for want of favorable opportunity to compete on equal terms with those of other countries. When the sails of American ships shall again whiten every sea, and the smoke of American merchant steamers ascend to the arching clouds in every accessible part of the globe, the dire and deplorable struggle between underpaid labor and unproductive capital now going on around us will have passed away forever, for then we shall supply the markets of the world with our surplus products instead of having their sale limited to the consumers within our own borders.

To accomplish this vast and incalculably beneficent revolution in the commerce and industry of the country is the lofty and noble purpose of our League. Our success will insure contentment and happiness to our noble army of workmen, and satisfactory returns to our active, vigilant, and enterprising capitalists. Let us achieve the purpose we have in view, and prosperity, peace, plenty, and contentment will prevail throughout our land—along the shores of the gulf, as on the borders of our northern lakes; upon our Atlantic sea-coast throughout its whole extent as upon the Pacific.

To bear any part, even the humblest, in promoting the success of a design, the results of which promise such comprehensive and enduring benefits to the people of our whole country, might well satisfy the ambition of a far more aspiring man than myself, and I shall eagerly seize every opportunity to contribute to that end.

The statistics bearing upon the subject will be presented to you by gentlemen far more competent than I to deal with them, but I can not refrain from saying that already there are gratifying evidences of the advantages resulting from such an organization as our League, in the renewed interest in our ship-building industry, and the newly aroused sense of the importance of our foreign trade, which is perceptible throughout the country.

With renewed expressions of regret for my inability to be with you, and with implicit confidence that the result of your deliberations will be of great immediate benefit to the League, and ultimately to the country, I am, sir,

Very respectfully, your obedient servant,

JOS. WHEELER.

Mr. WHEELER. The printed report of the proceedings then says:

This letter was listened to with close attention and heartily applauded.

It seems from this that those most interested in American shipping approved the ideas I expressed.

Mr. KERR. Will the gentleman permit a question?

Mr. WHEELER. Yes, sir.

Mr. KERR. Is it not a fact that the Democratic party when it was in power always raised every dollar of the public revenue by a tariff?

Mr. WHEELER. Not every dollar. We received considerable money from public lands and other sources. In 1836 the receipts from public lands were in excess of the customs duties.

Mr. KERR. Well, during the last fifty years, while it was in power?

Mr. WHEELER. That is substantially so, and a well-arranged, fair, judicious tariff is a very proper method of raising revenue.

A MEMBER (on the Democratic side). And that is what we propose to do.

Mr. WHEELER. It is evident that something must be done to find an outlet for the country's surplus productions. Certainly that will benefit all of our industries.

[Here the hammer fell.]

Mr. KERR. I move that the time of the gentleman from Alabama [Mr. WHEELER] be extended.

The CHAIRMAN. The hour fixed by order of the House for the recess has arrived.

Mr. BRECKINRIDGE, of Kentucky. In view of that fact I move that the committee rise.

The motion was agreed to.

SATURDAY, *May* 5, 1888.

Mr. MILLS. I move that the House resolve itself into Committee of the Whole House on the state of the Union for the further consideration of bills raising revenue.

The motion was agreed to.

The House accordingly resolved itself into Committee of the Whole House on the state of the Union, Mr. SPRINGER in the chair.

The CHAIRMAN. The House is now in Committee of the Whole House on the state of the Union for the purpose of considering the bill the title of which the Clerk will read.

The Clerk read as follows:

A bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. WHEELER. Before resuming my remarks of yesterday I desire to thank the gentleman from Iowa [Mr. KERR] for his courteous motion for the extension of my time, but in response to the gentleman from Wisconsin [Mr. CASWELL] I wish it to be understood that the friends of revenue reform will not object to any interruptions or interrogatories from the advocates of high and oppressive taxation. The principles we champion for our revenue system stand upon too high ground to be affected by any possible action of its enemies.

The opponents of this bill have very nearly exhausted their copious vocabulary of derision and scorn in execrating England, England's laws, and England's methods. But I doubt not that those who have in this matter assailed her most virulently will agree with me that, whilst there is a great deal we can not admire in that Government, there is yet much that must command our cordial commendation.

REPUBLICANS' AND ENGLAND'S TAX LAWS.

While laws enacted by Republicans tax the working-man's sugar 90 per cent., his salt 85 per cent., his rice 120 per cent, his blankets 200 per cent., and many other necessaries of life in like proportion, England gives all these things free of tax to her people. Her internal revenue is almost entirely collected from the incomes of the rich and the luxuries they consume, and not a dollar of duty is collected upon imported articles of necessary daily consumption. In almost every breath we hear of the English free-trade laws, until the impression has been created that England is a country of absolute free-trade, while in fact, since the enactment of her revenue laws in 1845, which Republicans denominate as a free-trade system, England has collected $4,510,759,630.20, an annual average of $104,901,386.75, while during the same period the United States has collected for import duties the amount of $4,964,155,502.84, an annual average of $115,445,476.81.

The Government of Great Britain has uniformly exerted its power to extend her trade and to enable her to dominate the commerce of the world.

It has been said, and the statement is figuratively, if not literally, true, that every ship-load of calico which leaves England is convoyed by one of her men-of-war. When Mexico refused to pay a few dollars for English goods, England's navy knocked down the walls of their castle of San Juan D'Ulloa. When the people of Egypt failed to pay the interest due English holders of their bonds, an English

force promptly bombarded the city of Alexandria and forced a settlement. When China declined to recognize or admit the validity of a register granted by an English consul, English armed vessels immediately resented the indignity, enforced an apology, and compelled the Chinese to open their ports to English commerce.

I refer to these arbitrary acts to illustrate how English statesmen have subordinated everything to enhance national wealth and commercial supremacy. The same idea is exhibited in her economic laws which govern the domestic affairs of the nation, and their taxing the luxuries and incomes of the rich rather than the necessities of the poor, is because they find such laws bring to a country the greatest prosperity. When we consider what that little island, which, when compared to our country, is but a barren waste, has accomplished, what a field of inviting thought is presented for our contemplation.

In considering what kind of laws the highest wisdom would suggest, it is interesting to examine the early history of manufacturing industries in this country; and we find there that we possess unequaled and unrivaled advantages in soil, mineral wealth, and other resources, which, under proper laws, should enable us to compete in the markets of the world with any manufactures on the globe.

OUR EARLY MANUFACTURING TRIUMPHS.

As early as 1645 manufactories were established in the American colonies. Mr. Bishop, in his History of American Manufactures, on page 476, says, that on May 6, 1646, Mr. Jenks was granted a patent for fourteen years for making engines for mills and for the making of scythes and other edged tools by his newly invented saw-mill, and in 1655 he was granted another patent for seven years for making scythes.

The navigation laws passed in Cromwell's time were very detrimental to American industries. In 1650 it was enacted that all productions of the colonies should be sent to English ports, and in 1669 a law was enacted—

that no wool, yarn, or woolen manufactures of the American plantations shall be shipped thence, or even laden, in order to be transported, on any pretense whatever.

At that time the colonies had established furnaces, foundries, and rolling-mills. They also manufactured sheet-iron, tinware, nails, and many varieties of articles made of iron and steel. From the same work we find that the earliest colonists maintained cotton, woolen, and linen factories. Cotton was imported from the Barbadoes and Smyrna.

Mr. Bishop says, on page 309, the use of cotton in textile fabrics has existed in this country from as early a date as in England, and the system pursued in the two countries also and the description of cloth made were not dissimilar. On page 329 he refers to a report to the board of trade reciting efforts—

to divert Americans from going on with the linen and woolen manufactures.

And in the same connection he says all cloth for clothing, except fine and expensive qualities, was manufactured in the colonies, and on page 331 he speaks of considerable improvement in the year 1719 in the culture of flax and manufacture of linen by Protestant people from Ireland; and on page 630 he states that the cheapness of fuel, the fine qualities of American iron, and the dexterity of Americans in the manufacture of scythes, axes, and nails had caused apprehension of a dangerous rivalry with British iron interests. It is further stated that American articles of this character were superior to those of Germany or France.

In the same year, 1719, the English Parliament passed a resolution that—

the erecting of manufactories in the colonies tends to lessen their dependence upon Great Britain.

But this was not the serious difficulty with which England had to contend.

Mr. Bishop, on page 626, says that iron manufacturers in the neighborhood of Sheffield were apprehensive that their expensive works would be ruined, the laborers rendered destitute, or forced to emigrate to America. In 1742 a report was filed by London traders with the Parliament which states that woolen, linen, and paper mills were being established in America, which—

interfered with the profits of British merchants, and was prejudicial to the trade and manufactures of Great Britain.

Parliament also passed a law prohibiting in general terms the exportation of any manufactured articles from the colonies which interfered with like articles in England.

In 1750 Parliament provided by law that pig-iron could be exported from the colonies to England because it was necessary to English manufacturing interests, but at the same time it was enacted that from and after June 24, 1750—

no mill or other engine for slitting or rolling of iron, or any plating forge to work with a tilt-hammer, or any furnace for making steel shall be erected, or, after such erection, continued in any of His Majesty's colonies of America.

COLONIAL IRON INDUSTRIES AND EXPORTS.

In 1771 2,222 tons of bar iron and 5,303 tons of pig-iron were exported from the Colonies to England.

During the Revolutionary war there was a large increase in all kinds of manufactures, in some classes of goods to a greater extent than was needed upon the return of peace. The depression in some manufacturing industries which took place in 1784 has been erroneously attributed to excessive imports. By referring to the statistics we find that the importations into the country that year amounted to $17,845,214. In 1785 the imports were $11,193,911, and in 1786 the importations were only $7,776,805. These imports were certainly not excessive. After the tariff law of 1789 went into operation the net imports of the United States were $22,460,844 for the year 1790, and for the succeeding ten years the net imports averaged $40,000,000. The duties collected during the existence of the Confederation were very small, and were mostly confined to wines and products of the West Indies.

In a history of Brazil, published in 1848, it is stated on page 213 that in 1784 cotton manufactories were carried on to such an extent that the Portuguese merchants made complaint to the home government that this industry was interfering with their business, and on January 5, 1785, a decree from the King of Portugal was sent to the officers of the crown in Rio Janeiro directing them to extinguish all factories of silk, linen, cotton, and woolen goods, and, if it should become necessary, to confiscate the looms.

Notwithstanding this, a Jesuit missionary, João Daniel, when visiting the Spanish missions west of the Madeira River, in 1797, says that the Indians there—

learn various trades, and manufacture very fine and valuable cotton cloths.

This demonstrates conclusively that the New World, in both North and South America, has always possessed advantages which made the new settlements formidable rivals of the mother countries in the matter of manufactures.

HAMILTON ON THE TARIFF.

For additional information on this subject I shall now read some statements and conclusions of Alexander Hamilton, which I find in his report made in compliance with an order from the House of Representatives of January 15, 1790, upon the means of promoting manufactures.

And it must be borne in mind that for many years Alexander Hamilton has been exultingly claimed by the Republican party as the great originator and apostle of the protective theory in American politics, and his eminent abilities, distinguished services, and lofty character have all been seized upon to sanction their most extravagant demands for a prohibitory tariff.

I will read from page 192:

The expediency of encouraging manufactures in the United States, which was not long ago deemed very questionable, appears at this time to be pretty generally admitted. The embarrassments which have obstructed the progress of our external trade have led to serious reflections on the necessity of enlarging the sphere of our domestic commerce.

He states (page 193) that the arguments against the enactment of laws for the purpose of encouraging manufactures are:

In every country agriculture is the most beneficial and productive object of human industry. This position generally, if not universally true, applies with peculiar emphasis to the United States, on account of their immense tracts of fertile territory uninhabited and unimproved.

Another argument is that—

To endeavor, by the extraordinary patronage of Government, to accelerate the growth of manufactures is in fact to endeavor by force and act to transfer the natural current of industry from a more to a less beneficial channel. Whatever has such a tendency must necessarily be unwise; indeed, it can hardly ever be wise in a Government to attempt to give a direction to the industry of its citizens.

And that (I read from page 194)—

If, contrary to the natural course of things, an unseasonable and premature spring can be given to certain fabrics by heavy duties, prohibitions, bounties, or by other forced expedients, this will only be to sacrifice the interests of the community to those of particular classes.

General Hamilton then says:

This mode of reasoning is founded upon facts and principles which have certainly respectable pretensions.

He then goes on and assumes that general theories admit of numerous exceptions, and that most theories blend error with the truth they inculcate; therefore, in order to arrive at a proper judgment (page 195)—

it is necessary to advert carefully to the considerations which plead in favor of manufactures, and which appear to recommend the special and positive encouragement of them in certain cases, and under certain reasonable limitations.

The next paragraph reads:

It ought readily to be conceded that the cultivation of the earth, as the primary and most certain source of national supply, is the immediate and chief source of subsistence to man—

Hamilton also says that the cultivation of the earth—

has intrinsically a strong claim to pre-eminence over every other kind of industry. But that it has a title to anything like an exclusive predilection in any country ought to be admitted with great caution.

He then enumerates many kinds of manufactures which had been in successful operation, and in speaking of protective duties, he says (page 245):

Duties of this nature evidently amount to a virtual bounty on the domestic fabrics; since by enhancing the charges on foreign articles they enable the national manufacturers to undersell all their foreign competitors. * * * Indeed, all the duties imposed on imported articles, though with an exclusive view to revenue, have the effect in contemplation, and except where they fall on raw materials, wear a beneficent aspect towards the manufacturers of the country.

On page 235 he also alludes to this question in these words:

But though it were true that the immediate and certain effect of regulations

controlling the competition of foreign with domestic fabrics, was an increase of price * * * when a domestic manufacture has attained to perfection, and has engaged in the prosecution of it a competent number of persons, it invariably becomes cheaper.

PROHIBITORY TARIFF PREVENTS COMPETITION.

In referring to prohibitory duties, he says (page 245):

This is another and an efficacious means of encouraging national manufactures; but, in general, it is only fit to be employed when a manufacture has made such progress, and is in so many hands, as to insure a due competition and an adequate supply on reasonable terms.

With regard to pecuniary bounties he states (page 246):

This has been found one of the most efficacious means of encouraging manufactures, and is, in some views, the best. It avoids the inconvenience of a temporary augmentation of price.

And as another of the advantages of bounties (page 247):

Bounties have not, like high protecting duties, a tendency to produce scarcity. An increase of price is not always the immediate, though, where the progress of a manufacture does not counteract a rise, it is, commonly, the ultimate effect of an additional duty.

He concludes, however, that the practice of aiding manufacturing enterprises in this way should be confined to new undertakings. Upon this point, on page 248, I read:

The continuance of bounties on manufactures long established must almost always be of questionable policy; because a presumption would arise, in every such case, that there were natural and inherent impediments to success. But, in new undertakings, they are as justifiable as they are oftentimes necessary.

On page 250 he discusses the Constitutional right to levy protective tariff duties, and singularly enough rests his entire case on the grant of power "to promote the general welfare."

The principles upon which he would base a system of protective taxation having been very copiously discussed, General Hamilton then addresses himself to a designation and consideration of the raw material entering into the several manufactures he would have protected, the first article treated of being iron, as it is regarded as entitled to "pre-eminent rank" for its manufactures.

I read from page 260:

Iron-works have greatly increased in the United States, and are prosecuted with much more advantage than formerly. The average price, before the Revolution, was about $64 per ton; at present, it is about $80, a rise which is chiefly to be attributed to the increase of manufactures of the material.

On the same page steel is referred to in these words:

Steel is a branch which has already made a considerable progress, and it is ascertained that some new enterprises, on a more extensive scale, have been lately set on foot.

After further consideration of other manufactures in which iron is a chief ingredient, the conclusion is reached, on page 261—

It seems equally safe and prudent to extend the duty, ad valorem, upon all manufactures of iron, or of which iron is the article of chief value, to 10 per cent.

And steel manufactures are dismissed with a similar generalization on page 262:

Manufactures of steel generally, or of which steel is the article of chief value, may, with advantage, be placed in the class of goods rated at 7½ per cent.

Two facts are very significant in connection with Hamilton's views as to the advisability, if not necessity, of a protective tariff tax on manufactures of iron and steel—confessedly "entitled to pre-eminent rank." First, the tax is proposed to be levied ad valorem; and second, that this early and great champion of the theory of protection concludes that the rather trifling duty of 7½ and 10 per cent. will be amply sufficient to accomplish the end had in view.

HAMILTON'S DISCIPLES MISREPRESENT HIM.

Bearing in mind that Hamilton insists that bounties and protection to manufactures should only be temporary, I should like to ask in passing, how gentlemen professing to be followers of his politico-economic theories and principles—after the iron and steel industries have enjoyed more than a century of protection—can justify their demand for a permanent tariff tax of from 45 to 114 per cent. on these articles of common consumption—an average ten times greater than Hamilton declared to be amply sufficient.

Copper is next considered, and he says:

The manufactures of which this article is susceptible are also of great extent and utility.

Brass, of which copper "is the principal ingredient" is also regarded as important, and it is asserted (pages 263, 264):

An additional duty on brass wares will tend to the general end in view. These now stand at 5 per cent., while those of tin, pewter, and copper are rated at 7½. There appears to be a propriety, in every view, in placing brass wares upon the same level with them.

Republicans now demand 45 per cent., and we are denounced as "free-traders" because we support this bill which fixes the duty at 35 to 40 per cent.

Of lead it is said on the same page:

There are numerous proofs that this material abounds in the United States, and requires little to unfold it to an extent more than equal to every domestic occasion. * * * The duties already laid upon the importation of this article, either in its manufactured or unmanufactured state, insure it a decisive advantage in the home market, which amounts to considerable encouragement.

The tax which Hamilton said was sufficient for lead's protection was equivalent to an ad valorem rate of about 7 per cent. Democrats are now called free-traders because they propose to reduce the present tax, equal to 60 per cent., to 40 and 45 per cent.

Coal, or as General Hamilton designates it, "fossil coal," is regarded as an important instrument of manufactures and navigation, and on page 264 is referred to in these words:

It is known that there are several coal mines in Virginia now worked, and appearances of their existence are familiar in a number of places.

In considering the article of sail cloth, made of flax and hemp, Hamilton, on page 271, says:

A flourishing manufactory is established at Boston, and very promising ones at several other places. It is presumed to be both safe and advisable to place this in the class of articles rated at 10 per cent.

Republicans now demand 35 to 40 per cent., and the supporters of the bill under consideration are stigmatized as free-traders because they propose to reduce the tariff on flax and hemp to 25 per cent.

On page 275 Hamilton recommends a duty of 7½ per cent. on all cotton goods, and speaks of this industry, as it then existed, in these terms:

Manufactories of cotton goods, not long since established at Beverly, in Massachusetts, and Providence, in Rhode Island, * * * seem to have overcome the first obstacles to success. * * * Other manufactories of the same material, as regular businesses, have also been begun at different places in the State of Connecticut.

I beg to call the attention of the House specially to the fact that when the manufacture of cotton was truly an infant industry in this country the most prominent protectionist of his day thought it was effectually shielded from the competition of the mother country by a duty of 7½ per cent., while after its having been continually protected during a century, the Republicans of to-day clamor for the perpetuation of a tariff tax of from 40 to 75 per cent., and, with hands upraised in holy horror, declare that our effort to reduce the tax to from 35 to 40 per cent. is a "free-trade heresy."

HAMILTON SUGGESTS TEN PER CENT. ON WOOL.

The wool industry is regarded as highly important, but the only definite suggestion as to protection which Hamilton makes, is (page 277) that a fund from which to pay premiums for improving the quality of native and bounties for the introduction of fine foreign wool, might be secured by the

addition of 2½ per cent. to the present rate of duty on carpets and carpeting.

The duty on carpets and carpetings at that time was 7½ per cent., and the proposed addition would therefore have raised it to 10 per cent. Republican legislation has increased this duty on the various grades to an equivalent ad valorem tax of 47, 59, and 73 per cent. Democrats are held up to obloquy as free-traders because they propose to fix this duty at 30 per cent.—three times what Hamilton said was sufficient.

As to the condition of the manufactories, we learn from page 276 that—

Hats of wool, and of wool mixed with fur, are made in large quantities in different States.

And with an adequate supply of materials there would be no difficulty in supplying the demand. And in another place it stated,

A promising essay towards the fabrication of cloths, cassimeres, and other woolen goods is likewise going on at Hartford, in Connecticut. Specimens of the different kinds which are made, in the possession of the Secretary, evince that these fabrics have attained a very considerable degree of perfection.

On page 277 we are told that—

The production of silk is attended with great facility in most parts of the United States.

But the high-tariff idolators of to-day will probably learn with a good deal of surprise that the only suggestion for the encouragement of silk manufacture submitted to Congress by the protectionist, Alexander Hamilton, is that raw silk be placed on the free list. In his own words, page 277:

An exemption of the material from the duty which it now pays on importation, while the bill under consideration, which they classify as a free-trade abomination, leaves the duty on silk and silk manufactures just at the duty fixed by the act of 1883, that is at about 50 per cent

HAMILTON'S TARIFF ON GLASS.

Regarding glass Hamilton says, page 277:

The materials for making glass are found everywhere,

and there is no deficiency of these materials in the United States. On the next page he says:

Different manufactories of glass are now on foot in the United States. The present duty of 12½ per cent. on all imported articles of glass amounts to a considerable encouragement to those manufactories.

This is the only article on which the duty at that time was as high as 12½ per cent. Since that day Republicans have so increased the tax on various kinds of glass, that now the tax on some kinds of glass is as high as 152 per cent., and the average tax is about 90 per cent. We are denounced as free-traders because we propose to fix this tax at about 85 per cent., a tax seven times greater than Hamilton thought necessary.

On page 278 we are informed that:

Manufactories of paper are among those which are arrived at the greatest maturity in the United States, and are most adequate to national supply,

and that such manufactories are already protected by a competent duty on similar articles imported from abroad.

At that time paper was taxed at 7½ to 10 per cent., and Hamilton thought this was "competent." Republicans have increased this tax to 25 per cent., and Democrats are denounced because they pro-

pose to fix it at 20 per cent., double the rate which Hamilton thought was sufficient.

HAMILTON'S REAL TEACHINGS.

The somewhat lengthy citations I have made from this elaborate and comprehensive report of the most prominent of those who first advocated the protective policy, may have been somewhat tedious, but carefully considered they will be found highly instructive on two or three important points:

1. That the politico-economic school of which Hamilton may be regarded as the founder held that it was good policy to foster and encourage struggling manufactures by protective duties or bounties—he uses the terms convertibly—but that such protection should only be temporary.

2. That an ad valorem duty of the low rate of from 5 to 10 per cent. would suffice to accomplish the object in view. He, however, thought it permissible to retain the existing duty of 12½ per cent. on glass.

3. That during the earliest period of our governmental history the manufacturing industries of the young Republic were able to compete, upon comparatively equal terms, with those of the Old World.

4. That no people can become commercially prosperous and independent unless its fiscal and economic policy be so adjusted as to secure, in the markets of the world, an outlet for its surplus products. And this last point is peculiarly impressive and specially significant at this time, when the official statistics of our financial and industrial condition shows that our present production is largely in excess of our possible consumption.

WE MUST HAVE A FOREIGN MARKET.

We learn from the census of 1880 that our population was 50,155,783 and that 17,392,099 persons, or 34½ per cent. of the population, were engaged in some kind of occupation. These included many children and many females. The highest paid were those engaged in factories, their average being $346.90.

Most elaborate statistics recently prepared by the Government show that farm labor without board in some States is paid as low as $12.25 per month, and children on farms, factories, and other vocations frequently work for $50 a year; and when we consider that in many occupations workmen are not employed more than two-thirds to three-fourths their time we find that the general average paid persons of all classes who work is about $200 a year.

In 1866, with a population of 34,000,000, the income tax showed but 460,170 persons who had incomes above $600. If the persons having such incomes increased in the same ratio as the population in 1880 they would have numbered 670,255. Therefore in 1880 the persons engaged in occupations may be divided as follows:

Those with incomes above $600	670,255
Those with incomes less than $600	16,721,844

The latter class averaged $200 a year, and could only purchase to the amount of $3,344,268,800; the incomes upon which tax was collected in 1866, amounted to $865,946,421; and, admitting an increase in proportion to population, the total income over $600 in 1880 would have aggregated $1,260,919,631. Now, again admitting, for the sake of argument, that this enormous sum is all spent to purchase articles of consumption, and we see the total amount of income of all kinds in the United States in 1880, which could be used to purchase products, was $4,515,189,431. To this we add $167,683,912, which was the excess of our exports over imports, and it aggregates $4,682,873,343. By the census of 1880 the products of our factories were valued at $5,369,667,706, and the products of our farms were $2,264,278,718, amounting together to $7,633,946,424.

We thus see that the products of our farms and factories in 1880 were, in round numbers, $3,000,000,000 in excess of the full measure of our home markets.

At this time the discrepancy is greater. Incomes are estimated at $6,000,000,000, factory products at $8,000,000,000, and farm products at $3,000,000,000.

Therefore to-day we have a product of $5,000,000,000 for which there is no home market. We are, however, surrounded by people who wish to buy of us, but the impolicy of our laws shuts us from the trade of the world almost as hermetically as China has been isolated by her laws, which we call relics of barbarism.

We all know that the Republican idea of increased tariff taxation will not, can not, give us improved trade relations with the rest of the world. In the report from which I have already read some extracts Alexander Hamilton says (page 248):

> It can not escape notice that a duty upon the importation of an article can not otherwise aid the domestic production of it than by giving the latter greater advantages in the home market. It can have no influence upon the advantageous sale of the article produced in foreign markets—no tendency, therefore, to promote its exportation.

Our sad experience has fully vindicated the wisdom of Hamilton's philosophy on this point. It has done more, for it has shown that not only will duties not create an export trade, but will crush out what had already been gained.

HIGH TARIFF LIMITS EXPORTS.

The resounding oratory of Republican declaimers insisting that all we have to do to build up our country is to keep on increasing the tariff tax until it reaches the point of prohibition, has betrayed a confiding people into the error of disregarding the voice which comes from every foreign land, saying they can not buy of us unless we will buy of them; that much as they would like to establish commercial relations, they can not send ships for our goods unless we buy something to make a cargo to this country.

And what has been the result?

Our rivals have habitually taken our place in what, for years, had been our best markets.

Many of our articles of export are decreasing, while countries whose rivalry we have been accustomed to hardly consider are rapidly supplanting us.

Germany has gradually raised its tariff on our wheat, and our exports have fallen from 122,000,000 bushels, worth $130,000,000, in 1879, to 102,000,000 bushels, worth $81,000,000, in 1887.

British India increased her export of wheat from 4,000,000 in 1879 to nearly 42,000,000 in 1887.

I have prepared a table, showing at a glance the wheat exports of these two countries during the last nine years:

Exports of wheat from British India during the years ending March 31, 1879 to 1887, inclusive.			Exports of wheat from the United States during the years ending June 30, 1879 to 1887, inclusive.	
Years.	Cwts. of 112 pounds.	Value in pounds of $4.85.	Bushels.	Value in dollars.
1879	1,056,720	520,138	122,353,936	130,701,079.00
1880	2,201,515	1,124,267	153,252,795	190,546,305.00
1881	7,444,375	3,277,942	150,565,477	167,698,485.00
1882	19,991,005	8,869,562	95,271,802	112,929,718.00
1883	14,193,763	6,088,814	106,385,828	119,879,341.00
1884	21,001,412	8,895,801	70,349,012	75,026,678.00
1885	15,850,881	6,319,018	84,653,714	81,267,565.44
1886	21,069,519	8,002,350	57,759,209	51,395,696.01
1887	22,263,348	8,625,876	101,971,949	81,577,559.20

The Argentine Republic by opening business relations with Europe increased her export of wheat from substantially nothing in 1880 to over 4,000,000 bushels, while Russia in Europe increased her exports from 36,000,000 to nearly a hundred million bushels.

In 1869 we imported cotton-seed oil to the amount of $779. The wise protectionists saw here an opportunity to accomplish the double purpose of raising revenue and protecting their infant industries, and they imposed upon it a duty of 30 cents per gallon, equal to about 86 per cent. ad valorem. We were struggling to build up this new industry, and with great difficulty we had found a foreign market, three-fourths of which was with Marseilles, Trieste, and other Mediterranean ports.

I am informed that France and Italy were finally induced to put an import duty on our cotton-seed oil, and our exports, which in 1880 reached 6,997,796 gallons, fell in four years so that in 1883 it was only 415,611 gallons. In 1883 these facts were presented to Congress, but the best we could do was to get a reduction of duty to 25 cents. It is true we have since built up our export trade with the Netherlands and other countries. I give this as an illustration of the impolicy of injudicious protection.

This unsatisfactory condition of our export trade, produced by this policy, should have been expected. Presidents Monroe, John Q. Adams, and Polk warned us against this special danger, and long before their time Washington's Secretary of the Treasury, Alexander Hamilton, in his report on manufactures, speaks of the hostile legislation of foreign countries regarding American products. He says (page 215) the United States—

> experience numerous and very injurious impediments to the emission and vent of their own commodities. Nor is the case in reference to a single foreign nation only. The regulations of several countries with which we have the most extensive intercourse throw serious obstacles in the way of the principal staples of the United States.

He also says:

> If Europe will not take from us the products of our soils upon terms consistent with our interest, the natural remedy is to contract, as far as possible, our wants of hers.

Again: To show how determined England was, and continued to be, in maintaining this spirit of a retaliatory tariff—by which she discriminated against American products—I will here call attention to the action of Great Britain regarding American rice.

The laws of Great Britain imposed a duty of two shillings and six pence sterling per bushel on all foreign rough rice imported into the United Kingdom. This tax bore heavily upon American growers of rice, but we did not complain, because all rice producers with whom America had to compete in the British markets were placed upon the same basis of taxation.

But by the act of the British Parliament, of August 13, 1836, the duty was reduced to one penny per quarter (of eight bushels) on the rough rice "imported from the west coast of Africa." Illustrations of this point might be multiplied indefinitely, but what has been cited will suffice to establish the proposition that we can not close our markets to other peoples' without losing nearly every outlet for the surplus products of our own industry and enterprise.

It has been contended that enhancements of values in land and other property is due to a high tariff. This assumption requires much modification.

Just so far as a high tariff encourages manufactures just to that extent does the congregation of hands to operate them cause a demand for building sites, and therefore an increase in value; but when the tariff is so injudiciously arranged as to discourage manufactures and make them unprofitable the reverse takes place. Factories cease to run, the operators seek other employment, and their houses are left to decay or, as is frequently the case, become destroyed by fire.

I must ask permission now to refer to some errors of gentlemen who have spoken against this bill.

The gentleman from Michigan [Mr. BURROWS], after describing the condition of the country for the seven years succeeding 1828, says:

But this brief period of prosperity was quickly followed by the revenue tariff of 1846 and 1857, which brought to the country another era of industrial depression.

I am surprised that my friend should have referred to the period following 1846 as one of "industrial depression." The impressions I have from my recollection and investigation are diametrically opposed to this assertion.

PROSPERITY UNDER DEMOCRATIC TARIFF.

From 1846 to 1861, under the tariff law my friend denounces, the tonnage of our shipping engaged in foreign trade increased from 943,307 tons to 2,496,894 tons, an increase of almost 300 per cent.; and from 1861 to 1887, under tariff laws which he commends, our shipping gradually decreased until, according to the last report, we have but 989,412 tons of shipping engaged in foreign trade, showing a loss under Republican rule of two-thirds of our foreign tonnage.

Again, in 1861 American vessels carried 65 per cent. of our exports and imports, while to-day but 15 per cent. are carried in American vessels.

Our exports of domestic merchandise were only $101,907,734 in 1846; in 1860 they were $316,242,423, an increase of more than 300 per cent.

We had but 4,930 miles of railroad in 1846, and in 1861 we had 31,286, an increase of more than 600 per cent. The history of our country shows that our manufactures flourished between 1846 and 1850, but I can give no accurate data. The census of 1850 and that of 1860, however, gives accurate information of the marvelous increase of that industry during that period, under a strictly ad valorem tariff. The capital invested in manufactures was $533,245,351 in 1850, and $1,009,855,715 in 1860, an increase of nearly 100 per cent.

In 1850 the materials used in factories were valued at $555,123,822; in 1860 the consumption of material amounted to $1,031,605,092, an increase of 100 per cent., and the products of these establishments was $1,019,106,616 in 1850, and $1,855,861,676 in 1860, an increase of nearly 100 per cent. The assessed value of all property in the United States was $6,024,666,909 in 1850, and $12,084,560,000 in 1860, an increase of more than 100 per cent. The value of farms in the United States in 1850 was $3,271,575,426, and in 1860 they were worth $6,645,045,007, another increase of more than 100 per cent.

I insist that the history of no country, at any time, can show such unexampled per centage of progress, and yet this is the period selected by the gentleman from Michigan [Mr. BURROWS] as one of "industrial depression."

This fearful error is one into which our Republican friends have frequently fallen. Last Monday my friend from New Hampshire [Mr. GALLINGER] made the same mistake. In speaking of the tariff law of 1846 he said:

The Southern leaders in 1846 insisted upon the repeal of the tariff law of 1842. Almost immediately a decline was witnessed in our productive industries. * * * This condition of things, to a greater or less extent, continued until the accession of Republicans to power in 1860.

The statements of the gentlemen from Michigan [Mr. BURROWS] and New Hampshire [Mr. GALLINGER] are but fair samples of the errors upon which Republicans base their arguments.

Is it possible that the enemies of the bill are unable to find any better illustration than this upon which to predicate their theories?

If we should eliminate all the incorrect statistics and exploded doctrines from the Republican speeches on tariff they would be reduced to the most meagre proportions, and the little left would be hardly more than a conglomeration of inconsistencies and unwarrantable conclusions.

THE LABORER WAS PROSPEROUS.

This remarkable prosperity is not at all surprising. The tax laws during that period were more equal than at any other time in our history; they were just to all people and to all pursuits.

The duties were all ad valorem, that is, a certain per cent. upon imported articles, and, therefore, those of a cheap character paid duty only in proportion to their actual value. To illustrate: Sugar was taxed 30 per cent. under the law of 1846, and 24 per cent. under the law of 1857. Sugar which cost in Cuba 2 cents per pound, was, under that law, taxed less than half a cent; expensive sugar which cost 10 cents was, under this law, taxed five times as much.

The Republicans have persistently opposed the ad valorem system, and have demanded specific duties; that is to say, they taxed such articles by the pound, not according to value. During Republican supremacy sugar was taxed as high as 4 and even 5 cents a pound. Under this kind of law sugar which cost 2 cents is taxed 200 per cent. and that which cost 12 cents is taxed only 33 per cent. The laboring man buys the cheaper article, while the finer quality is purchased by the rich and prosperous.

Under the law of 1846 and 1857 blankets were taxed 15 to 20 per cent.; therefore a cheap blanket, which cost $2, was taxed 30 cents, while the tax would be $3 on a very fine blanket costing about $20. Under Republican supremacy blankets were no longer taxed ad valorem, but by weight, the tax being as high as 50 cents a pound. A cheap, coarse blanket weighing 8 pounds, and worth about $2, would, under such a law, be taxed $4—200 per cent. on its cost. A fine, handsome blanket, made of very superior wool, might possibly weigh only 2 pounds, and under such a law this blanket would be taxed $1, although the original cost may have been $20.

It may be said that I have cited extreme cases, but an examination of the entire schedule of the tariff shows that under laws enacted since the repeal in 1861 of the tariff laws of 1846 and 1857, the grossest hardship and injustice have been inflicted upon the laboring and poorer classes.

By one system or another the Republican party contrived to place from three to five times as much tax upon the necessaries of life and cheap articles used by the poor as upon the luxuries and fine articles purchased only by the rich and prosperous. Not satisfied with taxing the poor man's blanket by the pound, they at one time taxed it by the square yard. By this character of taxation they have made the rich man richer, and, with the exception of isolated cases, have kept laboring men from the possibility of accumulation.

All this was different under the Democratic law of 1846. Under that law the poor man paid the same percentage of tax and had the same chance as the rich; the consequence was, the laborers of the country were happy, prosperous, and contented. Their expenses were not so heavy; they had means to purchase the comforts of life, and thus created a demand for the products of our manufacturing establishments. This in turn created a demand for labor, which was, of course, followed by an increase in the price of labor. The result of all this was an infusion of life into all the avenues of trade and into the various industries, and was followed by an era of great prosperity.

MR. BLAINE SUSTAINS US.

But I need not have taken the trouble to give these overwhelming statistics, as the history of those times utterly refutes the statement of my eloquent friend from Michigan [Mr. BURROWS] that—

The revenue tariff of 1846 and 1857 brought to the country another era of industrial depression.

I could quote without limit, but will confine myself to authority no one on the Republican side of the House will question.

Nearly four years before Mr. Cleveland wrote his message of December 6, 1887, Hon. James G. Blaine published his book, in which he says a word on this subject.

On page 105 Mr. Blaine says:

The free-trade tariff of 1846 was passed.

And I will now read an entire paragraph on page 196:

The Whig victory of 1848 was not sufficiently decisive to warrant any attempt, even had there been desire, to change the tariff. General Taylor had been elected without subscribing to a platform or pledging himself to a specific measure, and he was therefore in a position to resist and reject appeals of the ordinary partisan character. Moreover, the tariff of 1846 was yielding abundant revenue, and the business of the country was in a flourishing condition at the time his administration was organized. Money became very abundant after the year 1849; large enterprises were undertaken, speculation was prevalent, and for a considerable period the prosperity of the country was general and apparently genuine. After 1852 the Democrats had almost undisputed control of the Government, and had gradually become a free-trade party. The principles embodied in the tariff of 1846 seemed for the time to be so entirely vindicated and approved that resistance to it ceased not only among the people but among the protective economists, and even among the manufacturers to a large extent. So general was this acquiescence, that in 1856 a protective tariff was not suggested or even hinted by any one of the three parties which presented Presidential candidates.

I beg to call special attention to Mr. Blaine's assertion that the principles embodied in the tariff of 1846 were approved not only among the people but among the protective economists and manufacturers. Mr. Blaine then proceeds:

It is not surprising, therefore, that * * * the Democratic Congress, in the closing session of Pierce's administration, enacted what has since been known as the tariff of 1857. By this law the duties were placed lower than they had been at any time since the war of 1812. The act was well received by the people, and was indeed concurred in by a considerable proportion of the Republican party.

Among the prominent Republican Senators who voted for the bill of 1857 I will mention Senators Hamilton Fish and Seward of New York, Senators Sumner and Wilson of Massachusetts, Senator Bell of New Hampshire, and Senator Foster of Connecticut.

It was also supported by Mr. Toucey, the Democratic Senator from Connecticut, and, to use the words of Mr. Blaine—

In the House the New England Representatives generally voted for the bill.

This, bear in mind, was the bill which reduced tariff taxation to a lower figure than the one which Mr. Blaine denominated as the "Free-trade tariff of 1846," and also lower than any law since those enacted during the administrations of Washington, Adams, and Jefferson.

MR. BLAINE'S MISTAKE.

Mr. Blaine was not correct with regard to the position of Senators Seward and Allen upon this bill. He says, page 197, that Mr. Seward voted against the bill and that Senator Allen, of Rhode Island, voted for it. The facts are just the reverse. Mr. Seward voted for the bill and Senator Allen against it. It is true that when the bill was being considered in the Senate on February 26, 1857, Mr. Seward and

Mr. Allen voted against each other upon four separate propositions to amend it; but on March 2 the vote was taken on the bill as reported by the conferees, which was the final action on the bill, and we find that these two gentlemen reversed their positions, Mr. Seward voting for the bill and Senator Allen against, and not for it, as stated by Mr. Blaine. The action of Mr. James, of Rhode Island, was the same as that of Mr. Allen; he voted with his colleague upon three of the amendments, and is not recorded upon the fourth. He also voted with him upon the final passage of the bill.

Mr. Blaine states, on page 197 of his book, that—

Mr. Seward represented the protective tendencies of the country districts of New York.

He also says that—

Senator Allen, of Rhode Island, was the direct representative of the manufacturers of that State.

And yet we see that upon this bill both these distinguished gentlemen were so undecided as to the wisdom of a tariff bill which reduced the tariff lower than any law ever enacted since the year 1804, that during the evening of Thursday, February 26, they voted one way upon this great measure, and upon the following Monday, March 2, they changed their views and again voted against each other; Mr. Seward voting for the bill and Mr. Allen voting against it.

UNDECIDED SENATORS.

I have carefully examined the votes of these distinguished New England and New York Senators to see, if possible, by what principle they were actuated in their votes upon this question. I find that Senator Wilson offered an amendment to a committee amendment, his purpose being to reduce the tax on wool. Senators Sumner and Wilson voted for it, Senator Allen against it, and it was not carried (Congressional Globe, February 26, 1857, page 351). The amendment of the committee was then voted on. Mr. Allen voted for it, Messrs. Seward, Sumner, and Wilson voted against it. The motion was carried (page 351).

Mr. Collamer, of Vermont, then offered an amendment, the purpose being to change the duty on certain kinds of wool from 8 to 23 per cent. Mr. Allen voted for it, Messrs. Seward, Sumner, and Wilson voted against it; and the motion was carried (page 357).

Mr. Douglas proposed an amendment, the purpose of which was to admit all wool of less value than 20 cents per pound free of duty.

This was carried by a vote of 33 to 9; Allen, Seward, Sumner, and Wilson voting for it (page 357).

On Mr. Hunter's substitute, which was a change in both substance and phraseology of sections 1, 2, 3, and 4, Mr. Allen and Mr. Sumner voted for it, and Mr. Seward voted against it. And on the final vote on the bill, as before stated, Mr. Seward voted for the bill, and Mr. Allen voted against it.

I must confess that I can not find any evidence of decided convictions on the part of Senators Seward and Allen upon the great tariff question of that time. It seems to me their minds were by no means fixed upon all the points in the bill. But I specially call the attention of the gentlemen on the other side, who are demanding a high tax on wool, to the fact that their political fathers, Sumner, Seward, and Wilson, were directly opposed on that subject to the views Republicans now advocate on this floor.

No doubt Mr. Blaine presumed Mr. Allen voted for the bill, as in the discussion upon it in the Senate it was argued that the reduction on wool was specially demanded by the New England woolen manufacturers.

This was the contention of Mr. Pugh, of Ohio, and others equally distinguished.

Senator Pugh said:

Under the act of July 30, 1846, manufactures of wool and wool unmanufactured were subjected alike to a duty of 30 per cent. * * *

But the Senator now proposes to reduce the duty on woolen goods, manufactured, from 30 to 23 per cent., and the duty on wool, unmanufactured, from 30 to 8 per cent.

Senator Pugh also said that the Secretary of the Treasury had recommended "free wool," and asserts that—

a few manufacturers of woolen goods in New England and New York have seized upon it, and perverted the whole enterprise into a scheme for sacrificing the wool-grower of the West to their own aggrandizement.

After further discussion Senator Pugh said:

I appeal, therefore, to the representatives of the agricultural States, whether in the North or the South, to restrain these woolen manufacturers within some reasonable limit.

I know, sir, that the Senator from Virginia believes this reduction will be of ultimate advantage to the wool-grower.

But he went on to say, with all his ability and eloquence—

he never can persuade the wool-growers of the United States that they ought to be burdened for the mere aggrandizement of woolen manufacturers.

As near as I can ascertain, the bill as it passed put a large proportion of raw wool on the free-list, the remainder being taxed 24 per cent. The wool manufactories increased very largely, as predicted: but all the predictions regarding disaster to wool-producers were in error, as that element of industry increased also. In round numbers our production of wool was but 52,000,000 pounds in 1850; in 1860 it was 59,000,000 pounds; and now it is five times that amount.

How much it was affected by the tariff I can not say, but it is clear to my mind that free raw wool of the quality we do not raise, and which is needed to mix with the American wools, is quite as essential to the wool-growers as it is to the manufacturers.

FREE WOOL ENRICHES NEW ENGLAND.

These gentlemen had before them the census of 1850, and a knowledge of the condition of the wool industries in 1857. At that time New England produced two-thirds of the wool manufactures of the United States.

Massachusetts was far in the lead, and Rhode Island came next. New York was the principal wool manufacturing State outside of New England and came next to Rhode Island in the value of this product. In Rhode Island the wool manufactures increased from almost nothing in 1850 to an invested capital of over three million in 1860. They continued to increase rapidly until 1870, but between 1870 and 1880 they remained almost stationary.

It may not be out of place to mention that the product of all the manufacturers in that State almost doubled under the tariff of 1846 and 1857, from 1850 to 1860, and that they have actually decreased from 1870 to 1880 under the war tariff which we are now seeking to amend. That some judicious change is imperatively needed there certainly can be no doubt.

If the bill which I introduced to create a tariff statistical bureau becomes a law I trust it will go very far towards solving these intricate problems. Its purpose is to establish a tribunal whose duty it shall be to enter upon and carry out exhaustive investigations and examinations of all questions affecting our tariff laws, and render intelligent opinions as to the advisability or propriety of amending or modifying the same. The bill is in these words:

Be it enacted, etc., That a bureau, in the Treasury Department, is hereby created and established, which shall be known as the Tariff Statistical Bureau, which shall consist of one chief tariff statistician and four associate tariff statisticians, who shall be selected with special reference to their familiarity with the general subject of tariff taxation, and their ability to collate, classify, and tabulate the results of their statistical investigations, all of whom shall be appointed by the President.

SEC. 2. That it shall be the duty of this bureau to secure, and keep constantly on file, the tariff laws of all countries; also, as far as practicable, to investigate, collate, and compile information showing the effect of said laws upon the general prosperity of the countries by which they are enacted, their effect upon the labor and industries of those countries, and especially their effect upon the general prosperity, the labor, and manufacturing, and other industries of the United States.

SEC. 3. That any citizen or corporation of the United States shall be privileged, either in writing or personally or by counsel, to submit to and urge upon the attention of said bureau propositions or suggestions as to any amendments to, or modification of, existing tariff laws, and it shall be the duty of said bureau to receive and properly file all such written or printed propositions or suggestions, and when submitted in writing, or by oral argument, all such propositions or suggestions shall be duly considered by said bureau, and their conclusions as to the probable effect of such amendments to, or modifications of, the tariff laws upon any special enterprise or industry, as well as the probable effect upon the labor and general industries of the United States, which conclusions shall be reported to the Secretary of the Treasury.

SEC. 4. That the business of the bureau, and its modes of procedure, shall be subject to such rules and regulations as the Secretary of the Treasury may think best calculated to secure the prompt and efficient dispatch of business, and, upon his request, the bureau shall aid the Secretary in preparing such rules and regulations, and when adopted they shall be printed and a copy thereof furnished to every person having business with the bureau.

SEC. 5. The chief of said bureau shall receive a salary of five thousand dollars per annum, and the four associates shall receive a salary of four thousand dollars per annum; and the bureau shall be authorized to appoint a secretary, who shall receive a salary of two thousand five hundred dollars per annum, and to employ, subject to the approval of the Secretary of the Treasury, such clerks as may be required to insure the prompt and efficient dispatch of the business of the bureau.

SEC. 6. That it shall be the duty of the Secretary of the Treasury to cause suitable and convenient rooms, in the city of Washington, properly lighted, furnished, and heated, to be assigned to said bureau, and to cause the necessary stationery and other articles to be supplied and the necessary printing to be done for the said bureau.

I should have mentioned that there was another tariff bill, beside the one which I have discussed, which was approved March 3, 1857; but it was very brief, and the Journals do not show how any member of the Senate or House voted upon it, no yea-and-nay vote having been taken.

On March 24, 1870, while Hon. WILLIAM B. ALLISON (who is the choice of many Republicans as their candidate for President) was serving his fourth term in the House of Representatives, he spoke in favor of tariff reduction.

I read from page 192, Congressional Record, second session Forty-first Congress. Mr. ALLISON said:

The tariff of 1846, although confessedly and professedly a tariff for revenue, was, so far as regards all the great interests of the country, as perfect a tariff as any that we ever have had. If any interest was depressed under the tariff of 1846 it was the iron interest. I do not believe that this interest, as compared with other interests, had sufficient advantage under that tariff; yet, when we compare the growth of the country from 1840 to 1850 with the growth of the country from 1850 to 1860, the latter decade being entirely under the tariff of 1846, or the amended and greatly reduced tariff of 1857, we find that the increase in our wealth between 1850 and 1860 was equivalent to 126 per cent., while it was only 64 per cent. between 1840 and 1850, four years of which decade were under the tariff of 1842, known as a high protective tariff.

Mr. ALLISON then compared the tariff rates of 1842, 1857, and the existing rates, and says:

Our industries were generally prosperous in 1860, with the exception, possibly, of the iron industry. This was the statement of Mr. Morrill, of Vermont, on this floor during the discussions of the tariff in 1864.

The gentleman then read from a memorial presented to Congress by steel manufacturers, which contained this statement:

It was reserved to Pittsburgh to bring about the first substantial and enduring

success in the year 1860, and, encouraged by our example, numerous establishments have sprung into existence, as already indicated in this paper.

Mr. ALLISON then said:

This shows that under the revenue tariff of 1857, which imposed only an ad valorem duty of 12 per cent. on steel, a substantial success was achieved in the steel manufacture in 1860. I have read the language of the memorial.

RUSSELL VS. RUSSELL.

Hon. JOHN E. RUSSELL, of Massachusetts, in a speech made here last week, said:

The list of the bankruptcy courts for the last ten years in reference to the woolen manufacturers of Massachusetts will show how many of them are being paralyzed.

When the tariff commission bill was being discussed in 1882, and the present tariff law was being considered in 1883, both being in the Forty-seventh Congress, it was contended that the remedy was a high tariff on goods made of wool, and Hon. William A. Russell, of Lawrence, Mass., demanded a tariff which was absolutely prohibitory.

I remember his speech and with what satisfaction it was received by those who could see no prosperity in America except under laws which tended to isolate our people from the balance of the commercial world. Mr. Russell said:

There is no protection in a strictly revenue tariff—that is, to an American manufacturer; for if a revenue is to be derived from an imported article it must be imported, which certainly involves its manufacture elsewhere, and the rate of duty must be so fixed as to invite its importation. Therefore a tariff can not be adjusted on a single article to serve the double purpose of revenue and protection. It must be either at a point to check importation and thus protect, or it must be at a point low enough to admit importation and thus produce a revenue. That is, when fixed at a revenue point it ceases to protect, and when fixed at a protective point it ceases to yield a revenue.

This Mr. William A. Russell (not the Mr. RUSSELL who is with us to-day) represented a district largely engaged in wool manufactures, and in his speech dwelt largely, almost entirely, on wool and its great need of protection.

WOOL AS AN "INFANT INDUSTRY."

I find, in reading the speeches of Clay, Prentiss, and other great protectionists, that the theory upon which such laws were demanded was that it was proper to protect infant industries. The argument was that moderate protection should be extended to them until they had time to get established. Will some one who demands high tariff on wool tell how he now applies such a theory to that industry?

Our earliest histories tell us that the wool industry was in a flourishing condition before the flood. We read that Abel was a "keeper of sheep" when he was killed by his brother. In later years the flocks of Jacob and the other patriarchs are continually referred to in the Bible as sources of their great wealth. Ancient mythology tells the wonderful story of Jason's voyage in search of the Golden Fleece. At the dawning of Christianity we read of shepherds "watching their flocks by night."

Certainly, there are few industries which can boast of a higher antiquity than this.

Mr. Russell and his friends succeeded in retaining a high tariff on wool, and the law enacted at that time (March 3, 1883) has done much to depress the wool-manufacturing industry of his State. Some of our most eminent men have insisted that a low duty, or even free wool, would go very far towards re-establishing our factories of this character, and some insist that it would more than double the use of American wool and thus enhance its price.

Mr. Thomas G. Shearman, in an address upon the tariff, says:

The manufacture of woolen goods affords another illustration. It has always been grievously injured by a heavy tax on wool. Woolen goods are "protected" (that is, taxed) by a duty of 50 to 100 per cent.; but wool is also taxed at about the same rate, and machinery used in the manufacture is taxed 45 per cent. Now, it is impossible to manufacture first-class real woolen goods without mixing in them more or less of foreign wool. American wools will answer for a limited class of purposes, but for some other purposes they are, taken alone, of no good at all. The one great reason that has always been advanced for protecting our woolen manufacturers is that we ought to keep out English shoddy goods. The result of protection is that the woolen manufacturers of this country, being hindered by protection from getting real wool, use more shoddy and cotton in place of wool than any other manufacturers in the world. Real woolen goods are almost unknown here. First-class cloth is not made here at all. For every pound of wool in American woolen goods there is an average of three-quarters of cotton and shoddy.

Mr. David A. Wells, in speaking of the effect of the high tariff duty on wool, quotes a letter from Mr. George William Bond, of Boston, who is, he says, the highest authority on wool in this country.

Mr. Wells states:

Mr. Bond begins his letter by saying, "that high duties on wool are now maintained as a bounty to States which raise comparatively a small part of the clip, for the rest do not require it. The oft-repeated claim that the United States should raise all the wool she consumes is folly. You ask 'at what point does any tariff on wool begin to affect the price of the domestic clip?'" I should say at that point which shuts us out from the competition of the world, so that we are restricted in the range of our manufacturers. Our fine wools have always been higher, other things being equal, when we were able to import the wools of other countries at a low duty, or at no duty at all. When the tariff of 1857 was passed fine wools became virtually free, so that we went into full or nearly full competition with Europe.

What was the effect? Wools advanced immediately in the markets of production abroad 25 to 33½ per cent., so that we got them no cheaper than before, and the prices of domestic wools advanced. Now, this was an advantage to our manufacturers, as it enhanced the cost to the foreign manufacturers, so that ours could well afford to pay the advanced prices. Reduced to gold, the average prices of wool have been lower under the tariff of 1867 than they were under that of 1857, and I believe that, if wools were to be made free to-day, there would be no material decline in the value of our fine American wools.

Thus we see that, by enacting a duty which shuts us out from competition in the world's markets, we give our competitors the raw material enough lower to materially lessen the protection afforded by the duty on the manufactured article.

GRANT AND ARTHUR ON WOOL.

Although these views are vigorously contested by the Republicans who oppose this bill, yet we find that they are in full accord with the ideas and utterances of some of the most distinguished men of their party. President Grant, in his annual message to Congress, of December 7, 1874, maintains this idea in the words which I will read:

The introduction, free of duty, of such wools as we do not produce would stimulate the manufacture of goods requiring the use of those we do produce, and therefore would be a benefit to home production.

Congress having disregarded the recommendation of General Grant, eight years later President Arthur felt called upon to recall the subject of tariff reduction to its attention as a matter of urgent importance, and in his second annual message of December 4, 1882, we find this language:

It will be remembered that I urged upon the attention of Congress, at its last session, the importance of relieving the industry and enterprise of the country from the pressure of unnecessary taxation.

If the tax on domestic spirits is to be retained, it is plain, therefore, that large reductions from the customs revenue are entirely feasible. While recommending this reduction, I am far from advising the abandonment of the policy of so discriminating in the adjustment of details as to afford aid and protection to domestic labor.

But the present system should be so revised as to equalize the public burden among all classes and occupations, and bring it into closer harmony with the present needs of industry.

Without entering into minute detail, which, under present circumstances, is quite unnecessary, I recommend an enlargement of the free-list so as to include within it the numerous articles which yield inconsiderable revenue, a simplification of the complex and inconsistent schedule of duties upon certain manufactures, particularly those of cotton, iron, and steel, and a substantial reduction of the duty upon those articles, and upon sugar, molasses, silk, wool, and woolen goods.

I now read from the address before referred to, by the distinguished Republican, Thomas G. Shearman, of New York:

While it is true that wages generally are higher in this country than in England, it is not true that they are in all the protected industries. On the contrary, one of the results of the twenty-two years of steady protection which the cotton and woolen manufactures have had has been that the employers have finally succeeded in cutting down wages in this country below the rates paid in England.

I call special attention to the statement of Mr. Thomas G. Shearman that, at the time to which he refers, January, 1883, wages in the woolen manufactories in this country were below the rates at that time paid in England.

Why was it that in January, 1883, labor in woolen mills had fallen until it was lower than in England? It was not low tariff on woolens that brought about this condition of labor. The duty on wool at that time was at its height, and it is clear to any investigating mind that this unreasonably high duty on raw wool was the main and controlling reason for the unfortunate condition of labor in American woolen mills.

SENATORS WILSON AND ALLISON ON WOOL.

It is not necessary to repeat so clear a proposition. In the Forty-first Congress Mr. Lawrence, of Ohio, asked Mr. ALLISON with some sarcasm how a reduction of duty on wool could benefit the wool-growers. I will read a few expressions from Mr. (now Senator) ALLISON's reply. He said:

As the law now is the tariff upon fine wools of a character not produced in this country is 100 per cent. upon their cost.

* * * * * * *

Before the tariff of 1867 our manufacturers of fine goods mixed foreign fine wools with our own domestic product and thus were able to compete successfully with the foreign manufacturer of similar articles.

Mr. ALLISON then explained that the law of 1867 being prohibitory, these fine goods could not be produced so cheaply as in other countries; and—

Consequently mills that were formerly engaged in producing those goods have been compelled to abandon business or manufacture the coarser fabrics. If they could afford to manufacture those fine goods they would make a market, which we do not now have, for our fine wools to be mixed with other fine wools of a different character from abroad. This want of a market, as I understand, is the reason why our fine wools now command so low a price; there is no demand for them at home, and we can not export them in competition with fine wools grown in other countries.

All through the records of Congress I find the most enlightened Whig and Republican Senators and Representatives of New England have taken the same view with regard to wool that has been adopted by the Committee on Ways and Means. On February 26, 1857, Senator Wilson, in speaking on the tariff bill which was enacted on March 3 of that year, was very emphatic in demanding free wool for the benefit of the wool-growers as well as for the benefit of the woolen manufacturers.

Mr. Wilson said:

The manufacturers, Mr. President, make no war upon the wool-growers. They assume that the reduction of the duty on wool, or the repeal of the duty altogether, will infuse vigor into that drooping interest, stimulate home production, diminish the importation of foreign woolen manufactures, and afford a steady and increasing demand for American wool.

I would like to read the whole of Mr. Wilson's speech, as it bristles with facts and ideas which I commend to every gentleman on the Republican side of the House. I will, however, read one more paragraph. I read from page 343, Appendix, third session Thirty-fourth Congress:

Since the reduction of duties in England, since wool was admitted free, her woolen manufactures have so increased, so prospered, that the production of native wool

has increased more than 100 per cent. The experience of England, France, and Belgium demonstrates the wisdom of that policy which makes the raw materials duty free. Let us profit by their examples.

In the discussion and votes on the amendments to the tariff bill of March 3, 1857, I find that Mr. Wilson was fully supported by those distinguished Senators, Seward of New York and Sumner of Massachusetts. They seemed to fully concur with Mr. Wilson, that raw wool should be either free or subjected to a low tariff.

OTHER MANUFACTURERS DEMAND LOW TARIFF.

It appears that wool does not stand as an isolated instance of the advantages of reduction or abolition of duties.

A prominent manufacturer of shoes, in explaining the baleful effect of a high tariff upon his business, said:

If the materials used to make a shoe go up in price, labor always has to go down. Strikes result, as that seems to be the only way the laborer can protect himself from the encroachment of the employer. In a general strike in a shoe manufacturing center the operatives often gain temporary advantage, but with a supply greater than the demand it can not long continue.

Gentlemen, do not blame the manufacturer for trying to meet the market, or blame the operatives for resisting a reduction in wages. It all goes to show that the supply is greater than the demand, and that our market is not large enough.

This manufacturer then goes on to explain how the cost of shoes is increased by duties on the articles used in their manufacture:

I will mention two or three articles specially and speak of the others generally. Take, for instance, serges or lastings. The average duty on the serges or lastings used in the manufactures of shoes is 85 per cent.

Cotton, nails, tacks, buttons, threads, all have to be used in the make-up of a shoe, and they are protected. The iron from which we make our machinery is protected. If, as facetiously said, we make shoes of paper, that is protected too. In short, you have paid a duty on nearly every component part of the shoe which you are now wearing on your foot.

A removal of duty from all articles used in the manufacture of a shoe would be an advantage to employer and employed.

He then states as a fact within his own knowledge that Canada imposed an import duty of 25 per cent. on shoes, hoping thereby to be able to compete with the superior skill and the greater efficiency of the workman in the United States.

In June, 1872, hides were put on the free-list, and it was asserted that it would make them so cheap that farmers could not sell them for enough to repay the cost of curing and shipping. But this proved to be a mistaken prediction, as there has been no material change in the value of leather, while our exports of sole-leather have increased so decidedly that they are now twenty times what they were when hides were put on the free-list.

Mr. McCULLOGH. Will the gentleman yield for a question at this point?

Mr. WHEELER. Certainly. I would like to accommodate the gentleman.

Mr. McCULLOGH. Do I understand the gentleman to say that there is an 85 per cent. duty on wool?

Mr. WHEELER. I said that there was an 85 per cent. duty on the materials used in making shoes. But since the gentleman has asked the question, I will state that the tax on some wool exceeds an ad valorem duty of 85 per cent.

In fact, on the cheaper grade of raw wools the tax even exceeds 85 per cent. And it is this almost prohibitory tax which has prevented the woolen mills of New England from making money. The tariff tax made imported wools so high they could not be used profitably, and as American wools require to be mixed with foreign wools, the mills either had to run at a loss or suspend operations.

The gentleman then says that though they (the shoe manufacturers of the United States) are obliged to pay a high duty on every article that enters into a manufactured shoe, and contend against the Canadian import tax as well, they furnish as many shoes to Canada as ever. He then goes on to show what his craft could do were the burden of the duties on materials used in making shoes removed, and adds to the already accumulated mountain of proof which shows that it is the superior skill and greater productive power of our workingmen which secures them a higher rate of compensation than is paid for the character of work in other countries, and that this superior skill and greater capacity for production is actually weighted down by a high tariff. These are his words:

This alone proves what our shoe-manufacturing industry is capable of achieving if it can have a chance. There is no other country knows how or could make shoes as fast and as cheap as the Yankees, and all we need is one end of the bargain. If we are able to sell our goods when protected and protected against, if half the disadvantage we now stagger under were removed we could soon fix ourselves into a place where the world's buyers could not afford to purchase from any other market.

Mr. McCULLOGH. Then you are in favor of the New England States?

Mr. WHEELER. I am in favor of the New England States. I am in favor of the whole country. I will vote for a law to promote every interest of New England if it be possible.

But the tax on wool, since the gentleman has mentioned that point, I will state is easily ascertained. The selling price in Europe has run down as low as 10 cents a pound for the lower grades and the tariff is specific under the present law, and since 1883 has been 10 cents a pound. That is a hundred per cent.

Mr. McCULLOGH. The tariff on wool as it exists, as I read it from a comparison furnished us by the Committee on Ways and Means, is 40 per cent., as the gentleman will find by reference to page 32.

Mr. WHEELER. By the law of 1883, raw wools valued at 30 cents or less per pound are put down at 10 cents a pound.

The gentleman must be mistaken. He commits this error: He must have before him the clause which refers to woolen cloths, or manufactured woolens, the average rate of duty on which the committee propose to fix at 40 per cent.

Mr. McCULLOGH. I understood the gentleman to say 85 per cent.

Mr. WHEELER. I did not say the tax was 85 per cent.; I stated it was 10 cents per pound on one class of wools, and that it amounted to an ad valorem tax of 85 per cent.

COAL AND IRON ORE.

While it is undeniably true that the reduction or abolition of the duties may be most beneficial to the manufacturer and working-man engaged in the production of certain goods, the same argument will not apply to all our industries.

This is illustrated by the condition of our country regarding iron ore. Our deposits of this important mineral surpass in extent and quality those of any other country on earth, I might almost have said all other countries taken together. We mine our ores with great facility. Last year we produced the enormous amount of 11,300,000 gross tons of iron ore. The countries which seek to compete with us in this industry are Spain, Elba, Algeria, and Cuba. They have the cheapest slave and peon labor; they work out the ore at little cost and send it as ballast upon vessels which ply between those countries and our sea-ports, 90 per cent. of that product being entered in Baltimore and Philadelphia; and notwithstanding our present tariff of 75 cents per ton, our importations were about one-tenth our domestic product. They were 390,786 tons in 1885, 1,039,433 tons in 1886, and 1,194,301 tons in 1887.

The rapid development of the iron industry in the United States, particularly in the South, is attracting the attention of the world. We recovered from the slight depression of 1883 and 1884, and the total production of pig-iron for the last three years is reported as follows: In 1885, 4,529,869 tons; in 1886, 6,365,328 tons, and in 1887, 7,187,206 tons.

COST OF PIG IRON.

I have not been able to procure the data from which to ascertain what it costs on the average to make a ton of pig iron in the United States, but I find in the report of the Senate Committee on the Relations between Labor and Capital, made in 1885, the tables which I will read, as to the cost of a ton of pig iron at the mines at Birmingham, Ala. I read from the evidence of J. W. Sloss, on page 300, vol. 4:

Estimated cost of a ton of pig iron, based upon a run of twelve months.

2½ tons ore, at $1.60	$3.60
1.4 tons coke, at $2.90	4.06
½ ton limerock, at 90 cents	.30
Fuel for boiler	.20
Sand, water, supplies	.30
Repairs, taxes, and interest	1.19
Labor and salaries	2.25
	11.90

Estimate of labor on the foregoing.

Ore	$2.25
Coke	2.13
Limestone	.17
Fuel	.14
Repairs and materials	.77
Labor and salaries	2.25
	7.71
Total freights on stock to ton of ore, $1.50, two-thirds of which, we think, would be labor	1.00
	8.71

Our ore contains lime, which is the reason for the light amount used.

It will be observed that in both of these estimates the salaries of superintendents, etc., are included, as well as the item of repairs, taxes, and interest.

These estimates were made three years ago, and there is abundant evidence that at this time pig-iron can be produced in Alabama at a much lower price.

This witness said, page 96, that they paid $2.90 to $3 per ton for coke, while Pittsburgh furnaces got coke for $1.40 to $1.50.

He also said they were paying 25 cents more for coal than they could get it for if they mined it themselves.

Now, Mr. Sloss is a man of scrupulous integrity, and could never be induced to make a statement the accuracy of which could be questioned; but it is evident he was put before the committee by emphatic protectionists, because it was thought his evidence would have a favorable effect upon the Senators and be material for an argument against a reduction of the tariff on iron; and it must be admitted that he put in every conceivable element of cost which by any possibility could enter into the manufacture of this article, including sand, water, supplies, repairs, taxes, interest, labor, and salaries.

The tariff was then more than 57 per cent. on the cost, and he testifies that the reduction of 28 cents per ton had no effect on iron interests. His exact words were (page 293):

Q. What was or has been the effect of the slight reduction made in the tariff last winter?—A. I don't think that reduction has had any effect. It was not enough to amount to anything.

General Willard Warner, formerly a United States Senator, in his testimony before the committee, on pages 264, 265, and 266, gives quite an interesting account of his experiences in iron-making in Alabama. He said that the iron-making in Alabama, like all other new enterprises, had been going through a period of waiting, suspense, and trial which would test the nerves and try the pockets of the strongest. He said at that time (1883):

After ten years' experience I feel that I am only half equipped for the business.

In reply to inquiries regarding his views upon the tariff, he said (page 256):

I am very proud to say that I am and have always been a protectionist and willing to be called by that name, for I believe in the old Clay and Webster doctrine; I was raised in that school and I am a Whig yet. I say that the protectionists of the country, the intelligent protectionist sentiment of the country, does not ask that you shall raise more revenue by a tariff than is necessary for the legitimate expenses of the Government.

These are the opinions of one of the most prominent Republicans and avowed protectionists in the Southern States. His views, however, seem to coincide with those of the Democratic members of the Committee on Ways and Means who formulated this bill.

I now read further evidence before the committee (vol. 2, page 19):

NEW YORK, *September* 7, 1883.

THOMAS M. MILLER, sworn and examined.

By the CHAIRMAN:

Question. You are the general manager, I believe, of the Atlas Works in Pittsburgh?—Answer. I am.

Q. What do you manufacture there?—A. Rolling-mill machinery, glass-works machinery, and other kinds of heavy machinery.

And on page 24, in reply to a question, he testifies:

I am a manufacturer, and I believe in the tariff, but I believe only in such a tariff as will properly develop the country without making any class of capitalists too wealthy. I think our tariff on steel rails is about right; the tariff on iron is about right, but not properly placed. * * * I think the time is coming very rapidly when we can do without a tariff and can defy foreign competition; we probably could do it largely now.

The opinion of this Pittsburgh iron manufacturer upon the question of tariff is in striking contrast with those professed by Republicans on this floor. Both he and General Warner have the intelligence to see that the enduring prosperity of our country requires an export trade and foreign markets, the desirability of which has been so contemptuously alluded to by the opponents of this measure.

In order to give other approximate ideas of the cost of pig-iron I will state that on page 105, volume 2, of the same report, I find that the late John Roach, the noted ship-builder, testified upon this point in these words:

Q. What is the cost in England of a ton of pig-iron?—A. About $13.50 to $14,

and on the next page he added:

From that up to $15 a ton.

Q. Where is pig-iron made the cheapest in this country?—A. I have an interest in North Carolina where it can be made for $16 a ton. I have an interest in Virginia * * * where they are going to make it for $14 a ton.

I find the average invoice cost of the pig-iron imported last year to have been $15.58 a ton, the duty on which was $6.72 a ton, making the total cost to the importer, not including freight or any other expenses, $22.30 a ton. I also find that the average price of "No. 1 anthracite foundry pig-iron" in Philadelphia for January, February, March, and up to April 16, has been $20.56 a ton.

No eloquence of words can add one iota of weight to the lesson taught by these impressive figures.

The recent developments in the Alabama iron district are remarkable. In 1887 this State produced 292,762 tons; and Alabama and other Southern States are but just beginning this industry. Within two years they have commenced the erection of more than thirty large blast-furnaces, only eight of which were completed at the beginning of this year, four of which were in Alabama.

In January, 1888, twenty new furnaces were in course of construction in Alabama, three in Tennessee, two in Maryland, and one in Virginia.

The New York Sun of last week in speaking of this says:

Down in the South there is a whirlwind of new industries and potent speculation. No revival—no restoration of commercial strength and prosperity—but the birth spontaneous and tremendous of a new people. No longer the sluggish cultivation of the earth, the hand-to-mouth acquirement of life's sustenance by the many, and selfish affluence of the few; but a new and tumultuous life, irresistible, self-multiplying, overwhelming. Alabama is like a vast Leadville of activity and excitement, only her foundations are more enduring than the richest mines of gold and silver.

In 1887 we produced 120,146,739 tons of coal, and exported but a trifle over 1,000,000 tons, about 1 per cent. The coal we export is sent to Canada, the West India Islands, and adjacent ports. In 1887 England produced 162,119,812 tons of coal, and in addition to that shipped in British steamers for their own use she exported 24,454,607 tons, about 15 per cent.

In 1887 England produced 14,110,013 gross tons of iron ore and imported 3,762,931 gross tons. In 1887 England produced 7,441,927 gross tons of pig-iron against 6,417,148 gross tons (valued at $121,925,800) in the United States; but Great Britain exports iron and steel to the amount of $125,000,000, nearly eight times as much as is exported by the United States. In the production of steel the United States has exceeded Great Britain for the years 1886 and 1887. During the last year we produced 3,339,071 gross tons, valued at $103,811,000, while Great Britain produced only 3,145,507 gross tons.

The total value of the iron and steel produced in the United States in 1887 in the crude state, or first stage of manufacture, and excluding all duplications, was $171,103,000. I have prepared a table giving, so far as I am able to do so, the world's annual production of coal, iron ore, pig-iron, finished iron, and steel. For the Continental countries of Europe, except Russia, the figures represent metric tons of 2,204 pounds; for all other countries, including Russia, Great Britain, and the United States, the figures represent gross tons of 2,240 pounds. As the difference between the two tons is so small it is not necessary for purposes of comparison to change them in this table. The product is given for the latest date attainable, and all are for the year 1887, except where other years are indicated in the foot notes. The column headed "Finished iron" does not include castings, the product of foundries, as this class of products is not accounted for in the United States statistics; the column therefore refers only to the products of rolling mills and forges, such as bars, rods, iron rails, plates, sheets, structural iron, axles, nail plates, etc.

Country.	Coal.	Iron ore.	Pig-iron.	Finished iron.	Steel.

* 1886. † Estimated. ‡ 1882. § 1885. ‖ 1884.

This tabulated statement should be encouraging to every American.

It shows that the United States makes more steel and more finished iron than any other country on earth. It shows also that, excluding Great Britain, we make more steel than is made by all the rest of the world combined. It also shows that of each of the articles, coal, iron ore, and pig-iron, we produce almost as much as Great Britain, and, if we omit Great Britain, our production of each of these articles is nearly as great as the combined production of all the other peoples on earth; and it may also be noted it thus appears that our situation to the rest of the world in coal and iron production is very similar to our position regarding cotton, and yet last year we imported iron and steel to the amount of $56,420,607.

Notwithstanding our wonderful resources and our unlimited supply of coal and iron, it is painful to see that our exports of manufactured iron have steadily decreased during the last six years. In 1882 they were $22,348,834; 1883, $22,716,040; 1884, $19,290,895; 1885, $16,622,511; 1886, $14,865,087, and in 1887, $16,235,922. They consist chiefly of finished articles, such as locomotives and other steam engines, boilers, stoves, machinery, car-wheels, castings, fire-arms, printing-presses, hardware, axes, saws, shovels, scales, sewing-machines, and similar finished products. Last year we exported 55 locomotives. In addition to the above we export an average of about $2,000,000 worth of agricultural implements.

In 1887 we exported 1,323,701 tons of coal, mostly to Canada, Mexico, and the West India Islands.

It must be evident to any thinking person that the problem before the American Congress is to devise some means to find an export trade for our immense iron manufactures.

Immediately south of us we have Mexico, the Republics of Central and South America, and Brazil, whose people annually buy $600,000,000 of the articles of which we produce more than we can consume. We should endeavor, by any and all reasonable modifications of our laws affecting trade with foreign countries, to establish trade relations with these people so as to furnish them these $600,000,000 of the surplus results of our industrial and mechanical superiority to the rest of the world. They need our manufactured articles and, in turn, we need their gold, silver, coffee, and various other products.

DUTIES COLLECTED SINCE 1791.

Prior to 1821 the amounts of dutiable goods imported were not kept separate from those which were free of duty, and it was not until 1867 that separate accounts were kept of the quantity and value of each kind of imported commodities entered for consumption, with the respective amounts of duty collected thereon.

I now call attention to a table showing total imports for each year

from 1791 to 1820, the total duties collected, and the average ad valorem rates of duty, based upon the aggregate net importations. This does not include imported goods which were afterwards exported.

Net imports and duties collected thereon from 1791 to 1820.

Year ending—	Value of net imports.	Amounts of duty collected.	Average ad valorem rates of duty.	Year ending—	Value of net imports.	Amounts of duty collected.	Average ad valorem rates of duty.
Sept. 30—			P. ct.				P. ct.

a Nine months.

I now present a table which shows the net value of imports entered for consumption for each year from 1867 to 1887, inclusive; the articles which are free of duty and those dutiable being in separate columns. They also show the total amount of duty collected, the average ad valorem rates upon goods which are dutiable, and the last column shows the average ad valorem rates upon the aggregate importations whether dutiable or free.

Imports entered for consumption and duties collected thereon.

Year ended June 30—	Values.			Amounts of duty collected.	Average ad valorem rates of duty on—	
	Free.	Dutiable.	Total.		Dutiable.	Free and dutiable.
					Per ct.	Per ct.
1867	$17,033,130	$361,125,553	$378,158,683	$168,503,750	46.67	44.05
1868	15,147,618	329,661,302	344,808,920	160,532,779	48.63	46.26

These tables will be found of great value to the student of the important question of tariff taxation, as they will enable him to see at a glance the amount of our imports from foreign countries annually since a very early period in the history of our Government under the Constitution, together with the amount of the duty collected, and the ad valorem rate of that duty. They will also be found instructive in that they show how steadfastly the Democratic party has been the party of low taxation, and that the highest taxation has always been enforced when the antagonists of the Democracy were in power.

WHAT INJUDICIOUS PROTECTION EFFECTS.

I have attempted, Mr. Chairman, to indicate a few instances of the evils of the principle of protection when carried to the point demanded by the Republicans of this House, but the deplorable consequences of the unlimited application of that principle to the practical affairs of life have been so forcibly depicted by a great master of broad generalization, whose unfinished work stands to-day an uncompleted monument to his industry, erudition, philosophical spirit and genius, that I can not do better than quote him. I read from Buckle's History of Civilization, Vol. I, pages 438, 439.

Referring to a proposed inquiry into the causes of the striking difference in the fortunes of England and France, he says the inquiry will show:

> That in politics, no certain principles having been discovered, the first conditions of success are compromise, barter, expediency, and concession. It will show the utter helplessness, even of the ablest rulers, when they try to meet new emergencies by old maxims. It will show the intimate connection between knowledge and liberty; between an increasing civilization and an advancing democracy. It will show that, for a progressive nation, there is required a progressive polity; that, within certain limits, innovation is the sole ground of security; that no institution can withstand the flux and movements of society, unless it not only repairs its structure, but also widens its entrance; and that, even in a material point of view, no country can long remain either prosperous or safe in which the people are not gradually extending their power, enlarging their privileges, and, so to say, incorporating themselves with the functions of the state. * * *
>
> The cause of this difference (between England and France) is to be sought in the existence of that spirit of protection which is so dangerous and yet so plausible that it forms the most serious obstacle with which advancing civilization has to contend. This, which may be truly called an evil spirit, has always been far stronger in France than in England. Indeed, among the French it continues even to the present day (1857) to produce the most mischievous results. * * * It is this which induces them to retain restrictions by which their trade has long been troubled, and to preserve monopolies which in our country a freer system has effectually destroyed. It is this which causes them to interfere with the natural relation between producers and consumers; to disturb the ordinary march of industry, and, under pretence of protecting their native laborers, diminish the produce of labor by diverting it from those profitable channels into which its own instincts compel it to flow.
>
> When the protective principle is carried into trade these are its inevitable results. When it is carried into politics there is formed what is called a paternal government, in which supreme power is vested in the sovereign or in a few privileged classes. When it is carried into theology it produces a powerful church and a numerous clergy, every opposition to whom is resented as an insult to the public morals. These are the marks by which protection may be recognized.

Who would have the industry, the politics, and the society of the United States exhibit these badges of oppression and inequality?

THEY SEEK THE LAND OF LIBERTY.

Thousands of ships spread their white sails to the winds and speed across the ocean bearing brave men with strong arms and stout hearts, flying from the Old World to the New.

They leave a country where the tyrannical dominance of family is

maintained by place and title, manor and earldom, and the autocratic power of crown and kingdom.

They fly from harsh and cruel rulers, who are

Fierce in their native hardiness of soul,
True to imagined right above control—

They come here where all are freemen, where our nobility, the nobility of America, are men measured by intellect, honor, and integrity, and not by lineage. That, Mr. Chairman, is the kind of nobility which it is the duty of the party controlling this Government to perpetuate.

Why do these people come to our shores? It is not a question of higher wages in America. It is because—

Here shall patriot Truth her glorious precepts draw,
Pledged to Religion, to Liberty, and Law.

It is because here they can acquire and be protected in the enjoyment of their own homes, where, surrounded by their families, they can dwell in peace and comfort. They come because this is a land of liberty and freedom. It is for that the people of the Old World flock by thousands and hundreds of thousands to great, grand, free America.

My country, 'tis of thee,
Sweet land of liberty,
Of thee, I sing.

All the world loves liberty; all people love liberty. Everything endowed by our Creator with animated life loves to be free. The great father of the Democratic party said:

The God who gave us life gave us liberty at the same time.

which idea has been thus versified by the poet—

The love of liberty with life is given,
And life itself the inferior gift of Heaven,

The eagle who soars to the starry heights and looks down upon the peaks of the lofty mountains, loves liberty. The fierce Nubian lion, monarch of the forest where he dwells, loves nothing as he loves liberty. The three hundred Spartans who lie buried at Thermopylæ, gave up their lives for the sake of liberty. The soldiers of all ages who have fallen while leading the front of battle, or who died gloriously contesting the enemy's onslaught, gave up their lives in the cause of liberty.

And the graves of the dead, with the grass overgrown,
May yet form the footstool of liberty's throne.

The oppressed of monarchies and imperialisms break from the restraints endured during ages of despotism and come to the New World because here they find liberty of conscience, liberty of action, liberty of person.

On the light of Liberty they see arise the light of Peace.

Through the mountain fastnesses of Italy there often rings the echo of a Neapolitan song—

We'll leave this land where despots reign
And sail across the sea,
And over there sing the refrain
Of lasting liberty.

They come to us because here they find no titled nobles to consume the fruits of honest labor, and upon reaching these shores they stand before all equal to all, and their hearts swell in triumph at the lofty idea:

Thine, Freedom, thine the blessings pictured here,
Thine are those charms that dazzle and endear.

Even though poor and humble, their offspring may aspire to a dignity and honor far above the proudest and most powerful monarch under the canopy of heaven. They seek homes in this country because, whether they possess millions or are patient toilers of the field, they are bound by no caste nor class, owe homage to no prince nor prelate, and call no man master. [Applause.]

The Tariff.

SPEECH

OF

HON. GEORGE D. WISE,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 9, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. WISE said:

Mr. CHAIRMAN: The President in his last annual message makes a clear and forcible presentation of the condition of our national finances, and urges upon the attention of Congress the necessity of some remedial legislation. He tells us that—

The amount of money annually exacted, through the operation of present laws, from the industries and necessities of the people, largely exceeds the sum necessary to meet the expenses of the Government.

Not less explicit was the language of his predecessor, who, when addressing himself in his second annual message to the same subject, said:

I heartily approve the Secretary's recommendation of immediate and extensive reduction of the annual revenues of the Government. It will be remembered that I urged upon the attention of Congress at its last session the importance of relieving the industrial enterprises from the pressure of unnecessary taxation.

But the condition which confronts us is more fully exhibited by the Secretary of the Treasury in his statement of the receipts and expenditures of the Government for the last and the current fiscal year. From this source it appears that the revenues from duties imposed on commodities imported into the country for the fiscal year ended June 30, 1887, amounted to $217,286,893.13; from internal taxes to $118,823,391.22, and from all other sources to $35,292,993.31, making as the aggregate of receipts from all sources, $371,403,277.22. For the same period the ordinary expenditures, including the interest on the public debt and the requirements of the sinking fund, were $315,835,428.12, leaving a surplus of $55,567,849.54. For the current fiscal year the revenues, actual and estimated, are $390,000,000, while our expenses, actual and estimated, amount to $309,000,000, the excess of receipts over expenditures being $81,000,000. It is estimated that at the end of the present fiscal year the surplus in the Treasury will exceed $150,000,000, which, with future accumulations, if applied to the reduction of the debt and the payment annually of the interest thereon, will be sufficient for the extinguishment of all the outstanding 4½ per cent. bonds at the date of their maturity in 1891, and still leave over sixty millions.

If existing laws be continued in force by which such a vast surplus is being annually taken into the Treasury, it is apparent that the result will be disastrous to all the industrial and commercial interests of the country. Ruin and bankruptcy are the inevitable consequences of persistence in the policy which we are pursuing, and if we remain in a state of inaction a financial crisis will come more withering and blighting in its effects than the cyclone. The fact stares us in the face that the circulation of the country, to the great injury of its business, is being needlessly withdrawn from the channels of trade and from productive enterprises, "threatening financial disturbance and inviting schemes of public plunder." The people of the country are bearing a burden of taxation for which no justification exists and no excuse can be rendered. However vigorous may be our disputes in building up and tearing down theories, there is not a Representative here who will dare proclaim himself in favor of the continuance of needless exactions and the avoidance of the consequences of such a policy by an increase of expenditures. The people demand relief, and our lingering will be pursued with a whip of scorpions.

In the consideration of the question of the reduction of revenue and taxation we come in contact with conflicting opinions, some favoring the accomplishment of the object by a revision of the tariff and others by the abolition of internal taxes. The pending bill is the result of compromise, and embraces both a reduction of tariff and internal taxes. I propose to speak of each of these sources of national revenue in turn, and to present such views as the occasion seems to call for.

The tariff is an old question, and from the foundation of the Government has been the principal issue in the division of the people of the country into opposing parties. It is the question in which our constituents are more deeply interested than any other, because it has the closest connection with their interests and affairs; and when we reflect that not only the revenues of the Government, but as well the wages of labor and the interests of capital may be affected by changes in the existing tariff, the thought should cause us to appreciate the gravity of the responsibility resting upon us.

Touching the reduction of revenue by changes in the rates of duty imposed upon importations, we are met by two opposing theories, entertained respectively by the advocates of a tariff for revenue and a tariff for protection. The champions of the restrictive system assert that manufactures are dependent upon its maintenance for their existence and that we are indebted to it for a diversification of our industries.

And in continuation of this line of argument the attempt is made to persuade the farmers that protection is beneficial to them because it affords a home demand for agricultural productions and surplus agricultural labor. These assertions are opposed to the teachings of the most profound writers on political economy and are contradicted by the evidence derived from experience. The division of labor and multiplicity of employments arise from natural causes, and are not dependent upon governmental action. It is true that you may by legislation encourage the investment of capital in enterprises, which otherwise would not receive attention; but industry, forced out of its natural channels, flows to less advantage. It is not one of the functions of government to control thei nterests of its citizens, and the attempt to give direction to the employment of capital and labor is opposed to the dictates of wisdom.

In the first Congress which assembled under the Constitution of the United States, Mr. Madison, of Virginia, when addressing himself to the subject of restrictions upon commerce, used this very strong and forcible language:

That if industry and labor are left to take their own course, they will generally be directed to those objects which are most productive, and this in a more

certain and direct manner than the wisdom of the most enlightened legislature could point out. Nor do I think the national interest is more promoted by such restrictions than that the interest of individuals would be promoted by legislative interference, directing the particular application of its industry. All are benefited by exchange, and the less the exchange is cramped by Government, the greater are the proportions of benefit to each. The same argument holds good between nation and nation and between parts of the same nation.

The surplus arising from the application of his talents and energies to that pursuit for which he is best adapted enables an individual to obtain larger supplies of the necessaries and comforts of life than could be procured by the attempt to produce them himself. In this respect national does not differ from individual economy.

Some of the fathers of the Republic favored the encouragement and protection of manufactures as one of the elements of national strength, believing that the safety and interest of the people required independence for essential supplies. But this principle has been pushed to the very verge of folly, until it has found its annunciation in the false dogma that every article is to be prohibited from entry into the ports of the United States which can be produced at home. However unequal may be the conditions surrounding the cost of its production in this as compared with foreign countries, they must be overcome by bounty and tribute. The wealth and prosperity of the country are promoted by fair exchanges, and if you will tear down the walls of exclusion erected around our coast, and let in the fresh breezes of ocean, languishing commerce will soon be revived by its invigorating influence. [Applause.]

Manufactures existed and flourished in this country long anterior to the date of the passage of the first national tariff act.

Bishop, in his History of American Manufactures, speaking of the colonial period, says:

> These qualities, so necessary to success in all practical arts, were conspicuous in the American character. A varied and dexterous mechanical industry was almost universal. Upon this basis had been long growing up a comprehensive scene of domestic household manufacture from native materials of great aggregate value, which had materially lessened the annual balance against the colonies and had promoted the comfort of all classes.

And again he says:

> Even at the present day many countries which were reckoned elders in the family of nations ere the ring of the ax was heard in the forests of America are essentially less independent in regard to some products of manufacture than were the American colonies at the period of the Revolution.

He gives an account of a glass-house established at Jamestown, in Virginia, in 1608, and Beverly, in his history of that State, tells that—

> A salt-work was set up at Cape Charles, on the eastern shore, and an iron-work at Falling Creek, in Jamestown River, where they made proof of good iron ore and brought the whole work so near a perfection that they writ word to the company in London that they did not doubt but to finish the work and h .ve plentiful provision of iron for them by the next Easter.

Bishop, speaking of the progress of cotton, woolen, and linen manufactures in the Northeastern and Middle Colonies, says:

> It may be questioned if the people of that day were not as really independent of other countries for such necessaries as their descendants at present.

As to whether manufactures can flourish under a tariff levied for revenue only we are not without experience. The "Walker tariff," which was enacted in 1846, and continued in operation for a period of fourteen years, was emphatically a revenue tariff. During that period in our history the wealth of the nation increased 126 per cent., whereas from 1840 to 1850 the increase was only 64 per cent.; from 1830 to 1840, 42 per cent., and from 1820 to 1830, 41 per cent. Our agricultural products increased 95 per cent. from 1850 to 1860, and our manufactures 87 per cent., being in both cases nearly double any preceding ratio of increase. This statement I take from a letter addressed by Hon. R. J. Walker, in 1867, to the people of the United States. During the decade from 1860 to 1870, under a high tariff, the national wealth increased on estimated values 87 per cent., and on assessed values only 16 per cent. From 1870 to 1880 the increase was only 20 per cent.

One has but to read the history of American manufactures from the earliest period to become convinced of the falsity of the pretense that they can not exist in this country without the aid of high or protective duties. But the advocates of this system rely mainly upon the difference in the rate of wages in this and competing countries as a justification for its continuance, and our laboring classes are told that a reduction of duties must be followed by a reduction of wages. This argument is very captivating to the workingman. He is made to believe that the comforts of his home and sufficient sustenance and clothing for his family are dependent upon the maintenance of the system.

The Democratic party is under the obligation of a solemn pledge that the necessary reduction in taxation shall be effected—

> without depriving American labor of the ability to compete successfully with foreign labor, and without imposing lower rates of duty than will be ample to cover any increased cost of production which may exist in consequence of the higher rate of wages prevailing in this country.

The wage-earners of the nation should be the special objects of our care and consideration, and they shall be deprived of none of the advantages which they enjoy by any action of mine. I shall strenuously resist every such change in our fiscal system as will, in my opinion, entail upon them the loss of employment or diminish the rewards of their industry.

But I can not give my consent to the proposition that the wages of labor are regulated by or dependent upon the existence of protective duties. That they are higher in this than in other countries I am ready to concede; but our workmen are indebted for this advantage to other causes than the tariff—chiefly to the abundance of cheap and fertile lands. In the language of another, "wages in the States are determined, not in the factory, but on the farm." By the expenditure of a very small sum of money a man can obtain a sufficient quantity of rich and productive land, upon which, with moderate effort, he can dwell with his family in plenty and peace. The rewards of steady and frugal industry will be sufficient to supply all the necessaries of life, and many of its luxuries. Besides, every man feels a peculiar pride in the thought of ownership of the soil upon which he dwells.

The citizen and immigrant can only be lured from this tempting prospect by the bait of very remunerative wages. I have neither the time nor the inclination to take a flight among theories; but the most satisfactory illustration of the principle for which I am contending is furnished by the fact that ordinary wages during the colonial period were higher here than in Europe. It is clearly shown by statistics that they have steadily advanced in this country from 1830 to the present day, through all changes in our fiscal system, with now and then slight fluctuations; and this steady movement towards an increase was not interrupted by the Walker revenue tariff. In Great Britain, where there is a nearer approach to free trade than in any other country, the toiling masses have experienced an improvement in their condition no less gratifying than that which has been witnessed in this country.

In another connection I propose to give some data in confirmation of this assertion, but will insert right here the statement, that in some tables prepared by George Lord, president of the Manchester Board of Trade, it is shown that wages in Great Britain, in a few of the most important industries, averaged an advance from 1850 to 1883 of over 39 per cent.

But the inability of our workingmen to occupy the fields of industry without the aid of defensive duties is not to be inferred from the fact that they receive higher wages than their foreign competitors. Other conditions are to be taken into the account before that conclusion can be adopted. The efficiency of labor is an important factor in the determination not only of the rate of its compensation but of its ability to maintain a successful competition. In considering the question of the cost of production the distinction between wages and the cost of labor is not to be overlooked. The idea involved in this proposition is so clearly presented in the sixteenth report of the chief of the bureau of statistics of Massachusetts that I will give it in full:

> The sharp competition of the present day renders it necessary for employers to watch carefully that important element in production, the cost of labor as represented in wages; and in considering the question of labor cost the rate of wages is generally taken as the standard. We venture the suggestion, however, that it is the sum of wages, and not the rate, which constitutes the true money standard of cost of labor, and we carry this suggestion to its logical outcome in the following proposition: In proportion as capital, through machinery, becomes more effective, the relative number of laborers is decreased in proportion to product, the rate of wages is increased, and the sum of wages is reduced; that is, lower cost is compassed by way of higher wages.

And to the same effect is the following, from a recent work on political economy by Francis A. Walker:

> It is probably true that as a rule the highest paid labor is that which costs the employer least. This is evidenced by the two facts that, generally speaking, employers when they reduce their force discharge their lowest paid laborers first, and that, generally speaking, it is in the countries where the lowest real wages are paid which feel the necessity of imposing commercial restrictions to keep out the products of others. Thus India, where the cotton spinner gets only 20d. a week, is flooded by the cottons of England, where the spinner receives 20s.

And he gives it as a rule without exception that—

> That country in which the higher wages are paid offers its products at lower prices than the competing products of other countries where the lower wages are paid.

The lands in South Russia are as rich and fertile as those in any part of the world. They are cheaper than in this country, and the cost of labor per day there is scarcely one-fourth of the cost here, and yet with these undeniable advantages in favor of the Russian, to which must be added an additional advantage in the cost of transportation of his grain, the American holds and occupies the London market against him. In this competition the pauper succumbs to the high-priced labor.

The whole story is told in the following, taken from an address by Mr. Moore before the Tariff Commission:

> The competition is between a state of intelligence and abject ignorance; between the employment of skill and science against a semi-state of barbarism; between a class whom labor elevates and makes the peer of the proudest of the land against a class whom labor degrades. By the aid of science the land in our Western States is made to yield its fullness. By the aid of skill and employment of labor-saving machinery, an outlay of money on a thrashing-machine, two men in Illinois will do the work of perhaps one hundred men during twenty-four hours who still employ the traditional flail of four thousand years ago. Is it, therefore, a wonder that our farmers can compete in grain in London with South Russia? The eventful and doubtful competition that our farmers may dread is not that of the pauper wages of Russia, Turkey, and Egypt, but of the still higher wages paid in Australia than in America. From that portion of the world, whose inhabitants are of the same race as our own, who have the means of employing science and skill, a more dreaded competition will spring up, and the only advantage we have is a nearer market.

But for the sake of the argument let it be conceded that the manufacturer is entitled to receive a certain amount of protection to neutralize the difference in the cost of production occasioned by the higher

rate of wages prevailing in this country. I undertake to say that investigation will show that no such rates of duty as are at present imposed on importations are required for the purpose indicated, and in proof of this I take the following extract from a speech delivered by Hon. JOHN G. CARLISLE, in March, 1882:

According to the statistics of the production of iron ore, as given us by the census of 1880, the amount paid for labor of all kinds was $1.35 for each ton produced. It requires 2 tons of ore to make 1 ton of pig-iron, so that the cost of labor in the quantity of ore necessary to make 1 ton of pig-iron is $2.70. According to the same authority, the blast-furnaces in the United States produced during the last census year 3,781,021 tons of pig-iron, and paid for services of all kinds the sum of $12,680,703, or $3.35 for each ton. It takes 1.3 tons of pig to make 1 ton of bar-iron, so that the total cost of labor in the pig necessary to produce 1 ton of bar is $4.35. The various products of the rolling-mills are so intermingled in the census reports that it is impossible to ascertain from the tables what it costs for labor to produce a ton of merchant bar-iron by itself, but during the present session of Congress, when the committee appointed by the New York tariff convention came before the Committee on Ways and Means they were accompanied by a gentleman who stated that he was the president of the Amalgamated Iron and Steel Workers' Association of the United States, a labor organization, and, in response to a question put by me, he said that the amount paid to labor for making 1 ton of merchant bar-iron was $13. Accepting that as a correct statement, we have the following figures:

Cost of labor in 2 tons of iron ore	$2.70
Cost of labor in 1 ton of pig-iron	4.35
Cost of labor in 1 ton of bar-iron	13.00
Total cost of labor	20.05

Now, Mr. Chairman, the duty on merchant bar-iron under the existing law is $33.60 per ton, or $13.55 more than enough to pay the cost of all the labor expended in its production from the time the crude material leaves the earth until it is sent from the mill as a finished article. And, besides this, there is a duty of 20 per cent. on the ore, equal to $1.10 for 2 tons, and a duty of $7 per ton on the pig, making the aggregate duty upon all these forms of product $43.80.

In this calculation no account has been taken of the advantage enjoyed by home producers over foreign rivals in consequence of ocean freight and insurance.

Taking the figures furnished by the census of 1880, we find that the labor cost of every $100 worth of finished product of woolen fabrics was $22. Assuming the cost of the so-called pauper labor of Europe to be one-half of our own, it is apparent that a duty of 11 per cent. would be amply sufficient to equalize the cost of production. Under the existing tariff the duties on woolen cloths—hawls, range from 50 to 80 per cent. and from 80 to 115 per cent., according to quality; on cotton-warp dress goods, from 60 to 73 per cent.; on all-wool dress goods, from 70 to 88 per cent.; and on ready-made clothing, from 49 to 85 per cent.—in almost every instance placing a greater burden upon the poor than upon the rich. These figures are enough to kindle the fires of indignation in the hearts of the consumers of the country. This foul wrong, Republicans, you conceal under the name of "protection to American labor."

In concluding what I have to say on this point, I venture the assertion that by the application of the same test to all the dutiable articles embraced in the schedules of the existing tariff it will be found, in a very large majority of cases, that the duties imposed are not required to compensate manufacturers for any difference in the cost of production occasioned by the higher rate of wages prevailing in this country.

(For comparative cost of production, including the cost of labor therein, in a ton of coal and pig iron, respectively, in Great Britain and several of the States of the Union see appended tables furnished by the Commissioner of Labor.)

Mr. Blaine, in his letter accepting the Republican nomination for the Presidency in 1884, tells us that in 1860 the true value of all the property in the States and Territories (excluding slaves) amounted to $14,000,000,000, and that its value, as returned by the census of 1880, amounted to the enormous aggregate of $44,000,000,000. He attributes this wonderful and phenomenal growth during the period between 1860 and 1880 to our present revenue system. John Bright addressed a meeting of his admirers in Birmingham, England, just one year prior to the publication of this letter from the pen of Mr. Blaine. On this occasion this ardent advocate of free and unrestricted intercourse between the nations spoke of England's rapid growth in industrial wealth, and her advancement in all the elements of national strength and greatness. He showed that the wages of labor had steadily advanced, and that the condition of the workingman was in every respect better than it had formerly been.

In confirmation of these assertions I will here present a description of the comparative condition of England in 1840 under protection and in 1878 under free trade, published by Augustus Mongredien in 1881.

POPULATION.

In 1840 the population of the United Kingdom was 26,487,000; in 1878 it was estimated at 33,799,000. Increase, 7,312,000. In the former year London contained 1,700,000 inhabitants; in the latter 3,800,000; increase, 2,100,000. So that the growth of London during the last thirty-eight years alone largely exceeded the total growth it had attained during the previous thousand years. In 1878 the emigration of British subjects to America, Australia, and all other places comprised 112,902 persons. The number who embarked at our ports for those places was much greater, but it consisted largely of emigrants from Germany and other continental states, who took their way through this country for the convenience of passage. On the other hand, the number of emigrants in 1878 was 77,951, many of them being returned emigrants; so that, on the balance, the yearly exodus from the United Kingdom is much smaller than is generally imagined.

TRADE.

In 1840 the foreign trade of the United Kingdom (combined exports and imports) amounted to £172,133,000, equivalent to £6 9*s.* 11½*d.* per head of the population. In 1878 it amounted to £614,255,000, or £18 3*s.* 6*d.* per head, a marvelous rate of increase! In the United States the proportion of foreign trade to the population is £4 13*s.* per head; in France it was, in 1876, £8 3*s.* per head; in Russia it was, in 1876, £1 9*s.* per head.

REVENUE.

The public revenue for the year 1840 was £51,850,000; for the year 1878, £81,598,000; and the latter sum presses far less heavily on the people now than did the former sum on the people then. The income tax in 1843 (the first year of its incidence) yielded, for every penny in the pound, £801,000. In 1878 the taxable incomes had so increased that every penny in the pound of income tax yielded £1,947,000.

Consumption per head of the population of the United Kingdom in 1840 *and* 1878 *of the undermentioned articles.*

Articles.	1840.	1878.
	Pounds.	*Pounds.*
Tea	1.22	4.66
Sugar (raw)	15.20	48.56
Coffee	1.08	.97
Rice	.90	7.50
Currants and raisins	1.45	4.49
Tobacco	.86	1.45

"The immensely improved condition of the working classes of this country is clearly shown by the above table, for the wealthy and middle classes must have consumed nearly as much per head of tea, sugar, etc., in 1840 as they do now, and therefore it is chiefly among the wage-receivers of the community that the largely increased consumption has been distributed."

Wealth.—An eminent statist, Mr. R. Griffen, has by a series of elaborate calculations arrived at the conclusion that in 1875 the total capital of the people of the United Kingdom might be reckoned as a minimum at £8,500,000,000. "This," he says, "is the capitalized value of the income derived from capital, using as far as possible the data of the income-tax returns as the basis of the estimate, and with the addition of an estimate of the amount of capital in use not yielding an income."

By a similar process he has made out that the total capital of the country in 1865 was £6,100,000,000, and consequently that during the intervening ten years the national estate had improved at the rate of £240,000,000 per annum. In 1875 the amount assessed to the income tax was £571,000,000; in 1865 it was £396,000,000. Now, in 1843, when the income tax was imposed, the amount assessed to it was only £251,000,000. Let us, then, take the proportion between the taxable income and the national capital, as given by Mr. Giffen, for the two periods 1865 and 1875, and apply it to the £251,000,000 taxable income of 1843, and we shall find that it gives £3,880,000,000 as the total capital of the country in 1843. This, of course, is only an approximate valuation, but it can not be far wrong, and it leads to the conclusion that the capital of the country has far more than doubled since 1840, while the increase of the population has only been 28 per cent. This enormous mass of wealth makes our national debt an easy burden compared with its pressure in 1840, and the process of accumulation is still going on at the average rate of at least £200,000,000 per annum.

Commercial marine.—The fluctuations in our progress under this head are curious and characteristic. In 1840, the tonnage of the registered vessels of the United Kingdom was 2,571,000 tons. In 1849, when our protective navigation laws were repealed, the tonnage was 3,096,000, an increase, under the old system, of 525,000 tons in nine years. In 1849 our trade was thrown open to the shipping of all the world, and our ship-owners and ship-builders were told that they would be swept away by the compe ition. What happened? In 1858, nine years after the repeal of the navigation laws, the tonnage of the registered vessels of the United Kingdom was 4,325,000, an increase of 1,229,000 tons over the tonnage of 1849. So that while during the nine years of protection that preceded 1849 the increase was 525,000 tons, the increase during the nine years of unrestricted competition that followed 1849 was 1,229,000 tons; and the expansion of the mercantile navy has been going on ever since. In 1878 the tonnage of the United Kingdom was 6,236,000, and the greatest part of the entire international trade of the world is conducted in British bottoms.

To afford some insight into the present distribution of the carrying trade, we may state that the total tonnage of the vessels that discharged and reloaded cargoes in 1878 at the various ports of the United Kingdom was 42,900,000 tons, of which 30,297,000 were British and 12,603,000 were foreign. These 12,603,000 tons of foreign shipping were distributed as follows:

	Tons.
Norwegian	2,444,000
German	2,270,000
Swedish	1,133,000
Danish	1,058,000
United States of America	988,000
Italian	981,000
All other countries	3,729,000
Total	12,603,000

Thus we have taken stock, as it were, of the material condition of the people of England at the two periods referred to, namely, 1840 under protection, and 1878 under free trade. The progress that the nation has made in wealth and prosperity during those thirty-eight years seems almost incredible, and one is tempted to think that the picture that has been traced of that progress is the work of a heated imagination. But, no, the statements made rest on the solid foundation of attested facts and the unimpeachable testimony of official records. Their truth may be tested by every one who chooses to inquire.

Mr. Bright told his hearers that all these marvelous results were due to the adoption of the policy of free trade.

With becoming diffidence, in differing with such distinguished and powerful leaders of thought in their respective countries, I dare to say that both were right in their statements of facts, and both wrong in their deductions from them. In the two countries, although under commercial systems essentially different, we have witnessed similar results. In each there has been a steady advance in wages and improvement in the condition and comforts of the workingmen. But in both there have been periods of depression, when the abodes of industry were filled with silence and gloom. Neither free trade nor protection has been able to prevent them.

In the flattering picture which the artist drew of the national development during the twenty years between 1860 and 1880 there is not wanting any shade or coloring to please the sight of the beholder. But giant Monopoly, with horrid front, should have been placed in the fore-

ground, holding in his greedy grasp the accumulations of these years of national prosperity, and Labor should have been represented as a manacled slave under his whip and lash. The Republican candidate for the Presidency did not stop to give an account of the pauses in this grand march of progress, nor of the sufferings and trials which at times befell the wage-earners of the country.

The honorable gentleman from Pennsylvania [Mr. KELLEY] has supplied the omission. In a speech delivered in this House, January 18, 1868, he said:

The loom and the spindle, no longer able to yield to their proprietors, stand idle; the fires are extinguished in forge and furnace, and the rolling-mill does not send forth its hum of cheerful and profitable industry. On one day of last month 1,800 operatives in the glass factories of Pittsburgh were deprived of the privilege of earning wages by honest toil at the trade in which they were skilled; the establishments in which they worked are closed. In the absence of productive employment for men or machinery the smaller holders of bonds are selling them to save themselves from bankruptcy if they are proprietors of establishments, or to feed themselves and families in involuntary idleness if they are laborers whose hard-earned savings have been loaned to the Government in its exigency. Look where we may, to any section of the country, we hear of shrinkage in the value of manufactured goods, or reduction of wages or of the hours of labor, or factories running on part time or closed or to be closed. I present no jaundiced or partisan view of the case.

We have also testimony from other distinguished advocates of protection to the same effect. During the same year Mr. MORRILL, a Senator from Vermont, spoke as follows:

Look at the industries that are at the present moment unusually depressed. Take, for instance, the entire woolen interest. There is not an establishment that is not losing money to-day. Take the wool-grower; not a pound of wool raised last year that will bring 10 cents per pound of its cost. Take the cotton interest. The whole circle of manufactures are in no better circumstances. Look at the value of their stocks. For instance, take the Bates manufacturing stock of Maine. * * * And so I might go on almost through the whole list. They all suffer. Take the West—Ohio, Illinois, or Iowa. Look at their hog crop. Why, if they had given away all their hogs, or if they had slaughtered them a year ago and thrown them away, they would have been better off to-day. They have absolutely lost their hog crop by feeding out grain to them which unfed would have brought more than all their pork.

It is a fact within the experience of every member of this House, that for a number of the years since 1870, the country has been filled with "tramps." Since I have been a member of Congress we have been called upon repeatedly to inquire into the causes of strikes and lockouts. During the progress of the Presidential campaign in 1884, the fires in the furnaces in my district were extinguished, the doors of the cotton factories were closed, and the wheels of industry were silent. The working people whom I have the honor to represent upon this floor walked the streets of Richmond in idleness, while their wives and children were suffering in penury and want. The condition of the workingman in other States was no better than in my own. The causes which had produced that result in Richmond were not confined in their operation to that locality.

The letter of acceptance of the Republican nomination by Mr. Blaine was penned July 15, 1884. By a strange coincidence that date marks the beginning in this country of a series of strikes on the part of the laboring classes, alleging as their justification the inadequacy of wages to provide the necessaries for the subsistence of their families. I have been permitted to examine some of the advance sheets of the report of the Commissioner of Labor, exhibiting strikes by States, years, and industries. I have here the tables showing that in some instances men were required to work for $1.24 per day of ten hours, and women for 50 cents. When the Republican nominee made his triumphal tour in a palace car through the Hocking Valley, in Ohio, his ears were greeted with sounds with which they were not familiar. The people who hailed his coming with their loud acclaims uttered them in a language which he did not understand. He did not hear them in the tongue wherein he was born. And there did not appear unto them, as in the day of Pentecost, cloven tongues, like as of fire, filling them with the Holy Spirit, and causing them to speak with other tongues. They, who rejoiced, were Hungarians, Polanders, Swedes, and Italians, introduced under the infamous contract system, while American toilers, disconsolate in their degradation, remained sullen and silent. Our Republican friends claim everything for their system. They say that the country is made richer, grander, and more prosperous by taxation. With what cunning tongue and linked sweetness doth monopoly speak.

The movements of the workingmen in combinations and strikes give evidence of a spirit of discontent, and show that they are not entirely satisfied with their condition. I do not charge that all these evils have been produced by the protective system, but it can not be denied that it has not been able to prevent them. Even if they are not the legitimate results of that system, they are here in spite of it.

The Hon. R. J. Walker said, forty-two years ago, that—

When the number of manufactories is not great the power of the system to regulate the wages of labor is inconsiderable; but as the profit of capital invested in manufactures is augmented by a protective tariff there is a corresponding increase of power, until the control of such capital over the wages of labor becomes irresistible. As this power is exercised from time to time we find it resisted by combinations among the working classes, by turnings-out for higher wages or for shorter time, by trades-unions, and in some cases, unfortunately, by violence and bloodshed. But the Government, by protective duties, arrays itself on the side of the manufacturing system, and by thus augmenting its wealth and power soon terminates in its favor the struggle between man and money.

The "combinations among the working classes," of which he spoke, have come. The "turnings-out for higher wages and for shorter time;" which he predicted, we read of daily in the papers, and it is not too much to say that these proceedings have at times been accompanied with "violence and bloodshed."

But while I can not give my consent to the extravagant claims of the advocates of a system by which monopoly and not labor has been fostered and protected, I am not a free-trader as I understand the meaning of those words.

From the foundation of the Government taxes collected at the custom-house have been the chief source of Federal revenue, and such they must continue to be.

I am in favor of placing the heaviest burdens upon the shoulders of the strong, and requiring the fewest sacrifices from the weak. While firmly rooted in the belief that the power to "lay and collect taxes, duties, imposts, and excises" was given to enable the Government to raise the amount of revenue required for the objects specified in the Constitution, I am unwilling to go to the extent of saying that in its exercise we may and should not discriminate in favor of American interests. While favoring a reduction of taxation, believing it to be demanded by the conservative sentiment of the country and conducive to the general welfare, it is my belief that that should be accomplished in such a manner as not to "injure any domestic industries, but rather to promote their healthy growth." I am satisfied that any sudden withdrawal of all the advantages which have been enjoyed by certain manufacturers would be attended by ruin and disaster, and that the consequences would be felt, not only by those immediately interested, but by those engaged in other pursuits.

For more than a quarter of a century we have been living under the shadow of a high protective tariff, and this fact is not to be lost sight of in the discussion of the question of the reduction of revenue and taxation. We are not here to fix, but rather to make changes in, a settled policy. I have not the figures to show the amount of capital invested in the protected industries, but it is very large, and certainly wise statesmanship demands that we shall not proceed in the work of revision of the tariff without due consideration for them. The business and pursuits of a large number of our fellow-citizens are conformed to it, and may and probably will be injuriously affected by sudden and violent changes. The interests of labor as well as those of capital are involved in the treatment of this question, not because the wages of workingmen are regulated by the tariff, but because the loss of employment may be the result of a sudden reversal of the policy we have been pursuing. When the movements of business and enterprise in their accustomed channels are rudely interfered with, and disturbance of existing adjustments occurs, the shock is felt throughout the whole circle of industries. When dealing, then, with the present situation I am satisfied that all our steps in the opposite direction must be slow and conservative.

As an indorsement of this view I quote from a speech of the honorable Speaker of this House in a former Congress. He said:

I can not expect to see incorporated in a single measure all that in my opinion ought ultimately to be done; and if the absolute power to dispose of this great question were in my own hands to-day, I would not make radical changes at once, but would be disposed to proceed by cautious and conservative methods to relieve the people from taxation, and to reduce the revenues of the Government without injuring or alarming the industrial interests of the country. We must all recognize the fact that large interests have grown up under the existing system; that they have been fostered and encouraged by it, and that they have so adjusted themselves to it as to become in a large measure dependent upon the assurance that it will not be suddenly swept away.

Under these circumstances, while I would strenuously insist upon actual and substantial reductions, I would be willing to accept very reasonable and moderate measures as satisfactory indications of a fixed purpose to relieve the people at large without embarrassing special interests. The business of the country will soon adjust itself to any reasonable change that may be made; but it must be more or less injured by he agitation which inevitably results from persistent refusals to settle our revenue system upon a just and permanent basis.

The people demand justice and stability in tariff legislation, and when these essentials shall be secured the manufacturing industries of the country will no longer require the interposition of the Government to force prices up and give them the control of the home market, but will become self-reliant and self-sustaining. Then, sir, all our great industrial interests will grow and prosper together, and we will go on developing our wonderful resources and augmenting the wealth and power of the country through all time.

These utterances have my most hearty concurrence.

There is nothing more hurtful to the business interests of the country than continual agitation. They demand a settled policy.

And the President, in his annual message communicated to Congress last December, spoke to the same effect when he declared that—

Our progress toward a wise conclusion will not be improved by dwelling upon the theories of protection and free trade. This savors too much of bandying epithets. It is a condition which confronts us—not a theory. Relief from this condition may involve a slight reduction of the advantages which we award our home productions, but the entire withdrawal of such advantages should not be contemplated. The question of free trade is absolutely irrelevant; and the persistent claim made in certain quarters, that all efforts to relieve the people from unjust and unnecessary taxation are schemes of so-called free-traders, is mischievous and far removed from any consideration for the public good.

He recognizes the fact that the entire withdrawal of such advantages as those engaged in the protected industries have enjoyed should not be contemplated, and in this position he is in harmony with the declaration of the platform of the Democratic party that—

Many industries have come to rely on legislation for a successful continuance, so that any change in the law must be at every step regardful of the labor and capital thus involved. The process of reform must be subject, in the execution, to this plain dictate of justice

I am opposed to extremists on both sides of this vexed question, as well to those who see monopoly in every encouragement of American

industry as to those who would levy duties solely for the sake of protection and without regard to the needs of the Government. In dealing with the present situation the discussion of the theories of free-trade and protection is irrelevant. While the people demand relief from the burden of taxation, they expect that this shall be accomplished without disturbance or injury to the manufacturing interests, upon whose prosperity depends, in some degree at least, that of the whole country. Though I believe that the pending bill, in the main, has been framed in accordance with those conservative principles which should be observed in making changes in existing laws, I do not approve of all its provisions, and shall hold myself at liberty at the proper time to offer and urge amendments. It is difficult to discover a good reason for the action of the committee in remitting the tax upon chewing and smoking tobacco and retaining it upon cigars, cheroots, and cigarettes. That is an unjust discrimination against the tobacco grown in certain States of the Union, and is certain to create murmurs of discontent.

INTERNAL TAXES.

The first act in the creation of the present system of taxation, known as the internal revenue, was passed in 1862, when the country was in the throes of a gigantic civil war, nearly fifteen months after its commencement. Even then, when the requirements of the Government for money were most urgent, and when a sufficiency of it for the equipment and supply of troops could not be obtained from other sources of revenue, this method was resorted to with reluctance and hesitation. It was feared that direct or internal taxation would create such discontent as to interfere with the vigorous prosecution of the war. The existence of this apprehension was natural when it is remembered that excise taxes had never failed in the history of our country to arouse opposition, on one occasion so violent and demonstrative as to require an armed force for its suppression. Experience has shown that they are not compatible with the spirit and temper of our people, and opposition to their levy and collection is in harmony with the record of the Democratic party from the foundation of the Government to this day.

However gentlemen may differ as to the necessity for the retention of the tax on distilled spirits and fermented liquors, there can be no question as to the propriety of the entire abolition of that on tobacco. By its repeal we know that a reduction of revenue and taxation will be accomplished to the extent of at least $30,000,000 per annum. We can proceed in no other direction with such a feeling of certainty as to the result of our action. By lowering the rates of duty upon certain articles towards the revenue standard the immediate effect would be an increase of importations and the consequent enlargement of the volume of revenue. On the other hand, by the increase of duties on certain other articles towards the point of prohibition importations might be diminished or entirely prevented; but it is to be considered that no relief would thus be afforded the people. It is true that a reduction of the income of the Government would certainly be the result of the transfer of articles from the dutiable to the free list, but a resort to that course, except in some few cases, might and probably would inflict great injury upon the industries involved. I am unwilling that the process of reform shall be attended with such ill effects as would inevitably result from the pursuit of that policy.

We are committed to the observance of this plain dictate of justice, "that any change of law must be at every step regardful of the labor and capital involved," and by me that pledge is held as a solemn obligation.

It is estimated by the Committee on Ways and Means that the income from customs will be reduced to the extent of $54,000,000 by the pending bill if it shall become a law. On the contrary, it is the opinion of many intelligent and well-informed gentlemen that its effect will be to largely increase it. Without claiming to be in possession of information that enables me to speak with certainty upon this subject, I do not hesitate to make the prediction that the above estimate will not be verified by the result. If in the event of the passage of this measure by Congress a surplus shall confront us, our labors will have been in vain. With an overflowing and redundant Treasury the same dangers as at present will menace the welfare and prosperity of the country, and the demands for relief will be as loud and deep as they have been in the past. Nothing will have been settled, and the business interests of the people will have to endure another period of agitation, so hurtful and deleterious in its effects.

The imposition of internal taxes has never received popular approval, and I am unalterably opposed to their retention as a permanent feature of our financial system. During the course of this debate we have been frequently asked, "Shall we have free whisky and tobacco while the necessaries of life are being taxed?" This is an attempt to present a false issue. If there be any force in the question, it would be as pertinent twenty or thirty years hence as it is to-day. If it means anything, it is to be interpreted as an expression in favor of excise taxes over imposts. No one is in favor of free whisky and tobacco. They can and will be taxed for the support of State and municipal governments, and thus will great relief be afforded the farmers and other taxpayers in the several States. There is no room for an issue between the repeal of the internal revenue and the revision of the tariff. The dispute arises as to the method and not the subjects of taxation. The question is whether our national income shall be derived from customs, as it has been principally from the foundation of the Government, or from internal taxes, or from both.

Mr. Madison, in a speech delivered in the beginning of the First Congress, when addressing himself to the subject of a national revenue, said that "the system must be such a one that, while it secures the object of revenue, it shall not be oppressive to our constituents. Happy it is for us that such a system is within our power; for I apprehend that both these objects may be obtained from an impost on articles imported into the United States." From this distinct expression of his position on this subject there was no dissent in either branch of Congress, and the policy of relying upon customs for the support of the Government was then established, and has since been steadily adhered to.

Presidents Jefferson and Monroe, in messages to Congress, made recommendations in harmony with this view, declaring that sound principles did not justify the retention of internal taxes upon the people and their industries, when the emergencies which required their imposition had passed. Quotations to the same effect from other distinguished writers and statesmen might be multiplied, but it is unnecessary. As before said, this system is in opposition to our past policy, and to the teachings of the fathers of the Republic.

Tobacco is the chief money-crop of the State which I have the honor in part to represent on this floor, and it is the only product of agriculture which is taxed by the Government. The farmers engaged in its cultivation are subject to restrictions, burdens, and restraints from which others are exempt. By existing statutes they are limited in the disposition of their crops to licensed dealers, except that they may sell, at the place of production, at retail, directly to consumers, to an amount not exceeding $100 annually. They are forbidden even to issue, as rations or supplies, to their laborers or employés, tobacco of their own growth and raising in excess of 100 pounds in any special-tax year, without having paid the special tax of a dealer in manufactured tobacco. These restrictions work a great hardship to the tillers of the soil, and should not be continued when there is no necessity for them. They are especially injurious to the small farmers, who should be the objects of the fostering care of the Government, instead of being subjected to unfriendly and repressive legislation.

Their condition was so well described by the honorable gentleman from Pennsylvania [Mr. KELLEY] in a speech delivered several years ago that I will take the liberty of quoting his exact language. He says:

> There are many thousands of these people for whose small crop there would be a ready market in the neighborhood, whose entire production is too small to pay for its transportation to a distant center of trade, or even to invite visits from traveling purchasing agents. These poor men must therefore barter their crops at the neighboring store at such prices as the single customer will offer, and for such goods as he is prepared to give in exchange.

No citizen, except when the emergency may be such as to require the exercise of extraordinary power, should be deprived of the right to dispose of the products of his toil and labor as he pleases. And if this internal-revenue system can not be maintained without interfering with the right of control of private property, that fact is the best argument against its perpetuation.

I have obtained from the Commissioner of Internal Revenue a statement showing that the receipts from that source in Virginia, from July 1, 1865, to February 29, 1888, amounted to the enormous sum of $111,000,000 in round numbers, $95,000,000 of which were paid by tobacco. It thus appears that during the twenty-three years since the termination of the war nearly $5,000,000 have been collected annually by Federal tax-gatherers in my State. In the selection of the chief product of her soil to bear this heavy burden, not imposed upon the products of other States, the action of the Government is unjust and discriminative, and the principle of equality in taxation is violated.

We are told that the consumers paid that tax, and not the people of Virginia. To a certain extent that is true, but not entirely. I will insert here what I have from the pen of an intelligent gentleman of my own State, who is a dealer in tobacco, and who has an accurate knowledge of the subject:

> The tax by raising the price shuts off a part of the consumptive demand. Now the elementary proposition is that the market value of all articles is regulated by the cost of production and supply and demand. To diminish the demand, therefore, will drive down the prices to a new lower point, to which the cost of manufacturing and the price of the leaf will have to be adjusted. The planter will have to sell his leaf lower or stop making it, or both, in part.

And the honorable John R. Tucker, formerly a distinguished member of this House, spoke to the same effect when he said:

> But this tax presses on the producer. It is true the consumer ordinarily pays the tax. If it is a low tax, he may be said always to do so. But as the tax becomes higher the producer, in order to hold on to the market, will have to abate his price, thereby paying the tax in part. But when the market can no longer be retained without a loss the production will cease wholly.
>
> And this has been the result in parts of Virginia where the low-priced tobacco is raised. Production has ceased. You have taxed the planter out of his right to use his own land and impaired his title.

During the period of which I am speaking the tax has ranged from 24 to 8 cents per pound, remaining constantly so high as to produce the results so forcibly stated by the gentleman from whom I have quoted.

There is another view which ought to be presented in this connection, and it is that this tax is paid chiefly by those who are least able to bear it. Tobacco may be a luxury, but it is in general use by the

laboring classes, and they will not be without it if it can be had. The enormous sum of $30,000,000 per annum is raised from that source, and the greater part of this burden falls upon the wage-earners of the country. To the extent that its cost is increased to them is their ability to purchase the necessaries of life diminished.

But the tendency of the internal-revenue system to create monopolies, against which have been hurled such bitter and eloquent denunciations, constitutes the chief ground of objection to its continuance. It increases the power and influence of capital, and makes those conditions which are most conducive to the existence of trusts and combinations. Its effect unquestionably has been to concentrate the business of manufacturing whisky and tobacco in the hands of a limited number of persons, and to give them entire control of the markets.

In a memorial to Congress from the Leaf-Tobacco Trade of the city of New York the statement is made that, although there are now about nine hundred establishments for the manufacture of chewing and smoking tobacco, "less than a score produce nearly all of the entire output of the country."

The wholesale dealers in and manufacturers of tobacco and cigars of the city of Baltimore tell us that—

The fostering care of the Government in levying the tax on tobacco has ruined the great bulk of the small manufacturers and aided in building up a few gigantic factories which are striving to monopolize the business, and in a great measure they have succeeded. One renowned factory of smoking tobacco, not in Baltimore, turns out millions of pounds a year, on which they have a profit of 20 cents a pound, or about 75 per cent. on cost of production. This is accomplished through the internal-revenue tax law, as it turns the business into a sort of patent. The poor consumer buys on account of the picture on the package and the windy advertisements of the factory, as he is not permitted to open the package to examine the goods. The law says if the stamp is broken it is illegal to sell it—so, in every case, he must buy his pig in the bag, sight unseen.

Since the internal-revenue tax has been levied the tobacco business of Baltimore has constantly decreased in importance. Formerly there were twenty to thirty smoking-tobacco factories located in Baltimore; now there are but five or six. The plug-tobacco commission business, once the pride not only of Baltimore, but the largest in the country, has been comparatively wiped out.

The sale of plug tobacco for export has been about abandoned at this port on account of the internal-revenue tax. Vessels can not wait a week or ten days to get the tobacco from the Virginia factories, and tobacco in store can not be sold for export, because it is stamped, without the loss of the costs of the stamps.

This is the testimony of gentlemen who have a thorough knowledge of the subject, and whose utterances should receive respectful consideration.

Prior to the war, in the county of Louisa, in my State, there were several prosperous factories, which furnished a ready and reliable market for the tobacco grown on the neighboring farms; but now, under the existing system, they are closed. These establishments, formerly the abodes of industry, are now occupied by bats and owls.

Many such instances of the ill effects of this nefarious system might be given, but I fear to weary the patience of the House. In every direction its tendency has been to close out the small dealers and manufacturers, and to give to the rich advantage over the poor.

In behalf of the manufacturers of and dealers in tobacco it is proper to say that they ask no special privilege from the Government, but desire that some settled policy shall be adopted. Heavy losses have resulted to them by reason of the long-continued agitation of the question of the repeal of the tobacco tax. In the language of their own petition to Congress, it has prevented "the planter from realizing the full benefit of his labor, forced the dealer to carry his stock at great expense or to submit to heavy sacrifices, relegated the manufacturer to idleness, and thrown out of work thousands of operatives or greatly lessened their pay."

Patriotism summons us to the duty of placing our financial system upon a firm and sure basis, with equal justice to all, and we should come to its performance without partisan bias or prejudice. Let us strive for such a solution ot the difficult poblem as will promote the welfare and prosperity of the whole people.

The Tariff.

SPEECH

OF

HON. GEORGE M. THOMAS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. THOMAS, of Kentucky, said:

Mr. CHAIRMAN: In the remarks of the gentleman from Kentucky [Mr. BRECKINRIDGE] yesterday in this House, he stated that the three Republican members of the House from that State lived in "pauper counties." The fact that three members on this floor from that State who are Democrats also live in "pauper counties" does not seem to have occurred to the honorable gentleman. Now I know that my colleague, who is an amiable man, did not intend to make a false impression by the use of the remark. He took it for granted that members of this House understand what is meant by "pauper counties." But in this he is mistaken; for quite a number of members have come to me and inquired what was meant by the expression "pauper counties." The gentleman gave as an excuse for the remark that he was replying to the speech of the venerable member from Pennsylvania [Mr. KELLEY] who, he claimed, had made an attack upon the State of Kentucky. Now, the gentleman from Pennsylvania did not make an attack upon the State. He was giving us some good advice as to the best course to pursue in order to develop the vast mineral resources of our State. I heartily agree with that gentleman when he says if the vast sums now invested in that State in whisky were invested in great industrial enterprises it would be much better for the State, and when the tax of 90 cents per gallon is taken off whisky (which the whisky men do not demand) the amount of money invested in that business will go into other industrial enterprises which will be of more benefit to the people than the whisky business. I want to break up the whisky trusts and the whisky combination, and this can only be done by repealing the whisky tax. Whisky can be produced for 15 to 20 cents per gallon. The tax is 90 cents per gallon. A large sum can not be invested in whisky at 15 or 20 cents per gallon, but you add 90 cents tax and then it takes five or six times the amount of the original cost to handle that product and put it upon the market.

Now as to the pauper countries. The State government of Kentucky is supported by an ad valorem tax now fixed at 42½ cents on the $100 worth of taxable property. Of this 42½ cents 22½ cents is used for school purposes, and I think I am safe in saying that few States if any levy a higher tax for school purposes than Kentucky. All the expenses of the State, including pay of all the officers, and the costs of all prosecutions for felony in the courts, including fees of sheriffs, jailers, clerks, and police officers, all public records and furniture in public offices, and the pay of petit jurors and grand jurors and wit-

nesses in felony cases summoned for the State, are paid for out of money in the treasury. The sheriffs of the various counties collect the revenue and pay it into the treasury. The auditor of state keeps an account with each county in the State and credits each county with the amount of revenue paid in by the sheriff and charges each county with all the expense of prosecutions in felony cases, including witness fees, sheriffs, constable fees, etc., in such cases, also the fees of jailers for keeping persons charged with felony. The counties are charged with the costs of the public records furnished each county, books and furniture for the public offices, and the pay of the petit and grand juries.

The superintendent of public instruction ascertains the number of children in each county of the school age, that is, from six to eighteen, and after finding the total number of children in the State, white and black, within the school age he makes a disposition of the money in the treasury raised by the imposition of the 22½ cents tax by dividing the same equally, that is, per capita, among all the children in the State, white and black alike.

The money is distributed to each of the counties according to the number of children within the school age in the county. The principle adopted by Kentucky is that the property of the people should be taxed to educate the children. The State is just as much interested in the education of a child in a poor county as a child in a rich county. A county paying $20,000 school tax into the treasury with 2,000 children within the school age receives no more money from the school fund than a county paying $2,000 school tax into the treasury with 2,000 children within the school age.

Now suppose that the county paying $2,000 school tax into the treasury receives $5,000 from the school fund, and the county paying $20,000 also receives $5,000, the county receiving the $5,000 is charged with that sum and credited with the $2,000, and is then called a "pauper county."

As a matter of fact all the property of the State is taxed to raise money to pay for educating all the children of the State. It is one great fund, not raised to educate a favorite class of children, but to educate all the children of the State, white and black.

The Tariff.

SPEECH

OF

HON. CHARLES N. BRUMM,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 10, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. BRUMM said:

Mr. CHAIRMAN: The wealth of a nation, like that of an individual, is measured by the amount and utilization of useful productions it possesses or can acquire and control, while the prosperity and grandeur of the nation and the happiness of the citizen depend upon the distribution of this wealth among the people, the equal enjoyment of its franchises, and the equal share of its burdens. Hence, the fundamental elements of material greatness being production and distribution of useful commodities, the great problem of political economy is how to foster the greatest amount of useful productions and the most universal method of distributing them.

In the solution of this problem are involved the questions of land and its utilization, labor and its rewards, transportation and its control, and the medium of exchange—commonly called money—and its circulation. While it may be true that you can not directly create values by law, yet it is the great lever of civilization by which we may facilitate the creation, destruction, utilization, and distribution of all values, material as well as social, moral, and political; and as the power of taxation is one of the most efficient functions of law, the question of tariff looms up to paramount importance in the solution of this great problem.

Sir, this great power is not given to the Government simply to sustain the Government as a government, or merely for the purposes of paying the expenses of "running the machine," or, as you free-traders put it, "for revenue only;" but it is given to the Government to benefit and protect the citizen like other fundamental powers (as declared in our Constitution), namely, "We the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquility, provide for the common defence, promote the general welfare and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States;" not the Southern States alone, but "the United States of America." Therefore the creature must be brainless indeed, even though he be a President, who in our day and generation would urge the superannuated Bourbon doctrine that the people can levy taxes upon themselves "for revenue only," without any discretionary power as to their own interests or good; *i. e.*, that the people have delegated to themselves the power of contributing for the good of the whole, but have forever parted with the privilege of enjoying any of the benefits that may flow from such contributions. [Applause.]

Yet this is the dogma that is solemnly proclaimed by Grover Cleveland, acting President of the United States; and what is most surprising is that there are some good men who give him credit for having a great deal of courage, forgetting that often—

> "Man, proud man,
> Dressed in a little brief authority,
> Most ignorant of what he's most assur'd,
> His glassy essence—like an angry ape—
> Plays such fantastic tricks before high Heaven
> As make the angels weep."

This is especially humiliating when we reflect that it is but the spawn of the cotton combine, the stock gamblers of Wall street, and the whisky sharks of Kentucky. I therefore dismiss this ridiculous objection to our constitutional right of self-preservation with the contempt it deserves.

Let me assure you, sir, that as our Republic is isolated from the rest of the world, politically and generically as well as geographically, we can progress in the solution of this economic problem only in proportion as we are socially and commercially isolated and free from foreign alliances and entanglements. In other words, to be eminently successful we must become as distinctively American in our commercial independence as we are in our political systems and geographical position.

Sir, when our fathers created this Government they made such a radical departure from old-established systems that even precedents and examples of other nations became of but little value to us. Old and accepted theories were exploded, a new and more practical civilization was born, and the narrow-minded fossils that still lingered in the dark realms of "passive obedience" and "the divine right of kings" were subdued in the throes of the Revolution, as the votaries of free trade, class legislation, and slavery will be eternally crushed by the inevitable results of their own wicked and unnatural rebellion. [Applause.]

Sir, the higher and stronger you build the bulwarks of protection to American industry the more efficient and potential you make the American man and the more firmly you establish American liberty and equality; for by protection only can you secure stability of prices at fairly remunerative wages to labor when subject only to the fluctuations incident to American competition uninterfered by cheap labor, the products of cheap labor, cheap money, and the surplus dump of despotic and barbarous nations. Therefore, my cry is still for the American idea of protection for American labor, and against class legislation in the interest of cotton, whisky, and Great Britain. [Applause.]

But our free-trade friends (and by that term I include any man who favors putting on the free-list anything we can make here in sufficient quantity, or lowering the duty to such an extent as to place the article under control of the foreign manufacturer) say that tariff duties raise the price of the product and rob the consumer, while not enhancing wages; that they foster monopoly, shut us out from the foreign market, ket, and produce overproduction. Herein is the whole gospel of free trade. Now, let us consider these dogmas *seriatim*.

First, they allege that the tariff raises the price of products and robs the consumer. While this is false, as I shall show hereafter, yet if it were true that it raises the price, this in itself would not of necessity be an evil, for if, under a homogeneous Government, a thorough system of protection would raise the value of one or more products of labor, it would, if not interfered with by a cheaper commercial system, raise all products of labor and all wages of labor; for in a locality or country of diversified interests and resources like ours, where the people rule, all wages and products of labor, if protected against extrinsic factors, would relatively adjust themselves to a common level, unless of course, affected by some special element, as patent right, limited quantity, or area.

But under a system of free trade, while the price of the manufactured article would be raised, as will be shown hereafter, wages and the farmers' products would always be reduced to the lowest world-standard, because farm products are generally the result of individual labor segregated and widely distributed all over the world, and therefore not so much the subject of combination and monopoly in the interest of the producer, but only the jobber. Moreover, the farmer can not suddenly increase or reduce his product at will, for he must sow and reap at times, or in seasons over which he has no control. He can not so readily adjust his product to the supply and demand of the market as can the rich foreign manufacturer. His crops are perishable, and must generally be gathered and sold when they are ripe; and while his cattle and live-stock must always be fed, they can not always be held, but must be slaughtered without regard to the rise or fall of values. Moreover, the elements, the weevil, the grasshopper, the cut-worm, the hog cholera, pleuro-pneumonia, and a thousand other pests, have often more to do with the quantity and quality of his products than the farmer himself has; and as his products fructify at certain periods well known to the blood-sucking speculator, this commercial free-trader has more to

do with the price of the farmer's product than has the farmer. Therefore I repeat, sir, that free trade will always pull the farmer's product to the lowest world-standard, while it will raise the price of manufactured articles just in proportion as they can drive out home manufactures and establish an exclusive foreign monopoly of these products.

There are, however, a few exceptions to the above rule as to farm products, and among them are cotton, rice, and, as yet, sugar. These differ from other farm products mainly in this, that they are not as perishable and can be held a reasonable time to await a rise in the market. They consume nothing, and they are purely local and very limited in their supply, yet they are in universal use, especially by the masses, and being the product of cheap negro labor, which is not represented in this Government, the planters themselves are the speculators that would make the farmers and the laborers of the North and West pay for their product just what they choose to ask, and for that purpose want free trade to enable them by combination with the foreign monopolists and despotisms to dictate the prices of all products and become the commercial lords of the world. Come, Brother NELSON, and I am sorry he is not in his seat, are you willing to have the farmers of Minnesota crushed under this cotton, rice, and sugar Juggernaut?

While I said it was not necessarily an evil to have products of labor dear, I now say that it were much better to have them dear than not to produce them at all, for every production of any article by labor means the consumption of more or less of all articles of labor, and especially of farmers' products.

Take for instance a pen. You can not produce a pen unless you consume relatively an amount of iron and steel, and a certain amount of wear and tear of machinery, and a certain amount of labor. That labor must be fed, it must be housed and clothed. Those engaged in the labor of manufacturing it, as well as those who manufacture the materials out of which it is made, consume the products of the farm, and in that way sustain our home market and reduce the surplus of our agricultural products which are sent abroad.

The chairman of the Committee on Ways and Means is not here, but in a speech made for home consumption stated that 60,000,000 of Americans consumed more than 200,000,000 of Europeans. If you will give us the chance to make all the iron and all the steel and the manufactured articles which are consumed in this country we will guaranty there will be no longer any surplus of farm products to be sent abroad and subjected to foreign manipulation.

Moreover, you must remember that wealth does not necessarily consist of the mere possession or ownership of a product or thing (for the article may often be a monstrous white elephant to the owner and a curse to the community), but it consists of or in the utility of a product or thing.

Neither is the utility or wealth of an article limited to its use or consumption, but also to its production. Indeed, many things are of greater utility and produce more wealth in process of creation than in their existence, use, or consumption. In fact, many are only useful by reason of the process of their creation, and are a positive evil in their existence; that is, bad books, unwholesome food, etc. Hence the nation that gets them is always the loser.

But why all this, when the fact is that a protective tariff lowers the price of manufactured articles to the cost of production at high wages and keeps the cost of farm products to the cost of production at the same high wages—for by destroying the home production you reduce the world's supply, enable the foreigner to monopolize the entire production, and fix his own price, while protection stimulates home production and home competition, creates supply to the maximum of demand, and by coming in competition with the foreign product breaks monopoly at home and abroad and reduces the price to the minimum of cost. This is the logic, and it is borne out by the fact that all products that have been sufficiently protected have fallen in price, and many are now sold for less than the duty; for example, cotton goods, steel pens, etc.

A gross of steel pens which once cost $35 can now be bought for 8 cents. This statement may sound surprising, but, as the Iron Age says, the casual reader may fail to catch its full significance. It illustrates the blighting influence of the terrible protective tariff. The duty upon steel pens is 9 cents per gross. Under tariff protection American producers have reduced the cost from $35 per gross to 8 cents, or 1 cent less than the tariff charge upon the imported article. Of course every accountant and school-boy realizes the oppressive taxation he is subjected to by the operation of a tariff capable of working such results.

And, sir, there is not a thing in this country which by the nature of its production can not be interfered with by foreign competition, that is not made cheaper and better in this country than it is anywhere else in the world. You may take photographs, daily newspapers, railroad fares, or anything which can not be interfered with by the foreign monopolists, and it will be cheaper and better than anywhere else.

But, the fluctuation of prices created by the foreign bushwhackers on our commerce is more injurious to our people (consumers as well as producers) than an absolute prohibitory tariff would be; for by their cheap labor, low money, accumulated idle capital, they can close the factories of any undeveloped country which has high wages and dear money.

Why, sir, the question is not one even of what it costs. I wish to show from what I said before that the protectionists as a rule do not go half far enough when they say all we require is protection sufficient to cover the difference in wages, as English products are sent to this country and sold for less than they cost in England. They do this to keep their surplus product from lowering their home market. Therefore it is not forced upon their market, but is dumped down upon our market. America, with its enormous resources, with its industries of every description, is the country which England wishes to preserve as a dumping-ground for its surplus products, regardless of the price.

Will any gentleman on the floor say that a failure in crops does not raise the price by reducing the surplus? And if so, must he not acknowledge that if our capacity for consuming the crops is increased by fostering manufactures we will relatively reduce or entirely wipe out the surplus farm products, and thus raise them to a fair American price of cost with fair American wages?

But they say wheat is lower than it was. Ah! I want to say a word to my silver friends. Since the agitation of the tariff by the introduction of the Morrison bill there has not been a word said either by my friend from Missouri [Mr. BLAND] or the gentleman from Texas [Mr. MILLS] on the subject of silver. Before their master's edict on tariff was issued they attempted to make this country believe the great evil we were laboring under was silver alone; that the depreciation in the price of silver caused the depreciation in the American market, especially for corn, wheat, cotton, and such products as could be produced in India and other silver countries; but now they have forsaken their silver god and are worshiping their party idol, free trade.

Why, sir, I would not want to call it cowardice, but when I see a man running away from a fight I have my opinion as to what started him running; and I find the Democrats who since Cleveland issued his anti-silver proclamation before his inauguration made a desperate fight for free coinage are in this Presidential year lashed like curs away from silver into the free-trade manger of the master where their only yelp is tariff, tariff, tariff. They have followed their dictator and abandoned all pension legislation, telegraph, railroad, land, pleuro-pneumonia, convict and contract labor, money and currency, ship-building, harbor defense, gun-making, admission of States, Hennepin Canal, Private Calendar, civil-service reform, interstate commerce, eight-hour law, anti-monopoly, Chinese, Mormons, fraud in refunding bonds, and Oklahoma. You have abandoned all other legislation, and have made everything subservient to this one dogma of free trade.

Gentlemen are complaining about the surplus. I do not believe we have a surplus if it were properly used, but if we have a surplus would it not be better that surplus should remain in the vaults of the Treasury than that you should send it abroad to manipulate the silver in the markets of the world?

Mr. BLAND. The gentleman has referred to me by name, and I ask him whether he will yield to me?

Mr. BRUMM. Certainly I will yield to the gentleman if it is not taken out of my time.

Mr. BLAND. Without reference to production or non-production, suppose we coin silver and pile it up in the Treasury, what good will it be unless we reduce taxation?

Mr. BRUMM. I will explain to you how you can take that surplus out of the Treasury, and what good it will do to coin your silver. Pass the resolution that Mr. PLUMB offered the other day exposing the forgery committed in changing the law authorizing the issuing and redemption of our bonds at option of the Government and at par. Why is it, sir, that your committee chokes down this investigation? Let the facts be brought out; bring them upon the floor of the House if you dare; let a yea-and-nay vote be taken, and I venture to assert that not one of you, or not a half dozen at most, will dare to vote against that resolution. [Applause.] That is the way you can get the money out of the Treasury and redeem your bonds without paying one cent of premium. But there are other ways of reducing the surplus, to which I will call your attention.

But proceeding with the line of argument I had mapped out, you say it does not enhance wages. My dear sir, labor is a commodity like anything else. Wages are enhanced or decreased by the same law that operates in all cases under the law of supply and demand.

I remember very well, in my own town, when the commercial travelers—drummers as we call them—would come around. They would look for some man to carry their trunks. When there was an active demand for labor and the men were at work they would have to hunt for some time to get a man, and when they would find a man one of them would say, "John, I want you to carry my trunks; what will you charge?" "Why, I will charge you a half dollar." The other would say, "Hold on, John, carry mine first and I will give you seventy-five cents." The first would say, "No; I want your labor; I will pay you a dollar."

That is an illustration of the law of supply and demand of labor—the supply limited and the demand great. The result is you have two employers bidding against each other. But, Mr. Chairman, you go to that town to-day and under the present depression you will find there are a number of people ready for any job to earn an honest penny. Now the question is not "What will you pay, sir?" but under the tyranny of such men as SCOTT, Cox, and Corbin you make these laboring men bid against each other, underbid each other; not saying "How much will you pay?" but "Please let me carry your trunk and you may pay me just whatever you may see fit."

That is all there is in the question of supply and demand as applied

to labor. That is all there is in the question of tariff raising wages. When you give us a chance to manufacture all we consume, you make a demand for labor, and the employers must bid against each other and the workingman sells his labor to the highest bidder; but close your factories, make the supply of labor greater than the demand, and you make the workingmen bid against each other, and the one who will bid the lowest will get the job.

But, sir, notwithstanding we have had this tariff that you so much delight to condemn, I ask you to point me to a country that is situated as we are—a country that you can compare with us anywhere in Europe. Let us see. I find that Europe has more than twenty-five millions of men who are under arms, or rather who are capable of doing military duty.

M. Gervais, a French authority, says there are men capable of bearing arms—in Germany 5,000,000, in France 4,500,000, in Austria-Hungary 1,800,000, in Italy 2,000,000, in England 800,000, in Russia 6,000,000, and in all the other European States 4,000,000. That gives a total of 25,000,000. Of that number 10,000,000 are trained soldiers.

Of this number 10,000,000 are drilled and trained soldiers. Now, sir, you take 10,000,000 men out of the consuming population and throw them upon the producing population, and what is the result? Starvation, famine, such as China and India never have seen.

Bring that condition of affairs home. Let us take from the labor market a number of young men compared with our population equal to the ten millions of men under arms in Europe; take them from the labor market, make soldiers of them as you did in the war, and with a high tariff wages will be enhanced in the market 50 to 100 per cent. Nay, more; Europe absorbs the best of her producing blood in her standing armies, nobility, etc., taking it out of the labor market and adding it to the consumers; still wages are much lower than here, where all are producers competing against each other in the labor market.

What country in the world could stand the absorption of such a mighty immigration as this country? We have in one century moved on from three millions of people to sixty millions. What nation, what system in Europe could ever have absorbed such a mighty immigration? And still they come, and, like water, find their level under this protective system. We absorb them as fast as they come, and if you stop the Chinese and those sent here under the contract and convict labor system, we will be able to absorb the honest workmen intending to make their homes among us. I have a little article here which I shall read as an illustration of the condition of the Australian workman.

PAUPERIZED LABOR—AUSTRIAN WORKMEN WHO ARE PAID ONLY THIRTY-SIX CENTS A DAY.

[Special cable dispatch to the Press.]

VIENNA, *June* 9.

The pitiful condition of the labor market in Austria is shown by a strike of blacksmiths and farriers which has just begun at Pesth. The strikers demand only that they shall be allowed to rest on Sundays, that twelve hours shall constitute a day's work, and that their pay shall be seven florins ($2.81) per week. At present they are required to work fourteen hours per day and half time on Sundays, and receive as wages only about 36 cents per day.

Mr. HOPKINS, of Illinois. Where is that?

Mr. BRUMM. In Austria. Compare these wages with those that are paid under our protective system, then tell me what is the cause of it. How is it that under the protective system the carpenter, and the plasterer, bricklayer, mason, etc., get better wages than they do in Europe? We do not protect the carpenter or the bricklayer or the plasterer. We do not import houses or walls or pavements, yet all get better wages. Sir, it is simply because we protect the manufactured article enough to enable us to make them here, and thus create such a demand for artisans and laborers as to raise the wages of all classes.

And in this connection the following extract may be of some interest:

It is probable that the diversity in the rate of wages in different sections of this country is not generally familiar even among the workers themselves. The National Builder for April contains a statistical table showing the rates of wages in all the branches of the building trade, a compilation that is of interest not only to the workingmen but to all students of the labor question. The list includes nineteen cities, among which are New York, Philadelphia, Boston, Chicago, Cincinnati, St. Louis, Minneapolis, and Salt Lake City. For example, the pressed-brick mason receives $6.50 a day in Kansas City, Mo.; $6 in Portland, Oregon; $5 in Boston, $4.80 (eight hours) in Chicago, $4.50 in Cincinnati, $3.75 in Jacksonville, Fla., and $3.50 in Richmond, Va. Carpenters receive $3.50 a day in New York, $3 in Boston, $2.50 in Richmond, $2.25 in Buffalo, and $2 in Detroit. There is a like variance in the rates of wages in different cities in all branches of the building trade. Common laborers receive $2 per day in Chicago and Salt Lake City, $1.75 in Philadelphia and Boston, $1.50 in Richmond, $1.25 in Jacksonville, and $1 in Chattanooga, Tenn. While there is thus presented a quite material variation, the fact remains that even the lowest rates are substantially higher than the highest paid for like work in Europe. In the worst of times and in the most unfavored localities, this is the country for the poor man and the wage-worker, and it will continue to be so if the efforts of the free-traders can be successfully resisted.

You say, sir, that the protective system fosters monopoly. I point you to coal-oil, the telegraph, the railroad; to anthracite coal, to block-tin, to whisky. Which of these interests is protected? Whoever heard of laying an impost duty on a telegraph, railroad, coal-oil, anthracite coal? Show me a monopoly that is more exacting than any other, more powerful, more damnable in its evil effects than any other, and I will show you that it is of a product that is not imported at all, and therefore not subject to any tariff duty.

No, sir! Wall street, with its stock-jobbing; the railroad combines of the country, with their transportation tyrannies; the unlimited franchises and unbridled license of corporations, and the internal-revenue monster are the sources of your monopolies. But, sir, if we are to have monopoly, let it be our own, within our reach, under our own laws, and of our own kith and kin, rather than under the merciless heel of the foreigner, beyond our reach, not under our control, not subject to our laws, not interested in our welfare, sharing none of our blessings, bearing none of our burdens, enjoying none of our greatness, fearing our competition, antagonizing our progress, and hating our free institutions. If we must have a devil, let it be one we know and that we may in time subdue, rather than one we do not know and that is entirely beyond our reach and control.

But you say it shuts out the foreign market. Sir, we need not buy of other nations in order to sell to them, as no commerce is transacted by governments, but always by individuals. Carriers do not swap; they are not traders as the skippers of old. Other countries buy nothing of us except what they must have, while we buy of them almost exclusively luxuries and such things as we could make cheaper and better than they can if you would only make them keep their hands off.

Why, sir, when an American lady buys her silk or woolen goods she does not ask the question of the merchant whether the Frenchman that sent them interdicts American meats. When the Englishman eats the American hog he asks no question as to whether the American butcher drinks English ale. He buys the pork because he is hungry and he can not get it anywhere else. We buy silks, woolen goods, etc., because you will not allow the American to make his own goods. And so on it ramifies all through the schedule.

We buy largely from the South American States and China, but there is no reciprocity of trade. The balance of trade is against us very largely. You say we shall seek the foreign market. That means that you seek the foreign market of 2 per cent. and lose our home market of 98 per cent. That would be like grasping for the shadow and losing the bone, meat and all. Make all the iron and steel in this country and it would furnish a home market for all our agricultural surplus and overproduction. We will then absorb every bushel of grain the farmer may raise in this country, and will pay him a good solid American price for it. Moreover, exchange of commodities, whether of equal market value or not, does not necessarily benefit both parties to the exchange; for both parties may not acquire equal wealth, as the one may get articles of necessity and permanent utility while the other may get luxuries only or perishable or even deleterious articles. Hence the one is the gainer or loser of wealth in proportion to the utility or necessity to the individual or community of the articles acquired.

Our importations are generally luxuries, things we can produce; our exports are necessaries. Moreover, the nation that gets the balance of trade in its favor must be paid in money, the medium of exchange, and to that extent it absorbs the oil and lubrication of commerce, domestic as well as foreign; for while we continue to ape the foreign barbarous idea of barter, by making money out of commodities under your system of free trade, we will be the commercial slaves of foreign nations, for they will always have the balance of trade in their favor.

And here I want to say a word to my Greenback friends who are free-traders, as long as we have this commodity money, and we can not get the Government to increase the issue of the Treasury note. Shall we stand by and let them still further contract the existing medium of exchange by sending our gold and silver out of the country to foreign nations to settle the balances in their favor? Why not stand by the system that keeps the balance of trade in our favor, and if you will not give us the Treasury note, let us utilize the silver and gold that we mine by keeping it in the country as a circulating medium to keep up the prices of farm products and of labor, and make it the harder for the gold-bugs to sustain their free-trade monopolies?

Mr. BLAND. I wish the gentleman would explain upon his theory how it is that Great Britain imports five hundred millions more than she exports, and yet is not drained. If the gentleman's theory were true, that ought to drain away all her circulating medium.

Mr. BRUMM. Yes. I know the gentleman's point; he made it the other day; but the gentleman forgets to reckon the amount that England receives for transportation; he forgets to count what she gets in the shape of interest; he forgets that the railroads built in this country with English iron have been paid for by bonds sent to England.

Mr. BLAND. We should now be in the same condition in that respect that England is in only for this tariff.

Mr. BRUMM. Oh, no, let us have protection as long as England has had it. Let us protect our shipping industries by favorable laws and liberal bounties as England has done, until we become as thoroughly developed as England is, and we will be in better condition than England ever was notwithstanding the sweat and blood her colonial slaves have been forced to contribute to her commercial tyranny and supremacy.

But, Mr. Chairman, brother NELSON says that the tariff has nothing to do with high wages, but that cheap lands make high wages. How about Africa, South America, Texas, Canada, etc.? He wants wages dear and everything else cheap, including farm products or food, but how he is going to bring it about he does not explain. He wants free sugar, though this bill does not; he says nothing about wool, though this bill does.

He is the friend to the farmer, yet he forgets that farm products, even under the blighting curse of the transportation and whisky mo-

nopolies, have maintained their prices, and that we pay more for our own flour and other products here than they do abroad. There are eleven thousand farmers and shepherds engaged in raising wool. Besides, nearly every farmer has some sheep. Destroy this industry and these people must turn their attention to some other farm products.

The duty on wool is not $6,000,000; lower it and you increase the revenue; strike it off and you absolutely destroy it. Decrease the wool supply, deprive the poor man of his mutton, and not only raise the price of wool to the consumer, but also of mutton, beef, and pork, while the farmer will get no benefit from the increased price, as it will all go to the speculator and foreigner.

But the strangest thing about the position of these would-be friends of the farmer and the foreign market for his product is the fact that upon the only two original American farm products, native to the soil, these farmers' friends want to place so high a tax as to nigh prevent their exportation. I mean tobacco and Indian corn made into whisky and alcohol. From these farm products are exacted one-third of all the taxes; yet these farmers' friends have not a word to say against this "legalized robbery," although nearly every penny of it is paid by the American producer and consumer, while all the purely protective duties are paid by the foreigner. Gentlemen, why will you insist on retaining this last relic of your bloody rebellion on the statute-books? Nothing but war would justify such a tax.

There is no tax so oppressive to the individual and obnoxious to a free man as this; none so destructive of commerce, none so effective in demoralizing politics, debauching government, and contaminating society as this. Sir, it has not only wrapped its venomed coil around the legislative, executive, and judiciary of our country; but it has stolen like the midnight assassin into marts of commerce and robbed trade of honest competition; it has ruthlessly levied its tribute on the hearthstone of every Northern and Western farmer; it has thrust its withering sting in every vine and fruit tree, and has left its damning blight on every tobacco, rye, wheat, and corn field in the land. [Applause.]

Sir, by the whisky tax you have wiped out all the local distilleries and have forced the farmer to sell his cereals and his fruit crop at the prices fixed by the whisky and cattle feeders' trust. It has destroyed fruit raising in many localities entirely.

Farmers can not sell green corn any longer, but must lose 18 pounds per bushel. It prevents local competition in grain and fruits and reduces prices. It absorbs the profits of the farmer in transportation. It prevents shipment of his products in the condensed form of distillation. It compels the farmer to retain it in perishable condition and forces him to ship it on a glutted market to swell the general surplus, and enables the jobber to speculate on the necessities of the consumer, and to gamble on the sweat and blood of the producer!

Nay, more; to complete this monopoly you take charge of the whisky lords' warehouses, you guard their product by the strong arm of the Government, and you loan them from $80,000,000 to $100,000,000 annually without a penny of interest that they may the more effectually take advantage of the rise and fall of the market and enslave the farmer. But no barn or granary is provided for the farmer, no guard is placed over his cereals and fruit, no money loaned or tax allowed to be retained by him to enable him to profit by the fluctuations of the market. Yet pretended friends of the farmers stand up here and defend this outrageous infamy.

Sir, why is it that the very men who must pay this tax in the first instance are so desperately anxious to preserve it as a national tax? Are they influenced by philanthropic motives toward the Government at large or the people? Who else is so anxious to pay a tax, duty, or tariff as these very honorable gentlemen? Sir, what motive have these men in so willingly paying tribute to Cæsar, if it is not by bribery and corruption to prostitute the Government to the maintenance of their vile monopoly? And what answer do we get? Simply that their product is a luxury. Even this is false. That portion which is used in the manufactures, in the arts, and in medicines is a necessity. Only that portion of this product which is used in wholesome moderation as a beverage is really a luxury, while all the rest is anything but a luxury, as every consistent member of the Democratic party well knows by experience. Yet the very evil which flows from this product you are maintaining and aggravating by raising the price to the tempting point of adulteration.

Thus you bring about *mania potu*, you engender disease and distress, by offering an inducement to doctor the very liquor which you tax up to that poisoning point. Why, sir, a drummer who came into my county some time ago said, in discussing this whisky tax, "If you take the tax off whisky, I will go out of business." I wish I had time to illustrate how this matter operates. Why not let the States alone tax this product, if it is a luxury, or treat it by police regulations as a mixed or total evil as well as a subject of revenue? Sir, although I believe that the sale and use of intoxicants should be under wholesome legal regulations, I am not a prohibitionist. I do not believe in sumptuary laws. Yet I say to you anti-prohibitionists that you are driving your best friends away from you when you force moderate and liberal-minded men into antagonism with you by your support of this red-robed harlot.

But again, why have two systems of revenue laws, when one is more than enough to meet all wants? If the internal system is right, wipe out the custom-houses; if impost duties are right, wipe out the internal system. They are not equally just or equitable. One or the other should fall. Which shall it be? I say the infernal internal system; for it is contrary to the genius of free institutions. It is inquisitorial in its operation, unjust in its application, and the money raised by it comes entirely out of the pockets of our own consumers. Besides, its abolition would be a straight cut to the desired goal, as it would just about produce the proper reduction of the surplus, according to the estimate of the Democratic Administration. I hope my friend from Missouri [Mr. BLAND] is answered. This would simplify matters. We would be rid of one-half the complication; and we could sit down and reason over the simple proposition of a fair adjustment of the customs duties. Then if the country wants duties levied with a view to protection, it should have that system; if for revenue only, it should have that policy. To make that issue square you should eliminate the internal system and relegate it to the States. This would make a positive reduction and would be proceeding on honest business principles.

But in your effort to straddle and trim, you continue to demonstrate your utter incapacity to deal with great questions, and in the lamentation of your dilemma, you cry aloud, "Oh! Lord, what shall we do to be saved?" And as the prayers of the iniquitous are an abomination, and therefore not answered, you think you can cheat the country by again masquerading as reformers, and seeming to do something to relieve the crying wants of our people. Yet, with all your boasted promises, you have produced, after three years of labor, this ghastly abortion, and hope it may be the saviour of your party. But, sir, it is the last kick in the dying struggle of Bourbonism. It is cowardly in its birth, sectional in its essence, partisan in its purpose, and destructive in its effect. It was conceived in disloyalty, delivered in envy of the prosperity of your brothers of the North and West, cradled in the interest of Wall street. The whisky ring, Great Britain, and the aristocracy of the South, nursed at the malicious breast of conquered rebellion, and, serpent-like, it strikes with venomed fangs at the innocent children of the fathers that punished your treason. I give you credit for "practical politics" in the South. On this topic I had intended to speak somewhat lengthily, but I find my time will not permit.

But, sir, who can imagine the gall that must be possessed by any one who can stand up and claim that the Democratic party is and has always been the friend of the laborer, when the entire party, as a party, endeavored to destroy our Republic in an effort to have capital own labor, the only issue, and to-day the party is owned by the same element that controlled it then, and that element in the solid South have reduced their labor to more abject slavery than they ever were in the palmiest days before the war? Then you had him properly labeled "slave;" to-day you add insult to injury by calling him a "free man," and disgrace him by placing him side by side with the convict hired out to a merciless contractor, and you shoot him down like a dog if he dares to protest in the name of organized labor, and you prohibit him from voting or cheat him if he does vote, or fail to count it.

While the anthracite miner is crushed by the railroad corporations, which are both miners and carriers, yet public sentiment is in his favor, and the public recognizes his right to organize, to educate and protect each other, while down in your country the laborer is shot by authority of law and the whole community is against him. You make him pay taxes, but give him no voice in levying the tax or making the laws.

In support of this I cite from an article in the American and the Press:

The Southern difficulty between black and white has entered upon a new phase within the year. After an effective suppression of the negro as a voter, the whites seem to have undertaken the work of suppressing him as a trades unionist. First in South Carolina, and now in Louisiana, the blacks have been notified that the right to associate for the control of their wages and hours of labor is not one of those secured to them by emancipation. In South Carolina this result was reached by organized intimidation. In Louisiana the negro resistance appears to be more determined, and it has been found advisable to shoot down a number of them "in order to encourage the others."

The trouble grew out of a strike on the sugar plantations, where falling prices for the product have had the usual effect of producing friction between labor and capital. Vague charges of insubordination followed, but not a single act of violence has been charged distinctly. The State militia was sent to the chief focus of the excitement, and then we heard by telegram of a "collision" between whites and blacks, in which, as usual, only black men were hurt. It now appears that the crowd of blacks dispersed peaceably when commanded to do so; but a few lingered in the neighborhood and one of them was seen to put his hand behind his back "as though" to draw a pistol. His object, no doubt, was to shoot down the whole militia company in their tracks.

At any rate the militia at once began a general fusiliade upon every black man in sight, and some seven or eight were shot dead and others wounded. As always is discovered after these murders, the killed were all persons of desperate character. But that a single shot was fired or a pistol drawn on the other side in this "collision" does not appear.

It remains to be seen how Northern workmen will regard this treatment of the Southern workman, and whether they will extend their support to the party which stands in the way of all redress. And it is notable that Republicanism has maintained its hold best upon the public where it has pressed the question of the political and industrial rights of the colored men of the South, as was done in Ohio, instead of shrinking from handling what are falsely called "the issues of the War," as the New York Republicans to some extent did.

CONVICT-MINED COAL—BLOODHOUNDS FED ON RAW MEAT—WAGES 30 CENTS A DAY.

Francis H. Banks, of Philadelphia, who has been on a business trip to the

South, talks to a Philadelphia Press interviewer regarding convict labor in Alabama:

"Early one morning, about two months ago, I set out from Birmingham to visit the Mary Pratt Mine, 6 miles to the southwest. A path was pointed out as the way to the mine. This was not much trodden, for it was not very well defined. At long intervals I encountered clearings with rickety cabins, the poor habitations of wretched negroes or more wretched whites, who barely subsist in a kind of way on the meager products of the soil. After a laborious trip I came upon a larger clearing than usual, and this I guessed, rightly as I afterward learned, was the mine.

"But nothing visible indicated a mining settlement or the workings of a coal mine. In a small level place was an inclosure about four acres in extent. About it towered a fence fully 20 feet high, and over this could be seen from without a whitewashed building.

"I knocked at the gate and was admitted. Then I became aware for the first time of the nature of the place. The attendant who admitted me wore the striped white and black convict garb, and the idea at once flashed through my mind that I was present at a works operated by convict labor. On this point I was given decided assurance when I entered upon the grounds by the sight of a pack of bloodhounds which were lounging lazily about here and there, particularly where fence or shed afforded shelter from the hot rays of the meridian sun.

"I descended into the mine, accompanied by the superintendent, or boss, who, by the way, is a life convict for murder. He, like all the others, wore the stripes. He was a negro, light in color, and his features approached the Caucasian. This boss was a rather intelligent man and before his life-burial in this prison mine he was in excellent circumstances. The murderous deed for which he was spending his life in this place was done in drink.

"There are altogether two hundred and eighty convicts working here, nearly all of them below the surface. The men were divided into gangs, each of which were overlooked by a foreman, who was a convict. These men daily mine about 1,000 tons of coal, which is a fair day's work. Indeed, their work compares favorably with the work of the free laborers at other mines of Alabama, yet the State receives only 30 cents per day for each man and the same is paid for the worst as for the best labor.

"The bloodhounds at the surface are fed with raw beef by a convict bearing the terribly significant title of 'the huntsman,' and are kept in training by an occasional chase of one of the colored convicts. The man is given a fair start, the bloodhounds are loosed. To escape being torn to pieces the man takes to a tree and is captured. Capture is unavoidable if the flight is discovered in time. In the years that the mine has been operated by the convicts one man has escaped. That was several years ago. The fugitive had a good start and threw the hounds off the scent by following for some distance a small brook which wanders through the sands. He got as far as the railroad and boarded a train, which by chance was passing, and was never overtaken. Many others have taken flight, but are run down by the dogs and either treed or torn by them."

LABOR TROUBLES IN ALABAMA.

BIRMINGHAM, ALA., *May* 5.

The 500 coal-miners and 200 coke-drawers at the Pratt mines quit work Thursday rather than accept a reduction of wages. The company employs 600 convicts and 500 free miners. The former will, of course, have to remain at work. It is rumored that the miners at Wheeling, Blue Creek, and other mines will also go out.

Mr. BLAND. What did your people do in Pittsburgh when the laborers struck?

Mr. BRUMM. I will tell you if you will only extend my time.

But what do you do whenever there is any legislation proposed in this House in favor of labor? You kill labor bills by smothering them in committee, by prohibiting them from the floor of the House through your steering committee, and by overloading them with amendments, and by filibustering against them. Your rules are so tyrannical and unjust that no man or no measure that your Bourbon ring is opposed to can have a hearing on his floor.

Sir, we have made repeated efforts to do some legislating in the interest of labor, and yet under your despotic rules you crush us out; you will not allow us to bring the matter up, because you know that if you would give us a chance we would carry them by an overwhelming vote, for even many of you who are choking our labor bills in the dark would not dare to vote against them on a recorded vote on the floor of this House. All we ask is fair play, and if you beat us, then we must submit until the people of this country will send men here who will not be whipped against labor in the dark chamber of the Bourbon caucus and then play the demagogue on this floor by proclaiming themselves as the great champions of labor.

Sir, I protest in the name of outraged humanity against this cowardly assassination of labor bills by hypocrites who masquerade as friends of labor. [Applause.]

Let me for a moment refer to some of the black rot which some of your men attempt to palm off on the people. The chairman of the Committee on Ways and Means stated that the cost of labor to produce a blanket was 30 cents, while the tariff was $1.50. Here there is nothing said about the cost of material, nothing about the cost of labor in material, etc. I could have given him a far better example. Take dressed beef, for instance, which costs eight or ten dollars a hundred. Now, the cost of killing that beef is only 10 cents per hundred, and, according to the chairman of the Committee on Ways and Means, the butcher's work is all that is to be considered as labor. Only constituents like yours could be gulled with such nonsense. [Laughter and applause.]

The gentleman from Missouri [Mr. DOCKERY] referred to the rapid increase per capita in manufacturing States; but nothing is said about the increase of population. He took Massachusetts and Illinois as examples, but he forgot to refer to the fact that Massachusetts is an old State while Illinois is a new State, to which immigrants are constantly going from Massachusetts as well as from other States.

He also said the interstate-commerce bill will make Pennsylvania plead for protection against Missouri. Even if that be true, we will not rebel if we do not get it. And if we find that we can do better in your State than our own we will go down to Missouri, and if you do not do better than you have been doing we will crowd you out.

Now, in reply to the gentleman from South Carolina [Mr. HEMPHILL], who said "there is no protective tariff where there are no votes;" that is to say, the more despotic the government is, the more there is of free trade. No doubt that accounts for South Carolina always having been in favor of free trade, for with her the employers only are permitted to vote.

But you say you are not free-traders; if so, you are not in harmony with your President. If you are not free-traders, you can not honestly vote for this bill.

But what of that? What does a Bourbon care for consistency?

How much time have I left, Mr. Chairman?

The CHAIRMAN. The gentleman has one minute remaining.

Mr. BRUMM. We have been referred to the strikes at the North. Strikes, Mr. Chairman, are but the skirmish line in this great battle, the organization and education of labor will make the main fight, and they will conquer all the Scotts, Corbins, Coxes, and other tyrants. They may drive back the skirmish line, but when the real conflict begins and the laboring men assert their rights as they are now learning them, they will not give up the fight until the cause of humanity is victorious.

Mr. HOPKINS, of Virginia. Will the gentleman let me ask him a question?

Mr. BLAND. Why do you not refer to Mr. Blaine's friend, Mr. Carnegie, and the strike of his laborers?

Mr. BRUMM. Who?

Mr. BLAND. Why, Mr. Carnegie, the man with whom Mr. Blaine is stopping in Scotland.

Mr. BRUMM. I have but a minute, and I wish merely to say in conclusion that you can not successfully stop the organization of labor in the defense of its undoubted rights.

Labor is marching on hand in hand, shoulder to shoulder, elbow to elbow, and is solving this great problem. They must win in this great fight for humanity, or our Republic will fall. Sir, in this great struggle we stand isolated and alone. There is but one America in this world. The great problem of life must be solved here or nowhere.

During the Revolutionary war we solved the problem of the divine right of kings and passive obedience. During the rebellion we solved the problem of legalized ownership of labor by the master; and now we must solve the problem of industrial and commercial emancipation with free labor; and I hope you will assist us, and that the glory of the American nation may shine over the whole world and into its darkest recesses, and show other nations the pathway to greatness and a higher civilization. [Applause.]

[Here the hammer fell.]

Revenue Reform demanded by our Agricultural Industries.

SPEECH

OF

HON. LEVI MAISH,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 17, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. MAISH said:

Mr. CHAIRMAN: One point at least in this controversy has not been disputed. All are agreed that the country is profoundly stirred up on the question of the proposed tariff reduction.

Never in the history of this country, excepting perhaps the slavery question, has a civil policy aroused such intense interest.

It is a question that is confined to no locality, but everywhere the people are to-day wholly absorbed in the contemplation of this great problem. Why is it that so profound an interest is taken in this question? Are the minds of a great people aroused to such a degree by merely trifling and transitory causes?

Deep-seated and substantial abuses alone could produce the state of feeling that now exists in the country.

The conviction among a large majority of the American people that our present system of Federal taxation is fraught with injustice, inequalities, and cruel wrongs is the foundation for the situation now witnessed in the Republic. This conviction commenced more than a score of years ago, and year by year has been steadily growing and extending. It will not stop until the question is settled.

To satisfy the public demand for a correction of the alleged evils of taxation convention after convention of both parties, national and State, has made the most explicit and emphatic declarations that our tax sys-

tem shall be modified and reduced to the requirements of the Government.

At a time like this it is the duty of every Representative to take his stand. This is my apology for participating in the discussion that has already been so protracted.

When the Representatives of the Fiftieth Congress assembled here in December last they were not ignorant of the great concern of the American people upon this question, and when the President sent his message to Congress he did not overestimate the importance of the subject when he devoted it exclusively to a discussion of the tariff and urging upon us the necessity of immediate action.

The Constitution wisely charges upon the President the duty of giving to Congress from time to time information of the state of the Union, and to recommend to its consideration such measures as he shall deem necessary and expedient. It was in pursuance of this constitutional obligation that the President called our attention to the anomalous condition of the Treasury, and recommended the measures suggested in his message.

Repeated attention had been called to this subject, and as repeatedly did the Congress adjourn without remedying a great public evil.

Owing to conflicting interests in large part, combined with a lamentable apathy to the interest of the country, the legislative branch of the Government has heretofore utterly failed to perform its duty.

The President, recognizing the imminent danger of the situation and the almost certain crisis that a continuation of the evil would invite, in a most pointed and vigorous manner again directed the attention of Congress to the subject and recommended a policy of reduction which in my judgment is most wise and patriotic.

The country has heard the alarm which the President has sounded, and the people's Representatives can no longer dodge the responsibility which he has so emphatically thrust upon them. There is no room for misapprehending the situation.

The evil that confronts us is an enormous surplus in the Treasury. Few have been bold enough to deny that this is an evil that demands a prompt and efficient remedy. Besides withholding from circulation a vast sum of money sorely needed by the people to transact their business, it invites a lavish expenditure of money, it stimulates schemes without number for its dissipation, and it is the parent cause of all kinds of jobbery and corruption. This surplus is the result of unwise legislation, for which the Republican party is responsible. After discharging a large part of the public debt, for which the present tariff laws afforded abundant means, and funding the remainder so that it could not be paid until after the expiration of many years, they allowed the revenue laws to stand unchanged, so that a rapid accumulation of a surplus in the Treasury was inevitable.

The only alternative thus far left to the Administration to release to the people a portion of these accumulated taxes was to go into the open market and purchase undue bonds at such prices as their holders choose to demand, the Government having to pay as much as 26 per cent. on these transactions. Perhaps this was a part of the statesmanship of the Republican party, which seemed in its past history to be peculiarly friendly to holders of the country's bonds.

Lacking the wisdom themselves to form a wise fiscal policy, the Republicans have, up to this time, been mainly employed in obstructing every effort that has been made by the Democratic party to correct the blundering statesmanship of the Republican party.

The Administration is entitled to great credit for making the effort to reduce this surplus.

Another course, which would have been more in conformity with the practices of the Republican party, would have been to continue the laws and dissipate this sum by extravagant and useless appropriations under the "general-welfare clause" of the Constitution—which, like charity, has covered such a multitude of political sins.

The surplus, we are informed, has already reached the enormous sum of $140,000,000, and this will continue to grow at the rate of at least $60,000,000 annually if the influx is not checked by legislation.

The President very clearly indicated how this reduction should be consummated. His views upon this subject were clearly presented in his message, and scarcely less clearly were they presented by him in a speech delivered at Newark, N. J., before his election.

The country therefore understood his views upon this subject when he assumed the duties of his office, and they knew that he would at all events do what he could to redeem his own pledges and the pledges of his party.

The gist of his plan of reduction is set forth in his message, as follows:

> The taxation of luxuries presents no feature of hardship, but the necessaries of life, used and consumed by all the people, the duty upon which adds to the cost of living in every home, should be greatly cheapened.

This is a statement so clear, so plain, and so self-evident that it leaves no room for cavil or misconception. It is replete with wise statesmanship and the noblest humanity. It is a policy upon which this Congress should have united irrespective of party. If carried out in accordance with his recommendation it would endanger no invested interest. It would jeopardize no industry. It does not threaten the manufacturing interests of the country, but, on the other hand, points out a sure, direct, and simple remedy for an existing danger, and at the same time promises a blessing to the household of every laboring man in the country.

In full accord with the views of the President, the Committee on Ways and Means of this House reported a measure which is so moderate, so reasonable, and so just in all its provisions that it can readily be accepted by all the friends of true tariff reform.

This measure has in reality been but little discussed by the Republican members of this House. They have employed their time in endeavoring to show that the policy of the Democratic party is that of free trade, and having set up this man of straw, they proceeded, with wonderful unanimity, to knock him down again by discussing the advantages of protection.

It can be easily shown that this bill affords as ample protection to our manufacturing industries as any law that has been distinctly enacted for that purpose in the history of the country.

In the multiplicity of protection ideas that have been advanced on the other side, one idea more conspicious than the rest seemed to pervade the whole discussion, and that was that the tariff should be reformed by them in the interest of protection. This, I submit, does not promise a speedy relief to the country, for the people will not soon again, in my judgment, intrust them with power. They had the opportunity for many years to redeem the pledges they made to the country, but they either lacked the disposition or the wisdom to do it.

It seems to me that a party that claims the privilege from the American people to reform the revenue laws of the country should have, at a crisis like this, presented to Congress some tangible plan of what they would do if they had the power.

For a month they have been discussing the questions of protection and free trade, and the country knows no more about the intention of the Republican party to-day than it did at the last Presidential campaign.

It is evident that they have been unable to reconcile the greedy interests which they represent.

If now they are unable to formulate a plan of tariff reduction, their ability to do so when clothed with power would be infinitely more perplexing. In plain terms, they have demonstrated to the country their utter inability to grapple with the subject. The country must understand by this time that if it depended upon the action of the Republican party the tariff laws would remain as they now are, yielding a constantly increasing surplus, which would be disposed of by wasteful and excessive appropriations; and if this method would prove ineffectual, that then it would be distributed among the States as proposed by the last Presidential candidate of that party. The course of the party in this House fully warrants this conclusion, but we are not driven to circumstantial evidence alone. Some members of the party have had the candor to avow the policy I have suggested. Mr. Andrew Carnegie, in an article in the March number of the North American Review, in speaking of the surplus used the following language:

> Never was there a situation in which the Earl of Aberdeen's advice is more appropriate than now. In regard to taxation after his cabinet had discussed the various means of solving a supposed problem, which, like the surplus, had only an imaginary existence, he asked, "Why could we not let it alone?" and that proved the true solution of the difficulty. It is so now with us. Why can not we let it alone?

The surplus, he declares, has only an "imaginary existence," and we are asked why this myth can not be let alone. He is one of the principal beneficiaries of the present tariff and also a prominent and influential Republican. He doubtless reflects the views of his class, and they would dictate the policy of their party in the future as they have done in the past.

The effort of the Republicans to show that they are *par excellence* the friends of the laboring classes will always remain one of the memorable features of this debate. In their desperate endeavor to maintain monopoly, in all the insolence of its power, they have the temerity to pose before the country as the champions of labor. The position is an impossible one. James Parton, in a recent article in the Forum, correctly stated the position of the two parties. He says:

> In all legitimate human strife the real antagonists are interest and principle, or, in truer words, the supposed interests of a part and the real interest of the whole.
>
> The Republican party has honestly and boldly taken in charge the supposed interest of a class, leaving to its antagonist the conquering force of principle, which is the interest of all.

But actions speak louder than words. Let us examine the conduct of the Republican party towards the workingmen of this country.

In 1864 the Republican party enacted the following law:

> That all contracts that shall be made by emigrants to the United States in foreign countries in conformity with the regulations that may be established by the Commissioner of Emigration, whereby emigrants shall pledge the wages of their labor for a term of not exceeding twelve months to repay the expenses of their emigration, shall be held to be valid in law, and may be enforced in the courts of the United States or of the several States and Territories, and such advances, if so stipulated in the contract, and the contract be recorded in the recorder's office in the county where the emigrant shall settle, shall operate as a lien upon any land thereafter acquired by the emigrant, whether under the homestead law where the title is consummated, or on property otherwise acquired, until liquidated by the emigrant; but nothing herein contained shall be deemed to authorize any contract contravening the Constitution of the United States, or creating in any way the relation of slavery and servitude.

This remarkable statute authorized the importation of foreign pauper labor under a contract that the wages of the emigrant shall belong to the party with whom he made the contract for a period of twelve months, and the strong arm of the courts of the United States could be invoked to enforce its stipulations. It authorized a lien to be put upon any land that the emigrant might acquire, and having thus put the badge of servitude upon him, we were coolly asked to hold that nothing in this contract shall be taken or deemed as creating "in any way the relation of slavery or servitude." The concluding paragraph of this statute betrays the guilt of its framers. What relation does the contract create if it does not create that of slavery and servitude? The only differences between the slavery thus sanctioned by the Republican party and that which was overthrown by the late war is that this was limited to a period of twelve months and the yoke was put upon white men.

This consuming solicitude of the Republican party for the workman found its fruit in my own State in the enactment of laws hardly less odious than the one just cited. On February 27, 1865, was enacted the following law, which, on April 11, 1886, was followed by the annexed supplement:

1. Any corporation owning or using a railroad in this State may apply to the governor to commission such persons as the said corporation may designate to act as policemen for said corporation.
2. The governor upon such application may appoint such persons or as many of them as he may deem proper to be such policemen, and shall issue to such person or persons so appointed a commission to act as such policemen.
3. The provisions of the act of February 27, 1865, entitled "An act empowering railroad corporations to employ police force, be, and the same are hereby, extended to embrace all corporations, firms, or individuals, leasing or being in possession of any colliery, furnace, or rolling mill within the commonwealth.

It is superfluous to comment upon these statutes. Their object is self-evident. The laborers of my State have not merited this tyrannical legislation. The effects of these statutes is to place into the hands of private individuals the highest power of the commonwealth, to be exercised at their will and pleasure. Was ever absolute power placed in the hands of one man that he did not use it to oppress his fellowman? Pennsylvania does not afford an exception. Can any one doubt that its purpose was to give to employers the power to subjugate their employés?

In conformity with the professed anxiety for the American laborer the Republicans have affected to be greatly exercised over the effect that the pending bill would have upon his condition, contending that it would bring him upon an equality with the pauper labor of Europe. This contention is based upon the idea that tariff raises wages, and that consequently a reduction of the tariff would lower his wages. In the first place, this proposition is wholly untenable, as has been repeatedly shown in this debate. In this country many of the industries that enjoy the highest protection pay the lowest wages, and many that are not protected at all pay higher wages than those that are.

But if the position of the Republicans were true it would show the hollowness of Republican professions.

The total number of people engaged in agricultural pursuits in the United States over the age of ten years in 1880 was 7,670,493, whilst the number over the same age at the same time engaged in manufacturing mechanical, and mining pursuits was 3,837,112. The value of the agricultural products exported for that year was $685,867,737, which was 83.24 per cent. of the total domestic exports.

In 1887 there was a slight decrease, the value being $523,073,774, as against $136,735,105 manufacturing products exported, the agricultural products being 74.41 per cent. of the entire domestic exports for 1887. This enormous surplus of the productions of our farmers was sold at the prices paid in the European market, where it was brought in competition with like productions of Austria, Hungary, Russia, and the degraded races of Egypt and India. If, therefore, the position of the Republican party is correct, then by far the largest and best portion of our workmen have been pauperized by competition with the pauper labor of the Old World.

This, however, has not pauperized the farmer, but, as I will presently show, it has been the inimical policy of the Republican party that has greatly crippled him, and, if persisted in, it will eventually place him upon the degraded level of the down-trodden laborer of the Old World.

Agriculture is the first and best pursuit of man; all other industries depend upon it and its prosperity. The farmers are pre-eminently the class of our citizens who should at all times have had our first and highest consideration. The normal condition of our country is that of agriculture.

This teeming globe presents no other country so highly favored by all the natural advantages of climate, soil, and navigable rivers, supplemented by unsurpassed artificial improvements.

Our farmers are mainly American citizens. Their pursuits are ennobling, and their homes afford the highest development of the domestic virtues. There may be found the true nursery of religion and patriotism. The farmer is the bulwark of our country, and when he falls it will be found, like Samson and the temple, that the Republic will be lying in ruins around him.

Now let us examine what the effect has been upon this meritorious class of our citizens. The statistics are calculated to startle even the most ardent protectionist, for even he is not so short-sighted as deliberately to compass the ruin of his best and almost only customer.

The following table shows the quantity and value of wheat exported from this country from 1879 to December 6, 1887:

Years.	Bushels.	Values.
1879-'80	153,252,795	$190,546,305
1880-'81	150,565,477	167,698,485
1881-'82	95,271,802	112,929,718
1882-'83	106,385,828	119,879,341
1883-'84	70,349,012	75,026,678
1884-'85	84,653,714	72,933,097
1885-'86	57,759,209	50,262,715
1887 (to December 6)	43,604,883	36,775,228

These official figures show that from 1879 to December 6, 1887, there was a falling off in the exportations of wheat of 95,483,586 bushels, representing a value of $140,283,906.

I claim that this was the direct result of our policy of non-intercourse. We can not hope to sell if we do not buy. Our foreign customers will gradually grow fewer as our purchases from them grow less. But what will our poor farmers do with their redundant crop? As has already been shown, it exceeds many millions of bushels the demand for home consumption. There can be but one result, and that, the figures just quoted incontrovertibly show, is rapidly being realized. Agriculture is slowly but surely retrograding. It will ultimately be reduced to the home demand for the farmer's products, and then he will be reduced to the condition that will make him the sport of the monopolist. How descriptive, then, would be these lines:

Here landless, laborers, hopeless toil, to strive,
To taste no portion of the sweets they hive.

If further proof of the destructive influence of our tariff policy were needed, the tables I shall presently present will, I am sure, convince the most obdurate protectionist.

Our farmers once had control of the wheat market of the world. There was a ready demand for all the products we could produce; but when we entered upon the policy of attempting to sell without purchasing in return the governments of the Old World were forced to open up new grain fields to supply their demands. England penetrated her India possessions with thousands of miles of railroads and laid under tribute the lands and labor of that distant country, to take the place of our productions. Now, how has this enterprise flourished? The following table shows that as our exportations decreased those of British India steadily increased.

Years.	Bushels.	Values.
1879-'80	4,109,495	$5,396,491
1880-'81	13,896,168	15,592,105
1881-'82	37,078,571	41,871,765
1882-'83	26,402,893	29,534,467
1883-'84	39,118,791	43,202,651
1884-'85	29,550,741	30,703,430
1885-'86	39,312,969	38,943,436

Here we have an exhibit that illustrates the supreme folly of our policy of isolation. This rival which we have ourselves set up we can never remove. The best that can be done now is to give our farmer a fair chance, and not hold him back whilst his competitor is calmly preoccupying the field, throwing up trenches and making himself impregnable.

How has this policy affected the agricultural industries of my own State? It can be stated in a few words and in a manner that can not be misunderstood.

In 1870 her farm lands were valued at $1,043,481,582; in 1880 they were valued at $975,689,410. Thus in ten years the farmers of my State have lost $67,792,172 in the decline of their property.

In 1870 there were produced in my State 19,462,405 bushels of wheat; in 1887 there were produced only 11,165,850 bushels, showing a falling off in seventeen years of 8,007,117. Doubtless the next census will show a continuous decline in the value of real estate, so that the loss in these two items of the Pennsylvania farmers may fairly be estimated at $100,000,000 in seventeen years.

In 1880 there were engaged in Pennsylvania in agricultural pursuits 301,112 people over the age of ten years, and in manufacturing, mechanical, and mining pursuits 528,277, whilst the amount of capital invested in manufactures in the same year was $474,499,993, as against $975,689,410 invested in farm lands. No account is taken of cattle, horses, or agricultural implements, as there is not of the value of the materials of the manufacturers. Now, even in my State, so highly favored by protection, it is shown that there is a class of our people that have suffered almost calamitous injuries by the invidious system of tariff taxation, and by reason of its enormous invested interests it is entitled to fair play, which as one of their representatives I here demand.

The Republican party, the more effectually, it would seem, to de-

stroy agriculture competition and promote the power of monopoly in this country, early entered upon the policy of giving away our public domain. Monopoly could not long flourish in the midst of a vast and prosperous agricultural country such as ours was destined to be.

After enabling the great railway corporations to draw from the Treasury about $180,000,000 in solid cash, that party bestowed upon them 296,000,000 acres of land, exceeding in area the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, Maryland, Ohio, and Indiana, which constitutes a little more than one-tenth of the entire area of the whole United States, exclusive of Alaska. It has given away to four of these favored corporations more territory than is embraced in all of the British Islands. The Northern Pacific alone has received more land than is contained in Pennsylvania and Ohio.

By this means the Republican party has fastened upon the people the most arrogant monopolies of the country, who, by their exorbitant demands upon the farmers, absorb nearly all the profits our protective system has left them. It has deprived millions of our people of the opportunity to secure homes upon the fertile lands of the far West. The public domain thus robbed from the people, whose birthright it was, has largely fallen into the hands of alien owners, and to-day vast areas are held in fee-simple by capitalists of England. By means of the wealth thus accumulated by the gratuity of the Government these gigantic monopolies are in large part enabled to dominate the States through which they run by securing the election of their favorites to office, and thus they control the legitimate powers of government.

A favorite argument of the Republican party in support of the policy of protection is that, under the present tariff system, the country has enjoyed an amazing prosperity. To assert it, however, is not to prove it. It can not be denied that our country has rapidly grown in wealth. She has outstripped that of any other country; but how can it be shown that we would not have been more prosperous if the protective policy had not prevailed? As we have not lived under a modified system of our tariff laws, such as is proposed by this measure, that question can never be answered.

The country has been prosperous in spite of unwise legislation, but it would have been more prosperous had our restrictive laws allowed an equal expansion of the agricultural resources of the country.

Had the farmers of the country had an equal chance, they would have drawn enormous wealth from other countries of the world and in which even the other industries of our country would have largely participated.

I stand here not to speak against the manufacturing industries of my State. They are amply provided for in this bill. It is my belief that they will be immensely benefited by its passage, and at the same time the agricultural industries will be lifted out of the "slough of despond," into which they have been plunged by unwise legislation, and started upon a career of great prosperity. Under the existing condition of affairs a policy of free trade is simply impossible. The Democratic party does not intend to strike down the props which have for so many years sustained the manufacturing industries of the country. In my judgment they would have consulted their best interests, looking not exclusively to present benefits, but also to the advantages of future permanent policy, had they given this measure their support.

Nature has recently given to them an advantage far outstripping the fallacious dependence of protection. The natural gas which flows spontaneously to their furnaces and furnishes them the best and cheapest fuel in the world makes them masters of the situation. Nature has here furnished them a protection secure against foreign competition and foreign pauper labor.

A careful examination of the Mills bill shows that it is extremely moderate, and drawn not only in the interest of the consumers, but very materially in the interest of the manufacturers.

The following editorial from a leading Republican journal will go further to vindicate the bill against the charge of antagonism to our native industries than anything I could say:

MODERATE TAX REDUCTION.

It is understood at this writing that the tariff debate will be resumed in the House to-day and continued through the week. This is just the time, therefore, when the reader who is interested in the discussion and its outcome—and everybody ought to be—will be glad to get a clear idea of the thing that our statesmen in Washington are talking about. We all know in a general way that they are talking about what is known as the Mills bill. But what is that? Those who are resisting with all their might all reduction of taxation except on such interesting necessaries of life as tobacco, beer, and whisky persist in representing it as a bill which, if it should become a law, would ruin and utterly obliterate all the infantile industries that depend for their gains largely upon the license they hold from the Government to collect tribute from other industries. Or, as they prefer to state it, the bill is intended to destroy the system of "protection to native industries," and is sure, if it becomes a law, to accomplish that diabolical purpose, and to ruin utterly not only those industries themselves, but to sweep all other industries to destruction along with them. It is desirable, therefore, before the debate proceeds further, to look at this bill and see whether it is conceived in a spirit of malignant hostility to "native industries," as its opponents assert.

So far as it relates to the tariff it may, for the purpose of clear presentation, be divided into two parts: That which transfers to the free-list articles now taxed and that which reduces the taxes on articles without transferring them to the free-list. In choosing articles to transfer to the free-list the authors of the bill were guided by the principle accepted and acted upon by all enlightened governments, that the materials entering into domestic manufactures should be free from taxation. They did not by any means follow this principle to the extent of placing all materials on the free-list. They did not go half so far in this direction as they might have gone with advantage to the industrial interests of the country. What they actually did may be gathered from the following table, which shows the classes of articles transferred to the free-list, with the values imported and the taxes collected on them last year:

Articles.	Value.	Duty.
Wood and lumber	$6,679,202.12	$1,039,207.35
Salt	1,355,946.96	676,865.50
Wool	18,206,987.97	6,390,054.73
Textiles	15,166,965.40	2,922,842.02
Chemicals	6,515,378.31	1,836,435.93
Metals, etc	18,497,275.20	6,096,101.86
Provisions	6,078,702.87	1,592,084.24
Sundries	8,149,018.50	1,860,699.38
Total	80,649,477.33	22,414,291.01

A word or two of explanation should be added. It is only rough or unworked wood and lumber that is passed over to the free-list. Planed lumber, or wood worked beyond the rough, is left in the list of taxables. The textiles passed to the free-list are only those of the coarsest kind, such as are used for bailing, etc., and mostly for packing products that are largely exported. All the finer fabrics are left on the list of taxables. The chemicals passed to the free-list are such as are largely used in connection with manufacturing processes; no others are freed. Among the metals passed to the free-list, tin-plates are the most important. Out of the $18,500,000 worth of metals freed by the bill, on the basis of last year's imports, nearly $16,900,000 worth was tin-plates. Tin-plates are the material of the packages of one of our most important lines of export industry—the canned-goods line. Since we have no tin-plate industry in this country, the passing of them to the free-list can not, of course, hurt any existing industry, while it will greatly benefit the canning industry and all persons who have use for tin-plates in this country. That is, it will benefit everybody, because there is not a family in which tinware is not used. The other additions to the free-list are all materials or articles of food. There is nothing dangerous or destructive in the additions to the free-list. The only fault to be found with the bill in this respect is that it does not go far enough. The question of free wool has been discussed heretofore, and does not demand special attention in this connection.

Passing on to articles on which taxes are reduced by the bill, we have the following exhibit of the reductions, estimated on the basis of last year's importations. The table shows the different classes of articles on which reductions have been made, the amounts of the tariff taxes collected on them last year, and the estimated amounts of the proposed reduction:

Articles.	Duties in 1887.	Estimated amount of duties remitted.
Chemicals	$1,688,200.49	$719,859.57
China and glass	6,392,372.14	1,697,650.37
Metals	9,937,574.48	1,123,827.53
Woodenware	300,716.66	42,959.55
Sugar	56,507,495.57	11,316,707.98
Molasses, etc	8,106.10	1,874.78
Tobacco	21,567.00	11,502.40
Provisions	1,711,805.92	331,480.38
Cotton	1,233,599.57	277,610.29
Hemp, jute, etc	6,207,936.53	1,838,671.62
Woolen goods	29,256,442.30	12,332,211.65
Paper	13,982.25	2,624.90
Sundries	4,960,363.43	1,039,302.54
Total	118,240,162.44	30,821,283.56

The guiding principle here is similar to that which governed the selection of articles to be passed to the free-list. The articles on which the reductions are made are largely those which have to be further manipulated before they are ready for consumption, or which are used exclusively or mainly in processes of production. But another principle also enters in. Where materials are freed from taxes the finished products made from those materials will bear a reduction of taxes without diminishing the protection enjoyed by the manufacturers. Thus, with wool and certain chemicals used by manufacturers of woolen goods transferred to the free-list much lower taxes on the finished products will protect the manufacturers just as much as the high taxes protect them now. According to the testimony of many woolen manufacturers who have placed themselves on record on the subject at different times, they would be abundantly protected by duties averaging 30 per cent. on finished goods if they could have their wool free of tax. But the pending bill gives them 40 per cent. or more of protection, and not only gives them free wool, but free chemicals. There is, therefore, nothing ruinous about the woolens schedule of the Mills bill.

And so it is from beginning to end. The reductions are exceedingly moderate throughout—far too moderate to suit tariff reformers who have faith in commercial liberty. There is nothing about them that need alarm the most timorous of our industrial infants. The most that is now proposed is, as Puck's cartoonist suggests, to reduce to some little extent the fat which encumbers most of the infants and impedes their movements and impairs their health. They would be all the stronger if a much more heroic dose of anti-fat tariff reduction were administered.

The Tariff Commission appointed in 1882 to revise the tariff was undoubtedly right when it said that—

Excessive duties are positively injurious to the interests which they are supposed to benefit. They encourage the investment of capital in manufacturing enterprises by rash and unskilled speculators, to be followed by disaster to the adventurers and their employés, and a plethora of commodities, which deranges the operations of skilled and prudent enterprise.

The members of this commission were all protectionists but one, and their opinion was not, therefore, biased against protection. Experience, however, has abundantly sustained the views quoted from their report.

I maintain, therefore, that the modification of the tariff laws proposed in the pending bill will redound to the great benefit of the man-

ufacturing industries of the country as well as those of all others, besides remedying the evil for which purpose it was presented.

The Democratic party, occupying the power in two of the co-ordinate branches of the Government, will not fail in its duty. The Executive has already done his in no uncertain way.

As the sun,
Ere it is risen, sometimes paints its image
In the atmosphere; so often do the spirits
Of great events stride on before the events,
And in to-day already walks to-morrow.

The Tariff and the Surplus.

"Timeo Danaos et dona ferentes."

SPEECH

OF

HON. HENRY J. SPOONER.

OF RHODE ISLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 17, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. SPOONER said:

Mr. CHAIRMAN: Although I may be inclined to distrust the sincerity, the disinterestedness, or the intellectual acumen of the authors of the "Mills tariff bill," I must concede their surprising political dexterity. I include in this compliment the Administration as well as the free-traders and their allies on the other side of the House, who have combined to create a "condition" which might afford a pretext for their predetermined assault upon our protective tariff system. Like the quack doctor who was "death on fits," they must first throw their patient into "fits" to furnish occasion for the administration of their specific.

In the light of the present, at least, no one who has followed the course of the Administration and of the controlling majority of the Democratic party in this House during the last three years can fail to discover the method and purpose which have directed their adroit manipulation of events.

Almost the closing official act of the last Republican President was the approval of the bill providing for the appointment of a board to "examine and report at what ports fortifications or other defenses are most urgently required," which bill became law by the approval of President Arthur March 3, 1885, the day preceding the expiration of his term of office.

Pursuant to the provisions of that law President Cleveland appointed such board, consisting of the present Secretary of War, the Chief of Ordnance, and another officer of the Ordnance Corps, the Chief of Engineers of the Army, and another officer of the Engineer Corps, two naval officers and two civilians—a board thoroughly competent to intelligently investigate and pass judgment upon the great questions submitted to their consideration.

It may be fair to assume that in that opening day of official power the plan of campaign subsequently entered upon had not been clearly defined or determined.

The report of that board was made to Congress in January, 1886, and presented a startling picture of the utterly defenseless condition of our coast. Let me quote briefly from that report. It says:

The coast fortifications, which in 1860 were not surpassed by those of any country for efficiency, either for offense or defense, and were entirely competent to resist vessels of war of that period, have, since the introduction of rifled guns of heavy power and of armor-plating in the navies of the world, become unable to cope with modern iron or steel-clad ships of war, far less to prevent their passage into ports destined for attack.

* * * * * * *

It is of no advantage to conceal the fact that the ports along our seacoast—a length of about 4,000 miles, not including Alaska—invite naval attack; nor that our richest ports, from their greater depth of water and capacity to admit the largest and most formidable armored ships, are of all the most defenseless.

The property at stake exposed to easy capture and destruction would amount to billions of dollars, and the contributions which could be levied by a hostile fleet upon our seaports should be reckoned at hundreds of millions.

It is impossible to understand the supineness which has kept this nation quiet—allowing its floating and shore defenses to become obsolete and effete—without making an effort to keep progress with the age, while other nations, besides constructing powerful navies, have not considered themselves secure without large expenditures for fortifications, including armored forts.

Our nearest neighbor, though reasoning from the past, she should have no occasion to dread a naval attack from us, has nevertheless constructed armored forts at Halifax and Bermuda, both as a refuge for her fleets and as outposts for offensive operations.

In the mean time we have acquired great riches and apparently dreamed that prosperity should inspire friendship and not envy in less favored peoples—forgetting that riches are a temptation, and that the plunder of one of our seaports might abundantly reimburse an enemy for the expenses of a war conducted against us.

* * * * * * *

Unfortunately the immense labor of novel constructions must be undertaken, under circumstances where careful workmanship is required and haste would be impossible. Under the most favorable conditions a long period would be required to place the defense upon a secure basis, and who shall guaranty that this can be effected free from complications with foreign powers? The Gun-Foundry Board has estimated that it would require at least three years to establish proper plant for the construction of modern guns. It would in all probability require two years more to get out and prove the first 16-inch gun. That there may be no delay in mounting the guns as fast as completed, the work upon the extensive foundations for the gun emplacements, as well as magazines, shell-rooms, engine-rooms, and other constructions necessary for the service of the guns, should be commenced at the earliest moment.

The board designated twenty-seven ports as requiring provisions for their necessary defense, including the principal ports along the Atlantic and Pacific seaboard and on the Lakes, and particularized as the ports where "fortifications are most urgently required" New York, San Francisco, Boston, the Lake ports, Hampton Roads, New Orleans, Philadelphia, Washington, Baltimore, Portland, and the Rhode Island ports in Narragansett Bay. After an exhaustive consideration of the kind and character of defenses, armament, and appliances required, they concluded with their estimates and recommendations.

The entire cost of providing the defenses required was estimated by the board at $126,377,800; of which amount they recommended that $21,500,000 should be appropriated for the first year, and $9,000,000 annually thereafter, emphatically declaring that "the above-named amounts should be appropriated by Congress without delay," and that "nothing less will suffice even for a beginning."

Would not every patriotic citizen suppose that both the President and Congress would have united in cordial co-operation to provide for the national defense? Yet, though we are far advanced towards the close of the third annual session of Congress since that report was presented, and notwithstanding the earnest efforts of the Republican Senate and the Republican minority in the House to secure appropriations for the commencement of the work, the Democratic House has persistently refused concurrence; and consequently the thirty-nine and one-half millions of dollars, which within the last three years should have been devoted to that important work, have been permitted to lie idle in the Treasury.

Reasonable payment for the carrying of foreign mails by American steam-ships—proportionate to the payments made for carrying domestic mails—has been repeatedly refused; and even the appropriation provided in part therefor has been withheld by the Democratic Postmaster-General; whereby the extension of our foreign trade and commerce has been prevented, while the amounts (large in the aggregate), which should have been devoted to that purpose, have been retained in the vaults of the Treasury.

The river and harbor bill of the last session, carrying an appropriation for many important works necessary for the protection of our commerce and to facilitate its operations, and the deficiency bill of the same session, with its appropriations of general and national consequence, were permitted to fail by the House and the President, and some fourteen millions of dollars thereby retained in the Treasury to add to the growing "surplus."

The "dependent pension bill," passed in 1887, and designed to relieve the utterly destitute and totally disabled veterans of the Union Army and their immediate dependents—*the wards of the nation*, was vetoed by our Democratic President, whereby, although ten thousand defenders of this Government were left in the almshouses of the country, about six millions of dollars annually (10 cents per capita to our people yearly) were preserved to swell the "surplus."

The purchase of its bonds by the Government, which had long afforded a safe and speedy means of relief for an overflowing Treasury—paying the nation's bonded debt as opportunity offered—was stopped upon the pretence that the law authorizing the purchase was of questionable validity, because, forsooth, it was enacted as a section in a general appropriation bill, although our hypercritical Executive should have known that very much, if not the larger part, of the general legislation of many years past has been enacted in identically the same manner, in general appropriation bills, the binding force and validity of which have never been questioned outside of the present Administration.

Through a week and a half of this session of Congress the valuable time of the House has been wasted by the Democratic obstructionists on the other side of the Chamber in preventing the consideration even of the bill to equalize the direct tax of 1861 among the States, by refunding said tax to such of the States as had paid the same into the national Treasury and relieving the States which had not paid the tax from the burden of the obligation; until finally their Southern commanders, by methods similar to those now employed to solidify the Democratic vote upon the pending bill, forced their party generally into line, consigned the direct-tax bill to the uncertainties of consideration in the distant future, and prevented not only an equitable adjustment of Governmental demands and obligations, but also a threatened reduction of some $17,500,000 in that dangerous "surplus!"

In brief, this Democratic Administration and Democratic House have neglected few opportunities to withhold appropriations and legit

imate and proper expenditures, whenever not demanded by party exigencies, that they might enlarge the alleged surplus in the Treasury and prepare the "condition which confronts us."

Truth and historical accuracy seem to demand this plain recital of facts, together with an indication of their necessary results—clearly foreseen and foreordained by the controlling forces of the party in power, and justifying the assertion that if the just claims of the Republic and her citizens had been recognized and their legitimate interests properly cared for the surplus in the Treasury would not now exist in its present threatening proportions. Indeed, if I were disposed to enter that field of inquiry I might well ask, is that a "surplus," much of which has been withheld from the pressing needs of the country and the just demands of its citizens and the States to increase the accumulations of an already overflowing Treasury? Or, quite as pertinently, what constitutes a "surplus" in a Treasury, with a public debt outstanding of more than $1,700,000,000, of which over $228,000,000 are redeemable within less than three and one-half years?

But it is unquestionably true that, by reason of the admirable economic and financial policy established under Republican administration, our national credit is so high and our available sources of income so prolific that, if that policy be continued, and the prosperity and productive and consumptive ability of our people be preserved, the retirement of our bonded debt, or its refundment at even lower rates of interest, as speedily as occasion and sound discretion may require, need occasion little apprehension. If, however, the policy promulgated by the President, and in which the bill under consideration is "the first firm step," is to prevail, we may well fear that the future condition of our Treasury, as well as of our people and their industries, is one of much uncertainty.

The message of the President and the pending bill have brought us to the point where the roads necessarily divide upon questions of fundamental principles; and the debate upon this floor has presented the issue unmistakably between the English system of free trade and the American system of a protective tariff. I want no quibbling over terms. I use "free trade" and "tariff for revenue only" as interchangeable and synonymous terms, as they are universally used in modern discussion.

The differences between the systems of "free trade" and a "protective tariff," and the principles upon which they are founded are radical, and the results flowing from their practical application widely at variance.

Free trade, when levying taxes upon foreign imports, seeks revenue only, and prefers to collect its tariff taxes from those products, like tea and coffee, which are not produced in this country, ignoring the policy of apportioning and applying such taxes with a view of encouraging and protecting home labor and home industries.

A protective-tariff policy, on the other hand, would admit free of duty (in so far as the needs of Government for revenue permit) all useful foreign products which can not be produced within our borders at all, or can not be produced here with the reasonable expectation of satisfactorily supplying the wants of our people by home production.

Upon foreign imports, similar to those successfully produced by our own people, it levies tariff taxes (or duties) sufficient at least to equalize the labor cost employed in their production with the labor cost engaged in producing similar products, whether of the farm, the mine, the mill, or the workshop in our own country; thereby, while raising necessary revenue for the Government, at the same time protecting our home labor and home industries from ruinous competition in our home markets with the products of the cheap, or pauper, or even convict labor abroad.

The protective policy recognizes the superior and happier condition of our people and their greater productive ability when, in a country presenting the varied opportunities here afforded, they can engage in diversified industries, each enabled to select that pursuit best adapted to his capacity, his inclinations, and his taste.

It believes that in a country of such vast extent of territory, with such variety of soil and climate, and possessing such immense and varied natural resources for the development of agricultural, mining, manufacturing, and commercial wealth, a free people can best attain the highest degree of general prosperity and perform the high mission committed to their charge by diversifying their industries, developing the abounding resources they possess, and achieving and maintaining their industrial independence, the staunchest ally of political freedom.

It believes that the United States can be and should be self-supporting, furnishing by the labor of its own people, and, in so far as possible, from its own productions, all the necessaries and as many as practicable of the luxuries used or consumed by our people, relying upon competition and the operation of well-recognized principles of political economy to so regulate prices that the laborer and the producer of such merchandise shall receive reasonable recompense and the consumer obtain the same at a reasonable cost.

The intelligent advocate of the protective system does not claim that the imposition of tariff duties upon foreign imports, sufficiently high to protect our home labor and industries from such undesirable competition as I have referred to, immediately or inevitably lowers the price of similar products manufactured or produced here to the price of the foreign production, as is sometimes charged; but it is claimed and demonstrated by actual results that the energy, skill, inventive genius, and competition which are brought into efficient exercise among our people by securing to them our own great home markets for the greater part of their products, as a protective tariff, properly applied, necessarily does, reduce the cost of production, and consequently the price of such products, lower, as a general rule, than they would have been if the foreign producer had continued to control our market; and with the lapse of time, increased capital and experience, and the enforced competition of the foreign producer straining to enter our market over the partial barrier of the tariff, all contributing toward the same result, the selling price of such merchandise falls as low as just regard for all our home interests involved permits, and frequently lower than the price of similar foreign products in the country of their production, and this without disturbance or even with an increase in the wages of the labor here employed.

These facts, easily ascertained by observation, inquiry, and investigation, are illustrated by the experience of this country during the past quarter of a century under a protective tariff, and by the present comparative prices of many articles of domestic and foreign production in their respective home markets, and verified by the exportation during the last fiscal year of our manufactured products alone of the value of nearly $137,000,000, which necessarily competed in the foreign markets to which they were sent, and largely in Great Britain, France, and Germany, with similar merchandise of foreign manufacture.

The chief object and effect of a protective tariff, beyond the raising of required revenue, is to preserve and enable a country and its people to profit by such advantages, natural or acquired, as they may possess.

The discreet and sagacious statesman will endeavor to shape and direct legislation with special and practical reference to the conditions and necessities affecting that country and its people, whose interests are committed to his charge. Legislation relating to taxation is essentially a business question, involving considerations of existing circumstances, situation, and surroundings, as well as of policy and sound principles, and the wise adaptation of its application in detail to the end of securing the most desirable and advantageous practical results.

The effect of a free-trade policy in Great Britain, or of a protective tariff in Germany, or of a wall of prohibition in China, can at best serve only as indications of the probable result of similar policies adopted here; and viewed in that light even can be properly suggestive only in so far as existing circumstances, situation and surrounding, are similar.

As times and circumstances change the wisest policy of to-day may not be the wisest policy in the not distant future. Even those who claim that English free trade is the best economic policy for Great Britain to-day can not but admit that her long-continued adherence in the past to a protective policy, amounting at times and in many respects to absolute prohibition of foreign commerce, afforded the opportunity and the cause of the development and perfection of her immense and diversified industries, the accumulation of her vast capital, and her present ability, through those advantages, to compete so strongly in manufacturing with the other countries of the world. Great Britain did not enter upon her career of free trade and open her markets to general foreign competition until she found herself able, as she believed, to compete in cheapness of production with the nations of the world. In that respect at least we may well profit by her example.

I charge that this bill is a free-trade measure, because it ignores and seeks to overthrow the protective tariff "system." It is not an assault, as military men would say, "all along the line," but an attack "in detail," with the evident hope and expectation of separating the forces of protection and preventing their combined and co-operating resistance.

One may well estimate its character from a knowledge of its authors, its supporters, and its friends, none of whom entitle it to the confidence of those who believe in a protective policy. It was framed under the leadership and to the satisfaction of the gentleman from Texas [Mr. MILLS], who has long been an undisguised enemy of protection; and its provisions are believed to have been inspired, if not dictated, in many respects, by that active agent of the English importers, the "Parsee Merchant," who, during the opening speech in this debate of the leader of the Democracy, beamed so gaily upon him from the Speaker's gallery.

Both the President's message and the pending bill have been hailed with delight by the free-trade press of England, already largely quoted in this debate, and by free-traders in and out of the Cobden Club, at home and abroad.

Listen to the voice of the Standard, the avowed free-trade organ of that dangerous theorist, Henry George. It characterizes the speech of the gentleman from Texas [Mr. MILLS] in support of the bill as "a manly, vigorous, and most effective free-trade speech." And referring to the argument of the gentleman from Tennessee [Mr. MCMILLIN], it says:

> This is not talking tariff reduction. It is talking free trade.

And in further reference to the situation developed by the bill and the pending debate:

> It is now certain that protectionists like Messrs. Charles A. Dana and SAMUEL J. RANDALL will ere long have to "eat crow" or go over formally to the Republican party.

And again:

The debate on the Mills bill is going along bravely in the House, Democrats and Republicans speaking alternately. Or rather, it should be said free-traders and protectionists alternate, for it is evident in the House, as through the country, that political distinctions that for some time have meant nothing are passing away, and that the real political contest this year is to be between protection and free-trade. Mr. FORAN, of Ohio, is the first so-called Democrat to break away in the debate from the tariff policy of his party.

The bill under consideration, moreover, is grossly discriminating, partisan, and sectional. Prepared in secret session by the partisan majority of the Committee on Ways and Means, the gentlemen from Texas, Tennessee, Arkansas, Kentucky, Georgia, West Virginia, Pennsylvania, and Indiana; without consultation with their colleagues upon that committee; all hearings refused; the right of petition practically denied, and the voice of New England and the great North and Northwest insolently silenced; framed upon no definite theory except with the purpose of striking the most effective blow at the protective system which circumstances would permit; and pushed, as it continues and will continue to be, by the "log-rolling" method of making all needful concessions to obtain a Democratic majority sufficient to secure its passage, the bill is a "vicious, inequitable, and illogical" aggregation of inharmonious provisions and principles. Compare the treatment extended by this incongruous bill to some of the great products of the country, and tell me, if you can, any just reason for these monstrous discriminations. Has not wool been put upon the free-list because it had no defender among the majority of the committee; while soft coal and iron-ore, in which the gentleman from Pennsylvania [Mr. SCOTT], a member of that majority, is so largely interested, is to remain protected by an ample tariff duty? Does it not propose to remove all duty from salt, the product of New York and Michigan, and to retain a protective duty upon sugar, the special product of Democratic Louisiana? And can any gentleman tell me of any instance in which the rule I have indicated has been reversed?

Salt, perhaps as satisfactorily as any of our productions, illustrates the result of protection in developing an industry and cheapening the cost of its product to the consumer.

The salt product of Michigan in 1860 was only 4,000 barrels, and it sold for $2.35 per barrel, the barrel costing 20 cents. Protected by a duty upon imported salt, the quantity of salt produced in Michigan constantly increased, while its price as continuously diminished, until in 1887 its product amounted to 4,200,000 barrels, selling for 58 cents per barrel, including the 20 cents which the barrel cost!

The propriety of retaining a protective duty upon sugar, considered from the standpoint of a protectionist, is regarded by many protectionists as questionable; for although our sugar-producers have had the opportunity afforded by many continuous years of protection they have as yet utterly failed to supply any considerable part of the sugar consumed by our people.

In this respect they are sadly in contrast with the producers of salt and protected products generally.

During the last fiscal year less than one-tenth of the sugar required for home consumption was of domestic production, and consequently sugar was imported in that year of the enormous value of nearly $69,000,000, import duties upon which were collected by the Government amounting to over fifty-six and one-half millions of dollars, a tax of over 82 per cent. ad valorem to the consumers, and contributing that immense sum toward the increase of what is called the surplus in the Treasury.

Is it surprising that the inquiry should be frequent as to the propriety of continuing protection to an industry which has so feebly illustrated its claim to be included within the principles upon which the system and policy of protection are founded; and as to why any necessary reduction of the surplus revenues might not well begin with the removal of the duties on sugar, thus relieving our people from a tax upon such enormous imports of one of the most common and necessary articles of food, consumed in every household?

I freely confess that, in my opinion, the protective duty upon sugar has been one of the least defensible of any within the tariff schedules. I say "has been;" for the recent results of continued experiments seem to indicate, and perhaps make certain, that the practical and economical manufacture of sugar from sorghum is nearly or quite an accomplished fact; and the ability to satisfactorily manufacture beet sugar in this country has been recognized by no less an authority than Mr. Claus Spreckles, who is already preparing to establish a plant and enter upon its manufacture in California. Both sorghum and sugar beets can be raised throughout large areas of our territory and in many of the States; and the present outlook is exceedingly promising for the production within the United States, at no very distant period, of sufficient sugar to supply, at a low price, the entire demands of our people.

Guided by the information now at my command, I am not prepared to concede that the sugar industry is not now entitled to continued protection, either by the retention of protective duties or, which might be better and more economical to our people, by the payment of a bounty upon domestic sugar—a policy adopted by both France and Germany, and resulting there in securing immense production at an extremely low cost.

Protectionists at least should appreciate the value and importance of establishing such great industries, not only increasing the diversity of our occupations and affording employment to those directly engaged in the manufacture, but also furnishing employment to all the artisans, mechanics, and laborers engaged in the erection of suitable buildings, preparing the required facilities, and constructing the necessary machinery for the manufacture; to the farmer and those from whom he obtains his additional labor and supplies needed for the preparation and tilling of his land, planting and gathering his crop, and furnishing the sorghum cane and beets for the manufacture, and to those numerous trades and occupations which are benefited by the establishment of new industries and the profitable employment therein of those who must procure from them the necessaries and luxuries of home and food and clothing and the numerous articles which are required for comfort and convenience.

As a protectionist, and having faith in the system of protection and its beneficent results when properly applied in accordance with the principles upon which it is based, I would not willingly see any American industry which can exhibit just claims to be included within its principles refused the reasonable and needed protection which that system should properly afford.

My intention, therefore, in criticising the preservation by the pending bill of the protective duty on sugar is rather to direct attention to the discrimination exhibited in favor of a product of Louisiana utterly inconsistent with the alleged principles upon which the bill was framed, and in significant contrast with its removal of all duty from salt and other Northern products.

The same course of dealing is illustrated in the provisions of the bill concerning hoop-iron and cotton-ties, a duty being retained upon hoop-iron, while cotton-ties, made of hoop-iron and exclusively used by the cotton planters and packers of the South, are to be admitted free of duty. And Southern rice, now protected by a duty ranging from 71½ to 134½ per cent., remains highly protected, but Northern potatoes, beans, and peas are placed upon the free-list.

I have been persuaded by this debate, more fully than ever before, that the confession of General Hancock, which at the time excited some amusement, that "the tariff is simply a local issue," is literally true from the average Democratic standpoint! It has been abundantly exemplified during this debate.

No more earnest argument, perhaps, in favor of protection has been made during the debate than in the speech of the gentleman from South Carolina [Mr. DIBBLE]; but it was entirely devoted and applied to the necessity of a protective duty on rice, the local product in which his constituents were specially interested. The gentleman from Louisiana [Mr. WILKINSON] was earnest, argumentative, and pathetic; but his powers were entirely expended in advocating a protective duty on sugar, the local product of his own section, that the great industry of his State might not be destroyed. And, in the same manner, I might specify the efforts of other gentlemen on the Democratic side of the House, each recognizing the justice and necessity of protecting, by the imposition of proper tariff duties, his own local products, but unable or unwilling to understand the applicability of the same principles to other products of other localities!

Come up higher, gentlemen! From this broad Republican platform on which I stand, you will be able to see and appreciate this magnificent Republic of ours, large enough and grand enough in territory and population and resources and material interests to demand a comprehensive national policy and administration of her affairs, free from the influences of petty selfishness and narrow partisanship, born of local jealousy and sectionalism.

What I argue, and what I insist upon is that some principle should govern the provisions of a bill regulating a great system of national taxation, and that legislators competent to deal with the subject, and exercising wisdom and sincerity in the performance of that duty, would not stultify themselves by presenting to this House a bill teeming with propositions so "vicious, inequitable, and illogical" as those which stare at us from the pages of the bill now under consideration. If the principle of protection is wrong and ineffective for the purposes claimed by its advocates, as has been fervently insisted by so many of you orators upon the Democratic side, why do you cling to it with such unrelaxing tenacity, supporting your claims by "protection" arguments for the protection of your own local, pet industries? And if the principle is patriotic, correct, and right, what do you mean that we should understand by your support of such a bill as this?

Have you not the courage of your convictions; or have you no convictions?

I have said this bill is an attack "in detail" upon the protective system. The removal of any stone from a properly constructed edifice impairs the stability of the structure; tear out the keystone, and the self-supporting arch falls.

Wool was selected for the free-list, not because it is less entitled to protection than soft coal, iron ore, rice, or sugar, nor because it has not abundantly justified its claims to be included within the protective system, for under the stimulus of that system the production of domestic wool has steadily increased while its quality has continuously improved, until we have grown to be the second only among the wool-producing countries of the world; but because it was believed that the scattered sheep-farmers could scarcely concentrate to defend their industry; that by such fallacious arguments as have been here urged, the people might be led to consent to the proposition; and, perhaps,

above all, for the reason that it was imagined that the woolen manufacturers would eagerly seize the bait of "free wool" and unite in the attack, and that thereby the just and practical line of defense of the protective system would be irrecoverably broken. It was a cunning scheme, and manipulated with much dexterity, but it will fail of its purpose.

Woolen manufactures are among the largest and most important industries of my State, and I may properly claim to represent them here. There are some forty-odd woolen manufacturers in Rhode Island, all of whom, with the exception of four or five, have united in a communication to our Congressional delegation in earnest opposition to the removal of the protective duty on wool, and I am assured that they correctly express the sentiments of the woolen manufacturers generally throughout the country.

Gentlemen of the Democracy, you must seek elsewhere for allies in your campaigns against American industries and the system under the protection of which they and the country with them have attained their present growth and prosperity.

In this connection, let me also inform the supporters of this bill that their endeavors are not agreeably appreciated by the farmers of my State, who strenuously object to the placing upon the free-list the foreign agricultural products which are imported to compete with the products of their farms; and that I have received their petitions, not only demanding a protective duty on wool, but also on potatoes, onions, barley, cabbages, hay, hops, beans, peas, eggs, poultry, and other agricultural productions. The intelligent farmers of our country, as fully as any portion of our people, recognize the benefits flowing from the enforcement of a protective policy, and appreciate the advantages of an economic system which has prevented the overcrowding of the ranks of agriculturists and has given them a home market for more than 90 per cent. of their crops.

A studious effort has been made during this debate, both by the advocates of this bill in the House and by the partisan Democratic press of the country, to obscure the direct issues necessarily presented and to confuse the public mind concerning the two great systems of taxation from which the revenues of the Government are derived, and their purposes, application, and results, or it might be unnecessary for me, in this representative assembly of the nation, to state and discuss so largely, as that course of dealing with the questions involved compels, the details and elementary principles to which I feel obliged to refer.

Our two great systems of taxation, the principal sources of our national revenues, are the tariff and the internal revenue. The tariff duties are levied only upon goods and merchandise imported from foreign countries, being the taxes imposed by our Government upon foreign products for the privilege granted them of entering our home markets. During the whole course of our history, the revenues required for the support of our Government have been chiefly derived from such tariff duties.

If the foreign producer or importer reimburses himself wholly or in part (as he is not always able to do) for the taxes he is compelled to pay as tariff duties, he must do so by adding the amount of such taxes, or so much of the same as the market will admit, to the price at which he sells his goods here; and the whole or part of such taxes, so added, is usually (but not always) paid by the consumer of such foreign goods. But no goods or merchandise produced within the United States are subject to any tariff tax or duty, and consequently no consumer or purchaser of domestic productions pays thereon any tariff tax. The prices of our home products of all kinds are regulated here by competition, the rivalry in which is so keen that such products can seldom, for any considerable period of time, command a price in excess of what they should fairly receive and closely approximating to their actual cost.

The charge so frequently heard from the free-trader that the same percentage of tariff duty which is levied on foreign-made blankets, cloths, and other imported articles is also added to the price here of similar products of home manufacture (which, remember, are subject to and pay no tariff duty whatsoever), and that such addition to the price is paid by the purchaser and consumer of such articles of domestic manufacture, is but reckless assertion and wild declamation, too frequently refuted in this debate to require further serious attention.

No sensible man who looks about him and compares the prices in our home markets of similar foreign and domestic goods believes or finds reason to believe such a charge.

The internal-revenue system is of an entirely different character and deals with an entirely different method of taxation. Internal-revenue taxes are levied entirely upon home products and domestic interests, and at present include taxes upon spirits and fermented liquors, tobacco, and oleomargarine produced and manufactured in this country, and upon bank circulation; and during the last fiscal year such taxes amounted to nearly $119,000,000, of which about ninety-six millions were derived from spirits, fermented liquors, and tobacco, all of domestic production.

Imported spirits, liquors, and tobacco, including imported cigars and cigarettes, pay taxes, when imported, under the tariff laws, in the same manner as other foreign imports; and their cost would be affected in no respect by changes or repeal of the internal-revenue laws.

The internal-revenue taxes imposed by existing laws are the remnant of that immense system of internal-revenue taxation, under which the enormous sums were collected from taxes upon manufactures, incomes, banks, professions, and almost every industry and possible object of taxation, to supply the Government with the vast revenues needed for carrying on the great war for the Union.

Under Republican administration, and during the years succeeding the war, while that party controlled the affairs of the Government, the burden of these war taxes was removed as speedily as circumstances permitted from the business and industries of the people, and that party now believes that a certain reduction of our surplus revenues could be most judiciously effected by a further removal of internal-revenue taxation. If the revenue therefrom is not required for the purposes of the Government, I know of no good reason why the internal-revenue taxes on tobacco grown by our own farmers, manufactured by our domestic industries, and sold by our home merchants, should not be free from taxation. An absolute reduction in our annual revenues of $30,000,000 could be made by repealing the laws imposing internal-revenue taxes on tobacco.

Alcohol is largely used in the arts and manufactures; and its cost therefore is a matter of material consequence, affecting many interests.

We must not permit ourselves to be confused by the introduction of the temperance question; for, in the first place, the leaders in the temperance cause believe that their cause would be promoted by the removal of all internal-revenue taxes from spirits and liquors, thereby withdrawing from the liquor manufacturers and liquor dealers the protection and support which, it is claimed, the internal-revenue taxation affords; and secondly, and more pertinently to the question under consideration, free alcohol for the arts and manufactures is one thing, and free spirits and liquors for a beverage, or "free whisky and free rum," quite another and a very different one. The taxes paid during the last fiscal year on alcohol used in the arts and manufactures (adopting the estimate of the Commissioner of Internal Revenue) amounted to $10,620,000, a very considerable burden upon our industries and an entirely unnecessary tax of about 600 per cent. ad valorem upon such alcohol, unrequired by the Government, and which could be safely remitted by a judicious amendment of the internal-revenue laws without in the slightest degree assisting toward the supply of "free" or untaxed "whisky and rum" or any other spirits or liquors.

I think I should also correct an error which appears to be prevalent among those who carelessly draw their information, or perhaps I should say misinformation, from unauthentic sources. I refer to the incorrect and misleading statements which have been promulgated as to the pledges of the Republican party, in their national platform of 1884, touching the tariff and the surplus.

Here is the declaration. It speaks for itself, and in no uncertain language:

> The Republican party pledges itself to correct the irregularities of the tariff and to reduce the surplus, not by the vicious, indiscriminate process of horizontal reduction, but by such methods as will relieve the tax-payer without injuring the laborer or the productive interests of the country.

Like all Republican pledges, it means what it says, and is the same patriotic declaration of adherence to the protective-tariff principle which its representatives upon this floor continue to reiterate.

The "irregularities of the tariff" should be corrected and the surplus reduced; but the tax-payer can not be relieved "without injuring the laborer or the productive interests of the country" by the passage of any such bill as is now before us.

The surplus would be reduced by a correction of the "irregularities of the tariff," of which the discrimination in favor of imported worsteds is a notable instance, and by the removal of internal-revenue taxes from domestic tobacco and alcohol used in the arts and manufactures; and some changes in rates of duty upon imported merchandise, and some additions to the free-list, without violation of the principles underlying the protective system, might well be made with advantage to all interests concerned. But the bill under consideration, framed and pressed by the enemies of protection, is of a widely-different character, and, as I have already urged, threatens the perpetuity of a system upon which our industrial prosperity and the advantageous employment of our labor are founded.

It is extremely doubtful, moreover, whether the pending bill, if enacted into law, would effect any reduction in the revenues of the Government, while it is very certain that the increased importation resulting from reduced tariff duties upon many classes of merchandise would largely increase the sum received in tariff duties from such classes of imports, and to that extent increase the revenues and tend to the increase of the surplus.

I admonish my Democratic friends, bewildered by the sight (so unusual to Democratic eyes) of an overflowing Treasury, that the only safe, proper, and judicious method of effecting any required reduction in the surplus is within the lines and subject to the broad and patriotic policy which I have indicated.

You of the Democratic majority who are now attempting to force upon the country undemanded legislation, inimical to American labor and American industries, may not be converted to the doctrine which I advocate; but if not, I am confident that a majority of your successors, sent in your place by intelligent constituencies, will assist in repairing any injuries you may have inflicted upon our system of American protection, and will unite with us of the present minority in controlling

legislation for the preservation of those important interests you so inconsiderately assail.

I am confident that we who in the past have fought the battles of protection will no longer fight our battles alone. An intelligent appreciation of the importance of our cause is alive and alert in localities heretofore controlled by the dogmas and theories which wisdom and larger experience have disproved.

No mine has been opened, no furnace, mill, or factory put in operation; no great industry started and developed in those localities which has not afforded a practical demonstration of the advantages and necessity of our protective system. From the industrial centers of the new South come the same earnest demands for the preservation of that system as are heard from the busy, flourishing industries of the North.

The venerable Senator from Georgia [Mr. BROWN], wiser and more farseeing than his colleagues in this House, catching the inspiration borne to him from the industrial sections of his own State, pleads for the system through which prosperity is promised to his people.

The cattle-men of Texas, more sagacious than their Representative here, who they assert fails to properly represent his district or his State upon the questions at issue, at their recent convention at Waco, Tex., passed resolutions condemnatory of his course, from which I quote:

Forsaken by our Representative, we urge upon our Senators and Representatives in Congress to work against the Mills bill, and we call upon all good men from other States to protect Texas, if her own Representatives fail to do so.

And—

Protection on raw wool is purely a protection to the producer, the farmer, as well as the sheepman, and should be maintained.

Sympathizing with an unrepresented constituency, I cheerfully respond to the call of the cattlemen of Texas, and assure them that I will endeavor to assist in protecting the interest of their State, in common with the interests of every State, from the application of the dangerous theories of men, of whom it is charity to admit "They know not what they do."

From the same State I have also received a "political tract," by C. L. Edwards, esq., of the Ellis County bar, an ex-Confederate—an earnest, able, and exceedingly interesting advocacy of the American protective system, giving assurance that the free-traders will not hereafter hold undisputed possession of the Texan field.

The message of the President, the pending bill, and the present debate have clearly developed the issue upon which the approaching national campaign will be contested. The opposing lines are being distinctly drawn and the antagonistic forces marshaled.

"Protection to American industries and American labor" will be the inspiring motto upon the Republican banner; and to its support must gather all patriotic citizens, irrespective of former political affiliations, who believe in maintaining our protective-tariff policy, in preserving American wages for our own labor and the American markets for our own producers; whose plan of reforming the tariff and reducing the surplus contemplates no impairment of the system or principles of protection. We can hope for no reform or reduction, within the limitations of that wise and sagacious policy, from those who have prepared and are advocating the passage of this "vicious, inequitable, and illogical" bill.

"Timeo Danaos et dona ferentes."

The work of revision can be safely intrusted to the friends only of a protective-tariff system. [Applause on the Republican side.]

Mr. Chairman, if I have any time remaining I yield it to the gentleman from Ohio [Mr. ROMEIS].

Admission of Dakota.

SPEECH

OF

HON. WILLIAM WARNER.

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 28, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9377) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. WARNER said:

Mr. CHAIRMAN: On Tuesday last, during the general debate on this bill, the chairman of the Committee on Territories [Mr. SPRINGER] addressed the House in reply to the speeches of the gentleman from New York [Mr. BAKER] and the gentleman from Dakota [Mr. GIFFORD] on the admission of Dakota. In his remarks he claimed that in the consideration of the claims of Dakota and other Territories for admission as States he was uninfluenced by partisan considerations; that to all appeals and suggestions of a partisan character he "turned a deaf ear;" that although tempted he stood firm on a non-partisan plane in these Territorial matters.

Being a plain, ordinary man, of like prejudices of other men, it may be impossible for me to rise to the gentleman's non-partisan platform. Should I claim to do so, as many at least would believe in my sincerity as did in the gentleman's.

That which the gentleman claims for himself I have no right to question, but when he claims that the Democratic party is in favor of "the admission of Dakota into the Union at this time as a State," I must take issue with him and question the sincerity of the statement. He said:

So far as regards the admission of Dakota into the Union, I want to call the attention of both sides of the House to the fact that the only party in this House or in the Territory of Dakota that is favoring the admission of Dakota into the Union at this time as a State is the Democratic party.

The accuracy of this statement can be successfull challenged. They action of the Democratic party in this and past Congresses controverts the gentleman's claim for it. If it be true that the gentleman and his party are in favor of the "admission of Dakota into the Union at this time as a State," why, I ask, did he strangle the bill he introduced for that purpose? Why did he let his bill for the admission of Dakota as a State die, that the "omnibus" bill, making the admission of Dakota at this time depend upon the admission into the Union as States at this time the Territories of Montana, Washington, and New Mexico, might live? Why link her claims for statehood with the claims of three other Territories? Why did he not report back to the House with a favorable recommendation the bill which he introduced, which would have given members an opportunity to vote upon the question of the admission of Dakota as a distinct and independent proposition.

The Democratic party stands pledged by caucus resolution to refuse consideration of any bill for the admission of Dakota unless Washington, Montana, and New Mexico are yoked to her.

Further on the gentleman contended with much earnestness that the Democratic party in Dakota was not in favor of the division of that Territory and that it had so recorded itself. I then asked him this question:

Did it not appear before the Committee on Territories that the Republican and Democratic conventions which nominated Delegates to Congress passed resolutions in favor of the division of Dakota?

And received from the gentleman this answer:

The Democratic convention of 1886 passed a resolution in favor of submitting the question of division to a vote of the people.

It might be inferred from this answer that the resolution named contained the record of the Democratic party of Dakota on division, while the facts are that every convention of that party from 1871 down to and including 1886 placed a plank in its platform favoring division. If the gentleman's statements that the Democratic party in Dakota does not favor division be true, then that party stands convicted of disingenuousness. No convention of that party in Dakota, including the one that assembled a few weeks since, has ever passed a resolution against division. Let the record of the Democratic party in Dakota speak for itself.

In its convention in 1886 to nominate a Delegate to Congress the leading candidates were Day, an open, earnest advocate of division, and Johnson, the recognized champion of the one State men. The issue joined was the division of the Territory. Upon this issue the lines were drawn. The contest resulted in the nomination of Mr. Day by a pronounced majority. The convention then adopted the resolution referred to by the gentleman from Illinois. It reads:

That we favor the submission to a vote of the people of the whole Territory the question of the division of the Territory.

The convention had nominated a candidate in favor of division, and asked an expression of the people on that issue.

The CHAIRMAN. The time of the gentleman has expired.

Mr. DOCKERY was recognized, and yielded his time to Mr. WARNER.

Mr. WARNER. The fact is, Mr. Chairman, that both of the great political parties in Dakota are pledged by platform after platform to the cause of division. The Democratic party of that Territory, with characteristic modesty claim to be the "originator, fosterer, and promoter of division." They have asseverated and reasseverated this from one end of the Territory to the other. The history of the Democratic party in Dakota is one in direct opposition to the position taken by the gentleman from Illinois. I send its record to the Clerk's desk to be read.

The Clerk read as follows:

RECORD OF THE DEMOCRATIC PARTY OF DAKOTA ON DIVISION—VOTES OF ALL THEIR CONVENTIONS—DIVISION AN ORIGINAL DEMOCRATIC MEASURE.

[From the Huron Herald-Democrat (Democratic).]

Inasmuch as the question of division of the Territory of Dakota is now before Congress, and as Ordway, Johnson, and other self-constituted leaders of the Democratic party here are endeavoring to make Congress believe that the Democrats are opposed to the division of the Territory, and in favor of admission as a whole, the Democrat proposes to give the attitude of this party upon this important question in the past, so that all may be informed on the subject.

At the Territorial Democratic convention which assembled at Bon Homme July 18, 1872, and which nominated Moses K. Armstrong for Delegate in Congress, who was afterwards elected to his second term, the following resolution was adopted:

"*Resolved*, That a division of the Territory should be made, giving to the settlement of Dakota a separate and distinct Territorial government north of the forty-sixth parallel of north latitude."

At the Territorial Democratic convention held at Elk Point, August 20, 1874,

in which W. A. Burleigh was nominated for Delegate in Congress, the following resolution was passed:

"*Resolved*, That we believe the best interests of the public demand the erection of a new Territory out of that portion of Dakota lying north of the forty-sixth parallel, and we pledge the influence of the Democratic party to secure the organization of such new Territory."

At the Territorial anti-monopoly convention held at the same time and place, and which also nominated Dr. Burleigh for Delegate, the following resolution was adopted:

"*Resolved*, That we are in favor of the organization of a new Territory out of the northern portion of Dakota at the earliest possible day."

The Territorial Democratic convention held at Yankton, July 6, 1876, which nominated Hon. S. L. Spink for Delegate in Congress, adopted the following resolution:

"*Resolved*, That we earnestly favor the organization of a new Territory out of the northern part of Dakota, and believe that such organization will largely tend to enhance the interests of the people of both sections

In the Territorial convention which nominated Bartlett Tripp for Delegate in 1878 no expression upon the division question was made. In the convention of 1880, which nominated M. L. McCormack for delegate, it is asserted by those who were present that a division resolution was passed, but the record is not available.

In 1882 the Democrats of Dakota assembled in Territorial convention at Mitchell, and after nominating W.E. Steele, of Deadwood, for Delegate, adopted the following resolution:

"*Resolved*, That we are in favor of the division of Dakota on the forty-sixth parallel and retaining the present name of Dakota for the south half.

In 1884, at Sioux Falls, where the Territorial Democracy in convention assembled nominated John R. Wilson, of Deadwood, for Delegate, the resolutions adopted embraced the following:

"*Resolved*, That we are in favor of the division of the Territory on the seventh standard parallel, and appeal to the Democratic members of Congress to favor such division."

At the last Democratic Territorial convention, held at Aberdeen September 30, 1886, in which Hon. M. H. Day was nominated for Delegate in Congress, plank No. 7 in the platform of principles adopted was as follows:

"That we favor the submission to a vote of the people of the whole Territory the question of the division of the Territory on the seventh standard parallel."

This is the consistent, outspoken attitude of the Democratic party of Dakota for fourteen years upon the question of division. This party has been the originator, fosterer, and promoter of division. The unselfish, thoughtful Democrats who have resided here for years, and who have studied the needs and wishes of the whole people of this Territory, have pronounced time and again for division. The last Democratic convention elected its chairman upon the issue of division, nominated its candidate for Delegate upon the same issue, and came very near electing him. Every man who attended the Aberdeen convention of September 30, 1886, remembers that W. I. Quigley was nominated by the one-State men for temporary chairman. The divisionists put up Hon. John R. Wilson, who was elected by an overwhelming majority. When it came to the selection of a candidate for Delegate the same question was presented. It was a trial of the strength of the divisionists and anti-divisionists. What was the result? On the informal ballot L. G. Johnson, who represented the one-State men, received 70 votes; M. H. Day, who represented the two-State men, received 204 votes; and D. W. Maratta received 69 votes. On the formal ballot Mr. Day received 228 votes, D. W. Maratta 76 votes, and L. G. Johnson 4 votes, most of the Johnson men voting for Maratta.

Thus it will be seen that every time this question has been before the Democratic party of this Territory, in whatever form, the party has pronounced emphatically for division.

When the resolution favoring the submission of the question to a vote of the people passed the Aberdeen convention every good and true Democrat was bound to stand by the result. And what was the result? In favor of division by nearly 5,000 majority.

Mr. WARNER. "This," says the article just read, "is the consistent, outspoken attitude of the Democratic party of Dakota for fourteen years on the question of division." I commend to the careful consideration of the gentleman from Illinois this further extract from Democratic authority: "'The unselfish, thoughtful Democrats who have resided here for years, and who have studied the needs and wishes of the whole people of this Territory have pronounced time and again for division." And also the following: "When the resolution favoring the submission of the question (division) to a vote of the people passed the Aberdeen convention every good and true Democrat was bound to stand by the result." They invited an expression of the people as to division, the people by their votes answered by a pronounced majorityagainst the one-State men and in favor of division. Common fairness and every-day honesty would seem to say to Democrats in Congress and Dakota, stand by the result. Yet the gentleman from Illinois [Mr. SPRINGER] bitterly opposes the will of the people of Dakota oft expressed, and attempts to justify his opposition on the ground that the people of Dakota are against division. In this he is certainly mistaken. If human evidence can establish any given fact, it has settled the question as to the wishes of the people of Dakota on the division issue.

To ascertain public sentiment—the will of the people—we go to party platforms, to legislative enactments, and to the ballot-box. From each of these sources of information unmistakable evidence is obtained that the people of Dakota favor division—evidence that can not be overcome by the mere dicta of any gentleman in or out of Congress.

In January, 1871, Dakota, through her Legislative Assembly, unanimously memorialized Congress for a division of the Territory. Similar memorials were passed by her Legislature in 1872, 1874, 1877, and 1881. In 1885 her Legislative Assembly again passed a memorial asking for division, giving reasons therefor. This I send to Clerk's desk.

The Clerk read as follows:

To the honorable the Congress of the United States:

The Legislative Assembly of the Territory of Dakota respectfully represents: That the people of this Territory earnestly desire the passage of the bill now pending in the House of Representatives, providing for the admission of the southern portion of Dakota as a State and for the creation of a separate Territory from the northern portion thereof, dividing the same on the seventh standard parallel, according to Government survey, or the forty-sixth parallel of north latitude, in the discretion of Congress.

The desire for division is so universal, and the reasons for it so apparent, that the people of this Territory have believed and still believe that this measure of justice can not be refused them.

The probable division of the Territory has been considered in the Territorial conventions of both political parties at every meeting for the last thirteen years, and these conventions, in almost every instance, without a dissenting voice, have universally declared in favor of division.

The Legislative Assembly of the Territory has repeatedly memorialized your honorable bodies for division.

Public institutions have been located and built with a view to division.

Conventions have been held in each section to promote division, and delegations have been appointed to go to the capital of the United States to labor for division. The people of the Territory have employed every possible form of respectful petition for division.

The population and area of the Territory justify division, and refusing it leaves both sections in an unsettled condition and operates to the serious disadvantage of both. The area of the Territory is greater than the united areas of New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Pennsylvania, Delaware, and Maryland.

The population of the Territory, as shown by its vote, by the public lands occupied, by its postal and internal revenues, and by its banking and other interests, is not less than 450,000, and there is good reason for believing it amounts to 500,000.

The population of the southern portion, for which admission is asked, can not now fall much short of 300,000, and will very soon exceed that figure.

The climate, surface, and soil of the Territory are as well adapted to agricultural pursuits and the ordinary industries of the North as are the climate, surface, and soil of Illinois and Iowa.

The people of the Territory have as great regard for the rights of others, and smart as keenly under a sense of injustice, as those of any other Territory or State.

The revenues paid into the United States Treasury by the people of Dakota, and all statistics attainable, prove that the population and material interests of the Territory are sufficiently great to justify this consideration at your hands.

No difficulty can arise as to the apportionment of the public debt of the Territory, as it was wholly created for the erection of public buildings, and the bonds clearly show for what purpose issued. Those issued for public buildings in that part of the Territory south of the forty-sixth parallel should be paid by the southern division of the Territory, and those issued for public buildings erected north should be paid by the northern division of the Territory.

The union of the two sections in one State would be unnatural, and would lead to endless difficulties.

The division prayed for is wise. It will quiet unrest, prevent difficulties and misunderstandings, which will arise if it is not granted, and will promote the interests of both sections.

And although the people of all Dakota are earnestly in favor of the admission of the southern half as a State, still they will hail with joy division only; and if asking for admission of the southern half as a State will in any manner delay division, then we earnestly request division without the admission prayed for, at the earliest possible time.

And for your favorable consideration hereof your memorialists will ever pray.

Approved February 2, 1885.

Mr. WARNER. Is it not strange—passing strange—that in the face of all this evidence, any one should have the hardihood to claim that the people of Dakota are opposed to division? To do so is to impugn their honesty or question their intelligence. They have given expression to their wishes in every way possible, at the ballot-box, in legislative resolutions and memorials, and in the platforms of both the great parties year after year they have declared in favor of division. Yet we are seriously told they do not want division, that the opinions expressed in party platforms, legislative action, and at the ballot-box misrepresent the real wishes of the good people of Dakota. I wish to introduce a bit more evidence. The Forty-ninth Congress—that is the Democratic House—having failed to act on the bill to admit Dakota into the Union, either as one or two States, the last Legislative Assembly of that Territory adopted the following joint resolution:

Be it resolved by the Legislative Assembly of the Territory of Dakota, That the proposition to divide the Territory of Dakota on the seventh standard parallel is hereby indorsed, and that the oft-repeated expressions of the representatives of the people of Dakota of adherence to the cause of division are hereby renewed and reaffirmed.

That each half of Dakota is entitled to membership in the Federal Union and should be admitted without further unnecessary delay, the southern half bearing the name of South Dakota and the northern half of North Dakota.

This is the appeal of the Legislative Assembly of Dakota on behalf of a long-suffering people, asking for division and admission. With them the necessity for Territorial government no longer exists. The people of Dakota are the equals in intelligence, energy, thrift, and morals of the people of any State of the Union. They have demonstrated their fitness for and ability to maintain State government. Why longer deny them the right of "home rule?"

Sir, it is not my purpose at this time to enter into any extended argument to sustain the just claims of Dakota to be admitted into the Union as two States. This question has been fully covered in an exhaustive and learned argument by my colleague on the committee from New York [Mr. BAKER]. Hereafter, when the so-called "omnibus" bill comes up for consideration, I shall avail myself of submitting some remarks on that question. At present I have neither the disposition nor the time to do so.

I now return to the assertion of the gentleman from Illinois [Mr. SPRINGER] that the Democratic party is in favor of admitting Dakota as one State.

This broad assertion is not justified by the action of the Democratic majority of the Committee on Territories. If this charge were made against that party by its bitterest enemy no evidence could be produced to sustain it. I venture the assertion that the gentleman is not in favor of admitting Dakota into the Union either as a whole or when divided into two States. If the gentleman is in favor of admitting Dakota, he is present and will certainly correct me.

Mr. SPRINGER. I will correct you. I am in favor of the immediate admission of Dakota into the Union as a State.

Mr. WARNER. Will the gentleman vote for the Senate bill to admit Dakota, or for any bill for that purpose without tacking some other Territory to it?

Mr. SPRINGER. I will vote for any bill that admits Dakota into the Union as one State, either now or hereafter at any time.

Mr. WARNER. I am glad that the gentleman has made that statement, but his action in this House does not bear it out.

Mr. SPRINGER. I have reported a bill for the purpose.

Mr. WARNER. The gentleman is always sincere, and he is just as sincere in the declaration he has just made as he was in the one he made the other day when he stated that he rises above mere party in these matters of admitting new States into the Union. He says he has reported a bill for the admission of Dakota. Is not the gentleman mistaken?

The fact is he has not at this session reported favorably to the House as an independent proposition any bill for the admission of Dakota either as a whole or as two States. The bill reported by the majority, through the chairman [Mr. SPRINGER], is the "omnibus" bill. This bill makes the admission of Dakota conditional and dependent upon the admission of three other Territories as States at the time Dakota is admitted. Under this bill as reported you can not vote for the admission of Dakota without at the same time voting for the admission of Washington, Montana, and New Mexico. It is to the support of this bill that the Democratic majority of the House is bound by caucus resolutions. It is not proposed to permit a separate vote on whether or not Dakota shall be admitted. The proposition of the gentleman and the majority of this House to the friends of Dakota is that she shall not be admitted unless we admit into the Union with her New Mexico and two other Territories.

Mr. STRUBLE. All Democratic.

[Here the hammer fell.]

Mr. HOPKINS, of Illinois, was recognized, and yielded his time to Mr. WARNER.

Mr. WARNER. I am under obligations to my friend [Mr. HOPKINS].

Mr. Chairman, in the Committee on Territories, as the reports will show, there was no division of opinion as to Washington Territory, there was no division of opinion as to Montana. A part of the committee did believe that Dakota should be admitted as one State, another part believed that it should be divided as asked for by her people and admitted as two States. As to New Mexico, the Delegate from that Territory was a member of the committee. No bill for the admission of New Mexico as a State of this Union was offered by him. The governor of New Mexico and delegations of leading citizens from that Territory were before the committee asking legislation on various matters, but the idea of its admission as a State at this time seemed never to have entered into the mind of man until the distinguished chairman conceived and reported the "omnibus" bill to this House, and, as far as the committee know, nobody in the Territory of New Mexico asked for it.

While Dakota, Montana, and Washington Territories were earnestly pressing their claims for admission into the sisterhood of States New Mexico was silent. She neither asked for nor did she give any reasons why she should be admitted at this time. Yet she is joined in the "omnibus" bill with the Territories named. What other reason than a purely partisan one can be given for this action? Certain it was not to secure early or even favorable action upon any bill for the admission of Dakota, for which the distinguished chairman [Mr. SPRINGER] assures the House and the country he is so anxious. Was it to secure statehood for either Montana or Washington? No; for there was no opposition to the admission of either of those Territories. No member of the committee demanded or even requested that action on either of them should depend upon the admission or rejection of any other Territory. This although each of those Territories was supposed to be Democratic, being represented on the floor of this House by Democrats.

The action of the Republican members of the Committee on Territories demonstrated that at least they were as fee from partisan consideration as the distinguished chairman [Mr. SPRINGER.]

The reason for yoking New Mexico and Dakota together is, I fear, not a non-partisan one.

These Territories have but little in common. It is unjust to thus link them together. It does not advance New Mexico, but amounts to a denial of justice to Dakota.

It is difficult to conceive of two communities whose claims for admission into the Union are more dissimilar than those of Dakota and New Mexico. Yet the gentleman from Illinois [Mr. SPRINGER] would have us believe that the yoking together of those Territories is to insure the consummation of his eager desire for the early admission of Dakota as a State. To believe this is a severe strain upon our credulity. In intelligence, agriculture, and other industrial pursuits, in short, in everything that makes a people great and prosperous, Dakota is fully abreast with the leading States of the Republic. Her best friends will not claim as much for New Mexico.

New Mexico, with her sparse population, a large percentage of whom belong to a different race, speak a different language, who are but just awakening from their primeval methods and customs, should not be coupled with the young giant of the nineteenth century—Dakota, whose citizens are imbued with American enterprise.

It is true that each of these Territories is an empire in area—Dakota containing 150,932 square miles, New Mexico 122,460, each larger than Great Britain.

New Mexico was organized as a Territory in 1850, having a population, Mexicans, of over 61,000, whose ancestors had occupied the lands for hundreds of years. Now she has a population of about 150,000, over two-thirds of whom are natives of that Territory. The younger Territory of Dakota was organized early in 1861, with a population of less than 5,000 Americans. Now she has over 600,000, composed of hardy, energetic, intelligent young men and women of the older States of the Union.

What has been the progress of these two Territories since their admission? What signs of promise for intelligent and prosperous statehood do the past history and present condition of each as a Territory give? What showing do they make in agriculture, the greatest of all industries, an industry in which the inhabitants of each are largely engaged?

Compare the yield of each in wheat, corn, and oats, the three leading products of the Western farm. Of forty-six States and Territories in 1886 Dakota ranked sixth in her wheat harvest, producing 30,704,000 bushels. New Mexico in the same year ranked thirty-fourth, yielding but 921,000 bushels, not one-thirtieth of the amount produced in the great Territory of Dakota. Take corn. In the same year Dakota ranked twenty-second, producing 15,805,000 bushels, while New Mexico ranked thirty-sixth, producing only 937,000 bushels. Dakota ranked twelfth among the States and Territories in the production of oats, her product being 20,651,000 bushels, while New Mexico ranked thirty-ninth, producing only 528,000 bushels. These figures are persuasive evidence of the injustice done Dakota in making common cause between her and New Mexico for admission into the Union.

Sir, it is evident that reasons other than the agricultural resources of New Mexico led the committee to dump her with Dakota into an "omnibus" bill.

[Here the hammer fell.]

Mr. DOCKERY obtained the floor, and yielded his time to Mr. WARNER.

Mr. WARNER. I am obliged to the gentleman [Mr. DOCKERY].

Sir, of the three great agricultural staples, wheat, corn, and oats, Dakota in 1886 produced the enormous amount of 67,160,000 bushels, while the aggregate yield of New Mexico in that year was less than 5 per cent. of that of Dakota.

If we take the estimate of the productiveness of the soil of New Mexico, as given by the Delegate of that Territory who so ably represents it on this floor, and cut it nearly in two, we will find that 30 bushels of wheat, 40 of oats, and 50 of corn is below the average yield of the land cultivated in his Territory. But the trouble is that but an infinitesimal percentage of her vast area of 78,374,400 acres is cultivated.

I send to the Clerk's desk to be read an extract from the speech of the Delegate from New Mexico [Mr. JOSEPH]. In this he paints it a land of plenty. After you shall have listened to his glowing description you will wonder why it is that this, the oldest of our Territories, whose soil has been cultivated by her native farmers and their ancestors for centuries, is the laggard that she is. The Clerk will please read.

The Clerk read as follows:

It is strange, Mr. Chairman, in our day, when steam and electricity have canceled distance, when four days' travel introduces us to every mile of our continent and half-hour telegrams whisper from ocean to ocean, when our bureaus give us the climatic diagnosis of every area and monthly statements of every crop, when New Mexico is as near to you practically as is New York—I say it is strange in our day to find such want of information as is printed in a Congressional paper on this very question of admitting New Mexico as a State. I quote:

"There is claimed for it [New Mexico] an excellence of soil and climate, which, however, is substantially, or in great degree, refuted by official and other reports on that region."

"Region?" Were they considering the Congo country? Is New Mexico midway of your continent as unknown as the mazy geography of the Nile? Is a Territory of this Government so remote that this same paper must further say:

"A general belief exists that much mineral wealth may be found in the otherwise forbidding country."

There is no excuse in our day of printing-presses for such feigned ignorance of the agricultural and mineral wealth of New Mexico. What are the facts?

New Mexico, lying south of Colorado and east of Arizona, embraces an area of 122,000 square miles, or about 78,000,000 acres of land. The Territory is three times as large as Ohio, thrice as large as all New England. The country is well watered by the Rio Grande, Pecos, San Juan, Red, Taos, Mora, and the Puerco Rivers, besides many other smaller streams. The valleys on both sides of every river have rich alluvial soil as deep and as fertile as the world can show. The statistical reports show that her arable lands yield from 27 to 35 bushels of wheat, of corn 60 to 85 bushels per acre, and the other cereals in like proportion; vineyards show a yield of 1,360 gallons of best wine to the acre. But to be more particular, let me quote from one of the authentic publications of the Territory for

last year, the Bulletin, which gives the average grain production in one of New Mexico's valleys:

Corn	bushels per acre	75 to 100
Wheat	do	30 to 60
Oats	do	50 to 75
Barley	do	40 to 50
Rye	do	30 to 45
Pease	do	25 to 35
Alfalfa, 2 tons per cutting tri-annually.		
Potatoes, sweet	do	75 to 100
Parsnips	do	175 to 275
Mangoes (weighing from 30 to 40 pounds each)	do	500 to 800
Beets	do	175 to 400
Carrots	do	175 to 300
Cabbages	weighing pounds per head	5 to 30
Tomatoes	weighing pounds each	½ to 1
Cucumbers	do	1 to 6
Squash (hubbard)	do	10 to 25
Squash (marrowfat)	do	30 to 75
Pumpkins	do	10 to 25

Mr. WARNER. This is the picture of a country "where every prospect pleases." Its broad acres, we are assured, are well watered. Its "deep and fertile" soil needs only to be tickled by the hand of the husbandman to richly repay its tormentor.

He is surprised that it is not known of all men that his Territory is just as it is painted in the extract read. He is indignant that there should be published in a "Congressional paper on this very subject of admitting New Mexico" misinformation as follows:

There is claimed for it [New Mexico] an excellence of soil and climate which, however, is substantially, or in great degree, refuted by official and other reports on that region.

[Here the hammer fell.]

Mr. CANNON obtained the floor, and yielded his time to Mr. WARNER.

Mr. WARNER. Mr. Chairman, the gentleman has drawn another and very different picture of his Territory. His hand and pen drew dark shades over that "region." In the early part of this session a bill was introduced appropriating $50,000 to each of the Territories of Arizona and New Mexico.

Upon this bill the gentleman [Mr. JOSEPH] made the following report, which I send to the Clerk's desk to be read.

The Clerk read as follows:

The Committee on the Territories, having under consideration bills H. R. 1980 and 6166, ask to report in lieu thereof the substitute contained in the report made herewith.

Your committee recommend the passage of said bill for the following reasons:

From the census of 1880 it appears that the Territory of Arizona embraces an area of 112,920 square miles, or 72,268,800 acres of land, of which vast area less than 2,000,000 are susceptible of cultivation for want of water, and even this small area is entirely dependent on irrigation, thus leaving utterly without water supply and without any means of irrigation the enormous body of over 70,000,000 acres of land, which, under the present land laws, must forever remain unfit for the habitation of man unless a supply of water can be obtained by artificial means.

The same conditions exist in the Territory of New Mexico, which embraces an area of 122,460 square miles, or 78,374,400 acres of land, of which, as appears by said census, only 5½ per cent. is susceptible of cultivation, for the reasons already stated, leaving 94½ per cent., or 74,063,808 acres, forever unfit for human habitation unless water can be obtained to irrigate the same.

The Territory of New Mexico was organized in 1850, and in thirty years thereafter it had a population of only 119,565 souls, or less than one person to the square mile, and its population during the two decades preceding 1880 only increased 26,000, all of which increase occurred after 1870, and consisted largely of persons connected directly or indirectly with the construction, maintenance, and operation of railroads leading through said Territory to the Pacific Ocean. While population increased as above stated, and also by reason of large mining enterprises, yet, as shown by said census, there has been an actual decrease of the agricultural element—the number of farms in 1880 being actually less than in 1860. This can be accounted for only on the fact of scarcity of water for agricultural purposes.

Mr. WARNER. "Look upon this picture, then upon that."

Mr. JOSEPH. Will the gentleman permit me to explain?

Mr. WARNER. My time is short; the gentleman must excuse me. I will do him no injustice. Certain it is, he can have no cause to complain. I have called the attention of the committee and the country to two descriptions of New Mexico given by the gentleman, one bright, the other dark. The dark one is based, as stated in the report just read, upon official statistics. Certainly no one will say it was made to slander the Territory of New Mexico. It fully justifies all and more than is contained in the quotation cited by the gentleman from a "Congressional paper," which he is pleased to characterize as "misrepresentation," and as displaying unpardonable ignorance of the agricultural resources of New Mexico.

From his report we learn that in the twenty years from 1860 to 1880—two decades of unparalelled prosperity in agriculture—his Territory went backward; that it actually contained a less number of farms in 1880 than in 1860, and that 94½ per cent. of its 78,374,400 acres of land "are forever unfit for human habitation unless water can be obtained to irrigate the same." Is it not passing strange that this Territory should be tacked to the great agricultural empire of Dakota—whose wondrous growth is the marvel of the age—in her struggle for admission to Statehood? This may be non-partisan, certain it is that it is not fair play.

"Every tub should stand on its own bottom." Let us deal justly by New Mexico, at the same time do no injustice to Dakota or the other Territories. While in New Mexico there "has been an actual decrease of the agricultural element from 1860 to 1880," to use the gentleman's [Mr. JOSEPH'S] language, Dakota under her civilization has yielded an abundant harvest, increasing from year to year. Her wheat crop in 1860 was 945 bushels; in 1870, 170,662 bushels; in 1880, 2,830,289 bushels; while in 1887 it reached the enormous quantity of 62,253,499 bushels. Her yield of corn in 1860 was but 20,269 bushels; it sprang to 2,000,864 bushels in 1880, and last year it jumped to 24,511,726 bushels. In 1887 she produced 43,267,478 bushels of oats against 2,217,132 in 1880, and 2,540 in 1860. Her aggregate crop of rye, barley, and buckwheat in 1860 was insignificant, only 815 bushels; in 1887 she produced of these cereals 6,814,384 bushels. In 1860 she cut from her prairies 855 tons of hay; in 1870, 13,347; in 1880, 308,036; in 1885, 1,527,987; while the estimated crop for last year was 2,500,000 tons. Her potato crop shows the same astonishing ratio of increase. It sprang from 9,489 bushels in 1860 to 3,868,860 bushels in 1885.

Dakota's live-stock in 1870 was valued at $779,952; last year it had increased to over $43,000,000; exceeding in value 40 per cent. the vast flocks and herds that roam the plains of New Mexico. The value of her farms was but $96,445 in 1860, $2,085,265 in 1870, $22,401,084 in 1880, and $156,767,918 in 1885. The value of her farm implements increased from $15,574 in 1860 to $2,390,091 in 1870 and $13,867,687 in 1885. These figures speak volumes for the thrift, energy, and enterprise of the citizens of Dakota who have so long been denied admission into the Union. They reproach, stronger than speech, any and all attempts longer to disfranchise that people, as contemplated by the "omnibus" bill.

[Here the hammer fell.]

Mr. GEAR obtained the floor and yielded to Mr. WARNER.

Mr. WARNER. While thanking the gentleman from Iowa [Mr. GEAR], I shall crave the indulgence of the committee a short time longer, although I have occupied more time than I had intended.

In his report the reasons given by the gentleman from New Mexico [Mr. JOSEPH] for the "decadence" of agriculture in his Territory—why the hand of the dial of progress among his people turned backward in the two decades from 1860 to 1880—are:

This can be accounted for only on the fact of scarcity of water for agricultural purposes.

This, Mr. Chairman, may in part account for the wide difference between the showing she makes and that of Dakota; but there are, I apprehend, other causes that have impeded her progress, that have dwarfed her growth, that have made her the laggard among the States and Territories of this Union. The fact is that she has clung too long to another civilization and to the customs and manners of past centuries. Let us examine into some of these causes.

Governor Wallace in his report for 1879, as governor of New Mexico, uses this language:

Agriculture in New Mexico is yet in its primitive condition. The wooden plow of the Mexican fathers holds preference with the majority of farmers.

Then adds:

Development is barely sufficient to serve anticipation.

In his annual report for 1881 Governor Sheldon, of Utah Territory, says:

There is sufficient agricultural lands, if cultivated, to supply the home market.

Then, in line with the report of Governor Wallace, adds:

The present methods of cultivation are primeval and do not properly indicate the productiveness of the soil.

There are, I am pleased to say, signs of abandonment of the "primeval methods of cultivation" that existed in New Mexico in 1881. Her present governor (Ross), in his report to the Secretary of the Interior, dated September 13, 1887, says:

Marked progress has been made in the agricultural industries during the last year. Not only have many thousands of acres of land been brought under cultivation, and the industry systematized by the introduction of the improved methods peculiar to American immigration, but with a large part of the native farmers there has been manifest a spirit of improvement in the abandonment of the primitive ways that have so long prevailed among them.

The wooden plow, the sickle, the thrashing stockade, and the winnowing fork are being discarded, and in their places are coming the improved machinery that has made a successful science of American agriculture. Once ventured these people are quick to see the disadvantages of their old ways and the advantages of the new to enable them to successfully compete with the newcomers.

In this we have an earnest that the "native farmers" of New Mexico are awakening from their Rip Van Winkle sleep of the ages. Yet, Mr. Chairman, she needs to do more than discard "the wooden plow, the sickle, the thrashing stockade, and the winnowing fork." She should lose no time in entering within the pale of the public-school system of America. The intelligence of the masses is the bulwark of "a government of the people, by the people, and for the people."

Of all the Territories New Mexico is the most backward in her public schools. The gentleman who so ably represents her in a recent speech assured Congress that his Terrirory is making great educational strides. He points with seeming pride to the fact that for the year ending December 31, 1887—

Over $53,000 were received in the hands of the proper officers in New Mexico for school purposes during 1887, and that at the end of 1887 there was on hand some $20,000.

This when her children of school age (five to twenty years) num-

bered 36,435! In 1886 her total expenses for school purposes was $28,973. "The greatest want of New Mexico is a proper school system" was the language of the governor of that Territory in his report of September, 1883. This want has not been supplied.

He then adds:

In fact, there is no system embracing the entire Territory that is uniform or effective.

In the same report Governor Sheldon says:

In my judgment, under the present system and management the money paid by the people for schools is in large part practically thrown away.

This official further informs us that—

The law—

Of New Mexico—

contemplates compulsory attendance upon schools for five months in the year, but it is not executed.

The public-school system was adopted in New Mexico in 1871, yet, in September, 1883, her governor in his official report says:

Probably three-fourths of the population are natives of the country and speak the Spanish language.

From the report of this official in 1881 we learn that—

only a few of the natives can understand or speak the English language.

In 1880 this, the oldest inhabited part of the Union, showed the greatest percentage of illiteracy. Out of a population of 87,966 over ten years of age, 57,156, or 65 per cent., could not read and write. Of these 46,329 were natives of the Territory. In view of these alarming facts I am anxious to give full credence to Governor Ross, of New Mexico, when, in his report of September 13, 1887, he says:

There has been a marked improvement in the educational affairs of the Territory during the past year. There is a growing appreciation among the native people of the necessity and advantages of acquiring an education in the English language and in the American methods of thought and of business and general affairs.

Yet with this marked improvement for the year ending December 31, 1887, she only raised by taxation for the support of her public schools $45,157.98, and only expended in the payment of the teachers the insignificant sum of $33,312.85. Yet the gentleman from New Mexico [Mr. JOSEPH] points to these figures as an evidence of "the zeal of the people in fostering the school system." He then asserts that his Territory appropriates to the support of her public schools "a larger share of her taxes than any other State or Territory in the Union."

He further tells us that the "law provides for general levy of 3 mills on the dollar for school purposes." If this amount is levied and collected, where does it go? Certainly not into the public-school fund. Her "aggregate assessment of taxable property for 1886 was $56,000,000," 3 mills on the dollar on this amount would be $178,000, while the official figures given by the gentleman [Mr. JOSEPH] shows the meager sum of $45,147.98 actually paid into the public-school fund. Not one-third of the school-tax was collected, or if collected, it never found its way into the treasury. Of what good is a statute providing for a general levy of "a tax for school purposes" if through the indifference of the people it remains unexecuted?

Evidently there is but little vitality in the public schools of New Mexico. She established them seventeen years ago in an old community, yet to-day their "advancement is barely sufficient to serve anticipation." The amount she expends for their maintenance is totally insufficient. She has but forty-one public school buildings, one to every 3,000 square miles of her Territory. Under her laws (Revised Statutes, 1884) the text-books used in her public schools may be in the Spanish language. It is not strange that, in view of these facts, her Revised Statutes adopted in 1885, containing her Territorial laws and the Constitution of the United States, are printed one page in the English and the other in the Spanish language from the first to the last page. Yet it is decreed by the majority of this House that Dakota shall not be admitted as a State unless New Mexico comes into the Union with her. There is a wider difference between these Territories in their educational advantages and progress than in their agricultural resources.

The population of Dakota in 1880, over ten years of age, was 99,849, only 4,821 of whom were not able to read and write, less than 4 per cent., against 65 per cent in New Mexico. From the report of the Commissioner of Education for 1885-'86 we learn that in that year the total expenses of New Mexico were $28,973 for the maintenance of her public schools for the education of her youth, against $1,917,259 for the same purpose expended in Dakota. Last year New Mexico expended $37,018, Dakota $2,600,000. The value of public school buildings for the year 1887 in New Mexico was but $68,204, while it was $3,265,590 in Dakota. Of forty-six States and Territories Dakota ranked seventeenth, New Mexico forty-sixth. New Mexico has but two public buildings, a state-house and a penitentiary. Dakota, aside from these buildings, has two universities, two normal schools, a school of mines, an agricultural college, a school for deaf mutes, two hospitals for the insane, and a reform school—all Territorial institutions, costing nearly a million and a half of dollars, yet her claims for admission under the "omnibus" bill are disregarded, unless those of New Mexico are recognized as entitling her to statehood. She must remain out of the Union until New Mexico is admitted. The facts given should convince all who are not blinded by partisan politics of the rank injustice done Dakota.

I have dwelt at some length upon the interest the people of these Territories have manifested by their deeds, not words, in the upbuilding of the public school, for in it the masses of the people must obtain an education, if at all.

It is in the public school that the son of the poorest citizen lays the foundation of knowledge that fits him in after years for any position within the gift of the State or nation. It is in the public school that the people are educated—fitted for the duty of self-government, fitted for the responsibility of rulers. From it comes the intelligent citizen, the just judge, the incorruptible legislator, the wise executive. It makes the ballot-box register the will of the many rather than the decree of a privileged class.

That incomparable soldier, model citizen, and wise statesman, U. S. Grant, voiced in terse and eloquent sentences the sentiments of the American people regarding the public school, when he said at Des Moines, Iowa, in 1875:

In a republic like ours, where the citizen is the sovereign, and the official the servant, where no power is exercised except by the will of the people, it is important that the sovereign—the people—should possess intelligence.

The free school is the promoter of that intelligence which is to preserve us a free nation. If we are to have another contest in the near future of our national existence, I predict that the dividing line will not be Mason's and Dixon's, but between patriotism and intelligence on one side and superstition, ambition, and ignorance on the other.

Now, in this centennial year of our national existence, I believe it a good time to begin the work of strengthening the foundation of the house commenced by our patriotic forefathers one hundred years ago at Concord and Lexington.

He then adds:

Resolve that either the State or nation, or both combined, shall support institutions of learning sufficient to afford to every child growing up in the land the opportunity of a good common-school education, unmixed with sectarian, pagan, or atheistical tenets.

To these sentiments every patriotic citizen says, amen.

The citizens of Dakota, Mr. Chairman, took with them to their Western homes, "where the mighty Missouri rolls down to the sea," all the devotion of their fathers to the American free school. They carried to their new homes a fixed determination that amid sunshine or storm, amid plenty or privation in their onward march to empire, the public school should be their pillar of cloud by day and of fire by night. They have fulfilled the prophesy.

We cross the prairies as of old
Our fathers crossed the sea,
To make the West as they the East
The homestead for the free.

The majority of the Committee on Territories urge as one of the reasons why New Mexico should be admitted at this time her mining resources. Yet her output of gold and silver in 1886 was less than that of Dakota. The hay the people of Dakota cut from the prairies in 1887 exceeded in value many times the value of the precious metals mined in New Mexico. I do not underestimate the value of her mines. They are but in their infancy; but mines and mining camps of any Territory should be one of the minor considerations upon the question of its admission into the Union.

I am led to believe that the citizens of New Mexico, those who only look to her interest, do not desire her admission at this time.

The assurance is given of the dawn of a new era upon New Mexico. Under the influence of emigration, aided by the whip and spur of electricity and steam, her native population is being revolutionized. The Spanish-Mexican civilization to which they have clung for centuries is giving way to American civilization.

Aid it, paper; aid it, type;
Aid it, for the hour is ripe.

No member of this House will go further to aid her in this struggle than I. Believing as I do that it is the first duty of the Government "to afford to every child growing up in the land the opportunity of a good common-school education," if New Mexico, by reason of her sparse population or any other cause, is unable to discharge this duty, I stand ready by my vote to appropriate all the money necessary to aid her. I am led to believe that her vast arid plains can be reclaimed by irrigation if Congress will make the necessary appropriation to aid in sinking artesian wells or the storing of water. Thus shall her waste places be made to yield an abundant harvest.

I am willing to aid as a member of this House by all the means in my power the early enactment of the necessary laws to settle the Spanish-Mexican grants that now cast a cloud over the title of large portions of the Territory, sealing it against settlement and development. Much of this, I trust, may be accomplished in the near future. When accomplished I shall be found an earnest advocate of admitting New Mexico into the sisterhood of States. Then, and not until then, she will be prepared to discharge the duties and assume the responsibilities of statehood.

My objection to her admission at this time is free from either sectarian or partisan considerations.

It is claimed by the gentleman from New Mexico [Mr. JOSEPH] in his remarks printed in the RECORD of April 18, that the report of the minority of the committee cast an imputation upon the religion of the people of New Mexico. He would create the impression that those who

oppose the claims of New Mexico are in some degree influenced by religious prejudices. For one I disclaim any such feeling. I yield to no man in my condemnation of religious bigotry or intolerance, take what shape it may. Nor do I believe that there is a sentence or a line in the report of the minority, aside from certain quotations therein contained from the writings of Professor Bliss and ex-United States Attorney Davis, that by any fair construction will bear such an interpretation.

Mr. STRUBLE. Davis was a Democratic official.

Mr. WARNER. I care not whether he was a Democrat or a Republican. I do not indorse his statements. I further know that while the minority of the committee favored the admission of North and South Dakota, Washington, and Montana, they were opposed to the admission of New Mexico, and certain it is that their judgment in favor of or against the admission of either of them was not, as far as I know, in the slightest degree influenced by the religion of the people of either. I never saw or read the quotations from the parties named until after the gentleman from New Mexico made his speech. I make the statement here in my place that whatever is contained in those quotations that cast an imputation upon the religion or chastity of the people of New Mexico I most emphatically repudiate. In this I reflect the views of every member of the committee.

I believe in "unfettered religious sentiment;" in keeping church and state forever separate; in the right of every citizen to the free and unmolested enjoyment of his religious belief and forms of worship so long as he obeys the laws of the land. Any sentiments contrary to this I repudiate.

In our country there should be "perfect security of free thought, free speech, a free ballot, and a free press, pure morals, unfettered religious sentiment, and of equal rights and privileges to all men."

To secure "free thought, free speech, a free ballot, and a free press, pure morals, unfettered religious sentiments, and of equal rights and privileges to all men" before the law, should be the highest ambition of every citizen. The man who would take away one of the least of these from the humblest citizen, aims a blow at the liberties of the people.

[Here the hammer fell].

Sale of Convict-Made Goods.

"We have a principle which is safe for the States and safe for the Union. We are relieved, as we ought to be, from clashing sovereignty; from interfering powers; from a repugnancy between a right in one government to pull down what there is an acknowledged right in another to build up; from the incompatability of a right in one government to destroy what there is a right in another to preserve." (Chief-Justice Marshall in McCullough *vs.* State of Maryland *et al.*)

REMARKS

OF

HON. JOHN H. ROGERS,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 22, 1888.

The House having under consideration the bill (H. R. 8716) to protect free labor and the industries in which it is employed from the injurious effects of convict labor by confining the sale of the goods, wares, and merchandise manufactured by convict labor to the State in which they are produced—

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That every person who knowingly transports, or causes to be delivered for transportation, from the State or Territory in which they are in whole or in part manufactured, any goods, wares, or merchandise, in whole or in part manufactured by convict labor in any penitentiary, prison, reformatory, or other establishment in which convict labor is employed, to or into any other State or Territory, or into the District of Columbia, shall be deemed guilty of a misdemeanor, and upon conviction thereof shall be punished by a fine of not less than $100 nor more than $5,000, or by imprisonment not exceeding one year, or by both such fine and imprisonment at the discretion of the court, and such goods, wares, or merchandise shall be forfeited to the United States.

SEC. 2. That it shall be the duty of the several United States district attorneys to prosecute all violations of this act by any person making the complaint under oath, and the same shall be heard before any district or circuit court of the United States or Territorial court holden within the district in which the violation of this act has been committed.

SEC. 3. That this act shall take effect at the expiration of sixty days from and after its passage.

Mr. ROGERS said:

Mr. SPEAKER: I approach this question with all the gravity that it deserves; and indeed it is a most important question. I owe the House an apology for not having arranged in some sort of system the observations which I desire to make, but I think I can demonstrate by adjudicated cases the absolute unconstitutionality of this bill, and in my effort to do so the House will contribute much if I can have its earnest attention and good order.

Mr. Speaker, the committee base the authority for the passage of this bill upon the commerce clause of the Constitution, which reads:

Congress shall have power to regulate commerce with foreign nations, and among the several States, and with the Indian tribes.

It will be observed that these three powers are grouped in one clause of the Constitution, and any one reading that clause, at the first glance would suppose that each of these three powers could be exercised to the same extent; that is to say, that whatever Congress might do with reference to foreign commerce it might do with reference to the Indian tribes, and that whatever it might do with reference to the other two it might also do with reference to commerce among the States; but I think that is an error.

I desire to be as brief as I possibly may, and therefore I proceed at once to the inquiry presented by this bill—the inquiry whether or no the Congress of the United States, under the commerce clause, may pass a non-intercourse act between the States of this Union. I assert the negative of that proposition. Why did the States confer the power upon Congress to regulate commerce between the States? That question has been adjudicated over and over again. I hold in my hand the recent decision of the Supreme Court of the United States in the case of Bowman and Bowman, plaintiffs in error, against the Chicago and Northwestern Railroad Company, in which the court proceeded to discuss the power of the Legislature of Iowa to prohibit this railroad company from carrying spirituous liquors into the State of Iowa for sale. In that decision, and it is an able decision, they discussed this whole question in almost every direction. I quote from that decision; and I quote now, it will be observed, in response to the question as to what was the purpose of the States in conferring the power to regulate commerce among the States upon Congress. The Supreme Court say:

"It can not be too strongly insisted upon," said this court in Wabash, etc., Railroad Company *vs.* Illinois (118 U. S., 557, 572), "that the right of continuous transportation from one end of the country to the other is essential in modern times to that freedom of commerce from the restraints which the States might choose to impose upon it, that the commerce clause was intended to secure."

In other words, lest the States of this Union might legislate against each other in their commercial transactions, in the formation of the Union under the Constitution the commerce power was delegated to the United States, so far as the States were concerned, in order that the United States might prohibit non-intercourse laws between the States. The decision proceeds:

This clause, giving to Congress the power to regulate commerce among the States and with foreign nations, as this court has said before, was among the most important of the subjects which prompted the formation of the Constitution. (Cook *vs.* Pennsylvania, 97 U. S., 566, 574; Brown *vs.* Maryland, 12 Wheaton, 419, 446.) And it would be a very feeble and almost useless provision, but poorly adapted to secure the entire freedom of commerce among the States, which was deemed essential to a more perfect union by the framers of the Constitution, if, at every stage of the transportation of goods and chattels through the country, the State, within whose limits a part of the transportation must be done, could impose regulations concerning the price, compensation, or taxation, or any other restrictive regulation interfering with and seriously embarrassing this commerce.

It will be observed in reading this that the court are passing upon a State statute; but they give the motive and principle upon which the States delegated this power to the Federal Government, and cite as the reason for it the last clause of this opinion from which I have read. In a former page of this opinion they say this:

Commerce with foreign countries and among the States, strictly considered, consists in intercourse and traffic, including in these terms navigation and the transportation and transit of persons and property, as well as the purchase, sale, and exchange of commodities.

Persons and property—

That is what they define commerce to be—

as well as the purchase, sale, and exchange of commodities.

For the regulation of commerce as thus defined, there can be only one system of rules, applicable alike to the whole country; and the authority which can act for the whole country can alone adopt such a system. Action upon it by separate States is not, therefore, permissible.

In this connection I quote from the dissenting opinion of Justice Harlan in the same case, since he states well the position of Judge Marshall in Gibbons *vs.* Ogden, as to where the States got the right of intercourse with each other, as well as what is meant by the word "regulate."

In Gibbons *vs.* Ogden it was said by counsel that the Constitution does not confer the right of intercourse between State and State, and that such right has its source in those laws whose authority is acknowledged by civilized man throughout the world. Chief-Justice Marshall said: "This is true. The Constitution found it an existing right, and gave to Congress the power to regulate it." (9 Wheat., 211.) In the same case he said that this power is "the power to regulate; that is, to prescribe the rule by which commerce is to be governed." (Page 196.) It may be said, generally, that free commercial intercourse exists among the several States by force of the Constitution.

It is here seen that "regulate" does not mean destroy, but means the rule by which commerce is to be governed.

The court, in the same case, while discussing the reasons why certain acts of Congress were passed, say:

These acts were passed under the power vested in Congress to regulate commerce among the several States, and were designed to remove trammels upon transportation between different States which had previously existed, and to prevent a creation of such trammels in future and to facilitate railway transportation by authorizing the construction of bridges over the navigable waters of the Mississippi, and they were intended to reach trammels interposed by State enactments or by existing laws of Congress. * * * The power to regulate commerce among the several States was vested in Congress in order to secure equality and freedom in commercial intercourse against discriminating State legislation.

I remark at this point, if the States intended by the commerce clause of the Constitution to grant the power to Congress to prohibit the products of one State going into another, they also conferred the power under the decision just read to prevent the citizens of one State going

into another; because commerce includes persons as well as goods and merchandise in transportation.

Finally, mark this language in the same opinion:

In view of the commercial anarchy and confusion that would result from the diverse exertions of power by the several States of the Union, it can not be supposed that the Constitution or Congress have intended to limit the freedom of commercial intercourse among the people of the several States.

That is all I contend for. The Constitution never intended any such exercise of power. The States, in delegating the commerce power, intended to secure freedom of commercial intercourse among themselves, and not to confer power upon the United States to prohibit commerce among the States.

I have now shown, I think, Mr. Speaker, what the object and purpose of the States were in delegating this power to the Federal Government. I concede, of course, that so far as the power over interstate commerce or commerce with Indian tribes or foreign countries has been delegated, that power is exclusive in Congress. Now what is that power? To what extent does it go?

My friend from Illinois [Mr. PLUMB], who prepared and submitted the minority report, builded wiser than he knew. He says in this report:

It is a direct attack upon State laws and State institutions. Suppose, in antebellum times, Congress had prohibited the transportation of cotton and sugar from one State to another because produced by slave labor, what would have been said as to the constitutionality of such an act of Congress?

The precise question suggested in that report I do not mean to say has been decided; but a question closely kindred to it was decided by the Supreme Court of the United States; and I now proceed to call attention to that, which I think is absolutely decisive of the question at issue. I read from 15 Peters's Reports. It is the case of Groves and others against Slaughter. I begin on page 505. I wish to state, however, first, in substance, the facts on which this opinion was delivered. By the constitution of the State of Mississippi the introduction of slaves into that State for merchandise or to be sold was prohibited. But the same constitutional provision allowed the citizens of the State to go and purchase slaves for their own use and bring them into the State.

Under this constitutional provision of the State of Mississippi this case grew up, and in reading this decision I shall read only so much of it as relates to the point at issue here. I ask the careful attention of the House to this, because in order to understand it correctly it must be carefully considered. The Supreme Court of the United States had discussed pretty fully the power of Congress to lay embargoes or to pass non-intercourse laws so far as foreign commerce was concerned, and at this point that is to be conceded, that Congress has the power, if it chooses, under two different provisions of the Constitution, to lay embargoes upon foreign commerce—at least that is settled so far as this case is concerned.

Now to proceed:

Under the power to regulate foreign commerce Congress impose on importations, give drawbacks, pass embargo and non-intercourse laws, and make all other regulations necessary to navigation, to the safety of passengers, and the protection of property. Here is ample range, extending to the remotest seas where the commercial intercourse of our citizens shall go, for the exercise of this power.

That is foreign commerce. Now listen:

The power to regulate commerce among the several States is given in the same section and in the same language, but it does not follow that the power may be exercised to the same extent.

That is what I said in the beginning. One would at first suppose that the extent and scope of that provision of the commerce clause of the Constitution were equally broad as to Indian tribes, as to foreign commerce, and as to commerce between the States; but not so, say the Supreme Court.

Mr. LONG. You admit that we may put a prohibitory embargo upon foreign goods?

Mr. ROGERS. Oh, yes; and you may also prohibit the introduction of liquor among the Indian tribes, but that comes under another power, which I shall discuss later. I read further:

The transportation of slaves from a foreign country before the abolition of that traffic was subject to this power.

The opinion proceeds:

An exception to a rule is said to prove the existence of the rule, and this exception to the exercise of the commercial power may well be considered as a clear recognition of the power in the case stated. The United States are considered as a unit in all regulations of foreign commerce.

It is one people so far as foreign commerce is concerned. There are no State lines. As to foreign commerce the United States are a unit, say the Supreme Court.

But this can not be the case where the regulations are to operate among the several States. Law must be equal and general in its provisions. Congress—

Mark this language, for here is the pith of the whole case—

Congress can not pass a non-intercourse law as among the several States, nor impose an embargo that shall affect only a part of them.

Mr. LONG. A part of what?

Mr. ROGERS. A part of the States.

Mr. O'NEILL. Where do you find that decision?

Mr. ROGERS. In 15 Peters.

Mr. O'NEILL, of Missouri. I would like to ask the gentleman a question.

Mr. ROGERS. I would rather that the gentleman would not interrupt me at this moment.

Mr. LONG. Could Congress lay an embargo that would affect them all?

Mr. ROGERS. Yes, sir; that is what the opinion says; and the last paragraph read—I mean the words: "nor impose an embargo that shall affect only a part of them"—applies to foreign commerce only. Congress may lay an embargo on all the States, but not on a part only; and if on all, then why not on a part only? Because it is provided in the Constitution that—

No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another; nor shall vessels bound to, or from, one State, be obliged to enter, clear, or pay duties in another.

Hence it is all regulations of foreign commerce must apply to all the States alike, or rather to the United States as a unit. This is made doubly manifest by the next provision of the Constitution, which says that—

No State shall, without the consent of Congress, lay any duty of tonnage, keep troops, or ships of war in time of peace, enter into any agreement or compact with another State, or with a foreign power, or engage in war, unless actually invaded, or in such imminent danger as will not admit of delay.

No State, therefore, can, as a State, have any binding or constitutional relations with any foreign power. Foreign powers must deal with the United States. But why elaborate this? The language of Judge McLean is plain:

Congress can not pass a non-intercourse law as among the several States.

I turn now for a moment to see what the Supreme Court meant when using the terms "non-intercourse." I hold in my hand a volume of the collated opinions of Chief-Justice Marshall; and that learned judge in the case of Gibbons *vs.* Ogden, defines the meaning of those terms. I read from page 290:

Commerce undoubtedly is traffic, but it is something more; it is intercourse.

Commerce, then, is intercourse. What is non-intercourse? It is the absence of commerce—no commerce.

It describes the commercial intercourse between nations and parts of nations in all its branches, and is regulated by prescribing rules for carrying on that intercourse.

Not for stopping it, but "for carrying it on;" not laying an embargo on it, not preventing it, not excluding it, but "carrying it on," is the language of Chief-Justice Marshall.

The universally acknowledged power of the Government to impose embargoes must also be considered as showing that all America is united in that construction which comprehends navigation in the word "commerce." Gentlemen have stated in argument that this is a branch of the war-making power, and that an embargo is an instrument of war, not a regulation of trade.

The learned judge then goes on to discuss these questions relating to foreign commerce; but it will be seen that it was thus decided at that early day what "intercourse" is and what "embargo" is.

But I will read another paragraph from Groves *et al.* *vs.* Stoughton, 15 Peters:

Could Ohio in her constitution have prohibited the introduction into the State of the cotton of the South or the manufactured articles of the North? If a State may exercise this power it may establish a non-intercourse with the other States. This no one will pretend is within the power of a State. Such a measure would be repugnant to the Constitution and it would strike at the foundation of the Union. The power vested in Congress to regulate commerce among the several States was designed to prevent commercial conflicts among them. But whilst Ohio could not proscribe the productions of the South nor the fabrics of the North, no one doubts its power to prohibit slavery. And what can more unanswerably establish the doctrine that a State may prohibit slavery, or in its discretion regulate it, without trenching upon the commercial power of Congress?

The committee in its report quote from an opinion in 93 United States Reports (United States *vs.* Forty-three gallons of whisky *et cet.*), with which I am familiar, and which I think does not sustain their views of this question.

The committee say:

Congress, under this constitutional power, may not only prohibit the unlicensed introduction and sale of spirituous liquors in the Indian country, but extend such prohibition to territory in proximity to that occupied by the Indians.

That question was also decided by Chief-Justice Marshall in the case of the Cherokee Nation against the State of Georgia, 5 Peters, page 1, and also in Worcester *vs.* The State of Georgia, 6 Peters, 515. It is upon those decisions that the Supreme Court of the United States, in 93 United States Reports, base its opinion, wherein the doctrine laid down by Chief-Justice Marshall is reaffirmed. I want to refer to this decision to show that it has no sort of application, so far as commerce between the States is concerned, but relates, on the contrary, to intercourse with the Indian tribes, a question entirely distinct, so far as constitutional interpretation is concerned, from that of intercourse between the States. I read the language of the Supreme Court in 93 United States Reports:

Chief-Justice Marshall, in these cases, with a force of reasoning and an extent of learning rarely equaled, stated and explained the condition of the Indians in their relation to the United States and the States within whose boundaries they live; and his exposition was based on the power to make treaties and regulate commerce with the Indian tribes.

Not among the States. I have conceded that Congress has the absolute power to lay embargoes as to foreign nations; and I will now con-

cede the absolute power so far as the Indian tribes are concerned. The opinion continues:

Under the Articles of Confederation the United States had the power of regulating the trade and managing all affairs with the Indians not members of any of the States, provided that the legislative right of a State within its own limits be not infringed or violated. Of necessity these limitations rendered the power of no practical value. This was seen by the convention which framed the Constitution, and Congress now—

Mark the language—

Congress now has the exclusive and absolute power to regulate commerce with the Indian tribes—a power as broad and as free from restrictions as that to regulate commerce with foreign nations.

But not a word about commerce between the States. He compares the power to regulate commerce "with the Indian tribes" to that which authorizes Congress to regulate commerce "with foreign nations," but he is careful not to compare it with the power to regulate commerce "among the States." Why? Because the extent of the power to regulate commerce with "foreign nations" and the "Indian tribes" went to a greater extent. And this shows that Judge McLean followed in the footsteps of Judge Marshall.

So that now I have shown three things: first, that Congress has absolute and exclusive power so far as commerce with foreign nations is concerned; second, that it has the same power with reference to the Indian tribes; and third, that so far as regards the States, it has no power to pass a non-intercourse law in regulating commerce among the States.

Mr. PLUMB rose.

The SPEAKER *pro tempore*. The gentleman from Illinois desires now to resume the floor in his own right.

Mr. PLUMB. I wish to yield to the gentleman from Ohio [Mr. BUTTERWORTH].

Mr. BUTTERWORTH. Before I take the floor I would like to ask if the gentleman from Arkansas has concluded?

Mr. ROGERS. I had desired to go on a little further, but of course as the time yielded to me has expired, I must yield the floor.

Mr. BUTTERWORTH. I am only insisting that the gentleman be allowed to conclude his remarks. This is not so inconsequential a question that we should be remitted to a very few brief moments, while if it was the consideration of a bill providing payment for a horse we would probably devote a whole day to it.

The SPEAKER *pro tempore*. It is entirely within the power of the gentleman from Illinois, who controls the floor at this time.

Mr. O'NEILL, of Missouri. I would again ask unanimous consent that if the business of the committee is not completed at 5 o'clock we take the recess asked for.

Mr. WASHINGTON, Mr. WILKINS, and others objected.

Mr. BUTTERWORTH. I make a request to the House that the gentleman from Arkansas may be allowed unanimous consent for such number of minutes as he may desire.

Mr. ROGERS. I was almost through with my remarks. I desire to say but a word or two more.

Mr. STRUBLE. Let unanimous consent be given.

The SPEAKER *pro tempore*. Is there objection to the gentleman from Arkansas continuing his remarks, not to be taken out of the time of the gentleman from Illinois?

Mr. BUCHANAN. I have no desire to object if the gentleman will indicate what time he will occupy. Would ten minutes be sufficient?

Mr. ROGERS. Oh, ample.

Mr. BUCHANAN. Then I have no objection.

Mr. ROGERS. I will not undertake to discuss the folly of this measure, or the annoyances, expenses, and tyranny its passage would impose upon innocent people. No man would be safe if it were held to be sound law. It applies with equal force to property already owned as well as to that which may be hereafter purchased. The Arkansas farmer who now owns a wagon manufactured in the Tennessee penitentiary could not drive down into Texas or Louisiana on business or pleasure without subjecting it to forfeiture and himself to fine and imprisonment; and so of all other property manufactured by convict labor. Cotton, wheat, or sugar raised by convict labor could not be sold, or, when manufactured, the goods shipped out of the State. And this is to become law, without reference to the pending arrangements of the States in relation to their convicts. To me the proposition is simply monstrous. I leave others to discuss this phase of the matter.

Another significant fact is this: So far as I know, this is the first act ever proposed to the American Congress prohibiting commercial intercourse among the States of the Union. It must be admitted that it proposes opening a new chapter in the history of our legislation. It is a wide field. The mind's eye can not sweep its horizon now. We have traveled a long way already under this commerce clause of the Constitution. Is it to be the highway to the centralization of the Government and the destruction of the States? I hope, Mr. Speaker, that we shall call a halt and draw the line on this bill.

A few more words and I am through. Mr. Chairman, it must not be considered, because gentlemen entertain views antagonistic to those of the honorable committee which reported this bill, that we are enemies either to the manufacturers or to labor. We are here the representatives of co-equal districts in this great Union. We are charged by public law, the organic law of the land, with the discharge of our duties, in conformity with our oaths to support and defend the Constitution. We are derelict, Mr. Speaker, if at any stage of our public career, whatever may be our surroundings, whatever may be our political peril, whatever may be the results of our voices or our votes upon these public questions, if we truckle to any sentiment or refuse to march squarely up to and support and defend the Constitution whenever and by whomsoever it is assailed. And, Mr. Speaker, so far as I am concerned, conceding to these gentlemen the highest and most honorable motives, and the greatest capacity for the framing and presentation of measures to Congress, I claim that we must be left in our representative capacity to discharge our public duty according to the dictates of our own consciences. I have endeavored to discuss this question purely in its constitutional aspect. There are other questions involved of the very gravest public moment which address themselves to the American people and to this Congress. Sir, for years I have been the open and avowed advocate of the working of the convicts of this country within the penitentiary walls, where they may be treated with that humanity which is in keeping with the civilization of the age.

As I read the newspapers of the country in this the nineteenth century, I am compelled to admit that the treatment of convicts in many of the States of this Union is out of harmony with true Christian civilization, and unworthy of us as a people. I wish to see every convict placed within the walls of a penitentiary; and my reasons may be stated in a single word. It will be found that a large majority of the convicts in this land are persons who have not been accustomed to the pursuit of any honest industry, to daily labor, and have no trade or calling. If these people were placed within the walls of a penitentiary they would have not only ample time to repent and become better men, but they might there be taught what is meant by having a trade, what is meant by daily labor and the discipline and aspirations that spring from it, so that when they are liberated they may have better opportunities and greater capacity for making an honest living in the great struggle of life in which all good men must take part in this world. Hence, Mr. Speaker, moved not only by considerations of humanity and of high public policy, but moved likewise by reverence for the Constitution, the only safeguard for the perpetuity of our institutions, I have submitted in a desultory way these reflections. Acknowledging the courtesy of the House in giving me its kind attention, for which I owe my thanks, I now apologize for having detained it so long.

The Tariff.

REMARKS

OF

HON. CHARLES A. BOUTELLE,

OF MAINE.

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 1, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. BOUTELLE said:

Mr. CHAIRMAN: The gentleman from Ohio [Mr. OUTHWAITE] on two occasions has undertaken to enlighten the House in regard to the enormous and exorbitant profits upon the manufacture of lumber. In order to do so he in the first place paraded yesterday figures from the census, in regard to which he assumed that the aggregate amount paid to the laborers in the lumbering business in certain States indicated the amount of earnings of those laborers for the year. Of course the fallacy of that assumption is obvious to any one at all acquainted with the subject; and the fact that the gentleman's statement was due to unfamiliarity with the subject rather than to an intention to misrepresent has been demonstrated by his expressing a little while ago his belief that the saw-mills of the country run throughout the entire year. Now, Mr. Chairman, in my section of the country the saw-mills can not run throughout the year. They are largely water-mills, and can not run more than six months in the year. Suppose you were undertaking to make a computation of the amount of money paid to men engaged in cutting ice on any of our great rivers. Would it be a fair computation to take the aggregate amount paid in a year for cutting ice, divide it by the number of men, and then say "that is what those men earn in a year," the fact being that the cutting of ice is merely an exceptional employment for a short period? In my district and in my State, Mr. Chairman, lumbering operations are largely carried on by the farmers. The cutting of timber in the winter is done by men who till the farms in the summer. There is an alternation of employments.

The gentleman from Ohio and other members, if they desire to get an exact understanding of the relative profit of the manufacturer and the workingman, could better find it by consulting the actual facts and figures. Is it true that the men who work in lumber in the State

of Maine and other parts of New England are paid at a rate equivalent to only $170 a year? The statement is absurd.

I hold in my hand a comparative statement, very carefully made up from what I believe to be reliable sources, of the relative wages paid in the lumber industry in the State of Maine and in Canada. Before reading this statement I will say that in addition to the amounts which these men are paid by the month and by the day, it costs a large percentage more to supply the men in the lumber camps of Maine than it does the men in the provinces, because our men insist upon better food and more liberal provision.

The following rates of wages have been furnished me as a fair average of the pay of workingmen in the woods and in the lumber mills in New Brunswick and in the State of Maine:

Woodsmen.

	New Brunswick.	State of Maine.
	Per month.	*Per month.*
Sled tenders	$18.00	$22.00
Choppers	18.00	26.00
Teamsters	18.00	26.00
Swampers	15.00	18.00
Cooks	26.00	30.00
Two horses, teamster, sleds, and chains	30.00	45.00

Millmen.

	New Brunswick.	State of Maine.
	Per day.	*Per day.*
Head edger	$1.40	$2.50
Second edger	1.20	1.75
First gang sawyer	1.35	3.50
Second gang sawyer	1.20	2.00
First rotary sawyer	2.40	4.00
Second rotary sawyer	1.35	2.25
Pilers	1.25	1.75
Common laborers	1.00	1.50

The gentleman from Ohio undertakes to say that men who are getting $2.50 a day in Maine as against $1.40 a day in Canada are receiving none of the benefits of the legislation which seeks to protect the lumber business in Maine and other parts of the United States.

Mr. Chairman, I presume that in my State the fair average stumpage of spruce would be from $2 to $2.25. A fair estimate of the value of the log when it has been chopped and hauled to water, and driven down the stream, and brought to the tail of the mill, is about $9 per thousand; and of the $9 in value per thousand represented by the log at the mill about seven-ninths stands for wages paid to labor.

[Here the hammer fell.]

Home Rule in the Territories.

SPEECH

OF

HON. JOSEPH M. CAREY,

OF WYOMING.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 29, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9377) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1888, and for other purposes—

Mr. CAREY said:

Mr. CHAIRMAN: I desire to offer an amendment to that paragraph.

The amendment was read, as follows:

Amend by adding to line 14, page 64, the following words:

"*Provided*, That the governor, secretary, and judges of the supreme court of each of the organized Territories, except Alaska, shall hereafter be appointed from the bona fide residents of the Territory wherein they are to serve."

Mr. FORNEY. I make the point of order on that.

Mr. CAREY. Mr. Chairman, upon this amendment I ask the attention of the House for a few minutes. We hear all over this country expressions in favor of home rule. Every true American believes that home rule should be adopted for Ireland. Many have so placed themselves on record. Every member on the floor of this House that I have ever talked with has professed to be in favor of home rule in the several Territories of the United States. In offering this amendment I am aware that it is subject to the point of order under the rules of the House, but we are conscious of the fact that probably three-fourths of all the bills that are passed in the House of Representatives are passed under a suspension of the rules or by unanimous consent.

There is nothing to prohibit this House, if it chooses to do so, from placing upon this legislative bill this amendment. I do not ask it for the Territories as a mere courtesy to be extended to them, but as a matter of justice and simple right.

The amendment is not broad and sweeping in its provisions. We only ask for a small part now of the rights denied to the people of the Territories. If it were adopted it would not confer the right upon the Territories to select their own officers. This privilege they should have. If adopted the power would remain to select officers of the same political faith as that of the party that may from time to time be in power. It only applies to governors, secretaries, and judges. These officers and their appointees execute and administer the Territorial laws and disburse much of the money raised by taxation by the people of the Territories. The amendment does not affect the appointment of officers connected with the Land Department or Indian service of the Government. The adoption of the amendment would not interfere with any officer heretofore appointed or prevent his reappointment at the expiration of his term if he had become a bona fide resident.

I hold in my hand the declarations which were made four years ago by two representative bodies of American citizens. Hon. WILLIAM MCKINLEY, now a leader in this House, as chairman of the committee on resolutions in the Republican convention which met in Chicago in 1884, reported this resolution, which was adopted without a dissenting voice:

Resolved, That the appointment by the President to offices in the Territories should be made from the bona fide citizens and residents of the Territories wherein they are to serve.

If you look over the list of men who were voted for before that convention as candidates you will find they are among the ablest and the greatest men that this Republic has given to the world.

I turn over only a few pages in this political manual and I find the following resolution, which was reported to the national Democratic convention which met in the same city six weeks later by Hon. William R. Morrison, then a member of Congress, a man who is universally esteemed throughout this country:

Resolved, That the selection of Federal officers for the Territories should be restricted to citizens previously resident therein.

If you will look at the list of those who were balloted for before that convention you will find among them the names of some of the most illustrious men in America. The name at the head of the list is that of Grover Cleveland, who brought victory to his party for the first time in a quarter of a century; then comes Mr. Bayard, the distinguished Secretary of State; then Allen G. Thurman, "the noblest Roman of them all;" then SAMUEL J. RANDALL, an honored member of this body, and JOHN G. CARLISLE, the present able Speaker of this House.

Mr. Chairman, there will assemble again in a few days two representative bodies of the American people. While they will not elect the President of the United States, every one may safely predict that either the man who shall be named at the St. Louis convention or the man who shall be designated by the Chicago convention will be the President of the United States after the 4th of March next. This is an ominous time for Congress to act in this important matter. Though late, there is yet time to fulfill the terms of the pledge that was made to the people. These great political conventions that assemble quadrennially in the United States are the grandest of all bodies of men that come together on the face of the globe. They are composed of the ablest and best. They come directly from the people. They are the index of the people's wishes. They yield to the throbbings of public sentiment. These conventions have given heed in the past to the demand for home rule in the Territories. I believe the conventions soon to assemble will declare in favor of the principle of the admission of new States and home rule in the Territories.

[Here the hammer fell.]

Mr. BURROWS. If I can obtain the floor, I will yield to the gentleman from Wyoming [Mr. CAREY].

Mr. FORNEY. I trust the gentleman from Wyoming will have permission to print the residue of his remarks. I have already yielded to him, and I must now insist on my point of order.

Mr. BUCHANAN. I move to strike out the last word.

The CHAIRMAN. That motion is not in order now; there is a point of order pending. The Chair sustains the point of order. The gentleman from New Jersey [Mr. BUCHANAN] is recognized.

Mr. BUCHANAN. I move to strike out the last word, and I yield to the gentleman from Wyoming.

Mr. CAREY. I thank the gentleman from New Jersey for his courtesy.

Mr. Chairman, I believe that President Cleveland intended to carry out the spirit of the resolution of the last Democratic convention. Presidents Grant, Hayes, Garfield, and Arthur by expressions, and often in practice, though not directed by a political platform, proclaimed the wisdom of appointing the officers for the Territories from actual residents.

I have no doubt President after President in his daily prayers and

meditations has said over this matter, "Lead me not into temptation," "Give me power to resist the importunities of politicians, of Senatorial delegations, of delegations from the House of Representatives, who insist on my sending out among the people of the Territories strangers as officers to govern them." The qualifications should be prescribed by law, and not left in the discretion of the President.

Of the twenty-five States admitted under the section of the Constitution providing for the admission of new States, Maine and West Virginia were each organized out of a part of the territory included in one of the original thirteen States, and the Republic of Texas became a State under the terms of her annexation to the United States. These three had represented in whole or part old political jurisdictions. This table of the remaining twenty-two new States shows that there has been no rule established or followed with reference to the amount of population required at the date of the admission of a new State.

Table of new States, not including Maine, Texas, and West Virginia.

States.	Date of admission.	Representative ratio on previous census.	Estimated population when admitted.	Population by following census.
Vermont	1791	33,000	85,425	154,446
Kentucky	1792	33,000	73,677	220,955
Tennessee	1796	33,000	67,000	105,602
Ohio	1802	33,000	45,365	230,760
Louisiana	1812	35,000	76,556	152,923
Indiana	1816	35,000	63,897	147,178
Mississippi	1817	35,000	35,512	75,448
Illinois	1818	35,000	34,620	55,162
Alabama	1819	35,000	40,000	127,901
Missouri	1821	40,000	66,557	140,444
Arkansas	1836	47,700	52,240	97,574
Michigan	1837	47,700	65,000	212,267
Florida	1845	70,680	64,000	87,445
Iowa	1846	70,6 0	78,819	192,214
Wisconsin	1848	70,680	180,000	305,391
California	1850	93,423	92,597	379,994
Minnesota	1858	93,423	120,000	172,023
Oregon	1859	93,423	50,000	62,705
Kansas	1861	127,381	107,206	364,399
Nevada	1864	127,381	40,000	42,491
Nebraska	1867	127,381	100,000	122,993
Colorado	1876	131,425	100,000	194,640
Total			1,638,471	3,644,655

Average population at date of admission	74,476
Average population at the following census	165,666

There is no rule, and probably never will be, as to what is required for a Territory to obtain admission as a State.

Senator Douglas on this question, speaking of the admission of Kansas, said:

This objection in regard to the want of population was not deemed quite conclusive and insuperable when we passed the bill for the admission of Oregon here two years ago.

My colleague thought it was very wrong to admit Oregon with so small a population. My answer was that while it was a good rule to require the ratio requisite for a member of Congress yet we had never adhered to that rule.

* * * * * * *

I helped to admit Florida into the Union when she had a population of 48,000.

* * * * * * *

I suppose two-thirds of the States of the Union have been admitted with less population than Kansas now has. I doubt whether more than two or three ever had as much. Ohio had nothing like it, probably not more than half. Indiana had about half, Illinois about half, Mississippi, Arkansas, Missouri, Alabama, and Louisiana about half. While I think it is not right to admit new States with too small a population—thirty or forty or fifty thousand—yet it has ever been done, and certainly, if the objection was not well taken to a population of forty or fifty thousand, it is not an insuperable objection when there are 109,000. Under these circumstances I think we had better waive these small technical objections and treat this question on its merits.

A table before me makes a remarkable exhibit for the eight organized Territories. The population given is not based upon an actual census, but the estimates are made upon information which appears to be reliable.

Territories.	Act organizing Territory.	Area of the Territories.		Estimated population.	Assessed valuation of property.
		Square miles.	Acres.		
New Mexico	Sept. 9, 1850	122,580	78,451,200	175,000	$60,000,000
Utah	Sept. 9, 1850	84,970	54,380,800	200,000	35,000,000
Washington	Mar. 2, 1853	69,180	44,275,200	170,000	50,000,000
Dakota	Mar. 2, 1861	149,100	95,424,000	600,000	157,000,000
Arizona	Feb. 24, 1863	113,020	72,332,800	92,000	26,313,000
Idaho	Mar. 3, 1863	84,800	54,272,000	97,000	21,000,000
Montana	May 26, 1864	146,080	93,491,200	170,000	60,200,000
Wyoming	July 25, 1868	97,890	62,649,000	100,000	33,000,000
Total				1,604,000	442,513,000

This table shows an average population for each of the eight Territories of 200,500, against the average of 74,500 population in each of the twenty-two States named at the date of their admission.

Make two Dakotas and the average population would be 178,000.

Omit Dakota with her large population and we will still have an average population for the remaining seven Territories of 143,000, or nearly double that of the average of the population of the States alluded to at the date of their admission.

Notwithstanding the rapid growth that has usually taken place in a new State immediately after its admission, the facts show that the States of Illinois, Mississippi, and Florida had each been a State for at least ten years before it could claim a population of 100,000; and that Oregon owing to her remote situation from the line of immigration was a State for fifteen years before her population numbered 90,000.

The results attained by the admission of new States have justified Congress in its action making their statehood possible. If this action has proven wise, there can be no doubt that the people of the eight existing Territories are not only entitled to home government but that the people in each would be justified in asking for State government.

The wealth of the Territories justifies home rule and shows that all the obligations imposed by statehood would not be a burden to either of them.

The assessed valuation of the property in the tables before me is based upon the last official figures obtainable, and is believed to be comparatively accurate. This valuation does not probably represent one-third of the actual valuation of the property. In several of the Territories railroad properties are not assessed and taxed, except on net or gross incomes. The same may be said of the property of mining companies and some other classes of corporations.

Assuming an average levy in the several Territories for Territorial, municipal, and school purposes of fifteen mills, and we find that the large sum of $6,637,000 is annually contributed for the support of governments and schools in the Territories. For all purposes affecting the government in these Territories Congress does not make annual appropriations that aggregate more than $300,000, or less than 5 per cent. of the amount raised by taxation in the Territories.

Wyoming Territory expends annually for the purposes named about $600,000. Congress contributes to that Territory for the support of government in each year less than $30,000.

I did not, Mr. Chairman, offer the amendment as a reflection on the Territorial officers of the several Territories. It would be an ungraceful act on my part to do so. As long as the law stands as it is now and the practice continues the same it is the right of all to seek and obtain these appointments. Many excellent men have been appointed and have filled and are now filling the offices in a conscientious and creditable manner. I would be false, however, to my convictions, formed after a residence in a Territory continuing through nearly a score of years, if I did not say that each Territory has citizens better qualified to fill every office therein than any who may be selected outside of the Territory interested, and who must have their first experience under a Territorial system after their appointment. It is not in disparagement to the many good men holding office in the Territories to say that each Territory has men of affairs who have shown such capacity in business and professional life as qualifies them to fill any executive or administrative office, and lawyers who have been indorsed time and time again by the entire bar, without regard to party for appointment to the judgeships whose private and public life are above reproach, men of long practice under the Territorial system, and whose legal abilities are of such high order as to well qualify them for the judicial office. None have been more willing to condemn the present system than those who have accepted office and have become acquainted with the true condition of the Territories.

Nearly every American statesman who has given expression to his views on the subject has declared that the present manner of selection of Territorial offices outside of the Territory in which they are to serve is wrong in principle and unjust to the people. These appointments are not made with the consent of the governed. The system is obnoxious to the principle that the American is taught from his very infancy that the right of self-government is inherent.

In the first few years of a Territorial existence, before the communities therein have become fixed and homogeneous, there may be some excuse for the appointment of non-residents, but when these Territories have grown in wealth and in law-abiding population, no good reason can be given for the continuation of the system. There are in these Territories as well organized communities as any that exist in the United States.

The Territories have time and time again asked that they might be permitted to select their own officers. Bills presented for this purpose never get beyond the committee-room. The change would take away a little political patronage from Washington, but it would lift the people of the Territories out of their anomalous condition of being freemen, living in and being citizens of the United States, without the power of self-government. These people have long been patient and law-abiding.

Those who framed the American Constitution could not, from the very condition of things at that time, look forward and comprehend

the existence of the great Territories of to-day. These Territories are several times as large in area as the thirteen original States. They contain half as much population as these States did when they achieved their independence. Little did the fathers of the Republic think that such grand provinces would be governed by non-resident officers appointed at the capital of the nation, which is on an average nearly as remote from the people governed, so far as miles are concerned, as the British Crown was from the American Colonies.

The people of each of these Territories, in their petitions and memorials to Congress setting forth the wrongs done them, could use the language of the Declaration of Independence, with slight changes, as most applicable to their condition, and declare:

"The United States has refused assent to laws the most wholesome and necessary for our public good.

"The United States has made judges dependent upon her will, and for the tenure of their offices and the amount and payment of their salaries.

"They have from time to time superseded our own Legislature and declared themselves invested with power to legislate for us in all cases whatever."

The Territorial system is an abnormal one. It should be short-lived, and no excuse should be made to prolong it a day longer than absolutely necessary to qualify a people for statehood.

Mr. Madison, and there can be no higher authority in the discussion that took place over the admission of Tennessee, said of the Territorial condition:

> The inhabitants in that district were in a degraded situation; at present they were deprived of a right essential to freemen—the right of being represented in Congress. Laws were made without their consent, or by their consent in part only. An exterior authority appointed their executive, which was not analogous to the other parts of the United States and not justified by anything but an obvious and imperious necessity.

Sixty years later, in the Senate of the United States, in discussing the Kansas question, Mr Collamer, of Vermont, said:

> The Territorial condition is not one which it is desirable to extend. It is an unnatural condition in our Government—that people have never yet had the advantage of choosing their own government, their own executive, or having their own judiciary. * * *
> They desire to be enabled some time or other, and they consider this the proper time, having the population, to have the privilege of governing themselves in this country as other people do.

Kansas had then been a Territory only six years, and no claim was made at that time that her population exceeded 100,000.

Can not the people of these Territories be trusted? They are the sons and daughters of the various States of the Republic removed only to the Territories. The people have for a hundred years been educated for republican institutions. The Republic is the wonder of the world. It has been made possible by the trust it has reposed in its own people. At the laying of the corner-stor e of the Catholic University in this city a few days ago Bishop Spaulding used these eloquent words:

> Above all, who could have believed that a form of government rarely tried, even in small states, and when tried found practicable only for brief periods, would here become so stable, so strong, that every hamlet, every village, is self-poised and manages its own affairs? The achievement is greater than we are able to know; nor does it lie chiefly in the millions who, coming from many lands, have here made homes and found themselves free; nor in the building of cities, the clearing of forests, the draining of swamps, the binding of two oceans, and the opening of lines of rapid communication in every direction.
> Not to numbers or wealth do we owe our significance among the nations, but to the fact that we have shown that respect for law is compatible with civil and religious liberty; that a free people can become prosperous and strong and preserve order without king or standing army; that the state and the church can move in separate orbits and still co-operate for the common welfare; that men of different races and beliefs may live together in peace; that in spite of an abnormally rapid increase of population and of wealth, and of the many evils thence resulting, the prevailing tendency is to sanity of thought and sentiment, thus plainly manifesting the vigor of our life and institutions; that the government of the majority, where men put their trust in God and in knowledge, is in the end the government of the good and the wise.
> We have thus helped to establish confidence in human nature; to prove that man's instincts, like the laws of nature, are conservative; to show that the enthusiasts who would overturn everything, destroy everything, have no abiding place or influence in the affairs of a free people, as volcanic and cyclonic forces are but transitory and superficial in their action upon the earth. We have shown, in a word, that under a popular government, where men are faithful and intelligent, it is as impossible that society should become chaotic as that the planets should dissolve into star dust. It is difficult to realize what an advance this is on all previous views of political life, how full it is of promise, how accordant with the sentiments of the noblest minds in every part of the world.

Mr. Chairman, we all agree that the best government of all governments is that which is derived directly from the people. The best models under this Republic are those of the New England States. The people there carry out to perfection the town and county idea. The towns and counties, as well as the State, select their own officers. These towns make the county and the counties the State after the manner that the States make the Republic. In this way all are trusted; all the people, the lowest and the highest, are called upon to take part in selecting the smallest town officers as well as in the selecting of persons to fill the most exalted places.

Our people—I mean the people of the Territories—are restricted in their powers in this regard, for the reason that they do not under the organic act have the power to fill by election any Territorial offices that may be created by a Territorial statute. The only officers that they are authorized to select at a Territorial election are the Delegates they send here to represent them on this floor. It is true that they are permitted to select county and district officers, but all the Territorial officers must be selected by the governor, who may be a non-resident, and confirmed by the council. What condition of things by reason of these restrictions do we find? Take Dakota, for example. The governor of that Territory has the selection of over one hundred Territorial officers. Not one of these officers expend a cent of Government money or perform a duty under a United States law. The legislative body, including both council and house, consists of only seventy-two members.

If the governor should be so inclined he could accomplish almost anything that he might desire in the way of legislation through the medium of the patronage afforded by these appointments. He is not responsible to the people over whom he has been called to govern. What might be true in Dakota might also be true to a greater degree in the other seven Territories, for in each of these the Legislature is only half as large as that of Dakota.

If the rule suggested in the following extracts from a speech delivered by the late Senator Howe, of Wisconsin, could be followed, the question of home rule would not be long denied, as each Territory would soon take its proper place in the list of American States.

Senator Howe, on the bill for the admission of Colorado, said:

> We have no general law which determines when our children, the children of the Republic, shall become of age and shall have the right to set up for themselves. We have been in the habit of fixing that time as each individual child came forward to claim it. Another child is here to-day asking to be emancipated from parental authority, so to speak, of the United States; willing still to be a child, but wanting, like other emancipated children, the right to guide herself.
> I have but one test by which to judge for myself when this thing we call a State ought to be admitted or not. Whenever I find a community friendly to the United States and able to pay the expenses of their own government, defray the charges of their own control, if they say they are willing to do it I am not the man to forbid them. If my own judgment is not quite in accord with theirs, if I find a pretty spirited and a pretty plucky people saying that they are equal to the work of self-government, when I am not quite satisfied of the fact myself, I rather yield my own opinion to theirs. I would rather encourage a little ambition of this kind than discourage it.

These Territories are growing rapidly. The people are moving forward and are taking advanced steps in that class of legislation that protects all in the enjoyment of equal rights. There is no discrimination on account of race or color. All who choose to make homes within their borders receive a most cordial welcome.

The American idea that public schools prepare children to grow into liberty-loving men and women, and fit them for republican institutions, has been put into actual practice. Without a permanent school fund and without Government aid large sums are expended each year in the maintenance of schools for all children of the school age. Wyoming spends $28 annually per capita on the average attendance of the children in her public schools, Arizona nearly double as much, Dakota $26, and each of the other Territories nearly or quite as much. In addition to the public schools, universities, agricultural colleges, and industrial schools are maintained in several of the Territories. The various religious denominations vie with each other in the establishment and support of churches and educational institutions.

The Territories are populated with an enterprising people. They have accomplished more in a score of years than was thought possible in a century. The sixteen hundred thousand of intelligent people living in the Territories, the thousand millions of dollars of accumulated wealth, the railroad systems measuring nearly 15,000 miles, half as great as that of the entire United States in 1860, and the other great business enterprises of these Territories demand home rule, and a more comprehensive government than that afforded under the Territorial system.

The oldest of the Territories, New Mexico and Utah, have remained in the Territorial condition for nearly forty years, the youngest, Wyoming, nearly twenty years. Children, since their organization, have been born and grown to manhood and womanhood. If it were in my power before this Congress, so crowded with business, adjourns, the two Dakotas and the seven other Territories would be offered acts under which they could become States. Each has served a full apprenticeship of preparation; each is ready for State government. There should be no exception made in any case if the people of each Territory should show a willingness to comply with the conditions that might be required. Unfortunately history shows that no new State has been admitted because of its own preparation. Then States were admitted in pairs to maintain the balance of power between slavery and freedom, in the annexation of new territory, as war measures, or to give a party in power additional political strength.

The Territories will probably be required to wait for admission until one political party has control of the President and both branches of Congress, or until by a system of legislative jugglery they may be made to balance each other on a political teeter-board. I had hoped until the opportune time arrived for their admission the small concession towards self-government proposed by the amendment would be granted without an objection. It is the old story: a power once exercised is rarely surrendered without objection.

[Here the hammer fell.]

The Tariff.

SPEECH

OF

HON. CLIFTON R. BRECKINRIDGE,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 17, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. BRECKINRIDGE, of Arkansas, said:

Mr. CHAIRMAN: When the President of the United States in December last communicated his regular annual message to Congress it was found to be devoted exclusively to the subject of war rates of taxation and to the surplus revenues which were being steadily accumulated in the Treasury. For some years these have been the chief questions in the minds of men and in the platforms of political parties. The Democratic party has steadily urged the reduction of the surplus by a reduction of taxes upon the necessities of life; and the Republican party has promised to reduce the surplus, without, however, clearly defining the mode. On few occasions, perhaps, in the history of our country has a communication from its Chief Executive been greeted with such extravagant denunciations as hailed this message from the Democratic President. Those of our people who consider themselves benefited by reason of the taxation upon imports filled the land with clamor, and the chief representative of that class of our countrymen, although traveling ostensibly for pleasure in a foreign land, saw fit to meet the message of the President with a special communication from the city of Paris.

But, sir, when the people came to consider the message of the President they found it a reasonable document. They could see nothing unreasonable in the proposition to reduce the surplus in the Treasury, and to do so by a reduction of taxes upon the necessaries of life, especially when the degree of reduction recommended would still leave taxes on imports, with a prudent regard for our present conditions, higher than they were at past periods in our history when they were said by these people to be sufficiently protective and when the differences between us and our foreign competitors were far greater than they are now. Therefore, upon the "sober second thought" of the people, the message of the President met with great favor. So marked was this that our political opponents soon sought some new point of attack along the Democratic line; and the chief of the opposing forces, who had rushed so valiantly into the fight, sent a letter which was practically a letter of resignation, withdrawing altogether from the contest for that position which previously he had seemed to covet.

In the due course of events the Committee on Ways and Means, to which the President's message and recommendations were referred, brought into this House the bill now under consideration proposing a reduction of taxes. This latterly has been made the occasion of violent assaults and of most extravagant assertions. But since the people have had an opportunity to examine the bill and meditate upon it, they find that it is a bill which falls far short of even the conservative recommendations of the President. The President rightly expressed the desire of the Democratic party that surplus taxes should be reduced at this time solely by a lowering of taxation upon the necessaries of life: but as a concession at this juncture from our professed preferences we have incorporated in the bill now before the House a reduction of nearly $25,000,000 of the internal-revenue taxes—that part of our war taxes which has been the chief subject of reductions in past years. And we find that the people, having approved of the message of the President, are now beginning all over the country to approve of the bill proposed by the Democratic members of the Committee on Ways and Means—a measure which, as I stated, is even more conservative than the propositions of the President.

The contest we are having is mainly over the tariff part of the bill, and it is well for us, Mr. Chairman, to consider for a moment the composition of our present tariff law. It consists of three strata. It consists, first, of the revenue tariff, which was adopted in 1857. Added to this we have the combined revenue and protective tariff increase adopted in 1861. This was professedly higher than was then needed for protective purposes alone. That was before the adoption of the homestead law, and at that time the Government had been relying for its revenues largely on the proceeds of the sales of the public lands; but that source of revenue had measurably failed for the time being, falling from $11,000,000 and $8,000,000 a year to less than $1,060,000 by 1861. The great prosperity of the people had led to extravagant speculation in land, and the short panic of 1857 led to a cessation of investments of this kind. Our deficiencies during these years just prior to 1861 just about equaled the falling off of the receipts from this source. The increase of these receipts in 1856 and 1857 had led Congress to think that the reduction of taxes made in 1857 could be safely and permanently made.

Then, after the tariff increase of 1861, there came our civil war, and by successive acts the tariff was increased strictly for revenue purposes. Most of these increases were to enable the manufacturers to stand the internal taxes laid during these years upon their products, and to compensate also, so long as such taxes should last, for those taxes which were laid upon incomes, occupations, etc.

Now, long after all the internal war taxes have been taken off of the manufactured goods, long after the war taxes have been taken from the incomes of our manufacturers and others, and when there is no longer any tax on the occupation of any citizen except in the business of tobacco and spirits, we yet find that substantially in all these branches of business in which the war increases of the tariff afford protection and advantages the rates of taxation continue as high and have even been in many cases made higher than they were in 1862, 1864, and 1866. If the internal taxes of 1866 were still in force our receipts now would be, at the rate then paid, over $900,000,000 per annum. If this were needed we could not complain. If the tariff increases were needed to offset the nearly $220,000,000 that this would embrace of direct taxes upon manufactured products alone we could not complain. But when there is not a cent of those and other taxes remaining to offset which the present rates on competing imports were laid, when they were not even professed to be needed for protection, as I will fully show later on, and when now only the small remaining remnant of internal taxes are now spoken of as "war taxes," and these war-tariff taxes are sought to be retained for purposes of monopoly, I solemnly protest against it. It is this part of the tariff that we seek to reduce just a little, and so little that it will unquestionably show, if our opponents reject it, their devotion, under whatever pretense they may assume, to monopoly pure and simple.

Sir, when a contest is made over a reduction of this character, over a reduction of this part of the present tariff system, it truly involves a great principle, as stated by my esteemed and distinguished friend from Ohio [Mr. BUTTERWORTH]. It will not do to pitch the fight, as the gentleman does, upon the ultimate aims and wishes of any part of the great mass of people who demand the passage of a bill like this. Of course any reduction of excessive rates of tariff taxation is in the "direction" of free trade. I do not seek to conceal my own belief in the wisdom of the greatest possible freedom of trade from all hindrances and restrictions. But the question is, are you in favor of any freedom of trade? You are friendly to the tariff, but are you friendly to a reduction of the tariff? Are you willing even at this late day to repeal even a part of the war part of the tariff increases? We are not going to increase the internal taxes. Sir, for many years our tariff taxes must furnish revenues for at least $50,000,000 annually in excess of all of our ordinary civil expenditures. How can we have free trade? If we untax raw materials to help our laborers and consumers we must tax finished products. Shall we restrict trade, even home trade, in order to oppress our own people and to keep up a wretched political combine which is but a business trust? To oppose this bill because of a contest that ultimately may and will arise when the public debt is paid and the pensions are all paid and but little revenue is needed is to evade the present issue. Here is where the gentleman [Mr. BUTTERWORTH] states the case wrongly, and by so doing and by acting as his side seems determined to act, they are doing all that lies in the power of man to force the people to choose sharply between free trade and our present most unconscionable system of monopolies.

Sir, there are three kinds of protection. There is what may be called a rational system of protection. That was the protective part of the tariff system practiced by our fathers at the close of the Revolutionary war when they felt the temporary need of some industrial defense as a war measure to encourage and secure certain industries necessary to supply us with a few indispensable articles. Washington pointed out that either Government had to conduct them or they had to be encouraged as pursuits of the people; but he warned his countrymen against "forcing" anything. We are lacking in industrial data of that period, but when we see how much higher the interest on money and the rates of wages are now in the new States and in the Territories than they are in the older States, we may safely conclude that the differences between the cost of production in this country and in Europe was much greater then than they are now. What rate was considered adequate then? At that time and under those circumstances rates of protection of from 5 to 10 per cent. were considered adequate. The idea was to enable manufacturers to pay their workmen the standard of wages that existed in this country (and certainly no laws can increase the standard) and to equalize the difference in the charges for the use of money. Dangerous and faulty as such a beginning may be, yet, if confined to this limit, it left no margin for monopoly. It formed no basis and afforded no temptation for a "trust," and we had none. It enabled the people to possess the necessary industries without enabling the industries to possess the people.

Then, sir, there is another idea of protection, which is not one of defense or of independence; but which may be called the commercial doctrine of protection. It is employed for the establishment of a variety of industries whether the country needs them or not, and in the face of the fact that we can for the time being procure their products more cheaply by exchange than we can by domestic production. This doctrine

of protection generally pretends only to foster those industries which we are naturally adapted to sustain. Like the former doctrine it only asks to cover the difference in the cost of production, and until recent years it has never claimed that the protection should be more than temporary.

The trouble with this is twofold—first, in due time a nation will get the diversity of industries naturally suited to it without the cost of premature fostering; and second, the beneficiaries of this legislation, like all recipients of class legislation, are never satisfied with their first demands or with the satisfaction of their real needs, but they continue to clamor for more, they never say "enough," and they soon begin to look around for allies to help them to continue and to increase their exactions. This is, at its beginning, a foolish policy of protection; and it soon becomes the third and last species of protection, which is a policy contended for by the privileged classes for purposes of monopoly.

This is the kind of protection we have to-day—a policy under which the privileged industries enjoyed great advantages until production caught up with consumption; and then, in order to prevent competition they began, with that wonderful capacity of our people to combine for a common purpose, to enter upon the era of combinations and trusts. This, Mr. Chairman, is not only a foolish but it is a wicked policy of protection that it behooves a people to prevent or to escape from. That we are in this condition to-day is so plain a fact that no fair and rational man will question it for a moment.

Sir, in dealing with these questions or with these different phases of the protection question the two great political parties have always as now shown their true animus and principles. At this time we recognize that some industries are more or less dependent for existence upon the maintenance of a certain degree of protection. We are dealing with an existing system and we have proceeded with great caution in such cases as these. The idea, however, that rates are to be apportioned as favors, or as salaries are equalized, as if the manufacturers were rendering a public service instead of following a private business—an idea quite prevalent among them—this idea has been disregarded, and as a rule luxuries have been left high and necessaries of life have been prudently reduced. But whatever the question or the period of time, the tendency of the Republican party is to make rates as high as the people can be persuaded or hoodwinked to stand, and the tendency of the Democratic party is to make them as low as the people need to stand. The inherent tendency to centralize wealth as well as power characterizes our political opponents, and the opposite tendency steadily characterizes ourselves. These propositions are, in my opinion, thoroughly shown by the present law, the bill, the committee reports, and by the speeches upon the respective sides.

Sir, in America there is no public or political necessity for the industrial and social blight of a privilege-giving and monopoly-breeding system of excessive tariff taxation as is supposed to exist in some of the foreign countries. We can understand how, among the crowding and hostile nations of Europe they may build up high tariffs as blind expressions of their animosities. We can understand why Germany with her peculiar populations recently united, and composed of discordant elements, for the purpose of strengthening the throne by the creation of a great privileged class, with the idea of making the throne a source of privilege and power, should make concessions and grant subsidies. We can readily understand how Italy may pursue the same policy, and with millions of men under arms they need also to utilize every possible source of revenue. But in America the conditions are different. Our people and institutions are homogeneous, our Treasury is bursting with surplus revenues, and never in our history was our country so fraternally united as now. The continued unification of our people, and the perpetuity of our Government will be best promoted by giving privileges to none, by enacting fair and equal laws, and by building upon the everlasting basis of justice and equality. [Applause.]

We need no such props or systems as are required to sustain emperors and kings. We need no classification of our citizens. But, sir, our Republican friends are contending for this part of the protective system and we are contending against it. It is altogether an erroneous system of statesmanship; and whatever may be the basic principles upon which the Democratic party may be established, certainly nothing is more fundamental or true of that party than that it is opposed and has always been opposed to all forms and phases of privilege and inequality.

In seeking to bring our commercial and fiscal affairs back to the economical and moderate conditions suited to peace we adopt the cautious and prosaic methods of reform.

It is one of the characteristics, Mr. Chairman, of those who engage in the defense of a bad cause to indulge in abuse and extravagant statement. Sir, one of the first statements that were promulgated by our opponents in this discussion was that the Democratic members of the Ways and Means Committee, with an imperiousness unprecedented, voted not only against granting "hearings" to the representatives of the various industries of the country, but that we even denied the people the great constitutional right of presenting petitions. Every one of the Republican members of the Ways and Means Committee have sought to prejudice public sentiment against this bill by signing a report containing these statements, dressed up in lurid colors. I first consider the latter one.

Sir, how strange it must seem to the people of this country when they learn, as is the case, and as I have the record here to show, that the proposition to admit petitions was never brought into question. How strange it must seem when they learn, as I have the record here to show, that the proposition that was brought up before the Committee on Ways and Means was an entirely different one, and that upon this wholly different proposition our associates deliberately found a most opprobrious charge.

I see my distinguished friend, a member of the Committee on Ways and Means [Mr. KELLEY], moving uneasily in his seat, and I will read the gentleman's own record upon this subject before I get through.

Mr. KELLEY rose.

Mr. BRECKINRIDGE, of Arkansas. I do not yield to the gentleman now. He can answer after I finish my statement.

There was a proposition made, as if to lay the basis of a charge for political advantage, as to an order of proceeding in committee. This proposition sought to dislocate petitions entirely from the subjects to which they related, and to this the Democratic members of the Ways and Means Committee objected. We insisted, instead, that petitions should be read, if gentlemen needed to call them up, in the order of the consideration of the subjects to which they related. Here is a resolution offered by the gentleman from Kentucky [Mr. BRECKINRIDGE]:

Resolved, That various requests having been made to the committee by persons representing themselves to be interested in industries which may be affected by the provisions of the bill under consideration, "to reduce taxation and simplify the laws in relation to the collection of the revenue," asking to be heard orally before the committee, the committee now determines that it will receive such written or printed communications as any one may desire to file, but it declines to hear orally any one not a member of the committee; and the clerk of the committee is hereby directed to notify those who have requested, or may hereafter request, oral hearings of this resolution.

To this resolution the gentleman from Pennsylvania [Mr. KELLEY] moved the following amendment, which is the proposition we voted down:

And that at the opening of each session of the committee the clerk shall proceed to read to the committee the statements and protests received during the interregnum.

It will be clearly seen that the only question presented by the amendment is one relating to the order of business. The question was whether the statements, arguments, and petitions should be considered by the committee as a body before we reached the subjects to which they related and be used as a block and obstruction to our ever getting to the various subjects at all. The Democratic members of the committee voted against their being thus read and used before reaching the place and topics to which they related. Were they to be read first and then not read subsequently? This would leave the impression faint and vague on the mind. Were they to be read first and also subsequently? This would needlessly consume time. I submit that what we voted down was simply a question of the order of procedure, upon which question our proposition was to give to these papers their proper position and their full force and effect, while the proposition of our opponents was to dislocate the papers from the subjects to which they might relate, to destroy their real force and effect, and to use them simply as instruments of obstruction to all progress with the subject of tariff reform in the committee.

I now yield to my friend from Pennsylvania if he desires to make a remark.

Mr. KELLEY. I ask the gentleman from Arkansas whether any counter-proposition of any kind was tendered to the minority when they asked that the appeals made might be brought to the attention of the committee.

Mr. BRECKINRIDGE, of Arkansas. Yes, sir; you were told that they would be entirely welcome. I with general assent told you so myself, and that we only desired you would bring them in in connection with the subject to which the particular petition was intended to relate. We gave you a cordial invitation to do that.

Mr. KELLEY. The gentleman from Arkansas may have condescended——

Mr. BRECKINRIDGE, of Arkansas. There was no condescension; it was entirely proper.

Mr. KELLEY. But the chairman of that committee, its organ, offered no opportunity to bring to the ears of that committee the petitions, memorials, and remonstrances that were committed to our care.

Mr. BRECKINRIDGE, of Arkansas. Why, the resolution adopted is a distinct invitation. At no time was a paper called for or produced in going over the bill and the slightest objection offered. We even had them classified for you, and in order to give the gentlemen of the minority an opportunity to consider all these matters, this bill, brought into committee on the 1st or 2d of March was not taken out of the committee until the 1st or 2d day of April; and we offered to hold night sessions to consider petitions and memorials and everything connected with the bill. We asked leave to sit during the sessions of the House and your side objected to it.

Mr. KELLEY. Does the gentleman not remember that the regular meetings of the committee were abandoned and were fixed to be held only when the chairman should summon the committee together? Not merely from Tuesday to Thursday or from Thursday to Tuesday passed, but weeks passed consecutively in which the minority had no opportunity of meeting officially.

Mr. BRECKINRIDGE, of Arkansas. No, sir; I do not. I remember distinctly, Mr. Chairman, that no postponement ever took place except at the request of the gentlemen of the minority and to serve their expressed convenience. They wanted a statement printed when there had been submitted to them on the 1st of March, the day they got the bill, a statement of the whole effect upon the revenue. This statement in detail and in full was also indorsed by the Secretary of the Treasury on the 14th of March; and the gentleman from Pennsylvania had the candor to apologize to the committee for his complaints and to admit that for ten days or a week he had kept that statement and never opened its leaves. [Applause.]

Mr. REED. Before the applause subsides I want to suggest that the pamphlet was put into our hands with a statement that the figures were going to be verified by the Treasury Department, and, therefore, until they were verified, we all laid them aside; and if the gentleman undertakes to say to the House that in the Committee on Ways and Means petitions were read at the time the items were considered, if he undertakes to say there was any consideration of this bill in the Committee on Ways and Means, if he undertakes to say that there was any explanation of facts or reasons for the changes proposed in the bill, he is mistaken.

Mr. BRECKINRIDGE, of Arkansas. I can not yield to the gentleman for a speech.

Mr. KELLEY. And I desire to say I made no apology for not having read a pamphlet which I was told was incomplete.

Mr. BRECKINRIDGE, of Arkansas. Ah, Mr. Chairman, I will not get up a dispute with my friend from Pennsylvania. It may not have been strictly an apology, but the gentleman will remember that he made an acknowledgment that he had had the statement all the time, and had forgotten all about it.

Mr. KELLEY. I had it, but had not read it, because I was told it was to be substituted by a pamphlet, the figures of which the Treasury Department would have verified. I was waiting until the majority gave us the official information in that form.

Mr. BRECKINRIDGE, of Arkansas. Why, sir, it may not be worth while to devote time to these matters, but the record is very plain, and it is the reverse, and I say it in no offensive sense, of the statements of the gentlemen. The "pamphlet" that the gentlemen speak of in a slighting way is a full and complete statement, compiled for the committee in the way always observed, exclusively from official data, and by the chief clerk of the committee, Mr. Talbot, who, as every member will gladly admit, is one of the most competent, skilled, accurate, and responsible men ever associated with this branch of the public business. After the almost innumerable calculations had been gone over by the experts of the Treasury Department, the Secretary of the Treasury says:

> With the exception of a few unimportant errors, these tables, as printed, appear to be arithmetically correct.

And I think the chances are even, Mr. Chairman, that in these "unimportant particulars" the Department experts were mistaken.

As further evidence of the mere captiousness of the representative elements of the other side of the House—of their willingness to do anything and to say anything to prevent the slightest progress in the way of a reduction of the tariff—I will refer briefly to their statement that they were without information to guide them in the consideration of the bill. Sir, this might have been said by diligent men in 1866, but it can not be said now. In that year we established the Bureau of Statistics for the special purpose of providing such information. The imports, rates of duty, cost of foreign articles, are all given. Our exports and selling prices are all given. This and much other data is tabulated as to countries, ports, and in various other ways. In 1883 this data was all tabulated down to date, topically, by the Treasury Department in Evans's Imports, etc., and subsequent reports bring the data down to the present date. We have the very able report of Hon. David A. Wells, discussing this whole question of tax-reform. We have the "hearings" and report of the Tariff Commission, and since that time the census report of 1880 has been completed. The volume on manufactures embraces over twelve hundred pages. That on agriculture embraces about as much, and the volume on labor amounts to some eight hundred or nine hundred pages. Other volumes give relevant and important information. We have consular reports almost without number. The Agricultural Department has become far more statistical than formally. The Bureau of Labor, presided over by a statistician of great ability and experience, has been created and has furnished us with masses of data. The "hearings" extended by the Ways and Means Committee in the Forty-eighth and Forty-ninth Congresses—both Democratic—are in print and at command. The archives of the committee contain papers and arguments upon almost every question involved. But more information is wanted and no action. We are wanted to hear and wait and hear until the privileged classes shall consent to a reduction of tariff taxes. As Secretary Folger said, their consent will never be given. The only trouble is that we have more data now than any living man can fully utilize, and no willingness or disposition on the part of our opponents to take a single step or to permit one to be taken to keep even their own former pledges to relieve the people. They have finally left the people and yielded fully to the most preposterous demands of the monopolies, and by this system of fanciful and extravagant statements they are seeking now, as in times past they have sought by these and other methods, to divert the minds of the people from the true state of affairs. There was sure to come a time when you had to go back at least to simply protective rates of tariff taxation, or yield to the monopolies and refuse to go back. That time finally came in 1883, as I will fully show later on, and then you became, gentlemen, a new party from the old Republican party, or at least different from its professions and promises from 1861 to 1883. You had been the party of protection. You are now the party of monopoly. The protective principle has led to its final and worst consequences and conclusions, and the question now is, shall they continue without abatement?

Gentlemen say that we shall embarrass the administration of customs laws by confusing terms and provisions. They know that the administrative part of the bill is substantially the former Hewitt administrative bill that they all approved of, and that every administrative feature in this bill has the approval of the Secretary of the Treasury. He discusses the matter without complaint in his letter of March 14, printed with the statement we furnished you and given also in the report of the majority of the committee. With a month given to you to point out defects, you never once even attempted to show such defects, and yet gentlemen make such statements in general terms, still avoiding specifications, and seek to prove them by complaining that we refused to take up their time in consideration in committee.

Boasting that for years you have stood here like a stone wall obstructing and preventing all reductions such as are now proposed, you yet profess, by reproaching us, whose earnest and repeated efforts you have defeated, that such failure is reprehensible, lightly regarding the fact that you have steadily prevented the subject from going to the Senate, which you have controled and do now control, in the only way it can reach that body, namely, as coming from the House, where you would have that entire charge of the subject which you have said and now say is all you ask in order to formulate your views. If the control of both bodies is a logical prerequisite to the formulation of a measure, we could have so pleaded, as you now do.

If the control of only one body imposes that duty you have been so situated during all these years of obstruction. Judge us frankly, gentlemen, by your own standard of judgment and submit yourselves to the same rule. For now three Congresses we have met the issue by formulating tariff bills, and you have avoided it by refusing to let your own Senate get control of it. Again we throw down the gauntlet to you, and again we ask you to let the subject pass over to the Chamber you control, or to offer some substitute of relief here. We might have objected to the subject going into the hands of a Republican Senate, but, gentlemen, with what grace, propriety, or reason can you object to that?

I now pass, Mr. Chairman, to the consideration more particularly of the reckless statements made by the gentlemen on the opposite side of the House about the rates fixed by the bill. The minority represent in their report that all the schedules are affected. They say, on page 18 of the report, in speaking of the bill:

> It undertakes to revise our entire revenue system; substantially all of the tariff schedules are affected; both classification and rates are changed.

The present law is a substitute for all of our former tariff laws, and it was passed only five years ago. At the very beginning of the act it declared that—

> The following sections shall constitute and be a substitute for Title XXXIII of the Revised Statutes of the United States.

There has scarcely been a Republican platform from that day to this that has not complained of the "inequalities" of this act, of its awkward, blundering, and "incongruous" provisions, and said that it should be "revised." It will be noted that they always speak of "revision" instead of "reduction;" but it wou d seem from what the Republicans themselves say of the clumsy character of the present law that it were no sacrilege to touch it. On the same page of their report the minority, in speaking of the bill, say:

> If enacted into law it will disturb every branch of business, retard manufactures and agricultural prosperity, and seriously impair our industrial independence.

They further say:

> The bill is a radical reversal of the tariff policy of the country. * * *
> It does not correct the irregularities of the present tariff; it only aggravates them.
> Its construction takes no account of the element of labor which enters into production, and in a number of instances makes the finished or advanced product free or dutiable at a less rate than the materials from which it is made.
> "The poor man's blanket," which the majority has made a burning issue for so many years, is made to bear the same rate of duty as the rich man's.
> It is marked with a sectionalism which every patriotic citizen must deplore.

Here are enough charges, Mr. Chairman, to kill the bill if only true in part, and I submit that they leave the gentlemen who make them in very bad shape if they are not true. Most of them are simple questions of fact, about which there is no excuse for error. Others are matters of opinion about which gentlemen are liable to differ.

Let us consider first the statement of fact that all the schedules are affected and the entire revenue system revised, both as to rates and classifications, and along with this the opinion expressed that all the industries in these respective schedules are thereby condemned to serious injury if not to ruin.

Sir, our tariff is divided into fourteen great schedules, and if we include the free-list it makes fifteen. These schedules are:

Schedule A.—Chemical products.
Schedule B.—Earthenware and glassware.
Schedule C.—Metals.
Schedule D.—Wood and woodenware.
Schedule E.—Sugar.
Schedule F.—Tobacco.
Schedule G.—Provisions.
Schedule H.—Liquors.
Schedule I.—Cotton and cotton goods.
Schedule J.—Hemp, jute, and flax goods.
Schedule K.—Wool and woolens.
Schedule L.—Silk and silk goods.
Schedule M.—Books, paper, etc.
Schedule N.—Sundries.
The free-list.

These are the schedules the minority say have been thrown into great disorder, making no exceptions; and under these are assembled the industries which they say this bill would consign to a common ruin. The statements made in the report of the Republican members of the committee have been repeated, embelished, and attempts have been made to enlarge upon them by nearly every gentleman who has spoken upon the opposite side of the House. These statements are made by gentlemen who pose before the country as men of information and as the special guardians of great public interests. I aver, without fear of successful contradiction, that an examination of indisputable facts of record will show that our opponents are characterized by a recklessness, not to say a wantonness of statement that accurate and prudent men do not indulge in, that no cause can justify, and that no good cause can inspire.

Take Schedule L, that of silk and silk goods, and let us examine into the changes we have made and the ruin we have wrought here, as alleged by the minority of the committee. Sir, under this head there were 382 productive establishments in 1879, as shown by the census of 1880. There is subject to ruin a capital of over $19,000,000; over 9,000 men, 16,000 women, and 5,000 children, a total of 31,335 hands, are to be deprived of employment that "adds to our national wealth" over $41,000,000 of products every year—the business is larger now—and their earnings were $9,146,705. What happy homes are destroyed! What a doleful picture we have of the hum of industry hushed and the great factories standing, grim monuments of disaster and of Democratic folly. Why, sir, we have not changed a classification or lowered a single rate. We have not touched the schedule. In the matter of gloves made of silk, and that might have been involved elsewhere, we took particular pains to keep them at the 50 per cent. rate laid upon the general merchandise of this schedule.

I will not say that gentlemen knew that we had not changed this schedule when they said we had done so. I infer that in their blind opposition to any tariff reduction they just struck out without reading the bill and studied only the art of making extravagant assertions and of charging ignorance upon their Democratic associates. We could have made reductions greatly to the relief of the buyers of silks and to the relief of the labor employed in making the goods. Our imports last year were over $30,000,000, and our rate of duty was 49.71 per cent. This is more than enough to cover the difference in the cost of production here and abroad and it is a serious embargo upon the consumption of silk goods of domestic as well as of foreign manufacture. It is more than twice as much as all the labor there is in the goods; but we must have revenue, and we prefer to keep a high tax on silks. It is a hardship on labor to have a high tax on the products of their labor, but in this case they must stand it. These mills consumed in 1879 $22,000,000 and a little over of material. This includes cost of capital and excepts wages. We legislated into their pockets, as shown by their receipts and returns, some $10,000,000 over and above all this and above what they paid their hands. The Republicans say they did this for the laborers. But they made no provisions for the hands to get it. They left the giving of it to the discretion and humanity of the manufacturer. The returns show that he kept every cent of it in his pocket. He simply put up the price of the goods to approximate tariff prices and kept the money, as all do who can, and this lessens consumption and hence lessens the demand for labor. So we are pretending to help labor by having free trade in labor and putting a tax on its products that more than offsets the wage he can possibly get, thus limiting his market. But I will not dwell further upon this matter.

I wish to call the attention of the committee to another schedule that we are said to have mutilated and to other industries that we are said to have pickled for an evil day. There is Schedule H, relating to liquors. The industries under this head exist or cease to exist under our "home rule" system of government as the people in the respective States prefer. When a State permits its people to make or consume such products they are subject to Federal taxation, and the Democratic members of the committee are very partial to taxing these products rather than the necessities of life. This schedule embraces distilled, malt, and vinous liquors and some other products, such as ginger ale, etc. A great many working people are employed in these industries. Without going into a complete summary, I may say that in 1879 there were over 3,000 establishments producing distilled spirits, malt liquors, and vinous products. They gave employment to more than 32,000 people, and the wages paid exceeded $15,000,000. The capital employed was nearly $120,000,000. Apart from any question of merit, our Republican colleagues on the committee unite in making this schedule no exception in their general statement of ruin. They do not specify the particulars. We can not blame them for that, Mr. Chairman. We can only blame them for making the statement at all, for the schedule is not touched.

Then there is the tobacco schedule—Schedule F—one of the great schedules, and covering one of the great lines of industry of the people. Foreigners will buy up our tobacco, ship it to Europe for say three or four dollars a ton, ocean freight, work it into the various forms fit for use, having pauper labor, and under the destruction of rates that we are said to have made they will ship it back here at a less rate of freight, for return freight is all "ballast," and they will deprive our people of this work. Seven thousand seven hundred and seventy-four establishments are going to ruin; $40,000,000 of capital will be idle to supplement the surplus in the Treasury; 87,587 hands, including 20,000 women and more than 11,000 children, who now find honest and cheerful employment manufacturing the gay brands of tobacco, are going to be sent to the poor-house. It is a terrible state of affairs. The changes we have made in this schedule and affecting these industries will stop the current of $25,000,000 of yearly wages now dispensed. It makes a man who loves his country—and only Republicans love our country—shudder. The $17,000,000 internal-revenue tax on tobacco that we repeal will help the industry. They all say that. Giving the cigar-makers Sumatra wrappers at 35 cents a pound instead of 75 cents a pound tax will help them. They all say that. Then so far we have helped them by universal consent. The last feature is a tariff change. What are the changes which are going to produce the stated ruin? Our Republican colleagues do not specify them; they only cry out "*Ruin!*" They say "All the schedules are so mutilated that all the industries will be ruined," and they make no exception of this one. They do well, Mr. Chairman, not to go into particulars, for not another feature in the schedule is touched. There is nothing so necessary for gentlemen who have made up their minds to adhere "through thick and thin" to the most extravagant features of a system as to fail to acquaint themselves with any of the facts which it would be inconvenient to admit.

Gentlemen may say that the reduction on Sumatra wrappers will lessen the protection to our producers of wrapper tobacco. This is true, but where does it leave them? A pound of Sumatra wrappers is equal in wrapping capacity to 3 pounds of domestic or Cuban wrappers. It is not a pleasant tobacco, and it is used mostly for medium and low grade cigars. It is easy to work, and this is the chief saving. The tax as proposed in the bill is 35 cents a pound for unstemmed wrappers. The stemmed wrappers are unchanged from $1 a pound tax, although I expect it ought to be somewhat reduced. The unstemmed Sumatra tobacco is worth, say, 91 or 92 cents a pound, exclusive of freight, etc. This makes the equivalent of a pound of American wrappers equal to, say, 30 cents; one-third of the tax is, say, 12 cents a pound. Good domestic wrappers were worth some time ago 14 cents a pound. The value may be more or it may be less now. Twelve cents is a bounty of nearly 100 per cent. that we leave to this class of our citizens, every cent of which we give them leave to tax other citizens for, if they limit production or in any way corner the market. We must do this for revenue so long as we tax imports for consumption at anything like present general rates. It is a restriction upon our commerce with the Netherlands, which country with its colonies is a large consumer of our products, and in common decency it is bounty enough.

That the issue as presented by this bill may be more fully comprehended, I now pass to the consideration of the schedules that we do touch, although about them as about the others the statements of gentlemen upon the opposite side of the House are utterly reckless.

Let us take schedule A—that of chemicals. This is the most intricate and difficult schedule that we have. It covers a multitude of industries of the most scientific character. By the census of 1880 we had 592 manufacturing establishments with a capital of nearly $30,000,000. They employed 9,515 people. They paid $4,157,163 in wages, and their product was $38,173,658. Sir, the wage per cent. of their product is 10 per cent., and we leave on the articles that we touch an average duty of over 22 per cent., which is more than twice as much as all the labor there is in them; and yet the gentlemen of the minority fail to omit the chemical schedule from their prediction of the general ruin which they say this bill will inflict upon every industry in the country. Why, sir, look a moment further at the chemical industry. I have given the wages and the product. The cost of material in 1879 was $24,380,566, making $28,537,729 for labor and material. Take this from the product, and we have a net profit of $9,535,929. In these figures, given by the manufacturers themselves, interest on capital, cost of maintaining plant, and every form of expense has been included. Here, then, is a profit of 33 per cent. in their sales over and above all this. Our rate of duty on all dutiable imports of chemicals last year was 35 per cent. In 1879 it was within a small fraction of 32 per cent. They collected from the people and retained in the pockets of the proprietors every cent of the protection and 1 per cent. of profit on top of it, which, according to the usual mode of computation, is the net profit, as I have just set forth, that they would have

made if there had been no protection. They would have made more than 1 per cent. under free trade after paying the wages they did pay, for many articles taxed were of the nature of raw material to them.

Here is a clear instance of the domestic product being enhanced in price by the tariff, and not a cent of the subsidy went to the laborer. The only effect was, as it is now, to subsidize the proprietor and to restrict the market for the products of labor. I do not mean to say that every chemical product could stand free trade; but I believe that the exceptions are few, as shown by the record; and I think it certain that just in proportion as we reduce these duties down to a very low rate do we increase consumption of most of these products; we compel the manufacturer to look to a large output at a moderate profit for his gains, and thus increase the demand for labor and increase the wages of the laborer. No well-informed friend of the working people and of consumers can find fault with this bill as regards this schedule, except upon the ground that we do not go far enough. We have proceeded with great caution. We have almost without exception left untouched those articles into the manufacture of which alcohol enters, because we do not reduce the tax upon that article. Mindful of the extremely technical character of this schedule we have conferred very carefully with manufacturing chemists, and I want to say that we have found them a very frank and candid set of people. They do not assume the wretched pretenses that so often mantle our protected classes, nor have they practiced the wretched sophistries that deceive no one but those who practice them. They say they have a good thing, and that they like it and want to keep it.

We gave the chemical schedule to the firm of Powers & Weightman with the request that they criticise it and give us the benefit of their opinion of its effects, etc. We take off, say, one-fifth of the estimated receipts from chemicals. This may fairly be called its full share in view of present conditions to which we need to accommodate the legislative proposition embodied in this bill. I hold in my hand a letter from Mr. A. H. Jones, of the firm of Powers & Weightman. He calls attention to the clause relating to essential oils, alkaloids, salts, etc., now on the free-list, and he gives some very strong reasons to show that this feature is wrong. It will receive very careful and respectful attention. He has some fears about the scope and meaning of several other clauses that are simply amendatory. He fears that they may go further than we think they do or intend them to go. This can be very easily guarded against if there be the slightest ground for doubt, and I may say that no reason for doubt will be left if we can possibly prevent it. Beyond this there is a nominal matter of 5 per cent. upon cerates, conserves, etc.; and this is the only danger that this eminent and interested critic can see. Yet how different is his talk from that of gentlemen here upon the floor and upon the committee who are talking for political effect.

I wish to cite only two or three points in relation to the earthenware schedule. This business, too, according to gentlemen on the other side, is to be consigned to ruin by this bill. It is an industry of very considerable importance. The data respecting this schedule is not consolidated, nor can it well be. We can, however, consider representative features of it without going too much into detail. As shown by the census returns of 1880, the per cent. of labor in the drain and sewer pipe business was 23; in brick and tile, 40; in stone and earthen ware, 40; in glass, cut, stained, and ornamented, 27, and in other glass, 43. We leave 49.21 per cent.—far more than all the labor there is in any branch of the business. The basket clause of the bill is 40 per cent., whereas under the act of 1861 it was only 30 per cent. Those are the general facts relative to this industry. We leave room for the manufacturers to charge extra to the consumers under this schedule more than all that is paid out for wages, and yet our friends on the other side of the House say this will not cover the difference between wages paid here and abroad.

I pass next to the consideration of the metal schedule. In 1880 there were in the foundry and machine-shop business (which they say we are going to ruin) 145,000 hands; the wages paid were over $65,000,000; the product over $214,000,000, the wage element being 32 per cent. of the product. If we had left 16 per cent., or the half of 32 per cent., perhaps it would have covered the difference between the cost of production in this country and in foreign countries; but out of abundant caution we have left over 43 per cent., which is 11 per cent. more than all the labor in the business. Yet gentlemen have the boldness to say that this does not cover the difference in wages.

In the iron and steel industry (separated in the returns from the foundry and machine-shop business) there were employed 140,000 hands, and there was disbursed $55,000,000 in wages. The average per cent. of labor in the product is 18; and we leave over 43 per cent., leaving still enough to permit an immense embargo upon the consumption of the products of labor, a heavy burden upon workers in iron and users of iron. Gentlemen take a weak position, weak in every sense, when they say they only want enough protection to cover the difference in wages in a particular industry. Every one can see that the rates we have are generally far in excess of all the labor in the particular industry. The product of one industry often constitutes the base or raw material of another industry. The first product is raised in price by the protective tax laid for it, and especially if the tax be specific a higher rate must be laid upon the latter or subsequent product. To admit this is to admit what our opponents absurdly deny, that protection does not enhance the price of the domestic-made article. If the first tax does not raise the price, why do you place the subsequent tax so far beyond the entire cost of the labor in it?

In the tinware industry the wage per cent. is 22; and we leave over 43, with free tin, and yet gentlemen say that there is not left room for the laborer to get his hire. I think it certain that with free trade in tinware, to prevent combinations, the workmen would do more and get more than they now do.

As to the wooden and woodenware schedule, a fair index is to take the furniture business. In that industry there were in 1880 59,000 hands, to whom were disbursed more than $23,000,000 in wages. The product was roundly $77,000,000 of goods. The wage per cent. is 30; and we leave a 30 per cent. rate of protection, which, in covering all the wages paid, certainly covers every difference of wages between this country and foreign countries.

In planed lumber we leave precisely the rate of protection that exists under the present law, simply taking off that upon the rough lumber.

It should be remembered also that in these bulky products distance and freight alone constitute adequate protection, as is shown by their extensive existence in the West, where wages are high, while often in the Eastern States wages are much more below the Western standard than in Europe they are below our Eastern standard.

I wish to pass rapidly to a brief consideration of the general features of the sugar schedule. The sugar-refining industry is an important one. In 1880 there were, exclusive of plantation refining, 49 establishments in that business in this country, with a capital of $27,000,000, with nearly 6,000 hands, and a disbursement of nearly $3,000,000 in wages.

The labor is only one-eighth of 1 per cent. of the product. The question is, as we have a duty upon raw sugars, whether we leave a sufficient margin between the tax on the raw sugar and the tax on the refined grades of sugar to cover the differences between the cost of refining in this country and the cost abroad. Under the present law the tax on sugar not above No. 13 Dutch standard of color and 65 degrees of saccharine strength is 1.40 cents per pound. For each additional degree the tax is .04 of a cent per pound. What is called the working base in the sugar-refining industry is No. 13 sugar, or sugar below 13, with 90 degrees of saccharine strength. The present tax on that is 2 cents a pound. The present tax for the first grades of refined sugar, those between 13 and 16, is now 2 cents per pound; between 16 and 20, a higher grade of refined sugar, the tax is 3 cents a pound; above 20 (and at 20 you reach about the grade of granulated sugar) the tax is 3½ cents a pound.

The margins now allowed for refining sugar, as will appear from what I have just said, are respectively 75 cents a hundred, $1 a hundred and $1.50 a hundred, from No. 13, of 90 degrees' strength to the upper grades. The highest cost stated for refining sugar was $1.90, which was the estimate stated by Mr. Havemeyer, of New York, as covering all the cost—labor, fuel, interest on capital, the integrity of the plant—and this presents it without possibility of loss, available for the market. Mr. Spreckels, in his testimony before the Committee on Manufactures, puts it as a considerably less sum, and other gentlemen put it still lower than Mr. Spreckels does, if I remember rightly, but none of them put the cost of refining at as high a figure as Mr. Havemeyer did.

The question still remains, what is the difference in the cost of refining here and abroad? We know that in the last fiscal year we exported some ten or eleven million pounds of refined sugar. For many years we have been exporting similar quantities of this sugar. Our refined sugars get a drawback of 1 per cent. less than is paid upon the raw sugar they are made of, and upon this basis they have for years been shipping refined sugar to England and Scotland and underselling the refiners of those countries at their own doors. It is possible, of course, that to run on full time and to keep their hands together they may have sold these sugars at a small loss; but I think it reasonably questionable whether the difference in the cost of refining as between this country and foreign countries amounts to much, if anything. If we reduced the sugar tax in a strictly horizontal way it would save the people only the tax and not lessen the margin of profit of the refiners. The existing sugar trust is a combination on the part of about two-thirds of the refiners to get the full margin of artificial profits that the present margins between the grades of sugar from raw to refined are intended to give them. The one central point of importance about this industry, and I may say this trust, as about all of our protected industries, is not that they consolidate, but do they oppress? Consolidation may be very necessary in certain businesses, but oppression is never necessary for the public good. If we take the world into our range of competition then the sugar-refining business will be abundantly regulated by competition. If we prevent the world from competing with this class of our business people, then just to the extent that our tax isprohibitory of imports to that extent do we give them a legislative warrant to tax the public for their private gain. Until production catches up with consumption they have not only the warrant but also the power to so tax the people at large without combining.

The condition then commands the tax for them upon domestic products as truly as it does to the Government upon similar imported prod-

ucts. They mingle in the markets at the same price. When production exceeds consumption then they may have only the warrant to tax the people, but not the power. Of course our legislative responsibility and duty are to be measured by the warrant we grant; and if, under the later condition of excessive production, the proprietors have wit enough to form an association, a trust, or something of that sort, they will continue to exercise the power which formerly they had through the law and the partially expanded state of production. Now they would possess and exercise that power through the law and the regulated or restricted state of production.

These simple facts are becoming more manifest to the "wayfaring man" and more difficult of concealment or defense to the believers and defenders of subsidies and of legislation restrictive upon commerce by which subsidies are artfully conveyed from the many to the few. The "trust" and "association" feature is bringing out the facts in great object-lessons to the people. Resolute as our intentions of reform may be, yet resentment is allayed by the reflection that we could hardly expect these people not to combine to continue that which the representatives of the people by their votes have been telling them they ought to have. Did you expect them to weary of these business pensions before you wearied of paying them?

But I must not dwell too long upon this feature. We have sought to reduce the sugar tax, say, $11,000,000. The reduction is a little more: and then by more largely reducing the margin of the refiners we have sought to also reduce what I may call the subsidy tax. Of course the tax on raw sugar affords a subsidy to the Louisiana sugar-planters. They will lose about $2,500,000 of their subsidy. But while the margins to the refiners are at present 75 cents, $1, and $1.50 a hundred for refining, we make them in this bill in this way: We take off 20 per cent. instead of merely twenty points from each grade. This makes a deeper cut in the higher grades. No. 13, of 75 degrees, is proposed a 1.15 cents, and each additional degree .032 cent. This makes No. 13, of 90 degrees, taxed at 1.63 cents. From No. 13 to No. 16 it would be 2.20 cents. Between No. 16 and No. 20 it would be 2.40 cents. Above No. 20 it would be 2.80 cents. This leaves margins respectively of 57 cents per 100 pounds instead of 75 cents, 77 cents per 100 instead of $1, and $1.17 instead of $1.50; or reductions of margins of 18, 23, and 37 cents per 100 pounds for refining.

Now, what cut does this make into the trust? Estimate consumption upon the basis of granulated sugar, and we cut their margin or profit say $1 a barrel. This means about $11,000,000 saving to the consumers of the country independent of and added to the saving by the reduction of the tax on raw sugars. We take off, say, $11,000,000 of the possible profits of the trust and other refiners, and yet leave them the margins of production that I have given, which I am sure is fully double what they need, if they need anything to cover the difference in cost of production here and abroad. If anything we have been too cautious. We want at least to lessen the limit and power of the trust and other refiners to oppress the people, and yet when we attempt even this gentlemen on the other side ask the people to rebuke us for it. We submit that while moving upon the trust we are not rash as respects the safety of the industry.

I now ask the attention of the committee while I briefly analyze the cotton schedule. It may be well for me to state that in making this analysis of the bill I seek to cover ground midway between that which is usually covered in general debate and in the five-minute debate. Generally only the bare outline of a bill and the largest totals are given in a speech at this stage of debate, or, if details are given, they are in illustration of a particular point or of local interest only. This is perhaps the correct theory; but I have been requested to depart from it and to group in one speech such explanations of the schedules as I am now giving. I know it makes a dry sort of a speech, but I partly share in the opinion of others that some member of the committee should do this work. It is perhaps of real importance in making plain the issue as presented, not upon our abstractions, but by this bill.

Now, sir, the cotton schedule deals with a very important part of our domestic industries. According to gentlemen on the other side, we are going to ruin them all. We had in 1880 1,005 cotton mills in this country; capital, $219,000,000; hands, 180,000; wages, $45,000,000; product, $210,000,000; and the average rate of wages was 82 cents a day, counting three hundred working days to the year, and the wage per cent. of the product was 21 per cent.

According to the prophecies and assertions of our friends on the other side we have made rash proposals about this industry. We are going to level down all these cotton mills; we are going to destroy this capital, and we are going to put all these people into the poor-house. I do not know what per cent. of the product labor is in foreign countries, whether 21, as here, or less. It is the boast of our opponents that it is less both in amount and in per cent. They also say, except when a bill proposes to reduce taxes, that only the difference needs to be covered; but now, even if we more than cover all the labor, they swear we do not cover the difference. There is not a rate in the schedule lower than 35 per cent. I submit, Mr. Chairman, that 35 is greater than 21, however stoutly the other side may deny it, and I also submit that 35 is greater than some figure less than 21, which is what they now tell the House and the people is not true. If the House will believe that 35 is greater than 21, and also greater than some sum less than 21, then the question as to the safety of the proposed rate is settled.

But much stress is laid by the other side of the House upon the fact that we change some specific rates to ad valorem, and they charge that we produce hurtful inequalities by taxing a lower manufacture at a higher rate than we do the product above it that is made out of the lower article. Substantially, all of the first part of this charge finds its foundation in what is proposed in this schedule. Let us look at this.

Yarns are now taxed partly ad valorem and partly what is called "compound"—that is, one form of compound; for instance, yarns valued at not exceeding 25 cents a pound is taxed 10 cents a pound; valued at over 25 and not exceeding 40 cents a pound, 15 cents a pound, and so on until we get to yarns valued at over $1 a pound, which is the final classification, and here the tax is fixed at 50 per cent. ad valorem. All this is as it is now fixed by law. You observe the last class is ad valorem only. The other classes are virtually ad valorem, for if an importer can undervalue his goods he can drop from one class to a lower one and thus escape the simply apparent specific tax fixed for high-priced goods, and get a low specific on costly goods, thus lowering the rate paid. Hence when we make all yarns ad valorem we virtually make no change in form or affect. Then again, if plain ad valorem is adequate for high yarns, which have the maximum of labor, why is it not adequate for low yarns, which have the minimum of labor?

But the need of some change is the more apparent when we consider the inequalities of the present rates. You observe that 10 cents tax is just 40 per cent. on 25-cent yarn. Lower yarns are also now taxed 10 cents a pound, which is more than 40 per cent.; 15 cents is nearly 38 per cent. upon 40-cent yarn, and it is nearly 58 per cent. on 26-cent yarns, and so on through the list, while the present rate on lower grades of hosiery made of these yarns is only 35 per cent. This is an inequality under the present law. Now we leave such hosiery at 35 per cent., and put the yarns to make them at the same rate, instead of leaving them higher, and for this we are denounced as doing an unequal and an unjust thing. Higher yarns are now taxed at 40, 50, and 54 per cent., as, for instance, 61-cent yarn is now taxed 33 cents a pound, which is over 54 per cent., while the finer hosiery and cloth made out of it is now taxed at the uniform rate of 40 per cent. ad valorem. We leave the latter tax just as it is, and put these yarns at the same rate and in the same form. I do not well see how else we could correct these inequalities. This is not only afair sample, but it is substantially all the basis there is for what we have seen and heard of the changing of the forms of rates.

One more illustration from this schedule, and it completes in fact the statement of all that we recommend in it. The tax now on costly cotton cloths, laces, etc., is 40 per cent. ad valorem. We leave it just as it is. The rates, however, on cheaper cloths are specifics. I hold in my hand samples of crinoline cloths, low-priced goods, involving but little labor compared with the cloths taxed 40 per cent., and that enter into the dressmaking industry, and these goods are taxed under the specifics at from 68 to 137 per cent. We correct this inequality and injustice to consumers and dressmakers and put the tax at the same rate as it now is upon fine cloth—40 per cent. Dresses are taxed at from 35 to 50 per cent. now by law; that is, cotton and silk. Should we leave their material taxed 137 per cent.? Some dress linings are now taxed 158 per cent. Here are mulls and tarltons. The cheaper goods are taxed as high as 110 per cent. Manufactures out of them are taxed 35 per cent. This inequality has, we are told, destroyed the ruffling industry here; and whether it has or not, it is unjust to the people employed in it and unjust to consumers. We make the rate the same as now fixed by law for fine goods—40 per cent. Here are sleeve linings taxed 70 per cent., the raw material of made-up goods taxed 35 per cent. and along there. Is this just? What inequalities do the other side propose to correct, and how, when they have the boldness to denounce us for proposals like these?

I may add that we make spool-thread 40 per cent. now specific and higher. We make it harmonize with other cotton products.

I repeat, Mr. Chairman, that it is the expensive cloth that has the largest per cent. of labor in it, and if that needs only 40 per cent. why should higher rates be imposed on the lower articles which need less protection?

We have brought, therefore, the lower grades of cotton goods down to precisely the same rate and to precisely the same form as the spinners now say is ample and adequate in rate and in form for the higher grades of goods.

I recognize the merits as well as the evils of specific and also of ad valorem forms of taxation. The former is always in favor from an administrative point of view. The danger is from overtaxation if prices decline and undertaxation if they advance, and this applies to both the revenue and the protective features of taxation. It is difficult to make it at all just to consumers and subsequent users of the products if the line or schedule be at all complicated. I consider silks, woolens, and cottons too complicated for its application. I may qualify the latter by saying that it would at least have to be elaborated much more fully than it is in the present law, somewhat as the French do, to make it scientific and just, and if this can not be done then the evils are

greater than the benefits. Under complicated conditions you can more safely trust to intelligent inquiry at the time than you can to cast-iron rules made here to force rather than to fit all the delicate changes and conditions of commerce.

The people engaged in the cotton-manufacturing business have impressed me as being a most substantial class of people and as men of great integrity of character. This is one of our oldest industries, and some branches of it would be far better off to-day under absolute free trade than under any form of protection that can be devised. This does not apply to the finer grades of goods. The latter grades are becoming the sole lines of New England manufacture. It is idle to contemplate the time when our revenue policy will not tax these finer goods as highly as the manufacturer can reasonably ask. The gentlemen in this industry met the tariff commission frankly, and they stood a good share of reduction at that time. They are timid now about their finer grades of goods and about the coarser ones as being upon the flank, as it were, of the finer goods. New England is in a transition state. The South is the place where the coarser goods are to be made for America and for the world. We are growing rapidly in this way in the South. We would grow more rapidly if we had free trade; but it would be a harsh and forcible transplanting of capital and operatives from New England to the South. A gentler course is the wiser. We are mindful of all these things. Our present bill, so largely made up by Southern men, if you please, shows it, especially when taken in connection with the language of our New England people when they had no unnecessary fears, as I hold their fears are now.

Mr. ALLISON in 1868, in a speech on the 4th day of June, said:

I remember in the year 1866, when we had under consideration a general revision of the tariff, the cotton manufacturers told us they did not want any increase of duties.

Now, what was the rate of duty on cotton goods at that time? Sir, the higher grades of goods at that time, although we had a direct tax upon the manufacturers products, was 35 per cent., and we leave it in this bill at 40 per cent. with no direct tax upon the products.

Cotton bags were taxed at 35 per cent., and bobbinets at 35 per cent.; we leave both at 40 per cent. Laces and insertions were then 35 per cent.; we leave them at 40 per cent. The "basket clause" is as high in this bill as it was then. I think, Mr. Chairman, these plain facts make absolutely ridiculous the reckless statements of gentlemen about this schedule.

Now, sir, there are some manufactures in the provision schedule which the minority prophesy will be ruined by the pending bill. There is very little upon that schedule that we touch. There is starch and mustard, with two or three other products in their natural state. In the starch industry, which substantially covers the ground, our capital in 1880 was a little over $5,000,000. They employed 3,119 hands; their wages were $919,197; their product was $7,477,742. The per cent. that labor got of the product was a little over 12. We leave rates of 40 and 47 per cent. We then leave a subsidy on starch sufficient to pay all the laborers now get nearly four times over, and yet gentlemen say room is not left to pay them. This is on a level with their other statements. Why, sir, our exports of starch last year were over 7,000,000 pounds. We sent over 1,000,000 pounds to England, and over 3,000,000 pounds to the Netherlands, and over 300,000 pounds to Germany. It will appear from this that here in this country, at the seat of the supply of corn and potatoes, the raw material for this manufacture, we are at the place to make starch cheaper than anywhere in the world, and certainly we would not export these vast quantities abroad were it not that we can undersell the foreign maker on his own grounds.

Now, Mr. Chairman, touching the hemp, jute, and flax schedule, our imports in 1887 were over $21,000,000, our receipts over $7,000,000, and the rate of duty over 34 per cent., and our average rate now, as proposed by this bill, is 24 per cent. In the linen-goods branch of this business the per cent. of labor is 27. In order to protect this labor we need to cover the difference between the 27 and some lesser amount that is received in competing countries. We leave 25 per cent. As we give them free flax and leave them 25 per cent., we believe that the protection is not only adequate to take care of the labor, but also, if it be charged in full by the manufacturer, to constitute a serious restriction upon the sales of the products of labor. In the matter of collars and cuffs we leave the present rate of 35 per cent. This is an industry that has been discriminated against by the high rate of taxation heretofore upon the cheaper grades of cotton goods. That inequality has been wholly or substantially removed, and we put this industry upon a fairer basis than it has occupied heretofore. It may be mentioned that the rate in the linen-goods industry up to July 14, 1862, was 30 per cent., but at that time they had a tax of $15 a ton on flax dressed and undressed. Now we give them the rate, as stated, at 25 per cent. and remove the tax off of the raw material. In the linen-thread industry, with a tax of $15 a ton on flax, there was a rate of protection of 30 per cent. We now give them free flax and 25 per cent.

I need not go on into many details about the woolen schedule. Its present form makes the solution simple and brief upon the basis of raw wool free. In general terms the rate now, except upon carpets, is said to be 35 per cent for protection and the balance, which is specific, is now said simply to offset the tax on the wool that enters into the cloth. We have nothing less than 40 per cent., the same in form and upon the basis of present professions higher and more truly protective than the present rates. If we can couple this with a substantial reduction in the aggregate to consumers we do not object to it. We certainly have no feeling of hostility toward any man. We are trying in a cautious, kindly way to give some relief to the masses of the people, and captious objections now urged argue no friendliness to this purpose.

I want to read for the information of our friends upon the other side of the House, who insist that we are reckless in our legislation, that this is going to ruin the woolen industries, what the representatives of those industries said in regard to rates in 1867, when they needed protection more than they need it now, but had not advanced to the high demands which now seem to characterize them. They said, through their committee, in their communication to the Internal Revenue Commissioner in 1866:

The provisions proposed by the committee and rendered necessary by the proposed change of the duties on wool aim to accomplish two objects: first, to fix the specific duties at rates which shall be simply compensatory for the duties on wool and other material, and secondly, to establish an ad valorem duty which, besides providing for the revenue tax on manufactures, shall leave the importer simply the net protection of 25 per cent. With some exceptions, the reasons for which will be specially explained hereafter, the ad valorem duties on manufactures of wool and worsted goods are fixed at 35 per cent., 10 per cent. being fixed as an equivalent for the internal-revenue tax of 6 per cent. on manufactures and on articles consumed in manufacturing, and 25 per cent. as protection to the manufacturer. That 10 per cent. is not more than an equivalent for the 6 per cent. revenue tax will appear from considering that the customs duty being levied on the foreign value, and the internal tax on the home value a larger percentage of the former than of the latter will be required to make a given sum.

To state a case for illustration, quite closely conformable to present home and foreign values: A yard of cloth sells now in our market for $2.50, which would cost abroad only $1.50. In that case exactly 10 per cent. customs duty would be required on the latter sum to equal the 6 per cent. internal tax on the former.

In the case taken the 10 per cent. would not be a whole equivalent for the internal-revenue tax, for such tax must also be paid on articles used in manufacturing.

Now, sir, what does this show? It shows that in an earlier state of the infancy of this ancient industry the manufacturers themselves declared that all the protection they needed was 25 per cent. The balance of the tax that was laid upon the imported goods they then said was simply to offset the direct tax upon the domestic manufactures and the tax upon raw wool entering into them. Yet to-day when there is not a dollar of direct tax upon domestic manufactures, not a dollar of tax upon the incomes or the occupation of these people; when we leave them, not 25 per cent., but in no instance less than nearly twice and in some instances exactly twice that sum; yet I say under these conditions we find gentlemen declaring that we are engaged in rash, inconsiderate, and destructive legislation, and that we are reducing the duties to such a stage as to utterly ruin these industries and they are here actually asking for higher rates of taxation. It is selfish, it is blind, it is scandalous, it is devoid of reason and humanity, it is bad faith. You, gentlemen, are the ones who are rash. I am almost ashamed of the greatness under such conditions of our moderation. Your true friends are those who regard the people, keep the faith, and advocate reform. [Applause on the Democratic side.]

Mr. Chairman, I have now substantially completed an analysis of the pending bill. There is nothing in the two schedules relating to books and paper and to sundries that calls for special mention. In a debate truly remarkable for its ability and evidence of research we have had discussions of the issue as drawn between the doctrine of free trade and protection, high taxes and low taxes. I have sought to present it more strictly as formulated by the message of the President and by this bill, which means practical legislation suited to present conditions, regardless of the ultimate aspirations of any particular school of thought. Two things, however, are always salient; first, that the President and the Democratic party do not believe in class legislation under any guise or in any form, and secondly, that he and the party supporting him are in all things eminently cautious and conservative.

In the early part of my remarks I spoke of objection the Republican members of the committee made to the mode in which the majority proceeded to formulate the bill; and now, having answered from the bill itself their reckless statements about its industrial character and effects, I wish to call attention to the charge of sectionalism. Very many Northern industries are not touched, and because some Southern industries are similarly treated they say the bill is sectional. The item touched that they lay the most stress upon in this connection is wool. They say we put Northern wool on the free-list and lightly touch Southern rice. Let us look at the sectional character of the wool tax.

In the Southern States, including Maryland, the Virginias, Kentucky, and Missouri, and all the country south of these States, and not going farther west than Arkansas and Texas, there are 876,560 square miles. In 1875 the number of sheep in this vast territory was 5,420,000. In 1887 the number was 9,428,953; showing that in this section of our country the sheep had increased nearly 100 per cent. Those of us who are familiar with the climate and soil of this vast area of our country know that it is peculiarly well adapted for stock-raising, and especially for raising sheep. Far the greater part of our mountain area east of the Rocky Mountains is in this section. An area varying in width from 100 to, say, 300 miles, and extending from Virginia to Mexico, lying between the mountains and the seacoast, is mostly of a sandy character, and the people are finding it too light a soil to utilize other than for stock-

raising. To show how little of this southern part of our country is really utilized it may safely be said that every bale of cotton and every bushel of corn it produces—and these are the principal crops—could be produced in the single State that I in part represent. I need hardly assert, then, that land there suited for sheep-raising is both abundant and cheap there. There is then a great future for the wool-producing business in this part of our country. Our recent growth shows the tendency.

Now let us compare this with the States that we are said to have dealt with in an unfriendly spirit.

The Northern States most frequently mentioned in this connection are the New England States, New York, Pennsylvania, New Jersey, and Ohio. They have a combined area of 209,590 square miles, a great deal less territory than there is in the single State of Texas alone. In these Northern wool-growing States there were in 1875, 9,830,100 sheep. In 1887 they had 8,580,526 sheep, showing a falling off of nearly 1,000,000 in number, or more than 10 per cent., while our Southern part of the country showed an increase of over 4,000,000, or nearly 100 per cent.

Where is the future of the wool industry? Not in these States of stiff soil suited to other purposes; not where land is high in value and the climate severe, and where through long periods of time this industry has showed itself to be on the decline; not in a country where the total territory is far less than the territory even of the State of Texas alone, but it is in that vast region of our country south of us, where the climate is genial, where there are lands suited to it, and lands to be got almost for the asking. And when gentlemen from this section offer free wool to the people of this country, instead of its being a sectional proposition it is rather a generous offer and a sacrifice. Who is sacrificing a growing industry? Certainly not those who are abandoning the pursuit and want wool only to manufacture it and thus give employment to their wage-workers.

But, sir, there is also another feature. To get our foreign wools cheap means cheaper clothing for the people. Cheapening in this way means more employment and better wages for the factory hands. So, if we assume that domestic wools will decline in price, yet our neighbors get benefits thereby from which they are now hindered. Even the wool-grower gets his cloth cheaper. But who is the wool-grower who wears woolen cloth? Who is dependent upon woolen cloth for clothing? What wool-grower needs it and must have it, and whose immediate neighbors are to gladden his eyes by being warmly clad in good wool, and whose increased prosperity is to add to the consumption of garden products and such things in the vicinity in which they live? The mills are not in the South. Our climate is mild and we consume but little woolen cloth, and never will consume much as compared with our people of the North. Substantially none of these compensations come to us or to any class amongst us when we surrender this protection upon our growing industry. You, gentlemen, surrender nothing here except that from which you are already turning your attention away. We surrender what we are just fairly turning our attention to. With superior and lasting facilities for this industry we may reasonably expect to speedily reach the number of sheep to the square mile that you possess under unfavorable conditions, and then we shall have over 35,000,000, or nearly as many as are now in the entire Union. The incidental advantages also go to you and not to us; and yet you seize upon this with a blind and reckless spirit of carping, misrepresentation, and complaint, and say it is sectional and unfriendly.

Yes, gentlemen, the future of this industry is in the South and in the West, where land is cheap and the climate favorable. The climate in the far Northwest, say well west of Minnesota, is far milder than it is from there east. Our far West, with the south current and winds of the Pacific, has the climate of Western Europe. In the middle and eastern section we have the climate of Eastern and Central Europe. What is the West? Gentlemen do not seem to know what the West means. Missouri is not in the West. Missouri is well advanced in the eastern part of our country. My own State of Arkansas is not in the West. Arkansas is in the eastern part of our country. Half of the State of Kansas, even, is in the eastern part of our country. In that part of our country west of the western borders of Minnesota, Iowa, Missouri, and Arkansas, and beyond the borders of Texas, excluding even the State of California, which will not long grow wool, there is a territory of 1,401,900 square miles. This portion of our country which hardly fills a part of the mind's eye of gentlemen when they speak of our country, is roundly one-half of the entire country. It is just beginning to fill up, and it is filling up with sheep, the first, primitive, pastoral pursuit of the people of a primitive country.

This part of our country had in 1875 little more than two sheep to the square mile. It had in 1887 over nine sheep to the square mile. There were 179,000 sheep in that vast territory in 1875; and while New England and New York and New Jersey and Pennsylvania and Ohio were losing 1,000,000 of their sheep, and the South was gaining nearly 5,000,000, this region was leaping forward from 179,000 in 1875 to over 13,000,000 sheep in 1887.

But I do not say take free wool while you can get it. I take no stock in your arguments. It seems to me that nothing could be more suicidal than for our people to fail to see that we shall produce and are now producing more of our qualities of wool than there is any demand for, and that we must have wools of foreign production, of different qualities, to mix with ours, in order that we may secure for ourselves not only a large home market, a fit line of product for home consumption, but also to extend our manufactures and the consumption of our wool and woolen goods in foreign countries.

You may well find a parallel, gentlemen. Wool is a product that is used to make clothing, and so is cotton. We import, roundly, $1,000,000 worth of cotton every year to supplement the deficiences in the quality of our American cottons, and I do not believe there is a gentleman here to-day from a cotton-growing State who would vote for a tariff upon cotton. We all remember very well the clamor that was raised when it was proposed to take off the tariff-tax on cotton and when it was taken off in, I believe, 1867; but we find that the importation of a million dollars' worth of foreign cotton annually is an unmitigated blessing to the American cotton-grower. It enlarges the consumption of our cotton goods. Do you suppose that we would destroy the production of wool in this country in a blind and ignorant devotion to some supposed interest of cotton? Cotton occupies its own natural field, and by being mixed with wool it is enabled to encroach upon the other fields and to swell and enlarge its domain. There springs up a great intermediate body of consumers. So it is with wool. Does the wool-grower ever say that he would destroy if he could the production of cotton which enters to such an important extent into the manufactures of mixed fabrics? He knows perfectly well that the cotton production in this country is not only enough to offset the wool crop, but that it is some three billion pounds—more than ten times the wool crop (if I state the figures correctly, somewhat off-hand). Free wool will help our wool-growers just as free cotton helps our cotton-growers.

There is nothing so utterly blind as selfishness. It does seem to me the most purblind thing men when our friends from New England raise a protest against free wool. New England is New England no longer, New England is now Old England. Standing out far to the Northeast, a commercial peninsula, with a tariff barrier along the Canadian border across which she can not trade, washed on the other side by the Atlantic Ocean, which is sealed against her by a tariff embargo, she is thus remote from us and isolated from the world. There has sprung up every species of manufacturing far to the west of her, and we depend upon her no longer. Sir, her future is to trade with the contiguous territory to the north of her, to trade down the seaboard to the uttermost point of our continent, and across the ocean with other climes and peoples. Her future development must be in the line of higher products of manufactures for us, and of products out of those raw materials which she can not afford to haul over long lines of railroad, but which can be brought to her cheaply by sea.

Stop this wretched "combine" for political purposes of taxing crude products as well as finished articles. Freight is adequate protection for crude and bulky products, and we seek by large appropriations for the improvement of rivers and harbors to make even this lower than it is. Why countervail this by laying high taxes? Why "grind the seed-corn" of the people by taxing crude products that constitute the base for making, through various mutations, the final crop of finished articles fit for consumption? We are like the horse, unrestrained by bridle or reason, that enters the spring corn and destroys all hope of autumn and winter forage. With raw products free we have only the finished products left to tax. Why should New England fear that the removal of one tax means the removal of both? Her thinking men, all thinking men, know that the double tax in combination is so unwise, so oppressive to consumers that only in case they can not be separated is there danger of a repeal of both.

Who says free raw material means free finished products? Not the Democracy, who want enlightened taxation and good faith instead of a wretched "combine" to extort that which can not stand upon the basis of reason and fair play. These appeals to selfishness are unwise and unpatriotic. No man with good and reasonable purposes needs to go into them, and all reasonable and good men should oppose them. What we propose endangers no home market. It expands and confirms the home trade. It is a question of a good home market as opposed to a bad home market. And in this way only can we also expect to enjoy a fair share of the foreign trade. A few manufacture all that the many consume. We now manufacture in excess of our wants. We need to manufacture more largely still. We can not, as we are now doing, increase the ratio of consumption at home. We need to improve our home conditions and to open up trade with those parts of the world that are consumers and not producers of our products. It is a question, then, between two good markets as opposed to our handicapped, burdened, trust-ridden market, with consumption restricted by every conceivable restriction upon cheap production. This comes of holding that the burdens of war are the blessings of peace.

Gentlemen can not talk two ways and be right in both. I do not hold to their doctrine of the benefit to the wool-grower of the tax on wool. But by their reasoning we of the South make a sacrifice when we offer free wool. Then they need not cry sectionalism. But I will say, and I say it heartily, that the interest of New England is dear to me as a part of our common country. I admire the people of those grand old Commonwealths, their history, their genius and culture, their method and thrift, and their sturdy virtue. They and my an-

cestors have fought in field and forum many a hard fight upon oppos ing lines. The differences are past to return no more. I trust they will develop a policy equal to this growing crisis in their affairs, and they can rest assured that there is no privilege or prerogative which many here contend for that we will not gladly yield for their weal and the common good. [Applause.]

It is said that we are sectional in making cotton-ties free, and that no item ought to be selected from a schedule and made free. I deny that taxation to be effective needs to be universal. Some articles can be selected from any schedule, like quinine from the chemical schedule, and be made free without a particle of disturbance to any other item or line of items in the schedule. Of course there are many items that can not be taken out in this way. The only question where it can be taken out in this way is the one of public interest. The making of cotton-ties is only an incident in the iron industry. The same men and the same machinery turn from it to other lines of band-iron at any time. In 1880 there were only six concerns that considered themselves engaged in this business. Their combined capital was just $70,500. They employed 131 hands, and the wages paid were $38,-069. They then had over 77 per cent. of protection, but, like the tin-plate industry, our metal-workers preferred to do something else, and it is an article that enters into the further occupations of our people, and can be released with practically no complications or distress to anybody.

Such an article is not, ordinarily, a fit article to bear a tax. Like tin-plate, the cotton-tie is a dead loss to the trade. Say three men working together will turn out four hundred bundles of ties a day, as an incident in the general product of a mill. I think it safe to say that less than four hundred men in a good mill, doing nothing else, could do all the work from ore to tie that would give us the one million or more bundles we need. As it is we tax the consumers nearly $400,000 on first cost to pay out $38,000 of wages. We tax millions of people to provide for a capital of $70,000 that can do other things, and to provide for one hundred and thirty-one people who can make other band-iron. This does not confuse the band-iron trade. A cotton-tie is not like a bucket or a barrel hoop that enters into something like permanent use. It is a loss with the using, and a new supply has to be bought every year. At the present price of $1 a bundle in England it means 35 cents compounded and lost on every bundle of ties—on every five bales of cotton—so that, including the profits of dealers, it is about 10 cents a bale that the repeal of this tax will save the people. And who are the people who stand this loss? The planter collects his rent or his share of the crop—and we do not work much upon the wage system—the planter collects his share in cotton already baled. The loss falls on the colored people and on the white people of small means who work in the fields as tenants or upon their own small farms. It is for these hard-working people of limited means that I plead, and upon such a showing our Republican opponents denounce us and say we are sectional. Are not these people a part of our whole people? Should we permit any class to be bound in the bondage of so unequal and unjust a tax as this?

You say he gets his money back when he sells his cotton. Why, there is not a colored man in my State who does not know that the spinner does not pay him for the refuse. They know the spinner is not a fool. Cotton is quoted in Liverpool net. We quote gross, but we always allow for the tare. If the price is, say, 10 cents for a certain grade of cotton in Liverpool, it means home weight with 24 pounds knocked off for tare. Freight and such charges are, say, half a cent a pound, and tare is, say, half a cent a pound. This means 1 cent a pound off if we are to pay upon gross weight. We buy by gross weight and sell by net weight. We provide in our price for the freight and tare that we know is charged up against us upon the foreign account of sales and proceeds. So we just take off 1 cent and make the price 9 cents a pound gross weight. If the bale were all cotton and could be shipped clean and in good order without bagging and ties, we would pay 9½ cents a pound, and thus knock off for only such charges as freight.

But we can not do that, so the farmer has to buy bagging and ties as a wrapping for the cotton. He pays out money for it, part of it being this 35 per cent. tax or bounty, as the case may be. It is a dead loss to him just as much so as the freight. You say he has sold it for 9 cents. Yes, he has sold it for 9 cents by selling 9½-cent cotton for 9 cents, so as to make up for the bagging and ties that are in the weight when cotton is bought at gross weight.

Mr. Chairman, in the early part of my remarks I spoke of the extreme attitude of the Republican party at this time upon the question of protection, and I promised to go more fully into the subject. I wish to show first that they are no longer to be relied upon for a general reduction of the present rates of tariff taxes. All of their promises have been for "revision" and not for "reduction," and we had as well understand clearly that by revision they mean simply an adjustment of present and of even higher rates of protective taxation and the permanent fixation of such rates as a permanent policy upon the country.

As evidence that our opponents propose to make these war rates perpetual, I call attention to their remarks on page 18 of the report of the minority. They say:

> The bill is a radical reversal of the tariff policy of the country.

Also, sir, upon page 20 of the report, they say:

> The majority gravely inquire in their report, "If Congress grants the request of the wool-growers, what are the people to do for woolen clothing?" We beg to suggest that the people of this country wore woolen clothing during the existence of the tariff of 1867—and the tariff proposed by the wool conference is substantially that tariff—and the people were never better clothed and never better able to buy them.

This report of a recent conference of the wool-growers and woolen manufacturers, which is here advocated by the minority, not only maintains the present rates of taxation, but it goes to far higher rates. They say, also, on page 29:

> If it be the purpose of the majority to reduce the income of the Government from customs sources, we beg to remind them that that purpose will not be accomplished by the scaling down of duties, as proposed in the bill.

It is very evident, Mr. Chairman, that no measure to reduce the surplus or to reform the tariff that they contemplate will take off a single tier of brick from the high wall of protection erected during the war for revenue purposes.

I wish to call attention briefly to what they suggest as a proper mode and measure of relief to the country as a substitute for tariff reduction.

In their report the Republican members of the committee say:

> If "the absolute peril" to the business of the country described by the President in his message last December as resulting from an existing and increasing surplus was imminent and well founded, how easily he could have averted it by the purchase of outstanding bonds with the surplus money in the Treasury a power which he possessed clear and undoubted under the act of March 3, 1881.

Sir, the Republicans were not so bold in 1881 and 1882. They know that every dollar expended in this way must be to buy bonds at a premium. To place the Government in this attitude is a kind of service to the holders of the public securities that I thought they would not dare attempt again. We now see how final and complete was the surrender in 1883 to the classes when they lightly suggest to the President that it is better to pay them high premiums for our bonds not yet due than it is to reduce taxes upon the necessities of life.

Then, on page 30, they further say, as if they wish to give emphasis to their intention to never scale down tariff taxes:

> If the House had even then appreciated the situation, how promptly and easily it could have, in part at least relieved it. It could have been done in the first week of December by abolishing the entire tobacco tax, amounting to $30,000,000 annually.

Here is another feature, Mr. Chairman, of their theory of relief wholly disconnected from a reduction of any of the present rates of tariff taxation.

And upon page 32 they further say:

> The President has for three years failed, while having the power, to avoid the financial condition he now complains of.

The only failure, Mr. Chairman, that the President has been guilty of has been that he has not bought bonds at such rates of premium that the holders might see fit to exact, instead of giving time for the Republicans in Congress to assent to some small relief in the line of his recommendations that taxes be reduced and the surplus be left in the pockets of the people. The gentlemen know that the sinking fund more than absorbed the call bonds.

And they say upon the same page that they will assist the majority in every "direct and practicable way." We have seen enough from past proceedings and quotations to know what they consider a "direct and a practicable way," and to make it perfectly clear that any reduction which involves a scaling of the present war rates of tariff taxation is not in their opinion "direct," nor do they intend that it shall be "practicable."

This sentiment is again voiced by the gentleman from Michigan [Mr. BURROWS], on page 3 of his speech, in which he says the Republican party insists that our present protective system shall not be disturbed except "in so far as it may be necessary to correct its incongruities and harmonize its provisions." Here the gentleman distinctly aligns himself upon the proposition to maintain not simply the present principle of protection, but also the present rates of protection; and any and every effort that is made to abate or to abridge these rates of protection to the subsidized industries is treated by the other side of the House as an attack upon an integral part of an established system.

The gentleman from Ohio [Mr. MCKINLEY], speaking upon this floor of the course of his party, said:

> Since the 4th of March, 1883, the House of Representatives has been dominated by the present majority, a period of five years, and no taxes have been reduced and no curtailment of the revenues has taken place. * * *
>
> If it be claimed that for the most part during the Democratic control of the House the Senate was dominated by the Republican party, and therefore the responsibility of failure to reduce the revenues should be alike shared by them, we answer that under the Constitution of the United States the House alone can originate bills to reduce taxation, the Senate having no jurisdiction of the subject until it is given to it by a bill which passes the House, and that during all these years no such bill has gone from the House to the Senate, and therefore the sole responsibility for failure rests with the present majority in the House of Representatives.

They not only refused to concur in any reduction, but they stood like a stone wall to prevent the question even from going to the Senate, which was and is under the control of their party.

But, sir, it is not alone in Congress that we should look for evidence that the present attitude of the Republican party is one in defense of the present rates of tariff taxation. That is what they mean now by protection. I hold in my hand a recent communication from the Eastern Pig Iron Association, in which they say:

The excuse for this bill is the existence of an alarming surplus. It is designed to reduce revenue.

Again they say:

Abolish the duty and you reduce the revenue from it. Make a duty high enough to prohibit importations, and you reduce the revenue.

They know we do not propose to "abolish" the duties on finished products to any general extent, and that it can not be done. We ought to reduce, then, to a proper revenue point, but they propose to limit revenues by making taxes so high as to exceed the ability of the people to consume goods at the prices the import tax would raise them to. Then the domestic "association" could put up the domestic products "as high as the country can stand."

Again they say:

Why this reduction of duties? Revision of the tariff is necessary to adapt it to the changes, amounting in some instances almost to a revolution in business, which have taken place since the tariff law of 1883. But *revision* is not *reduction*. A consistent and logical revision of the tariff would increase many of the present rates.

Sir, the bill may be faulty in some of its details, and doubtless it is, and no bill will ever be proposed that will be absolutely perfect in every particular, but it involves the principle of reduction of taxes as opposed to the principle of prohibitory taxes; of necessary taxation as opposed to unnecessary taxation. No tax will stop imports unless it is so high that our people can not sell their own goods at the advanced price it permits. As it is not a question of detail, so it is not a question of faction. This measure of guarded reduction is the general average of reform sentiment and purpose.

I will give the position of the Republican party in the recent past directly; but as further evidence of its present position I quote from the recent speech of Senator SHERMAN before the Home Market Club, in Boston. He said:

Wherever any industry which can be conducted in this country with reasonable success needs a moderate *increase* in duty for its protection, to give it, and in *this way* to check foreign importations and *lessen the revenue*.

He also said:

The direct taxes upon American productions levied by our internal-revenue laws which interfere with the industry of our people should be modified or repealed. In *this way* the revenues of the Government should be reduced so as to supply only enough revenue to pay the expenses of the Government wisely and economically administered, and to carry out the provisions of the sinking fund for the gradual reduction of the public debt.

The language, upon the same occasion, of the distinguished gentleman from Ohio [Mr. MCKINLEY] who serves on the Ways and Means Committee with us here, and who is worthy of the highest honors his party can bestow, was substantially the same. This is what they all mean by revision and reduction now: To revise higher and to reduce the taxes on spirits and tobacco only while they retain and increase the war rates upon the necessities of life reached through the tariff. I may observe that I italicize certain words in the quotation just read.

Gentlemen seem to forget that these demands are false to all the old demands and doctrines of protection. The present accepted creed, which dates, as I will show, from 1883—only five short years ago—is a new crusade and a new departure. It is protection dictated by the protected classes solely, and it is protection run mad. What thought Mr. Clay about the permanency of protection. In the Senate in 1838 Mr. Clay said:

No one, Mr. President, in the commencement of the protective policy ever supposed that it was to be perpetual. We hoped and believed that temporary protection extended to our infant manufactures would bring them up and enable them to withstand competition with those of Europe. If the protective policy were entirely to cease in 1842, it would have existed twenty-six years from 1816, or eighteen from 1824—quite as long as, at either of those periods, its friends supposed might be necessary.—*Benton's Thirty Years' View*, Volume II, page 113.

What have we now. These periods have all expired and we have had a run of nearly thirty years since 1861, and now we hear that protection must be perpetual, and at even higher rates than those imposed in war, and to countervail the then existing direct taxes on manufactures and incomes.

I will pause for a moment in this historical review to show the difference between the taxes laid and the taxes paid. The returns show our average rate of taxes paid to be 47.10 per cent. on the dollar on dutiable imports. The gentleman from Michigan [Mr. BURROWS], in speaking upon this subject, on page 17 of his speech, says:

To illustrate: The duty of cognac oil is 533 per cent. If everything else were admitted free of duty—if after the close of the war we had put all else on the free-list—it would be literally true that the average rate on dutiable goods would be 533 per cent., and greater now than during the war.

This duty is about prohibitory. Our imports of cognac oil last year were just 16 ounces, valued at $12. The tax was $64, or, say, 533 per cent., as stated. Now, in this same class of volatile or essential oils there is, after several special enumerations, the item of "all other essential oils and combinations of." On these the rate of taxation is 25 per cent.

The interests of the protected classes have been looked after under the specifications. The last rate permits imports. We brought in $131,867 under the last clause, and collected duties amounting to $32,966.75. Now, the remarks of the gentleman would lead us to suppose that we add these two rates of taxation together, divide them by two, and thus get the average rate as expressed in the 47.10 per cent. general average. This would give us, if we taxed only these two items, a rate of 279 per cent. But that is exactly what is not done. The total imports, namely, $131,867 and $12 are added together, making $131,879. This is divided into the tax received, namely, $32,966.75 and $64, making $33,030.75. The total imports are divided into this and we have the average of tax paid, namely, less than 25.0001 per cent.

The big tax does not show in the returns, as there are little or no returns under it. It was meant, as such taxes are, to be for "protection." Suppose the $12 of cognac oil had not come in and only these two taxes existed. The returns would show the rate of taxation paid 25 per cent., while the actual average of the tax laid would be 279 per cent. Sir, the whole tariff is like unto this. Take the list the gentleman made his selection from. See how forcibly it illustrates the difference between the tax laid and the tax paid. Being a tax upon consumption, its worst features are concealed by somewhat lower prices being charged for many local products than that of the foreign product plus the tax, and hence no imports and no revelation in the returns of the tax laid and in large share collected by the private citizen for his personal and private benefit and use. The average tax paid in this list of six articles is 25 per cent. I leave off fractions of less than 1 per cent. The taxes laid upon these articles are as follows:

	Per cent.
Oil of bay leaves, $2.50 a pound	= 58
Cognac ether, $4 an ounce	=533
Fruit ether, oils, or essences, $2.50 a pound	=229
Fusel oil, 10 per cent	= 10
Rum oil, 50 cents an ounce	=400
All other essential oils and combinations of, 25 per cent	= 25
Total	1,265

Divide 1,265 by 6, the number of articles in the list the gentleman cited from, and we have 210 per cent., the average amount of the tax laid upon the list while the imports show a rate paid of 25 per cent., most of the rates being prohibitory. He and his party now discuses the question of high taxes, and cite 25 per cent. here and 47 per cent. upon the whole tariff as the measure of our burdens.

I now resume the historical review of the present tariff. The base of this tariff is the low tariff of 1857. The act of 1857 received two to one of the votes of New England. It received the sanction of every vote in the House from Massachusetts and from Maine. You do not need to go to the Confederate constitution for the economic doctrine of a revenue tariff and of the low tariff of 1857. What you contend for now is not found in any constitution, nor, except for the last five years, in the doctrine of any political party.

When the higher tariff of 1861, the Republican tariff, was adopted, Mr. MORRILL, who had charge of the bill in the House, used the following language:

There are no duties proposed on any articles for the simple purpose of protection alone. The highest duties in the bill are proposed for the purpose of revenue. The manufacturers might get along with lower duties, but we require the revenue. (May 8, 1860, page 1974.)

This is the same bill that failed to become law until after the Southern members largely withdrew and the Senate became Republican. The House was already Republican.

Sir, the degree of protection extended in 1861 was apologized for then, and the statement was made by the father of the present war tariff that it exceeded even in that day the needs of the protected classes. As I stated before, we had been getting eight and eleven millions of dollars a year revenue from the sales of public lands. The great prosperity of the country since 1846 had led to excessive speculation in land. The sharp panic of 1857—the result of this—and lasting only a few months, had the effect, however, of showing the people that this kind of property had been unduly stimulated, and capital sought new channels. This caused these receipts to fall below $1,000,000 a year and to continue very small. We needed revenues, and the tariff of 1861, though confessedly protective, as all tariffs upon competing imports are, was more for revenue that was needed than for protection that was not needed. We see, however, how the protection is held on to.

In 1862, under the exigencies of war, there was brought in another tariff bill which read as follows:

TITLE.

[Second session Thirty-eighth Congress, 1862.]

A bill (H. R. 531) increasing temporarily the duties on imports, and for other purposes.

This bill was approved by Mr. Lincoln July 14, 1862.

This bill was not for protection in the sense that its rates are now contended for. The present doctrine was not the doctrine of LINCOLN and MORRILL. The only protective feature or purpose in it was to compensate for the time being for the internal taxes that were cotemporaneously laid upon and against these industries. And yet, Mr. MORRILL,

obeying the behests of the privileged classes who still contend for the continuance of these restrictions upon trade for the subsidies they get from them, now seeks to perpetuate them, and even the shade of the great and good Lincoln is invoked for this unholy purpose, so at variance from all that he ever said or did. The rates were for revenue for the Government, and went beyond the rates of 1861, which, as we have seen, went beyond the needs of protection. Now they are not needed by the Government for public purposes, nor by the classes for private purposes, yet they still contend for them, although they are bloated by the long continuance of such high rates.

Mr. MORRILL, in introducing this bill, on June 27, 1862, said:

The bill, however, has been prepared for the purpose of making additional revenue, and for the purpose, when it is possible, of giving compensation for the internal-tax bill.

In debate, at the same time, June 27, 1862, the following occurred:

Mr. TRAIN. I would inquire of the gentleman from Vermont whether it has not been the understanding of the Committee on Ways and Means all along that wherever a manufactured article was affected by the excise bill that article should be protected by this bill correspondingly?
Mr. MORRILL, of Vermont. That has been our idea.

The clear understanding and purpose was further expressed June 27, 1862, as follows:

Mr. DE LANO. If there is anything that the Committee on Ways and Means have endeavored to inculcate in the House it was that where internal tax was imposed to raise internal revenue they would make it up or compensate for it by a corresponding duty upon foreign importations.

And upon the same date the following was said:

Mr. MORRILL. I would not propose any additional duties in time of peace, and they only grow out of the extreme necessity of the hour—a necessity for more revenue——
Mr. LOVEJOY. If I understand the gentleman from Vermont, this tariff is for the purpose of protection, and not for the purpose of revenue?
Mr. MORRILL. Certainly not.

Mr. Lovejoy was suspicious. He wanted the matter clearly understood. I submit that all doubt was cleared away, so far as language could possibly do so. Yet the maintenance to-day of these rates and of subsequent increases, and the concession of still higher rates upon the necessities of life, and that, too, after all the direct taxes upon these manufactures have been long ago repealed, is made the test of latter-day Republicanism. They want, not a Government tariff and the whole people's tax, but a rich man's tariff and a poor man's tax. Would that we could get something like back to the tariff that was confessedly too high in 1861.

Sir, what were the expressions of the administration, speaking through the illustrious Secretary of the Treasury, afterwards Chief-Justice Chase, during these times. Mr. Lincoln confined himself in his messages to questions of the war, leaving to his Secretary of the Treasury to voice what was necessary and right as to commercial and fiscal matters. We know that in all things Mr. Lincoln was conservative, and selfish clamor would no more cause him to yield to the extravagant demands of the privileged classes to-day than perils moved him then.

On July 4, 1861, Secretary Chase, speaking of himself in the third person, said:

He ventures to recommend only such modifications of the existing tariff as will produce the principal part of the needed revenue.

In his next message, on December 9, 1861, the Secretary saw no need of any change but for revenue. He said:

Reflection has only confirmed his opinion that adequate provision for taxation for ordinary expenditures for prompt payment of interest on the public debt existing, and for the gradual extinction of the principal, is indispensable to a sound system of finance.

Beyond this he did not go.

But, sir, at a later day Mr. Chase saw that there were those who were prospering greatly out of the calamities of their country. He saw that they would seek to perpetuate those conditions, however they may have arisen and by whatever pledges they may have been obtained, which were contributory to their wealth. Nearly every ill wind blows somebody some good, and we usually find these beneficiaries advocates of ill winds. The incidental industrial bounties were being reaped by the few. They began to preach the doctrine that the whole Republican party was destined to adopt in 1883—just twenty-one years later—that war rates of tariff taxes upon the necessities of life make a good permanent peace policy; that when you impose internal taxes and put tariff rates to countervail as against the competitor abroad it is good to repeal the internal tax and keep up that of the tariff, which by its restrictions upon trade yields a bounty until domestic production catches up with domestic consumption; and then you can still be protected, as a special favor, from the regulation of international competition, and you can form a trust. So, on December 4, 1862, Secretary Chase sends this significant note of warning:

The Secretary does not yield to the phantasy that taxation is a blessing.

How well does this comport with the opinion of that other calm and wise man of that day (Henry Wilson, of Massachusetts), who certainly would not to-day be found urging that taxation is a blessing, even when viewed in the novel garb given it by the distinguished gentleman from Ohio [Mr. BUTTERWORTH], who calls it "a commercial regulation." Call high taxes "a commercial regulation" and you are all right. Sir, the outer coating is sugar, but the inner contents are weakening drugs to those who take the pill. The only man strengthened by it is the man who sells the medicine.

I have clipped the following from the New York Evening Post, which we know is accurate and reliable:

This is what Henry Wilson said in one of his latest speeches in the United States Senate on the question of tariff revision, and we do not believe that he would have changed his opinion now for the sake of a mistaken political policy:

"Men who have looked with hungry eye upon a Treasury overflowing with surplus millions do not wish to see the sources from which those coveted millions are derived dried up. Now, as in times past, political ambition is not unwilling to sacrifice the business interests of the country in the hope to win political power. * * * I think American labor will be best protected by taxing all the necessaries of life lightly; placing the raw materials which enter into our manufactures on the free-list; raising revenue to support the Government upon articles that come in competition with our manufactures and upon the luxuries of life, which are consumed by the more wealthy classes of society."

Sir, this bill is in the line, but far short of doing all that Mr. Wilson said ought to be done. It will take several bills like this to meet the views he expressed. But, sir, look at the attitude of the latter-day Republicans. See what a change has come over the leaders here. I charge nothing in a harsh spirit, but I submit that they are like men who have forgotten all that they ever swore by in the past, except for five years past. They have thrown themselves into the arms of the manufacturers, and say "Keep all, wipe out the pledges, spurn past doctrines; don't bother about the people; they forget and don't think; we need organization and money; you manufacturers are organized and rich; state your terms; write out the tax laws; we will deny even the right and decency of the representatives of consumers to seek to advise about or to formulate legislation fixing the taxes the people shall pay."

Again, Mr. MORRILL said on January 19, 1864, when a still higher tariff tax was made to offset the internal-revenue taxes laid upon manufactured products:

I suppose that our object in levying a tax at this time is to obtain revenue—

In the same debate, on January 21, 1864, Mr. Washburne, of Illinois, said:

I am for any revenue bill that will raise money enough to vigorously carry on the war.

Upon the same bill Mr. Thaddeus Stevens, of Pennsylvania, on February 15, 1864, said:

The committee is of opinion that no man will complain of the amount of tax which is laid on him, if it be necessary for the purpose of revenue.

Thus Mr. Stevens also shows that the purpose of this increase was to raise revenue for the Government and not to meet any real or supposed need of the manufacturers and mine-owners for protection.

It is interesting to note that at this time the gentleman from Pennsylvania [Mr. KELLEY] did not deny that these tariff increases raised the price of the necessaries of life, as his present devotion to a war policy for times of peace leads him to extenuate or deny. Neither did he think it other than one of the calamities and prices of war. His friends are those who made money, and they and he now seek to keep up this part of the hardship of the more common lot of men. On January 21, 1864, he said:

The increased cost of the necessaries of life is but the price armed treason is compelling them to pay for the preservation of the unity and Constitution of the country to which they are so devoted.

"Armed treason" is gone; but these same tariff taxes upon the necessities of life are left. Why is this?

Then we come to the tariff bill of 1866. Further increases were made. What was the purpose? Was it for the Government or for the manufacturers? How long were these increases, like the others, to endure? Were they also to be temporary or were they to be permanent? Let us see. On June 28, 1866, Mr. MORRILL, having charge of the bill, said:

The present bill is not likely to suit everybody, and I regard it only as a temporary measure, fit to be introduced because of the imperious necessities of our present condition.

The Government was sorely pressed for money. It had had to pay off the armies, and had come to the end of temporary expedients.

How different the views of leading Republicans then from now. How different the test of Republicanism upon these economic questions. Will the people follow the new departure of the last five years? We have no dispute under existing conditions with men who propose to keep the former pledges of the Republican party. The day when dispute would arise over measures proposed for adoption would be at least several Congresses and several administrations ahead. Democracy can always be relied upon, when conditions and equities permit it, for ultimate free trade. But the contest of the next five or ten years is to get back to even a protective tariff, as formerly and properly so called. We are perfectly honest and frank with the people.

What exasperates the other side of the House is that we refuse to be hasty, foolish, rash, or unmindful of the needs and equities of those industries, well placed, which have been brought forth prematurely by protection and can not as yet fairly stand reductions. Such honest claims in fair and honest measure have nothing to fear from us. Their only peril lies in being used by those who seek to put the tariff to oppressive uses and to practice bad faith with the people. If every feature must "stand or fall together," then it is a contest as to which

shall exist—the people or the tariff. In that event the tariff will go with a crash.

In speaking upon the tariff bill following the report of Secretary McCulloch, and in the line of the quotation I have just made, Mr. MORRILL, on June 28, 1866, said:

Although our present tariff, in ordinary times, would be likely to be denounced as prohibitive, yet we find it practically productive beyond all precedent, yielding for the year ended June 30, 1866, nearly one hundred millions more in gold than was ever before realized, or about $170,000,000.

While the present bill is indisputably to preserve the aggregate of our internal revenue, it will not be likely to diminish, even if it does not increase, the revenue from imports.

Speaking in the same connection, he expressed the hope—

That a better time is coming, when labor will be more abundant, taxation less onerous, and when our paper money shall be good for its entire face value. God speed the day.

On December 3, 1866, Secretary McCulloch, in his report, said:

You—

in stating his views to Hon. David A. Wells, special commissioner of the revenue, appointed to investigate the question of taxation—

will therefore endeavor first to secure for the Government a revenue commensurate with its necessities, and, secondly, to propose such modifications of the tariff laws now in force as will better adjust and equalize the duties upon foreign imports with the internal taxes upon home productions. If this last result can be obtained without detriment to the revenue, by reducing taxation upon raw materials and the machinery of home productions rather than by increasing the rates of imports, it would, in my opinion, be decreasing the cost of production and increasing the purchasing power of wages and greatly promote the interest of the whole country.

Again he says, in speaking of taxation:

Always a complex and difficult question, it is particularly so at the present time. Prior to the rebellion it had no relation to internal taxes, for this form of Federal taxation was then unknown to our people. It had little connection with the currency, for until the year 1862, although the banks had repeatedly suspended specie payments, specie was the only legal recognized standard.

And yet, Mr. Chairman, with all of these utterances and with all of these facts showing that this was a temporary measure, the principle and the rates then embodied for the Government are held to-day by the Republican party as a claim of need and right for the manufacturers, and the highest rates as a permanent and lawful prize of protection; and to assail them is to assail an idol that they are now ready at any and at all times to defend.

Mr. KELLEY. Will the gentleman permit me a moment?

Mr. BRECKINRIDGE, of Arkansas. Certainly.

Mr. KELLEY. I am ready to admit that I have learned something since 1864. Does not the gentleman believe that one may learn something in that time?

Mr. BRECKINRIDGE, of Arkansas. I understand the gentleman very well. I think his reply is a very honest one. That is about what I would expect from a man of his known integrity of character. The gentleman admitted fairly and squarely that these taxes, laid in time of war, with apologies and pledges from every leader of the Republican side, who stated at the time that they were temporary and for a temporary and special purpose, and that they had raised the cost of the necessaries of life; he admits that these pledges are now all spurned and that these rates are now part and parcel of the fixed and permanent creed and policy of the Republican party. [Applause on the Democratic side.] And I submit that if the people of this country desire anything like a reduction of taxes from the high war rates then imposed, they must look to the Democratic party and to that party alone for such action. [Applause on the Democratic side.]

Mr. KELLEY. I beg the gentleman's pardon; he failed utterly to understand me. I beg of you to understand me to say that I plead guilty to having learned something since 1864; and I stand upon my opinions in this year rather than upon the views that I held twenty-four years ago. My friend may not have learned anything in that time, but I would not like to make such a confession for myself.

Mr. BRECKINRIDGE, of Arkansas. I trust the venerable and distinguished gentleman may long live, and that as long as he lives he may learn, and that in his learning he may yet come back to the best conclusion of his more vigorous manhood, that no people on earth can ever hope to enrich themselves by high taxation. [Applause.]

Mr. KELLEY. I was a free-trader until 1857.

Mr. BRECKINRIDGE, of Arkansas. I think we have about exhausted this point; but I do not wish to appear discourteous to the gentleman from Pennsylvania by seeming to cut him off.

Mr. KELLEY. Nor do I wish to be discourteous. I had not had time to fully digest protectionist views.

Mr. BRECKINRIDGE, of Arkansas. Let us come to a later period. A gentleman, now a distinguished candidate for the Republican Presidential nomination—but hardly upon the basis of the sentiments I quote from—Mr. ALLISON, in his very able speech in this House on the 24th and 25th of March, 1870, said:

I desire to call the attention of the committee to the growth of the present tariff. In 1861, at the close of the Thirty-sixth Congress, the policy of the Government was changed by the passage of what was called the "Morrill tariff;" a tariff prepared in the interests of protection, and distinguished from the tariff of 1846 and of 1857 by the imposition of heavy duties upon articles manufactured in this country, and by admitting free of duty many raw materials used in such manufactures. This tariff was modified twice during the year 1861 for the purpose of increasing the revenue, but upon leading articles remained substantially the same until July 14, 1862, when a thorough revision of the tariff of 1861 was made. By this revision the tariff was increased generally to compensate for the internal-revenue tax, and upon a few articles for the purpose of increasing the revenue. Mr. Stevens, in debate, said that the principle adopted was the one that was mentioned when the tax bill was under consideration, namely, the additional duty was fixed as nearly as possible at the same rate as taxation, except in a few cases, where necessary to correct errors in the present tariff.

* * * * * * *

Mr. Shellabarger, then a member from Ohio, rose in his seat and asked Mr. MORRILL if there was any increase of duty over and above the tariff of 1861, save and except the compensating duty made necessary by internal-revenue taxes. Mr. MORRILL said in reply that there was no increase except for that purpose, or for the purpose of revenue upon articles not produced in this country.

Mr. ALLISON added:

At the close of his speech Mr. MORRILL made this pledge:

"This is intended as a war measure, a temporary measure, and we must give it our support as such."

Again, he speaks of it as "a war measure, imposed by the necessities of the Government, the scarcity of laborers, and the enormous direct taxation."

And further on in that speech Mr. ALLISON said:

This large internal-revenue tax was made the excuse and the cause of the advance of the tariff of July 14, 1862, and June 30, 1864. I quoted the language yesterday of the then chairman of the Committee on Ways and Means in 1862, Mr. Thaddeus Stevens, himself a protectionist, and certainly in favor of the protection of the great interest of Pennsylvania, iron. He made a pledge upon this floor in 1862 that those additions of duties upon manufactured articles imported in this country were made necessary because of the internal-revenue taxes. Both he and Mr. MORRILL, subsequently chairman of the Ways and Means Committee, declared that the act of June 30, 1864, was a temporary measure, a war measure, and was not intended as a measure which should remain upon the statute-book as a protective tariff in the time of peace.

Then yielding the floor for a moment to Mr. COX, who had been a member of the conference committee of the two Houses, that gentleman said:

I desire to say, in addition to what has been said by the gentleman from Iowa [Mr. ALLISON], that I was on the committee of conference upon the tariff of 1864. The reason why that conference report was made as it was made, the reason given by Mr. MORRILL and Mr. Fessenden, was that the internal tax had been raised, but that the moment that tax was reduced they would be in favor of reducing the custom duties. That was understood when the report was made upon the tariff of 1864; it was one of the conditions leading the conference committee to report that measure.

Then Mr. ALLISON resumed the floor and said:

It is admitted by all that the increase of the tariff was commenced and carried on upon the basis of the protective duties of the Morill tariff of 1861; the increase of direct taxation, added to the price of domestic manufactures, rendered an increased tariff neecessary in order to prevent our country being flooded with cheaper foreign productions. Certainly, then, upon the decrease of internal taxation the tariff may be, and ought to be, decreased in proportion, the danger being no longer in existence which was sought to be averted by these increased duties.

But I may be asked how this reduction shall be made. I think it should be made upon all leading articles, or nearly all; and for that purpose, when I get the opportunity in the House, if no gentleman does it before me, I shall move that the pending bill be recommitted to the Ways and Means Committee with instructions to report a reduction upon existing rates of duty equivalent to 20 per cent. upon the existing rates, or one-fifth reduction. Even this will not be a full equivalent for the removal of all internal taxes upon manufactures. It will not be difficult to make a reduction upon this basis.

Now, as to the amount, again, of the direct tax, long since all repealed, to offset which the present compensatory or equivalent tariff duties still retained were laid, I quote from the same speech of Mr. ALLISON. He said:

The total of this domestic tax amounted in the fiscal year 1865-'66 to the enormous sum of $310,000,000; and upon domestic goods alone to the sum of $128,226,784.

All of this domestic tax of over $128,000,000 has long since been repealed.

But let us look at some still later utterances about the "compensatory" part of the present tariff. Mr. MORRILL, on May 9, 1870, said:

At the same time it is a mistake of the friends of a sound tariff to insist upon the extreme rates imposed during the war if less will raise the necessary revenue.

How must this sound to those who object to the present bill upon the ground that it will not reduce the revenues and that this bill is unjust to manufactures? And in the same speech he says:

Whatever percentage of duties were imposed upon foreign goods to cover internal taxes upon home manufactures should not now be claimed as the lawful prize of protection when such taxes have been repealed. There is no longer an equivalent.

* * * * * * *

Protection has here no legitimate claims, and it may be taken off whenever direct taxes are repealed and less revenue is desired.

It was under some sense of obligation to the people that at that time, 1870, a reduction of the small extent of 10 per cent. was made in the tariff. This was only a very partial keeping of the pledges that had been given. The love of money was stronger than every consideration of humanity and of honor. Only this much was done, and even this was not permitted to stay, for in 1875 the 10 per cent. was restored back to the tariff and to the manufacturers, as I previously stated.

What said Senator SHERMAN in 1868? In his report on an International Monetary Standard, June 9, 1868, page 180, he says:

Every advance towards a free exchange of commodities is an advance in civilization; every obstruction to a free exchange is born of the same narrow, despotic spirit which planted castles upon the Rhine to plunder peaceful commerce; every obstruction to commerce is a tax upon consumption; every facility to a free exchange cheapens commodities, increases trade and production, and promotes civilization. Nothing is worse than sectionalism within a nation,

and nothing is better for the peace of nations than unrestricted freedom of commerce and intercourse with each other.

Is this from the Confederate constitution? How does this comport with the present test of Republicanism? Your party was founded upon opposition to bodily servitude. That is settled. You had the principle of liberty then, and in that particular our party was in a position false to our own principle. The paradox was unavoidable. It was settled for us centuries before and at the formation of our Government. But you must have an issue. You have abandoned the principle of liberty, which you were never really founded upon, except as the expediency of the day dictated, and now you yield to us our natural estate. You have an issue. You have the desire of your hearts; but it brings leanness to your souls.

What did Mr. SHERMAN say in 1872? On pages 348 and 349 of the Congressional Globe of that year Mr. SHERMAN expressed himself as follows, in the Senate:

The income tax expires with the collection of the tax of 1871, which, on personal incomes, is assessed during the present month. The public mind is not yet prepared to apply the key to a genuine revenue reform. A few years of further experience will convince the whole body of our people that a system of national taxes, which rests the whole burden of taxation on consumption and not one cent on property or income, is intrinsically unjust. While the expenses of the National Government are largely caused by the protection of property, it is but right to require property to contribute to their payment. It will not do to say that each person consumes in proportion to his means. This is not true. Every one must see that the consumption of the rich does not bear the same relation to the consumption of the poor as the income of the one does to the wages of the other. As wealth accumulates this injustice in the fundamental basis of our system will be felt and forced upon the attention of Congress.

No words can be truer or wiser than those also that he utters on pages 353 and 355 of the same speech. He says:

It must be remembered that the present duties, taken together, are far in excess of what they were before the war, and that they have been three times largely increased since the passage of the Morrill tariff act of 1861. * * * Such excessive protection not only ceases to diversify production, but forces labor into protected employments. If the present rates of duty were high enough during and since the war, when home industry was burdened with heavy internal taxes—with stamp duties, income taxes, and high rates on raw materials—then surely they are now too high when all these taxes are removed. * * *

I have listened with patience, day by day, to the statements of gentlemen who are interested in our domestic productions. I am a firm believer in the general idea of protecting their industries, but I assure them, as I assure their representatives here, that if the present high rate of duties, unexampled in our country, and higher by nearly 50 per cent. than they were in 1861, are maintained on metallic and textile fabrics after we have repealed the very internal taxes which gave rise to them, and after we have substantially given them their raw materials free of duties, we shall have a feeling of dissatisfaction among other interests in the country that will overthrow the whole system and do greater harm than can possibly be done by a moderate reduction of the present rates of duty. And I am quite sure that intelligent men engaged in the production of various forms of textile and metallic fabrics feel, as I do, that it is wiser and better to do what is just and right, to make a reduction on their products at least to the extent of the reduction in this bill on their raw materials, rather than to invite a controversy in which I believe they will be in the wrong.

If the Republican party were to adhere to their pledges we should be put to it for a forcible issue with them for years to come. How did Mr. Garfield stand? He said, speaking in this House in 1866, and he repeated the same language here on April 1, 1870:

We have seen that one extreme school of economists would place the price of all manufactured articles in the hands of foreign producers by rendering it impossible for our manufacturers to compete with them; while the other extreme school, by making it impossible for the foreigner to sell his competing wares in our market, would give the people no immediate check upon the prices which our manufacturers might fix for their products. I disagree with both these extremes.

I do not share Mr. Garfield's concern that we could not command the market at least to the extent of nine-tenths of our manufactured products. He further said:

I hold that a properly adjusted competition between home and foreign products is the best gauge by which to regulate international trade. Duties should be so high that our manufacturers can fairly compete with the foreign product, but not so high as to enable them to drive out the foreign article, enjoy a monopoly of the trade, and regulate the price as they please. This is my doctrine of protection. If Congress pursues this line of policy steadily we shall year by year approach more nearly to the basis of free trade, because we shall be more nearly able to compete with other nations on equal terms. I am for a protection which leads to ultimate free trade.

Again Mr. Garfield said:

Mr. Chairman, examining the possibilities of the situation, I believe the true course for the friends of protection to pursue is to reduce the rates on imports wherever we can justly and safely do so, and accepting neither of the extreme doctrines urged on this floor, endeavor to establish a stable policy that will commend itself to all patriotic and thoughtful people.

You observe, sir, that General Garfield does not say to all patriotic and thoughtful Republicans merely, but to all such "people," which includes reasonable men of all schools of thought. If we were at the begining of things, if we were proposing to lay taxes for the first time, instead of dealing, as we are, with conditions grown up under a policy of high protection, I say frankly that I for one would fight every protective feature offered. But we must be reasonable; we must be "thoughtful;" we must recognize dependencies and equities; we must be just. We are at the concluding end of a policy, not at its inception. This is the inception of repealing of rates, not of establishing rates. Under these conditions there is no element of conflict between this bill and this line of policy laid down by General Garfield. There is no such conflict as respects the position taken, I may say, by a single gentleman on this side of the House. The only conflict is with the new position now and here in the last five years maintained by the other side of the House. There is no future prospect of any conflict between us and the position laid down by General Garfield. But you have left that position, so wise, progressive, and conservative, so suited to our revenue and commercial requirements.

You now contend for every high rate, and on that, too, as the "permanent policy of the Government," in order that "our manufacturers * * * can regulate the price as they please." Being unable to sustain yourselves by demonstration or reason, you take refuge in all manner of extravagant statements in trying to conceal your past professions, and in crying out "patriotism," as if we do not love our own country and ourselves and all of our countrymen. But this is in every age the custom of Bourbons and of men with selfish purposes.

During all this period the surplus revenues could be used in paying bonds subject to call, and not, in consequence, at a premium to the Government. The monopoly wing of the Republican party used this for all it was worth. They said: "Pay your matured debts with your surplus money. This is what a prudent business man would do. If the bonds were not matured, and if they commanded a premium, it would be another thing." This was the position of the monopoly wing who held for their own purposes to the "phantasy that taxation is a blessing" to the masses.

What did the great war governor of Indiana, Governor Morton, say at this time? On April 30, 1872, Governor Morton in the Senate said:

Now, I wish to say to the Senate that I am strongly convinced that we should go further, and reduce the tariff in material respects upon many other articles. * * * The country expects a large reduction, the country knows that it can be made, the country has been promised this reducion, and the dominant party here is responsible to the country for this reduction, and will be held responsible if it is not made.

Here, also, is what was then (April 22, 1872) said by our venerable friend from Pennsylvania, who had not quite completed his studies; at least he had not fully learned that his manufacturers would never abate one jot or tittle of their privileges:

Mr. KELLEY. Here is a bill for the reduction of taxes and duties covering sixty-three pages, in which there are items sometimes of only a line, on which a whole day of debate would be spent under the five-minute rule. If we adjourn on the 29th of May we shall have repealed no tax or duty, and the people will ask us in every paper and at every corner why we have continued the system of taxation, so largely in excess of the demands of the Government and the reduction of the public debt, at the rate of $50,000,000 per annum outside of what is already provided by law. On neither side of the House can justification be found, nor do I believe apologies, for having hastily adopted a resolution of adjournment which will prove entirely satisfactory to the tax-payers, who are loaded at every point and whose profits are absorbed in the excessive Treasury of the Government.

I submit, Mr. Chairman, that these statements make very interesting reading to a man inquiring after truth. We have no bonds subject to call now. Now you say "buy them anyhow," and that "this is what a prudent business man would do." Only the greenbacks can be paid without a premium. Do you mean to force their retirement? Do you prefer this to a repeal of taxes?

Surplus taxes were used in paying off bonds subject to call until 1880, when such bonds were all paid up. Then, as now, a premium had to be paid upon bonds to get rid of the surplus. So it was, also, in 1881; the amounts of premium were respectively $2,795,320.42 and $1,061,948.78. The amount of premiums paid up to December 5 of the present fiscal year was $2,852,015.88. The people were so exasperated in 1880 and 1881 at having to buy bonds at a premium that the manufacturers and the Republican party became alarmed, and they hastened to make new promises. In 1882 the Tariff Commission was created. The manufacturers said and showed that they could stand a reduction of from 20 to 25 per cent. of the protective duties, and the commission so recommended to Congress. Several hundred millions of bonds, however, were maturing. Here was a fresh outlet for surplus taxes.

The manufacturers and other protected classes soon repented, like Pharaoh, of their promises. The Republican party tried once more and for the last time to keep faith with the people. They shut out the lobby. They took up the bill of the Tariff Commission and refused "hearings" and all that kind of mere pressure by which the privileged classes, pretending to be the nation and the support and virtue of the nation, beset the representatives of the people to gain their special ends. They were beset by the same calumny and abuse that we are now. See how they were attacked. The chief fugleman was Henry Carey Baird, of Philadelphia. In the Philadelphia Inquirer of December 26, 1882, he first seeks to discredit his own Tariff Commission. He said:

The Tariff Commission was a body wholly irresponsible to the American people, and was forced by the law under which it was constituted to rush hither and yon about the country and scramble through with its work, and report on the assembling of Congress; and the claim of the Committee on Ways and Means that the evidence was all presented to the commission, and all that the committee has now to do is to pass upon it, will not answer. The evidence is not all in, and furthermore the members of the committee, unlike those of the commission, are responsible to the people who sent them to Congress, and must and will be held to a strict accountability for any disastrous legislation which flows from their ill-judged action. Let the chairmen of both committees, then, if they would relieve themselves of this responsibility at once and in a decisive manner, call a halt, each of his committee, and thr ow open wide his doors, which should never have been slammed in the faces of the American people.

Then he rallies the cohorts of monopoly and works for a "combine" in the following fine style:

[From the Philadelphia Press, December 30, 1882.]

PIG-IRON MANUFACTURERS AND THE TARIFF.

To the editor of the Press:

SIR: An Associated Press dispatch, given in the papers of to-day, is as follows:

"PITTSBURGH, *December* 27.

"The pig-iron manufacturers met here to-day and formed a national protective association. The committee appointed to go to Washington reported that hard work would be required to maintain a fair duty on pig-iron, as an effort was to be made by the free-trade element to have the duty of $6, recommended by the Tariff Commission, reduced to $5."

The only safety to the pig-iron manufacturers in the present crisis is to join hands with the Book Trade Association, of Philadelphia, in demanding that the Committee on Ways and Means shall open their doors to all those who have grievances to complain of in the proposed tariff of the Tariff Commission. Let the people have a hearing, and daylight will be put through this bill, and the committee will be so enlightened on the subject and in regard to the feelings of those interested that they will not report it to the House. Let all the industries stand shoulder to shoulder in defense of the rights of each other, and the bill will be promptly and readily killed, as it should and must be.

HENRY CAREY BAIRD.

NEW YORK, *December* 28, 1882.

He then pretends that we love high taxes, and abuses poor Mr. John L. Hayes and others for their temerity in temporarily questioning it, in the following manner:

[From the Philadelphia Inquirer, January 1, 1883.]

THE CHAIRMAN OF THE TARIFF COMMISSION AND THE TARIFF.

To the Editor of the Inquirer:

SIR: In a Washington dispatch in the Inquirer of to-day I find the following: "Mr. John L. Hayes, president of the Tariff Commission, said to-day that the Committee on Ways and Means is doing just what the commission would have done had the time permitted. They are putting in an article here and there and completing the classification rather than materially changing the rates recommended by the commission. 'The changes made,' he said, 'are no reflection whatever; the work being done by the committee is quite necessary and proper.'"

This tariff bill is raw, disjointed, and wholly unfit to be enacted into law, and before it can be put into proper shape "the representative men of various interests" must make their "comments and suggestions," which can only be properly done by meeting the committee face to face. For the committee to persist in their refusal to meet these representatives is little short of criminal, and will endanger the prosperity and happiness of the American people.

Just here let me say that there has been no real demand for a radical change in the tariff, unless it has come from the other side of the water. The people, having now had a rest from the torments of their Government since January, 1879, when the Treasury Department ceased operating on the currency, simply desire to be let alone, and there is nothing they more fear than the assembling of Congress, when alone their peace and happiness are threatened. "Never since this world was peopled," writes a valued correspondent in the West, "was there so vast a body of human beings in one nationality enjoying so much of real liberty and independence and abounding comfort and prosperity as was realized by the American people on the beautiful Christmas morning." "To realize for one moment," he adds, "that all this great prosperity and happiness is now in danger of being destroyed by the weakness of Hayes and other professed or pretended protectionists on the Tariff Commission is enough to blanch the cheek of every patriot in the land. It is a crime against humanity of the most stupendous character, and every man in high place or low who aids or abets in the work will cover himself with infamy."

HENRY CAREY BAIRD.

PHILADELPHIA, *December* 30, 1882.

Was there ever such bigotry and insolence since the world was made? Yet it is just such stuff as we hear here every day.

He throws out a clumsy bait to the South in this style:

The fact is that some of the New England manufacturers, especially of cotton goods, are more inimical to protection than are the Democrats of the South, because they are instinctively monopolists, and feel that they have less to fear from foreign competition than they have from the growing manufacturing industries which are now assuming such grand proportions among the cotton-fields of the South.

I repeat what I substantially said in the earlier part of my remarks that we have no feeling of hostility toward the New England people or toward any people, either at home or abroad; but while we are friendly we need not be fools. The South is the place for making coarse cotton goods for fifty years to come. We make and sell them now at free-trade prices, and some of our mills sell exclusively in foreign markets. Free trade, then, can not reduce our prices for goods. It would only give us cheaper machinery, cheaper freight, and cheaper facilities for exchange of money. It would be an unmixed blessing to us. Some others can not stand it just now. We are willing to stand shackled with these selfish, feudal restrictions upon our trade until the mushroom industries can fairly stand the blessed air and sunlight of liberty.

As further evidence of the kind of "fire in the rear" that made the Republicans finally throw up their reduction bill, I now read a quotation Mr. Baird made with marked approval on January 9, 1883. Here they are pitching into the Finance Committee of the Senate:

The action of the Senate Finance Committee in so promptly reporting a tariff bill was a general surprise. The committee did its work quietly and secretly, and the representatives of the various industries interested, who have been arriving here in large numbers, find they have come a day after the fair. The Senators consider themselves sufficiently familiar by this time with the questions involved in an alteration of tariff rates, and are tired of hearing the same arguments repeated year after year by interested advocates. This year the Finance Committee declined to hear any such pleas orally, though they announced their willingness to receive any such arguments which might be made in writing.

He then gets very close to our venerable and good friend, Judge KELLEY. I suppose this was one of the times when the Judge "learned something." He spoke as follows:

[From the Philadelphia Inquirer, January 20, 1883.]

APPLICATION OF THE GAG IN THE TARIFF DEBATE.

To the Editor of the Inquirer:

SIR: The Committee on Ways and Means having, after the manner of the famous and tyrannical Council of Ten of Venice, which tried and convicted men without permitting them to appear before it, refused to hear any one in defense of the thousands of industries which are imperiled by proposed tariff legislation, it was eminently proper that Judge KELLEY, the chairman, should offer a resolution in the House of Representatives in which it was proposed that "general debate upon the pending bill (H. R. 7313) reported from the Committee on Ways and Means be limited to one day, to be equally divided between the friends and opponents of the bill." Indeed, it seems a great piece of condescension that he or his committee should voluntarily propose to permit any general debate upon the measure at all. * * *

HENRY CAREY BAIRD.

PHILADELPHIA, *January* 19, 1883.

This was a hot time for our Republican friends. They have never forgotten it. So vivid is their recollection and so distorted their imagination that now they abuse us when we are far more indulgent than they were and swear that we are exceeding in enormity anything ever heard of. They learned, as Secretary Folger said, that if you wait for the manufacturers to consent to a reduction of the tariff you never will reduce it. What followed you well know. The party yielded. It threw up the bill and brought in a bill from the conference committee granting higher duties than either the Senate or the House had authorized them to grant, and higher than had ever been known. It was passed under gag law and was not even read in the House. The tariff was reduced from 42 per cent. to 47 per cent. and there it stands to-day. This satisfied such reformers as the gentleman from Massachusetts [Mr. LODGE], and not a voice save two is raised from the opposite side of the House in all this debate to deny that the yoke of the manufacturers is heavy, that the burden upon the people is light. This ends the chapter. The issue is drawn. It is finally made up. The Democratic party may not go fast. It may go slow. This much, however, is beyond dispute, that it is the Democratic party alone that proposes to go at all. The people must choose between the policy of China and the policy of Christendom, between a policy for peace and a policy apologized for even in time of war.

I have spoken, Mr. Chairman, of the equities which exist under the tariff. In addition to this our people who desire a revenue tariff are not in favor of a tax on tea and coffee, which would have to be taxed to procure a free-trade revenue tariff. I think the time will come when they will favor this tax; but that time is certainly years and perhaps many years hence. I think this demand is likely to come first from certain classes of our manufacturers in order to displace taxes upon articles they use. This brings us, then, apart from the question of stability of income, to a tariff upon a broad base rather than to one upon a few articles. The reasonable and honest wants of protection can not possibly suffer in this case. This makes the fixed contention of the protected classes utterly selfish and unreasonable to my mind. They reject reason and justice and stability for a system unreasonable, unjust, and hence necessarily unstable. The way they imperil all by acting in a grab spirit indicates that they really do not think that they would be seriously hurt if the whole system were wiped out. But be this as it may, we must have revenue and we can not afford to absolutely wipe it out. Substitute taxes upon incomes, occupations, etc., could be laid; but this will not be done unless the people are forced to revolutionary fiscal legislation. Gentlemen, you have seen the railroad power tried in a fight like this. The people won.

The people will win now, and I believe they will win in a wise and salutary way, and that when it is all over you will see how exacting and unreasonable you have been.

You can not excuse these rates of taxation by crying "labor." You cite the daily and weekly wage here and in Europe, and you know it means nothing. In Europe the able-bodied men are in the army, or they come here to escape military service. The lame, the halt, the old men, and the women and the children get those wages. You can hire such people at the same wages here. Why do you not do it? Simply because it does not pay. Vigorous men at higher wages are cheaper to you. You do not deny this. Do you mean to say that on the other side of the water it pays to hire these feeble people? This is what you in reality do say. It is absurd. We have the best paid labor because we have the best labor, and hence we have in reality the cheapest labor in the world. Labor suffers by the embargo upon the consumption of the products of labor caused by the high prices the tariff fixes upon goods.

You say prices are lower than they were once. Of course they are, and you beg the question. Are they not lower also elsewhere? It is the disparity in current prices that hurts and that shows the effect.

You tell the farmer that he has a home market. He would have a larger and a better home market but for these restrictions upon labor and upon consumption. What is the feature of a home market? Does your war policy lessen exports, and hence lessen our dependence upon foreign consumption? If so, how does it work? In 1850 we exported roundly $13,000,000 in grain and breadstuffs. In 1860 it was $24,000,000. This was under a low tariff. You said shocking! See the increase! Let us consume all this at home. Let us hire people to eat our grain and flour. Some foolish farmers thought it a good plan to hire people to eat their stuff, so they put high prices on the goods they had

to buy so as to increase their own consumption of such goods, and thus hire a new lot of men to come here to make the extra goods. Of course this made consumption and production relatively less than ever. It then impaired relatively the home market for grain and flour, and hence made exports greater than ever. It cut the farmer both ways. By 1870 the exports of grain and breadstuffs was $72,000,000. It was bad enough for exports to grow nearly 100 per cent. upon $13,000,000 from 1850 to 1860, but how is this that it grew upon the larger base of $24,000,000 over 400 per cent. by 1870? Nothing can abash a "home-market" philanthropist who is getting a subsidy, so he got off some miserable sophistry and asked the farmer to wait for ten years longer and see how it would work. By 1880 these exports were $288,000,000; and so it has continued. Now tell me, gentlemen, when are we to expect you at this rate to give us a home market sufficient to keep your pledge to consume our grain and breadstuffs?

We depended upon Europe to consume $16,000,000 of provisions in 1860. In 1880 we had to send out $127,000,000 worth. Of live animals we sent out less than $2,000,000 worth in 1860. In 1880 we had to send out nearly $16,000,000 worth. We had to ship, say, $1,598,000 worth of tallow in 1860. In 1880 we had to ship off $7,689,000 worth of tallow. We had to ship $600,000 worth of seed in 1860. In 1880 we had to ship $2,776,000 worth. In 1860 we had to ship $32,000 worth of hops. In 1880 we had to ship $2,575,000 worth of hops. And so it goes. Are you improving? Are you not making the home market relatively worse and worse? Mr. Chairman, it never pays to hire people to consume your goods. The trader and the customer soon becomes the proprietor under such a "protective" system as this.

Gentlemen, your latest sophistry is to tell the farmer that he gets a better price here than he does abroad. You "point with pride" to the 20 cents a bushel protection on wheat, 10 cents on corn, 2 cents a pound on bacon, and 2 cents on lard, and tell the farmer to "see that." We export these things, but how about the prices? I have figures here from the Department of Agriculture. In reducing the prices to our money I have taken English weights of grain, treated a penny as 2 cents, and a shilling as 24 cents. This makes the figures in error by a minute fraction, as you all know, but so very small that it is generally disregarded in calculation.

No. 2 red wheat was worth 96.75 cents a bushel in New York April 28 last. Freight was 1 cent a bushel. This makes 97.75 so far to Liverpool. You tell us it is higher here in New York than it will net in Liverpool. Price of same wheat in Liverpool same date, 6*s.* 8*d.* per 100 pounds. This is equal to 99.6 cents per bushel of 60 pounds. This is 1.87 cents a bushel higher net in Liverpool than in New York. Of course there are some other small charges to take up part of this. But fill them in, and now say whether you are keeping your promise as to price, or if wheat is protected. The farmer has to fall back on the "home-consumption" theory, which I have just gone over. You are feeding him on wretched theories that are right in the teeth of facts and reason.

But look at corn—No. 2 mixed. I take the same dates. Freights are of April 2; but they vary but little, and I take the highest rates of freight and the lowest quotations in Liverpool and the highest in New York. Prices are all of same date. This corn was 69.50 cents a bushel of 56 pounds in New York, freight 1 cent to Liverpool, making 70.50. Quotation in Liverpool 5*s.* 9*d.* per 100 pounds, equal to 75.60 a bushel of 56 pounds, or 5.10 cents higher net than in New York.

How about bacon? Take long clear sides. New York, 8.25 cents, freight to Liverpool 10 cents, making 8.35 to Liverpool. Price in Liverpool, 38*s.* 9*d.* per 112 pounds, making 8.64 per pound, or .39 higher net than in New York.

Lard and cotton figure out the same way, as of course everything else does that we produce a surplus of and that can not be put into a trust.

Mr. Chairman, our friends on the other side of this House have so often stated that the growth of the country is due to high taxation that they are beginning actually to believe it. The question is not, has the country grown, but has it been retarded in its growth? Have we, by reason of high taxation, grown more rapidly than we would otherwise have grown? Has such taxation upon consumption, with its great and inevitable incidents of class benefits and class burdens, caused an artificial, forced, and unfair distribution of wealth? These are the questions to answer.

That such taxation will retard the growth of a country, though it may not wholly prevent it, is too plain a truth to require demonstration. That it will convey benefits to the protected classes and thus unduly increase their earnings at the expense of others is equally plain. These truths are the plainest and safest convictions of enlightened and thinking men. Let us not reason about so plain a matter, so strangely denied by interested parties who at the same time contend for the present rates and system, but let us look at a few results which can not be denied and which speak with absolute precision and with the utmost force. Let us take data of so broad a nature as to include every element in the case, and of so proven a character as to be far beyond any conceivable stage of experiment.

See the wonderful wealth and power that we were shown to possess in the great conflict from 1861 to 1865. Take that shown upon both sides and put them together, and do they show that our country had grown feeble and poor under a policy of low taxation from 1846 to 1860? Was the North with high-priced free labor less wealthy and less powerful than the South with not simply pauper labor, but with actually slave labor? Is either of these things true? And yet gentlemen say that low taxation will ruin us.

Let us compare the results of the two systems and see if our growth has not been retarded by war taxes, and if by our class legislation the current of wealth has not been measurably changed from one class to another. Let us take States fairly agricultural and a State having the protected industries, and see the results. In 1850 our per capita wealth was $388. In 1860 it was $514. The average gain was $206 per capita, or 66 per cent. In this decade Iowa gained $243 per capita, or 197 per cent.; Illinois gained $316 per capita, or 172 per cent.; Indiana gained $187 per capita, or 91 per cent.; Pennsylvania gained $174 per capita, or 55 per cent.

It will be observed that the new States, rich in soil and vigorous in population, gained under a fair and equal system more than the older States. The new States would be expected to exceed the national average and the older ones to fall behind it.

Now leave the per capita basis of calculation and go to State wealth: Iowa's grew betweeen 1850 and 1860 from $23,714,638 to $247,388,268; an increase of $223,613,630, or 970 per cent. Illinois' grew from $156,265,006 to $871,860,282; an increase of $715,595,176, or 458 per cent. Indiana's grew from $202,000,000 to $528,000,000; an increase of $326,000,000, or 161 per cent. Pennsylvania's grew from $722,000,000 to $1,416,000,000; an increase of $694,000,000, or 96 per cent. The national growth during this decade was from $7,135,780,228 to $16,159,616,068; an increase of $9,023,825,840, or 126 per cent.

Gentlemen will observe the greater rate of growth in the States more favored by nature and as yet not unduly discriminated against by our tax laws. It may be remarked, too, that both in this case and in the former the manufacturing State calculates upon a larger base, and hence the matter of per cent. might seemingly count against her and not so in reality. This will make these facts the more striking if the per cents are reversed in spite of Pennsylvania's calculating upon a larger base. But before I go to that I will remark that the gain in the agricultural States was, as you observe, more in actual dollars per capita than it was in Pennsylvania between 1850 and 1860.

Now, take the first decade under high and discriminating taxes and under what may now be called "the new doctrine." From 1860 to 1870 the nation grew in wealth from $16,000,000 to $30,000,000, an increase of $14,000,000, or 87 per cent., a rate 39 per cent. less than that of the previous record. This shows that war and the attendants of war retard the growth of wealth. But how as to the different States? Iowa grew from $247,000,000 to $717,000,000, a gain of $470,000,000, or 190 per cent. Illinois grew from $871,860,000 to $2,121,680,000, a gain of $1,249,820,000, or 143 per cent. Indiana grew from $528,000,000 to $1,268,000, a gain of $740,000,000, or 140 per cent.

Now, mark Pennsylvania. She grew from $1,416,000,000 to $3,808,000,000, a gain of $2,392,000,000, or 166 per cent. Pennsylvania was harassed by war; she was disturbed in every way; but she possessed the subsidized industries. See how she now runs ahead of the average growth of the nation. See how the agricultural States have fallen in the scale of progress and how the wealth poured into the pockets of the mine-owners and mill-owners of Pennsylvania has caused the census returns from that State to swell.

Now take the per capita record for this decade. The increase in the nation was from $514 to $780, equal to $266, or 52 per cent. Iowa gains from $366 to $871, equal to $505, or 138 per cent. Illinois gains from $509 to $835, equal to $326, or 64 per cent. Indiana gains from $392 to $601, equal to $209, or 53 per cent. Pennsylvania gains from $487 to $1,081, equal to $594, or 122 per cent.

Now, sir, take the decade from 1870 to 1880. The national growth was from $30,068,000,000, to be exact, to $43,642,000,000—a gain of $13,574,000,000, or 45 per cent. I give only the final figures now. Iowa gained $697,356,000, or 97 per cent.; Illinois gained $971,000,000, or 45 per cent.; Indiana gained $231,000,000, or 18 per cent.; Pennsylvania gained $1,585,000,000, or 41 per cent.

As to the per capita changes during this decade: The national gain was $90 per capita, or 11 per cent. Iowa gained $169, or 28 per cent.; Illinois gained $170, or 19 per cent.; Indiana gained $3, or .003 per cent.; Pennsylvania gained $178, or 16 per cent.

I leave it to some one else to trace, in connection with these facts, the relation between the growth in wealth and in population. If a State or a class is growing more rapidly in population than in wealth it is growing numerically poorer. Its course is downward. Others may be prospering and growing stronger, but the masses of this State and of this class are getting left in the race of life.

I contend, Mr. Chairman, that the rate of increase from 1850 to 1860 would have been maintained but for the war and for war taxes. We had just fairly reached the great and fertile plains of the West where growth was easy and which even now we only partially occupy. We perhaps do not occupy one-fourth of their vast area.

We were building railroads at a far more rapid per cent. of increase than we have done since. Railroad building material is as heavily taxed

as almost anything in the list. We had applied all the great inventions which have since only been perfected in details. Our rate of issues of patents exceeded what we have had since. Had we continued to do, as for ten years we did do, for ten long, practical, and well-tried years, our wealth in 1880 would have been, not the $43,642,000,000 that we point to with pride, but it would have been exceeding $81,272,000,000, fairly and justly distributed as it was being earned and was being distributed, instead of unequally and artificially distributed as our wealth of diminished growth has been by the new system. It is in the face of reason and in the face of facts like these that the subsidized classes and their apostles here tell us that high taxation has not retarded our growth in wealth, and that by high taxation and by class legislation we must expect to best promote happiness, justice, and prosperity among our people.

Mr. Chairman, one word in conclusion, and I will not longer tax the indulgence of the committee which has listened to me so patiently and kindly during the lengthy exposition I have attempted to make of the pending bill, of its probable effects, and of the positions of the two parties at this time. The contest we are now engaged in will be protracted, and it will, I fear, grow in fierceness. Our party is under the conservative leadership of the President of the United States. The conspicuous feature about the President and about his administration of public affairs is the confidence he imparts to all classes of the people. Business men feel no real alarm, but privileged classes will contend to the uttermost for the retention of their privileges.

The good and the honor of this country are not to be advanced by class legislation, whatever may be its form, guise, or pretense. The time has come for us to gradually eliminate such features from our laws. The condition of the Treasury no longer requires the present high rates of taxation upon the necessaries of life. The conditions of trade never required them in full, not even when under our internal-revenue system every article now protected bore a direct tax, when gold was at a premium and labor was very scarce. This bill, I have before remarked, is even more conservative than the recommendations of our most conservative President. Our political opponents offer nothing that they have not condemned before and that all good men ought to condemn now. In a strange, almost unaccountable fatuity the proprietors of the protected interests have forced the Republican party to go beyond all of its former positions, to abandon the people, and to abandon the principle of liberty. We do not ask that the foreigner may sell to us; but we do ask that we may be permitted to buy from him if our home manufacturer seeks to extort from us. If it be called unpatriotic in us to want to buy from the foreigner if necessity compels us, I submit in all fairness that it is equally unpatriotic in the proprietors of our protected industries to want to extort from us when there is no necessity for it whatever.

Sir, the condition of affairs does not permit of this question assuming a sectional phase. There was a time when the development of the portion of the country from which I come was limited by the institution which then prevailed, but which I am happy to say is gone forever; but now, under free labor, we are developing in every way, like the other parts of our country. This is a class question. It is a national question. It is a question of equal laws and of equal rights, and it is for our people to determine whether they will now take the first step, as proposed by this bill, and regardless of petty details, toward a return to something like a peace establishment in our system of taxation, or whether they will adopt new doctrines and make these high rates of war taxes upon the necessities of life a permanent part of our peace policy and permit a vast system of subsidies to permanently obtain in the business methods and regulations of the country. [Prolonged applause.]

The Tariff.

SPEECH

OF

HON. TIMOTHY E. TARSNEY,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

May, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. TARSNEY said:

Mr. CHAIRMAN: I approach the consideration of the subject embodied in the bill with marked hesitancy and trepidation, knowing as I do that the questions embodied in this measure are vital to the welfare of over sixty millions of American people, and reaching in their ramifications to every portion of the civilized world. Almost ever since the adoption of the Constitution of the United States Government the question of taxation has been mooted by the ablest minds and the greatest statesmen that this Republic has produced. Therefore, to some it may seem presumptuous of me to even attempt to enter upon a discussion of this important and now all-absorbing question. But when I consider that every citizen in this broad land is interested in the matter, and that the two hundred and fifty thousand people who sent me here are deeply concerned in it, I hope that I may be pardoned for reflecting what I believe to be the views of my constituency, and of a majority of the Commonwealth from which I come.

If every individual in the world had learned, believed in, and practiced the golden rule, there would be no necessity for organized government of individuals. Each individual would, under that condition of affairs, become a government unto himself, interfering with none of his neighbors, and his neighbors not interfering with him. Jealousy and avarice, as they exist unfortunately throughout the world to-day, would be eliminated. But it is because people who may have learned the word, but never imbibed the spirit of that rule, and who, either openly or by deception, by fraud or by robbery in one form or another, obtain for themselves the property, the earnings, or the rights of other people without paying them therefor a just compensation, that the thing we call civil government became necessary. Therefore nations are established and laws are promulgated, not so much to teach what is right, but to provide a punishment for the transgression of the laws that are violated, and to maintain and support, and to provide for the common good, the peace, order, and safety of the community, so that one citizen may be placed upon an equality with every other citizen, and a tribunal, judicial or quasi judicial, may be placed within the reach of the citizen for the redress of grievances occasioned by the transgression of his rights by others.

Thus it is for the general good order of society that we find in this great Republic a community of governments, each under the Constitution of the United States, and also of its respective State, with its powers clearly defined in the fundamental law. Thus we have the General Government of the United States, with its seat of administration at the city of Washington. Its powers and its jurisdiction are fixed by the Constitution of the United States, and it is a Government of delegated and limited power. It is evident that such was the intention of the framers of that Constitution, for it was provided by the tenth article that "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people." Therefore when we seek the limit of power of the Government of the United States, we refer to that Constitution; and reading it from the four corners, we ascertain the power that Congress may properly exercise.

The framers of the Constitution were aware, as we are, that the machinery of Government provided under the Constitution must, in some manner or another, be supported. Supported how, and by whom? The people, whose Government it is, support it through the medium of taxation, fixed and determined by the wisdom of the law-making power, and the purposes for which national taxes shall be levied are likewise clearly defined by the Constitution. Section 8, Article I, provides that—

The Congress shall have the power to lay and to collect taxes, duties, imposts, and excises; to pay the debts and provide for the common defense and general welfare of the United States; but all duties, imposts, and excises shall be uniform throughout the United States.

There would seem to be but little room for construction by implication of the language above quoted. In other words, it specifies the purposes for which Congress shall have power.

With reference to Article X, above referred to, it has no other power except by a forced or strained meaning of the Constitution.

Therefore, in the opening of my remarks I asserted that the only power that resides in Congress to levy duties, taxes, etc., is that which is necessary for the proper support and maintenance of the Government of the United States for the purposes set forth, and not one dollar beyond for any other purpose. In other words, taxation for necessary revenue was that which was intended by the framers of the Constitution.

So it is that we find that with the reserve power of the States. They may exercise any powers, assess taxes, and perform all functions of government not inconsistent with nor prohibited by the Constitution of the United States. States, in turn, have counties, townships, cities, villages, and school districts, each within itself exercising the power conferred upon it, or not prohibited to it within its respective field, and all for the general welfare of the people and for the support and maintenance of these several governments; each within its own sphere, acting within its own functions, like the planet wheels of a horse-power, without friction, combined to make a great harmonious whole.

States and municipalities resort to their own methods of raising the necessary revenue for their own needs, as by the assessment of real and personal estate, and upon the callings or occupations of their citizens. The General Government to raise these revenues has resorted to a different plan, namely, the collection of its revenues through taxes upon imports and the internal-revenue system.

Many people on the floor of this House to-day, and throughout the country, maintain the opinion that the Government may go further, and incorporate with necessary taxation a further element, and that is the so-called protective idea which has, for the past quarter of a century in particular, taken such a strong hold upon the minds of the American people. Here I much differ with the gentlemen who belong to that school of politics. I do not believe in the doctrine of protection

for protection's sake, but I do believe that in this respect the functions of government exist purely and simply for the purpose of raising necessary revenues to maintain and support the Government economically administered. In other words, that taxation should be the object, not the incident; and if we are to have any such thing as protection, it comes as the incident, but not the object, of taxation.

What is protection? The meaning of the word is a shield or a barrier against some other nation or individual. Upon the line above indicated I find that the two great political parties in the United States, through their public declarations in their platforms, divide. There are individuals in either party who do not in all instances follow the general party teachings; but I am speaking of the history of both organizations and the public declarations as shown by the majorities of both. I find by a review of the history of the last quarter of a century that in every national Republican platform and the Republican platforms in most of the States, and by the legislation placed upon the statute-books of the country by the representatives of that party at a time when the three departments of the General Government were exclusively controlled by the Republican party, that public declarations were made, the ideas incorporated into the laws, the purposes of the organization for protection openly promulgated from the stump, until the word protection has become a war-cry of the Republican party.

Protection is a beautiful word, but when we come to analyze it, the purposes for which that word is used by our Republican friends, we can not avoid the reflection that they have but stolen the livery of the Lord in which to serve the rapacious devil. My Republican friends have rung it into the ears of the American people that their purpose was to protect, first, the American laborer; second, the American farmer; and third, the American manufacturer. Pardon me if for a brief while I analyze these different claims and present some views in relation thereto which my observation and study lead me to believe that I am warranted in doing on this occasion.

I make the bold assertion here and now, my Republican friends on the other side of this House, that never under your so-called protective system did you ever protect a laboring man one dollar's worth in the world, while on the other hand, from the beginning to the end of your policy of protection you have degraded and impoverished the very laborer you pretended to assist, but never did. I call your attention to the fact that employed in the mills, in the factories, and in the mines, and in every other avocation of employment where the product of labor is protected by a tariff or duty of from 40 to 100 per cent. that the entire profits of protection enter into the coffers of the employer and not into the pockets of the employé.

Time after time within the last fifteen years, when that labor which you pretend to protect, feeling that it did not receive its fair share of the earnings of the brain and the hand, the bone and the muscle—when bold enough to assert their rights and ask for a better condition of things, they have been thrown out of employment and others have been substituted in their place. From England, Ireland, and Wales, from Italy, ay, even from far-off China have been imported, either by contract or upon a promise of a better condition of things, a foreign people to take the place in the mills, the work-shops, the factories, and elsewhere of the very American labor which you have pretended to protect. And that labor, so invited and so employed, when it reached the custom-house docks at Boston, New York, or Philadelphia on the east, or at San Francisco upon the west, unlike the product that is protected, which can not pass without the payment of the duty upon it, these foreign laborers walk across the docks of our custom-house, bidding good morning to the customs officers, but pay no duties, and enter into the United States in free and open competition with the American labor which came to make this country their home. And the necessaries of life used by the laborer, by his wife and children, are taxed for the purpose of paying tribute, not to the Government, but to the manufacturer.

One illustration will serve to demonstrate this point. The coat that I now wear—I know not where the cloth was manufactured, but suppose it to have been in England or France—was imported into the United States. It could not come through the custom-house of New York or elsewhere without having a duty paid on it of about 59 per cent. That duty so paid was added to the invoice, and the goods were sold by the importer to the wholesale dealer in New York, the cost to him, then, being the original cost, with the rate of transportation and duties and the profits of the importer added. To that in turn are added the profits of the New York wholesale merchant, and then the goods were sold to our clothing people up in Michigan. They in their turn paid all these charges, and when I, as an humble citizen, came to pay for this coat in Saginaw, I am charged up with all these incidental charges before mentioned, and in this event I have paid to the Government of the United States 59 per cent. upon the coat I wear.

Suppose, now, that these goods are the product of the mills in Massachusetts or of Connecticut. The New England manufacturer, possessed of all the innate selfishness that is common to humanity, and with that natural desire to make what he can out of his surroundings, knows that his foreign competitor can not bring his goods in competition with him in the United States without paying the rate of duty I have indicated. Therefore, the New England manufacturer, irrespective of fair and legitimate profits, raises the price of his goods to 45, 50, or 55 per cent., enough to prevent his foreign competitor from sending his goods to this market, and he, the New England man, sells to the merchant at my home, and I buy the goods. In the one instance I have paid my taxes to the Government of the United States, and in the other I have paid my taxes to the New England manufacturer. And so it is with all the commodities within the protective range from the swaddling clothes in which we wrap the infant, the shirts we wear, the clothing for our wives and our babies, all, all is taxed; and the laborer who produces the goods that bring to the manufacturer his 40 and 100 per cent., when he purchases the necessaries of life and his clothing or the material, he pays to that manufacturer the tribute exacted through the medium of protective laws. And so it is that labor, instead of being benefited by the protective system, is, in fact, robbed under the pretext of protection. Therefore, I reassert that labor receives no protection.

We hear many things said about the pauper labor of Europe, much sympathy expressed by the protection classes with our mechanic and laborer, and much solicitation lest they should be compelled to compete with what the protectionist calls the foreign pauper labor. Yet, according to the report of the Massachusetts bureau of statistics and labor for 1885, we find that the total average earnings of a Massachusetts family with five workers, including children, is $803.47. A like family in Great Britain receives $517.47. The average total expenses of the family of mechanics in Massachusetts is $754.42; that of the family in Great Britain is $508.35. So we find that the Massachusetts mechanic, after working a year in the protected industries and supporting his family, has a net saving of $49.05, and the annual savings of the family in Great Britain is $9.12 And so we get the great benefits of protection to the American mechanic over his foreign competitor, which is a net result of $39.93. God save the Queen! This looks like a protection for both.

But, say my Republican friends, we must maintain this protective theory in order that the American farmers may be protected.

According to the last census there were 7,070,492 inhabitants of the United States engaged in agriculture. A fair estimate to-day would place that number at nearly if not quite 9,000,000. How, then, is the farmer protected? My Republican friends will smile at my apparent simplicity, and will smilingly answer, "wool." Yes, my Republican friends, you have been pulling the wool over the eyes of the American farmer for a full quarter of a century, blinding him and attempting to make him believe that your protecting arm was about him. But I call your attention to the fact, indelibly recorded in history and upon the record of this House, that whatever protection the American farmer had upon the clippings of his flock prior to the 3d of March, 1883, you struck down with one fell blow. Your tariff bill of 1883 reduced the duty upon the farmer's wool that you were pretending to the farmer that you would protect.

I call your attention to the existing tariff law, and I also call your attention to the yea-and-nay vote taken in this House, as it appears in the CONGRESSIONAL RECORD of that date, and I find some of the loudest talkers upon the protective ideas here upon the floor of this House, whose names were recorded "aye" upon the vote to reduce the duty upon the farmer's wool. I only refer to this at this time for the purpose of pointing out to you that your practice, my Republican friends, has not been in accord with your precepts or your pretenses. While I am not now criticising your action in your vote, I do criticise, as I have a right to, and to protest against your falsely representing to the agricultural interests that you are their friends, when your every act has been to strike down instead of to build up the agricultural interests of this country. You say to me, as it is broadly said throughout the country, "You must have a home market for your home products." Let us examine the result of this home-market theory. I need not demonstrate to you, for you know it, that in this country we raise more wheat than we can eat, more corn than we can consume, more oats than to supply the home market, and other products of agriculture, and when we have satisfied the American appetite we can do no more unless we can find a market for our surplus. And to-day we find the business of our agriculturists paralyzed throughout the country, with our granaries overflowing with the product of the farmer. And still we find the mortgages of the farmer increasing; that he can not, with all the blessings that Providence can bestow upon him, with good seasons and good crops, keep pace with the world.

We find that the products of our farmers can not be sold at remunerative rates, and why? Remember that the prices we receive for surplus product abroad regulate in every instance the domestic price at home. Liverpool and London regulate the price of wheat in New York, Chicago, or Minneapolis.

It is but a few years ago that the United States supplied Great Britain and many other of the European nations with their breadstuffs. It is not true to-day, and why? Nations are much like individuals; in fact they are but combinations of individuals, after all. If you will not trade with me, I will not trade with you; and if you place such restrictions upon your dealings as to render it impossible for me to deal with you, I will turn my attention elsewhere and deal with others. Now, my protection friends, mark the result of your protective policy as it affects the agriculturists of America. By your restricted and in many instances prohibitory tariff, you have refused to deal with the nations of the world, and they in turn have turned their attention elsewhere.

European nations, instead of relying upon America for their breadstuffs, as they did in years gone by, have now turned their attention to Russia and Egypt, ay, they have penetrated the jungles of India with their long lines of railway, and there have builded up one of the greatest wheat-growing countries upon the face of the globe, producing in 1884, 252,000,000 bushels of wheat, which means four bushels of grain for every man, woman, and child within the limits of the United States. This in conjunction with the wheat coming from other foreign countries in the Liverpool market, where it meets our surplus and regulates the general price. Therefore we find that the American farmer, purchasing everything he uses upon his farm, the clothing that he wears, the necessaries of life outside of what he raises himself to maintain his family, is thrown in a free and open competition with the so-called pauper and serf labor of Europe, Africa, and India. We may talk about protecting American farmers as much as we please, but the facts stand so bold staring us in the face that nearly nine millions of American agriculturists are selling the product of their labor, their sweat, and their toil in competition with the cheap labor of these countries. Wherein, then, lies your protection to the American farmer?

Remember, too, another thing, that your so-called protective system has, to a large extent, forced this condition of things. It is but a little while ago since France and Germany placed an embargo upon our products, and at this time an American hog can not enter the German Empire even with a passport from the Secretary of State. Why? It is not that American pork is not as good as German pork, but it is because these restrictive and prohibitory duties have been placed upon the products of Germany that they are unable to send to us the surplus of their product, and have therefore acted upon that spirit which has been in the human family from its origin, *lex talionis*. Even Canada has her retaliatory duties; and while I can picture to you in the commonwealth from which I come one of the most beautiful cities in this broad land, upon the banks of the rippling, the blue, and the pure Detroit River, and as I stand upon the banks and look only a mile away I find another nation; in that beautiful expanse of water, and in the middle of the stream, there is a barrier, invisible to the eye, it is true, but felt in the pocket, and felt in the reciprocal and commercial relations with that country. So that Detroit—and I use it only by way of illustration—is a commercial city with one side only to draw from.

I likewise find by an examination of statistics that before the present pretended protective theory was adopted the products of the farmer brought a higher range of prices than they have at any time since the system was adopted, except the abnormal period during the civil war, which can not be counted in the estimates.

Lowest and highest prices of farm products during ten years of revenue tariff before the war, and twenty years of protection after the war, omitting the abnormal period during the war.

Year.	Wheat, per bushel.		Pork, mess, per barrel.		Wool, per pound.		Oats, per bushel.		Corn, per bushel.

1886	.83	.95½	10.00	12.50	.30	.34	.30½	.39	.43	.55

*Nominal.

It will be remembered that the prices received by the farmer before the war for his products was on the basis of 100-cent dollars; that for the years succeeding the war up to 1878 the price of all commodities was regulated by the Treasury-note dollar, which was worth very much less than the gold standard, as will be seen by an examination of the following table:

Highest and lowest prices of gold in New York, 1867–1878.

[Compiled from the Commercial and Financial Chronicle.]

Years.	Highest.	Lowest.
1867	146¾	132½
1868	150	132
1869	162½	119½
1870	123½	110
1871	115¾	108¾
1872	115⅝	108½
1873	119½	106½
1874	114⅜	109
1875	117⅜	111¾
1876	115	107
1877	107⅝	102¼
1878	102⅝	100

Therefore upon this branch I assert that the farmers of our country are not protected in the slightest degree in any of the commodities which they produce, but are selling to the world upon free-trade rates, and paying protective prices, paying not only taxes to the Government of the United States upon imports, but tribute to American manufacturers upon domestic products, and this I can not avoid characterizing as no more or less than legalized robbery, for it never was contemplated by the Constitution or our theory of government that the earnings of one of our citizens should be transferred from his pocket to the pocket of another without just compensation being paid therefor.

Who do you protect, my Republican friends? You answer: "Our pet class is the manufacturers of the United States." I agree. How many? According to the best data obtainable there were within the limits of the United States at the last census 44,019 institutions, not individuals, but institutions, that were manufacturing products protected under the American system, and 60,000,000 people are paying tribute to the few and favored class known as the American manufacturers.

I have already demonstrated, or attempted to, that the labor employed in these factories is not protected. I have never yet seen or heard of one of these employers drawing the line of distinction between the American workingman and the imported foreigner. It requires not profound statesmanship, it requires not the patient study of the statistician, it requires not the profound knowledge of the philosopher to observe that the dissatisfaction, the discontent, the strife and turmoil between capital and labor in the United States which promises to imperil the stability of our republican institutions, originated in nine cases out of ten in the protected employments. Why, then, should you, under the power of law, enrich the owner of the factory while you pauperize the employé who produces his wealth. In fact, I question whether even to the protected class itself are the protective laws a benefit. It is certainly not to the great mass of the American people. You ask, "Why not to the manufacturer?" Because the manufacturer, like the farmer in this country, with its boundless resources, where everything that can be mentioned that enters into the products of our mills, our factories, and our manufactured products generally, can be produced from our own soil. We find as a matter of experience that our manufacturers, taking advantage of the markets, will keep their mills and factories in operation until they have glutted the markets with their products, and then will close down their mills, cease the manufacture of the product, bank their fires, stop the wheels of industry, and throw out of employment the labor which they pretend to protect, caring not from whence it came or where it may go, only looking to their own coffers. Would it not be better, then, if we could find a market abroad, not only for the product of the farm, but for the product of the factory; and would it not be a better policy for the American people to deal with the world, not upon free, but upon fair terms?

Sir, I hope to live to see the day when the producers of our country, the farmer and the manufacturer, can find a good market at a fair price for the surplus products of their labor and their skill.

Would it not be better for us, with all our boundless resources, with the highest skilled labor that the world produces, with the quick intellect of the American mechanic and the American laborer, and the strong arm and willing hand to keep the wheels of industry in motion for twelve months of the year, and after satisfying the home consumption sell the surplus to foreign nations and take in exchange, not money necessarily, but some of the products of other countries which we need and can not produce?

Another element which enters into the consideration of this problem is the ship-building and navigation between the United States and foreign countries. By an examination of statistics it appears that the progress of American ship-building was continuous and rapid from the organization of the Government down to 1861. The time was when, under a revenue tariff, the United States was almost mistress of the seas. Her flag could be found floating in the ports of every commercial nation on the globe. The American clipper ship was the prod-

igy of the world; built of American material by American workmen, and manned by American officers and American seamen. Our merchant marine was the pride of the country. But "O! how has the mighty fallen!" Go with me to-night to the city of New York and stand on Brooklyn bridge and look down the river to the bay; go through the harbor and amongst the thousands of spars, and the flags that float from the mastheads, you will not find one in five hundred that floats the stars and stripes, and these few are coasters. Not one line of ships engaged regularly in the transportation of commerce to foreign countries. Why all this? Our materials are in existence, the brain and the sinew of the American builder and the sailor are not lost. The indomitable spirit that will brave the tempest and the storm is with us still. But why this falling off in shipping? The time was when in American bottoms we sent to foreign nations 77 per cent. of our exports under the American flag The order is reversed, and now it is less than 12 per cent.

Table showing the total foreign tonnage and total American tonnage cleared from seaports of the United States for foreign countries, from 1858 to 1887, inclusive:

Year.	Total foreign.	Total American.
	Tons.	*Tons.*
1858	1,308,635	3,127,746
1859	1,552,101	3,315,325
1860	1,755,871	3,501,465
1861	1,536,205	2,873,720
1862	1,637,168	2,567,763
1863	2,076,892	2,266,312
1864	2,616,951	1,662,282
1865	2,450,201	1,710,330
1866	3,131,077	2,029,755
1867	3,230,392	2,270,096
1868	3,186,200	2,625,031
1869	3,612,138	2,502,200
1870	3,832,030	2,529,598
1871	4,282,961	2,634,841
1872	5,141,147	2,597,611
1873	5,940,849	2,574,021
1874	7,096,947	2,961,103
1875	6,279,345	3,061,354
1876	6,802,096	3,037,362
1877	7,345,436	3,043,158
1878	8,647,080	3,196,491
1879	10,545,403	3,071,287
1880	12,217,973	3,077,724
1881	12,754,453	3,039,514
1882	11,910,956	2,935,512
1883	10,669,945	2,895,077
1884	9,340,610	2,845,109
1885	9,087,700	2,808,575
1886	9,606,976	2,896,259
1887	10,740,017	2,770,518

You ask the cause. Some attribute it to our navigation laws with some of their restrictions. True, this may, to a certain extent, enter into the result, but the chief cause, and the principal one which I desire to present to this House to-day, is the fact that we have not that free and unrestricted commerce with the world that we had in the days of a tariff for revenue only, when our ships could go out laden with the product of our own country, and go to the port of any nation of the world and bring back in exchange their product. Therefore I say to this House that the policy of this country should be to so revise the tariff laws that we will bring ourselves to the base line of necessary taxation for governmental purposes honestly administered; discourage the idea of local protection for the benefit of a few favored individuals, and legislate for the common good of our population. When we do this, and upon fair and reciprocal relations with the world, we will find that American ingenuity, American pluck, and American skill will once more launch upon the high seas a merchant marine which will make our flag respected in every nation of the world where to-day it is sneered and scoffed at because of our commercial weakness. Furnish the incentive, then, to build and man ships and ships will be builded and manned by Americans. Then, and not till then, will come the necessity for rejuvenating our Navy for the purpose of protecting our merchant marine; instead of doing, as we are to-day, pretending that we desire to build an American navy to protect the merchant marine which does not exist except in the imagination of individuals. Then, and not till then, will the United States, the greatest nation upon the face of the globe, take her rank among the commercial nations of the earth, and stand at the head of the class. Abolish all class distinctions, abolish all laws that seek to favor and enrich the few at the expense of the toiling, suffering many.

But you ask, how shall this be done? My answer is, pursue the pathway that the Democracy of the country has always pointed out. Collect your taxes, be liberal if you please, but let the sole and only object of taxation be the support and maintenance of the Government.

But we find ourselves in this position to-day, and confronted by this system of so-called protection, based upon selfishness and based upon favoritism, as is clearly discernible by an examination of more than four thousand four hundred articles upon the tariff list, has grown upon us for a quarter of a century, and we who are here to-day considering it are confronted by this system and the evils that it has wrought, and the question is, how shall we bring ourselves back to that safe anchorage ground from which you, my Republican friends, have drifted us, to a harbor of safety, a harbor of refuge, where our ship may float safely and a general equalization be obtained?

Mr. Chairman, it so happens that I have the honor to be the only member upon the floor of the House who assisted in making the national platform upon which the first Democratic President in twenty-four years was elected. I had the honor, sir, of representing the commonwealth of the State of Michigan on the committee on resolutions of that memorable convention held in the city of Chicago in 1884. The committee on resolutions labored earnestly and diligently to frame that platform. We certainly said what we meant, and we meant what we said. In that platform you will find that we declared in favor of a reduction and a revision of the existing tariff laws, but we did not declare in favor of the destruction of any industry that had builded up even upon a false basis. Wrong though the theory may be, damaging to the great masses of our population as it is, we still recognized the fact that many people had invested their money—and in many instances their entire fortune—upon the basis of the law as they found it upon the statute-books. To this class of people we said: We propose to revise, not to destroy, but to revise the existing tariff laws, bring them down to the base line of necessary revenue for the support of the Government. But in doing this it shall be done with a careful hand so as to do the least injury possible to the people; in other words, a fair modification of the tariff laws, compelling the classes to yield for the time-being until we could adjust ourselves to the line which we have always believed to be the only comprehensive theory and method of taxation.

Therefore we say to-day, and I call the attention of the honorable members of the Ways and Means Committee to this, that instead of at once and by a sudden revulsion of the policy which we are not responsible for, let us go about this revision slowly, carefully, fairly, and equably, and where we find those industries which have builded up upon this false basis, instead of cutting them off at once by a sudden shock, paralyzing or injuring the industry, give them a gradual and a sliding scale, by an annual reduction of a fair percentage on their products, until such time as we may reach the common level, which I hope will be soon, and from which I hope we may never again depart.

Permit me, Mr. Chairman, to call the attention of this House, and particularly of the honorable Committee on Ways and Means, to the industries of the State which I have the honor in part to represent.

The district from which I come is the center of the great salt and lumber producing district of the State of Michigan. The following table will show the amount of lumber produced from 1851 to 1887, inclusive, upon the Saginaw River alone:

Year.	Lumber cut.	Total on dock December 1.	On dock, sold, December 1.
	Feet.	*Feet.*	*Feet.*

1886	798,826,224	315,029,650	59,775,100
1887	779,661,265	339,565,951	64,230,195

The quantity "sold" December 1 is included in the total amount on dock.

In addition to this the following table will show the product of shingles for the period from 1867 to 1887, both inclusive:

Statement of the shingle product.

1867	90,983,000	1874	208,489,500	1881	304,925,500
1868	104,104,500	1875	124,030,240	1882	295,046,500
1869	119,843,500	1876	204,346,725	1883	242,126,000
1870	178,570,000	1877	167,806,750	1884	261,266,750
1871	187,691,000	1878	153,989,750	1885	222,953,000
1872	159,001,750	1879	218,934,000	1886	227,463,000
1873	218,394,550	1880	241,075,160	1887	196,983,000

COMPARATIVE.

Following is a comparative statement of the lath manufactured by the Saginaw River mills since 1866:

	Pieces.		Pieces.
1867	63,870,875	1878	53,236,075
1868	61,478,910	1879	65,969,000
1869	51,754,221	1880	65,663,833
1870	61,287,500	1881	65,983,750
1871	62,850,900	1882	94,703,800
1872	76,951,800	1883	106,132,490
1873	87,330,400	1884	127,316,000
1874	73,675,950	1885	80,931,400
1875	73,209,255	1886	100,119,400
1876	72,703,660	1887	89,873,550
1877	72,514,999		

In 1887 we manufactured 38,722,008 staves and 1,633,743 sets of heading.

The following table shows the amount of the various grades of salt inspected in Michigan since 1869, the first year of the establishment of the State inspection law:

Comparative table.

1876	1.05	1887	.57 1/16

The product in the Saginaw Valley was shipped almost exclusively by rail.

Notwithstanding the immensity of these products, and notwithstanding the rates of duty as they appear in the existing tariff law imposed upon wood and the products thereof, and upon salt, I stand here to-day as the representative of 250,000 people, and say to this House and to say to the country that our people recognize the absolute necessity of a revision of the existing laws of taxation, and as becomes good citizens they are willing to bear their fair share of a fair reduction.

When we come to consider that the rate of taxation by means of custom-house collections and the internal revenue is $1,000,000 a day absorbed from the people, and nearly $500,000 per diem in excess of the actual needs of government, and that this money is being withdrawn from circulation and hoarded up in the vaults of the national Treasury, we realize the necessity of reduction. I presume that there are other sections of the country similarly situated to the favored region from which I come, and which are likewise affected by the provisions of the bill now before us.

I appeal to my Democratic colleagues to exhibit their true democracy to the country, and demonstrate to the people that we have made no promises that we did not fulfill, and that we will faithfully and honestly carry out the pledges which we have made in our declarations of principles that gave to us the first Democratic administration in a quarter of a century, the first to indicate to the people that it intends to relieve the people. Therefore let us equalize the laws of taxation. Let us by a gradual scale reduce the taxes upon the necessities of life, until we come down to that base line of necessary revenue which, as I have indicated, is the only true idea of taxation. Then place your taxes lowest upon the necessaries of life and highest upon life's luxuries, so that the burdens of taxation shall be borne by our people in proportion to the taste, the whims, or the wealth of those who consume the luxuries of life, and lighter burdens upon those who are content with the necessaries of life. In other words, let us have dear diamonds and silks, and cheaper shirts.

The Question of Free Lumber.

REMARKS

OF

HON. JACOB H. GALLINGER,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 31, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. GALLINGER said:

Mr. CHAIRMAN: Other duties will prevent me from participating to any considerable extent in the lengthy debate which will doubtless be had on this bill under the five-minute rule. Indeed, if I could have assurance that a yea-and-nay vote will be taken in the House, as a separate proposition, on the question of putting lumber on the free-list, I would be satisfied not to say a word and content myself with recording a vote against it; but that assurance can not be given, and for this reason I will ask the attention of the committee while I briefly state the position I hold as a Representative of a New England district on this question of free lumber.

A DEMOCRATIC PROPOSITION.

This proposition seems to have the unanimous support of the Representatives of the Southern States. Indeed, it is claimed that it has, with one or two exceptions, the unanimous support of the Democratic side of this House. At first glance it seems strange that the South, with her great forests, is in favor of removing the duty on lumber, as they are so largely engaged in its manufacture and sale. But reflection will show that there is a wide difference in the circumstances which surround them as compared with the Middle and New England States. For instance, a portion of my district, heavily timbered, adjoins Canada. It is separated from that country by an imaginary line. Now, I submit to the gentlemen from the South who are clamoring for free lumber, that if a foreign country joined their borders they would very likely entertain different views on this question from those which have found expression in the Mills bill. In no contingency can they be brought into competition with Canadian lumber, their product being largely of a different kind, and the item of transportation practically excluding the foreign production from their markets.

ONE KIND OF PROTECTION.

The great lumber king of New Hampshire is a Democrat. He probably does more lumbering than any other ten citizens of the State, and is withal a shrewd and a sagacious business man. When asked recently what he would do in the event of the Mills bill becoming a law he is reported to have said: "Mr. MILLS has not caught me. I have gone over to Canada and bought a large tract of timber, and thus protected myself." But others in the business, with less capital, can not protect themselves in that way, and they have a right to be heard on this floor in defense of their interests.

CANADIAN LABOR.

Certain gentlemen who have participated in this discussion insist that Canadian labor is brought into the United States to work in this industry, and that it comes in competition with American labor; hence a reason why lumber should be free. I beg to say, Mr. Chairman, that the Canadian labor which comes to us is mostly of the lowest grade, and does not injure American labor interests. They are employed in the woods on timber in its crude form, which is not protected by our tariff laws. But go into the great lumber-mills in any New England State and you will find that the skilled workmen are Americans almost without exception. You will find, too, that the protest against any interference with the tariff on lumber comes not only from the manufacturers, but also from the men who are earning good wages in those mills. If this bill becomes a law it will practically wipe out the lumber industry of New Hampshire and do incalculable harm, not

only to those who are engaged in its manufacture and sale, but also to the large class of laboring men to whom this industry gives remunerative employment.

NO COMPENSATING BENEFIT.

There is neither sentiment nor poetry about this thing. It is simply the logic of common sense and business intelligence. If lumber is placed on the free-list it will strike a serious blow to some of the industries on which the prosperity of New Hampshire and other New England States depends without any compensating benefit. I know it is claimed that the removal of the duty will lessen the cost of the article to the consumer, but there is no assurance that any section of the country will be benefited in that respect by the proposed legislation, for when Canadian lumbermen have taken possession of our markets they will fix the price of the product at a point not lower than the present ruling rates.

WAGES VS. CLIMATIC CONDITIONS.

The gentleman from Tennessee [Mr. McMILLIN], in undertaking to show that it is not a higher rate of wages which attracts Canadians to the United States, said that they came to New England for climatic reasons. How absurd that is. The climatic conditions of Northern New England and Canada are substantially the same. They come not for their health, but to do the hard work in our forests and because they get higher wages than at home. That is all there is to it. That they come is not a reproach to our enterprise, but rather a tribute to our institutions and an added reason why American industries should be protected by proper tariff legislation.

Mr. FORD. Does that protect American labor?

Mr. GALLINGER. It does, unquestionably. Every man in New Hampshire who is willing to work finds ready employment, and in addition we give work to many who come to us from Canada. Our diversified manufacturing industries enable us to do this and they enable us to pay higher wages than we otherwise could do. It does no harm to our own people if our tariff laws also enable us to pay higher wages to Canadian laborers than they can get at home. We want tariff laws, primarily, to protect our own people, and if those who emigrate to our shores, whether from Canada, Ireland, or any other country, share in their benefits, no one should complain.

NOT LEGISLATING FOR CANADA.

If this question of free lumber, divorced from all the other provisions of this bill, were submitted to the people of New Hampshire and of Canada there would be a practically unanimous vote in Canada in favor of it, and a practically solid vote in New Hampshire against it. For my part I am not legislating for Canada. Too much has already been done in that direction since the advent of a Democratic Administration. I believe I voice the sentiment not only of Republicans, but of a large majority of the Democratic party of my State when I say that they are opposed to putting lumber on the free-list or disturbing the duties fixed by existing tariff laws, believing as they do that such legislation will benefit foreign dealers to the great detriment of American manufacturers and mechanics.

WOOD PULP.

Closely allied to the lumber question is that of wood pulp. This is becoming an important industry in this country, and the Mills bill proposes to put that also on the free-list. The entire wood-pulp product in 1880 was $2,225,000, the capital invested being about $1,000,000. New England's share in this industry was about one-half of the whole, while the Southern States had practically no interest in it; and being a Northern industry, they propose to strike it down. During the past eight years the manufacture has greatly increased, and now it is gravely proposed to destroy it. The duty on this product represents just about the difference in cost of manufacture between Canada and the United States, and is in the nature of protection to American labor. If put on the free-list it will either transfer the industry across the line or necessitate a reduction in wages to the Canadian standard. One or the other is inevitable, and either will be a detriment to American interests.

TIMBER CULTURE.

It is argued by some that it is necessary to put lumber on the free-list so as to protect the American forests. To sustain this view it is said that unless the timber supply comes from abroad our forests will soon be utterly despoiled and the supply exhausted. Nothing more ridiculous than this has ever been advanced. It is mere theory, and yet it is used as one of the staple arguments for free trade in lumber. The simple fact is that American timber lands are not being materially lessened, and the rapidly-increasing consumption of coal, which now reaches the smaller towns of the country, is greatly lessening the drafts upon our forests. Notwithstanding the doleful predictions of a few men who have assumed the rôle of public benefactors, and whose dire manifestoes are periodically issued to the country in the shape of appeals in behalf of American forestry, the fact remains that there is no appreciable diminution of timber lands in the United States, the supply being sufficient for all time to come. Indeed, it is a probable fact that if our forests were left undisturbed for ten years greater losses would come to them by the ravages of fire and natural decay than they now suffer by the ax. The removal of the larger trees gives opportunity for the others to grow, increases for them the sustenance from the soil, and in from twenty-five to thirty years a second crop of timber is produced, which would be almost wholly lost if the large trees were allowed to remain until destroyed by the natural process of decay.

TRUSTS.

Again, it is said that a great trust or combine controls the lumber industry of the country, and that lumber must be put on the free-list to destroy this trust. What arrant nonsense that is! It is denied as well as asserted that there is a lumber trust; but, even admitting its existence, what proof is there that it will be broken up by the removal of the duty? One of the most ridiculous schemes ever entered into is the effort to prevent business combinations by Federal legislation. It can not be done. So long as mankind looks with longing eyes upon the accumulation of wealth, just so long will combinations of capital be formed outside of and beyond Federal interference, and it is the cheapest kind of demagogy to talk about preventing it by Congressional action. But if lumber must be put on the free-list to break up the lumber trust, why not put sugar on the free-list to break up the sugar trust? Everybody admits that there is a sugar trust. Why is that overlooked by our revenue reformers? Is it because sugar is a Southern product and the Ways and Means Committee is dominated by Southern men? It certainly looks like that. If a Northern interest is to be destroyed because it is alleged to be controlled by a combination of capital, let the blow fall impartially upon all interests similarly situated. Unless this is done the sectional purpose of the Mills bill will be emphasized, and Northern manufacturers will have notice served on them by the South that their interests are to be sacrificed, while Southern interests are to be protected.

But even admitting that the lumber trust, if one exists, can be broken up by this legislation, will that prevent the formation of a Canadian lumber trust; and if not, what will be gained by the operation? Of course if these trusts are so used as to affect interstate transportation they can to that extent be regulated, but for Congress to undertake to prevent the combination of capital in the States will be as futile as it will be ridiculous. Indeed, it is almost as absurd as the staple and stale statement from the other side that the tariff promotes trusts, when it is a well-known fact that trusts exist in England and that they also exist in this country for the purpose of controlling the production and sale of certain articles on the free-list.

MILLIONAIRE LUMBERMEN.

When the advocates of free lumber tire of talking about lumber trusts, they invariably begin to declaim against the men who, according to their statements, have made great fortunes in the lumber business, and this, too, is given as a reason why lumber should be put on the free-list. The gentleman from Minnesota [Mr. WILSON] has been especially severe in his strictures on millionaire lumbermen, and the gentleman from Ohio [Mr. OUTHWAITE] has presented what he claims to be statistics from the census of 1880, showing the immense profits which come to those engaged in lumbering. The most casual examination will convince any unprejudiced man that the statistics are utterly unreliable; but nevertheless they are urged as a reason for free lumber. So far as New England is concerned, the profits to those engaged in the lumber business have not been excessive, and the talk about millionaire lumbermen is absurd. That some men have made fortunes in the lumber business admits of no doubt, but such men would make fortunes under almost any circumstances. Fortunes are being made every day by shrewd and bold operators in products now on the free-list, such as coffee, and there are also millionaire operators in sugar, a protected industry. If the millionaire lumbermen are to be dealt a blow because they have accumulated fortunes, why withhold the blow from the millionaire sugar men? Perhaps the Southern men, who control the Committee on Ways and Means, will answer the question.

THE MARKETS OF THE WORLD.

Eloquent appeals are made on this floor in favor of opening the markets of the world to American products; but when that time comes the mills of Manchester, Dover, Great Falls, Rochester, Suncook, Franklin, and other places in my State will be as silent as the linen mills of Ireland are to-day, and the "hum of countless industries," now heard on the banks of the Merrimac, will be as silent as the grave. A "free and open market" means competition with England, China, Australia, and Canada. It means either that they will possess our markets and destroy our industries, or else that our mechanics and workingmen will accept the wages and live in the same manner that the people of these countries do. It means that the prosperous and thrifty mechanics of New England, who own pleasant homes and have many of the luxuries of life, will be reduced to the condition of the workingmen in some of the large cities of England, where, according to English testimony, not a single workingman or mechanic owns the house which covers his head. There is no other alternative, however cunningly the Democratic party may try to make it appear otherwise.

THE DEMOCRATIC POLICY.

Mr. Chairman, I took occasion to speak on this floor a short time ago for the industries of New England in a general way, and desire now to simply put myself on record against this provision of the bill, which I consider one of its most mischievous features. I trust the House will

reject the proposition and allow the tariff on lumber to remain as it is, but there is little to encourage that hope, as the Democratic policy seems to be to despoil the section of the country which furnished the men who fought the battles of the Union cause, and which give Republican majorities to-day.

WHY REMOVE THE DUTY?

Under existing rules of duty our American lumbermen are fairly prosperous, wages are good, and lumber is being sold at a reasonable price. Why strike down this industry by removing the duty? Why destroy the prosperity of honest and industrious artisans? In my district there are towns which almost entirely depend upon this industry, and which have grown with marvelous rapidity. Money has been invested in the belief that the tariff on lumber would remain. Why take it off?

The proposition is a grave one. It is fraught with infinite danger to a large and growing industry, and if the blow now aimed by the South, and assisted by the votes of Northern men, is destined to fall, the day of reckoning will come when the voice of the people will be heard above the din and clamor of revenue-reform advocates; and that voice, potent with the energy of a just cause, will in time create a sentiment which will strike down those who betray American interests into the hands of European and Canadian capitalists.

The Tariff.

SPEECH

OF

HON. WILLIAM D. OWEN,

OF INDIANA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, May 15, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. OWEN said:

Mr. CHAIRMAN: Can a national industrial system assist the prosperity of the people? This is the issue before the American people at this time. We ask for a continuance of the American policy. Gentlemen on the other side of the House denounce its operation and ask its overthrow.

England furnishes an important example of the influence of a national industrial system. For four hundred years she operated a protective tariff and cherished every industry within her borders. Considering the age during which it was operated it is the highest tariff in history. In time it made England the world's producing nation.

A political party sought to break down the system, but the bluff, practical Englishman had a head of his own and saw that if he manufactured everything he used and sold his surplus goods abroad he was getting rich, but if he bought his goods from other people, every dollar expended was a dollar taken from his own shores, and in the end he would be the poorer. He was wise enough to understand that a people must be able to control their own markets before they can capture the markets of the world. He saw if he paid $325 for a machine when he could purchase an imported one for $300 that, apparently, he lost $25; but when he saw that $200 of the money was expended in wages to men who worked through its various processes of manufacture, and as $100 of that $200 wages was over and above what would be received in a foreign country, his country was really profited $75 by the manufacture of that machine at home. So for four hundred years he resisted the pleas of the free-trader, and as a result grew a manufacturing and commercial development under the influence of which England dominated all nations, became the mistress of the seas, and extended her territory until the sun never sets on her dominions.

Her distinguished statesmen in the House of Lords proclaimed that when a nation developed manufactures to a competitive standard with her, they should flood goods upon that people below their cost price; and when their industries had been crushed and their manufactories driven into bankruptcy she could then advance prices and recoup losses, and in time make a large profit. This thing Lord Brougham dictated to the House of Lords, and this thing English manufacturers really did with us in 1815. Our industries having prospered wonderfully under the protection of 1812, it became necessary within three years for England to take steps for their overthrow, and as a result of this combine of English trusts on American industry, 65 per cent. of our factories were thrown into a condition of bankruptcy.

When the protective policy had so skilled and trained the manufacturers of England that they could produce goods cheaper than any other people, it was found other nations were profiting by the example. Then it was England first declared protection to be illiberal and unfair; then it was it imposed heavy taxes on the people; then it was it hindered manufacturing industry; and then it was, as a "great humanitarian nation" that never had any other mission than to serve in an unselfish fashion the interests of mankind, she proposed to abolish the protective policy, and in the generous comity of universal love would count of one blood all nations, and proceeded to inaugurate a free-trade system. Her protection was abolished in 1846, since which time she has spent her spare energies in warning other nations against the prostrating effects of protection. She has especially warned us that this industrial system is not adapted to us, and last year her Cobden Club, through its honorary members in this country, distributed twelve millions of her free-trade pamphlets amongst our people.

The undisputed greatness of England was won, not by the prowess of arms, but by that greater prowess, an active common sense in business affairs.

Alongside of England nestles Ireland with a civilization older than England. Her round towers tell of an industry that was ancient enough to have ruins when Cæsar ruled in Rome. Even after the tyrannous confiscations of her best estates by Cromwell and the impoverishment of her people, so great was her recuperative force that by the co-operation of the field and workshop within one hundred years her farms blossomed and prosperity abounded in her workshops. When her surplus products were again shipped abroad they attracted the rapacity of English statesmen, who declared that Ireland must cease to manufacture and become a food-farm for England. Accordingly the "restrictive trade laws" were laid on that land, and free-trade ultimately forced upon her. Within twenty-five years almost every vestige of her industry had disappeared, Irish linen alone remaining. She was reduced to an agricultural condition. Ireland repeated the history of the ages that no purely agricultural people were ever prosperous or rich.

The field and the factory are each interdependent. Each has a want the other must daily supply. Divided, the farmer fails and the factory hand becomes a pauper. United, they prosper; and out of this union come wealth and happiness. If England had permitted Ireland's protective policy to remain it would not have been possible for landlordism to dominate that land and reverse the order of population and surrender as emigrants to America the flower of her sons.

There they stand side by side, England and Ireland. England, dominated by her protective policy at home for four hundred years, and forcing free trade on Ireland. The one the pauper among nations, the other the prince among empires.

The history of England and Ireland finds parallel in the protective and free-trade or "tariff-for-revenue" eras in this country. Every season of protection has been one of active business, increased wages, and growing wealth, and every free-trade or tariff-for-revenue era has been one of declining wages, of receding wealth, and business depression. To-day, after a quarter of a century of what our friends call a robber-tariff, the day's wages of a workingman will buy more goods than in any day of the world's history before.

Up to 1860 the entire wealth of the United States was but $15,000,000,000; to-day it is $50,000,000,000.

Let us get some conception of the large ratio of benefit that labor has received under this increase of wealth, for this estimate does not include his capital; an employed day is his capital. The laborer's capital has increased from 80 cents a day to $1.20 a day. This is the average wage. It has increased 85 per cent. We can not compute the value of his increased capital as we can of merchandise, but his returns from his capital are just as plain. His return on his increased capital is $245,000,000 a day, or $1,100,000,000 a year more than in 1860. The average return on capital in 1860 was 4 per cent.; in 1885 it was 4⅞ per cent. The average day earnings of labor in 1860 was 65 cents; in 1885 it was $1.20. The returns from investments have increased 12 per cent., and from labor 50 per cent.

PURCHASING POWER OF A DOLLAR.

I addressed a letter to John W. Wimer, Burnettsville, Ind., who has been a merchant since 1856, and asked him to give me from his books the price of certain domestic articles in 1858, and the price of the same quality of goods at this time, I naming the articles. I submit the list and prices:

Articles.	Worth in 1858.	Worth in 1888.
One pound Rio coffee*	$0.16⅔	$0.18
One pound good brown sugar	.08½	.06½
One yard prints (calico)	.12½	.07
One yard wide sheeting	.10	.07
One yard jeans, 6 ounce, wool filling	.65	.40
One yard flannel, 4½ ounce, twilled	.40	.33⅓
Five-pound blanket, all wool	5.00	4.00

*See the reason for the advance in price of coffee elsewhere.

The price of the necessaries of life is 30 per cent. cheaper in Indiana than they were in 1858. After twenty-seven years of a protective tariff the laborer gets his goods 30 per cent. cheaper than under free trade, and also gets higher wages. The result is, he lives 80 per cent. better under protection than he did under free trade.

The Mills bill is a medly of protection, free trade, and politics, con-

structed without reference to the general welfare, and with the sole purpose of getting votes enough to pass it. When I gaze on it, and then tune my ear to the low gutteral growl of the special pleas known in politics as Democratic harmony, I am reminded that Hancock uttered a Democratic truth when he said the tariff was a local issue. There is my friend from Ohio [Mr. SENEY], who is dreadfully displeased with free wool. He says it is ruinous to the farmers. Mr. SENEY'S district is full of sheep. Senator MCPHERSON wants free trade throughout the nation, but says it is a necessity to protect the porcelain and pottery worker of New Jersey. Mr. PUGH, of Alabama, another leading Democratic Senator, is a bold reformer with an iron-ore attachment. He strikes for free trade except in Alabama; there he says iron must not be touched. He says it would cripple the development of one of the greatest industries in the United States. Mr. DOUGHERTY, of Florida, demands a high tariff to protect his orange constituents. A request has just come from the 35,000 lumbermen of California which puts the Democratic members as well as the Republican members of that State for the protection of lumber. Mr. TARSNEY, of Michigan, is an earnest advocate of the bill, but he proposes to put lumber and salt back on the protected list.

The gentleman from Maryland [Mr. RAYNER] demands reductions on iron, but insists with vehemence that the tariff on glass must not be "cut down so much." There seem to be glass factories in his district. My friend from Virginia [Mr. O'FERRALL] pleads eloquently for the bill, but when Judge KELLEY says it means free coal, my friend forces the chairman of the committee [Mr. MILLS] to his feet to give public pledge that if the bill is interpreted to mean free coal he will have it changed. The 75 cents a ton on soft coal therefore stands undisturbed by agreement. The Rhode Island woolen cloth manufacturers want the tariff taken off wool, but want the manufactured article protected to the fullest extent; while BERIAH WILKINS, who has the largest Democratic majority of any Ohio Congressman, demands an increase in the wool tariff. What a mix they are in!

Mr. Chairman, there is no middle ground on this question. Such a claim is a mere pretense. A man is a free-trader or a protectionist. If a free-trader, as far as the revenue is raised by tariff, he wants it levied without reference to protecting industries. If he is a protectionist, he wants it levied with special reference to its industrial benefits; and when an industry is self-supporting, or experiment has proven it incapable of development, he withdraws the protection. The lines that separate them are as widely separate as the poles and as clearly defined as any different policies of government. The tariff reformer is a politician, a citizen who is not anchored to any governmental principle. He is a speculator on political chances. He is an industrial mugwump, who, when you scratch his back you find a man who reforms every one else, but wants to protect the industries in his own district.

For me to defend and protect an industry in my own district, and support the free-trade policy against other industries elsewhere, shows me as really acknowledging the value of protection, but that as a politician I am willing to join my party in a crusade against others. It is of seed such as this that trouble is brought to governments.

WHOSE FAULT?

More than $100,000,000 of surplus will be in the Treasury vaults on the 30th of June. The piling up of this money is a crime. The party now in power, charged with all the duties of governmental administration, has neglected its promises to the people, and stands after five years of control in this House, in which such measures can alone originate, without having reduced taxation one dollar. Their proposed measures on this subject have been so partisan in character and unfair in operation that they did not dare call a caucus to put them through as party measures. Now they come on to this floor and say that their measures have not passed heretofore because of opposition from this side of the House. When 153 tariff votes count more than 168 free-trade votes, then can we defeat your passing a bill. You have 15 majority in this Congress. You had 43 in the last, or Forty-ninth, Congress, and more than 70 in the Forty-eighth Congress, and yet you charge us with defeating your bills to reduce the revenues. It is an amazing spectacle to see the Democratic side of this House confess itself a majority of incapables. There has not been a day in these five years that an equitable measure of tariff reform could not have been overwhelmingly passed.

There has been a steady increase in surplus since the 4th of March, 1884. There were nine millions of available surplus when Mr. Cleveland became President. It is a well-known fact that not a dollar was paid on the national debt for eleven months after he went into the White House, and a resolution had ultimately to pass this body demanding the Secretary of the Treasury to use the surplus on the national debt before a dollar was paid. For twenty-four years his predecessors had taken the available surplus in the Treasury, and each month applied it on the debt.

On the 30th of June, 1887, all the national debt then due was paid. Since that time the surplus has gone on increasing. In the mean time the people are paying the oppressive gold-bearing interest on the bonds due in 1892, amounting to millions of dollars each year, when there is an express provision of law which declares that when all bonds due are paid the Treasurer may go into the market and purchase the unmatured bonds, and thus save the people the interest, and put the stagnant surplus into circulation. This is the right England reserves on her bonded debt, and so stipulates in her laws.

The President gives to light but one reason for his refusal to execute this law. He said it was passed as an amendment to an appropriation bill, and he has some doubts as to its legality, but the best lawyers in the land have no doubt about it; his Secretary of the Treasury has no doubt about it; his Comptroller of the Treasury has no doubt about it; the Treasurer of the United States has no doubt about it; this House has no doubt about it, for the other day, when we had up the bill to redeclare that this is the law, it was disclosed that every member recognized it as the existing law. I am, therefore, forced to believe the gentleman from Ohio [Mr. MCKINLEY] was right when he said the surplus was piled up in the Treasury for the purpose of tariff ammunition.

The Democratic party has been in power in this House since 1874, except in 1881 and 1882. In each campaign the issue has been a reformation of the tariff and reduction of the revenue, and yet in all these years they have not reduced the revenue one dollar or passed any general tariff bill. The only reformation and reduction we have had in these fourteen years was passed in the Republican Congress in 1882, when we made an estimated reduction on the tariff of $44,000,000.

Why has not the Democratic party done something? At last forced to take some action on the tariff, they have refused to execute the law for the redemption of the Government bonds, to the end that the people may believe that so much idle money can only come from unnecessary taxation, and therefore demand tariff reduction.

AMERICA OR EUROPE, WHICH?

It is claimed that we can manufacture more than we can consume. We have the machinery and materials and can manufacture almost every article we need and millions of surplus for export. Notwithstanding this we imported $700,000,000 worth of goods last year, and every $2 worth makes an American laborer lie idle one day. A factory closes because somebody puts goods in a store-room across the street and sells below its price. But the American is as smart as any business man in the world, and if he can not get a good profit he will be content with a small one. He consequently reduces his price to that of the foreigners. Neither one of these men is going to run his business at a loss. Ordinarily men do not do business for the purpose of bankruptcy. Now, if the foreigner cuts his price again, the American must meet it or he can not sell his wares. But if that new price is below what the American can do the business for he must retire from the field and close his factory.

ILLUSTRATION.

The Spiker-Harrison Company is not going to keep the price way up and let Studebaker come in with a lower-priced wagon and capture the market. The company will put its wagons at the lowest possible living profit first; but if Studebaker can sell the same quality of wagon for $10 less the Spiker-Harrison Company must go out of business. Seven hundred millions of dollars' worth of foreign goods sold in America last year was because they could be brought here, pay the import duty and the special commissions, and yet be sold cheaper than the American goods. In the presence of the price at which these goods could be imported and sold our merchants were helpless, and went to the wall. If this can be done when these goods must pay an average tariff of 40 per cent. to come into our country, what would be the result if the Mills policy is inaugurated?

If such misfortune is in store for us, these gentlemen will early gaze on the ruins of an industrial system the most patriotic and prudential the world ever saw. If to the dictates of a party theory that ought only to be a reminiscence of its past, this Mills bill proposes to sacrifice the commercial possibilities of our country and the dignified independence of our laborers, it will be painfully demonstrated that Mr. Cleveland uttered a great truth when he said, "It is not a theory but a condition that confronts us."

A CONDITION.

We have thrown into juxtaposition two conditions, one European, the other American. One is old, sullen, despotic; the other fresh, untrained, and liberal. In the overcrowed marts of Europe human life is cheap. Man is only a machine. It is the old days of Lycurgus, when to the question, "Why was man created?" the answer was, "For the state." In the other, our country, the state was created for the man, and as a citizen he is a sovereign. It is the country of Washington and Lincoln where laws are crimes if not made to help the citizen on his way. The one is a land of caste, where the masses are oppressed, where they are strangers to hope and only ask to live. In the other, the plow-boy expects to own the farm shortly, and the clerk means to be the proprietor of the store; a land where there is no aristocracy but brains, no wealth but vigorous manhood, and all he asks is a fair chance in the race of life. The one is a mummyized civilization that has existed since caste ruled, and labor meant serfdom and ignorance. The other is American—a new incarnation, the instinct of honest aspiration that asks to develop the country's resources and make her self-sustaining; that says the man at the office or forge or in the mine shall labor, and from his wages his wife shall be able to pass in society, have a comfortable home, his children receive an education, and his son by

dint of tact and toil may become the Chief Executive of the land. The success of the one means for us to deteriorate and ultimately drop into the helpless groove of the past. The victory of the other means all that is glorious in national life. It is a condition that confronts us, and I am in favor of the American condition.

FILIBUSTERERS AND THE LOYAL TAX.

We have recently witnessed the defeat of the refunding of the direct tax. When the opening of the rebellion found the nation penniless a direct tax was laid upon all the States for money to prosecute the war. The loyal States promptly paid their assessment, amounting to $16,000,000. The rebellious States did not pay theirs. There has been no disposition since the war to force these States to pay their proportion, and equality in the sisterhood of States required that the sixteen millions should be returned to the loyal States. With the money in the Treasury, what loyal man will say it should not be refunded, and how can any rebel that has become loyal oppose it? But the gentleman from Alabama [Mr. OATES] with his contingent blocked the business of the House for eight days.

This splendid Alabamian drove the party into a caucus and snapped the whip of the solid Southern vote, which is a majority, over the party head, and the next day on this floor voted every Democrat except one just as he had planned. They had balked a little, as is frequently done, but the master brought them to time in the end as he always does.

THEY DO NOT TOUCH THE SURPLUS.

We need appropriations for coast defenses. All confess we need a navy and a foreign mail service, and above all we need the passage of a proper pension bill for our soldiery and the repeal of the arrears act, and not one of these measures will receive attention. All are to be ignored in order to create a surplus so that a demand may made for the reduction of the tariff.

REDUCTION OR DEVELOPMENT?

It is estimated that if we are to have no pension legislation we can reduce the annual revenues from seventy-five to one hundred millions of dollars.

We have an expansion of territory covering industrial possibilities capable of producing nearly every article needed in our civilization. Whoever seeks to enlarge all this is a good citizen. In their development is the strength of our nation and the prosperity of our people, and I am for that man because he is for his country. When one asks that we shall sell in the world's dearest market and buy in the cheapest he has so far lost sight of the peculiar condition, and also of the overcrowded marts of the Old World, that he would place us where in a large measure we would buy everything, and have no market in which to sell our wares. He would remodel our industrial system, fill it with stagnation and poverty, and call it reform.

We had a right to suppose the President's message would be so conservative in suggestions and so patriotically active in American affairs that it would quiet the anxiety in business circles, and stimulate the volume of trade, but instead thereof he has quieted the anxiety in English circles, and stimulated the volume of English trade. Every English journal has complimented the President's message, and states that while he asserts that he is not a free-trader he uses all the arguments known to free-trade.

In the last analysis of livelihood man is driven back to mother earth, and the surplus unemployed population must take to the farm for a living. With an increased number of producers in the country and a decreased number of consumers at the factories, and the fatal decline of prices that will follow, the farmer will realize that the protection on the factory that gives him a market is as much his protection as it is the factory's. The free-trade policy is, each for himself. The American policy is, each for all.

MR. MILLS INCONSISTENT.

The distinguished chairman of the committee says not protection, but coal, steam, and machinery are the cause of high wages in this country. If this concrete trinity rules wages, then give us plenty of this coal, steam, and machinery. Why not strike the duty from coal and break its infamous trust? Why not shovel it, free, into the furnace, so as to create the steam which runs the machinery? Can the gentleman afford to go before the country with this triune combination, which he claims demonstrates the valuelessness of protection, when the first factor in that combination, coal, does its business by aid of a protective tariff, and while the last factor, machinery, is in almost every case a protected article, and when the middle factor, steam, only exists as a useful quantity, as a result of the union of the other two!

POLITICAL ECONOMY.

Whenever from a given amount of manual labor there comes a largely increased product you have increase of value of the labor. When, therefore, industries are systematized and production is in its best form the average wage is high but the cost of the product low. This result is as old as political economy, but we are the first people who have ever approached its realization. The time is rapidly coming when America will, while paying the highest wage in the world, sell to her consumers the cheapest-priced goods in the world.

American cutlery, whose day laborer gets from $1.25 to $2.75 per day, is now selling in English markets, and driving out the Sheffield cutlery, whose workmen get less than half the American wages. Heretofore statesmanship has given itself to diplomacy and war, but has now in America given itself to industry, and labor is learning that it has better victories than war, and better fruits than our diplomacy.

With our superior facilities for production we could, if our workers would accept the English scale of wages, enter the markets against the world. Already in this debate has the distinguished English free-trader, Mr. J. E. Cairnes, been quoted, but I will quote again. Discussing the rate of wages in this country he says:

> How happens it then that, enjoying industrial advantages superior to other countries, they are yet unable to hold their own against them in the general markets of commerce?
>
> What it means, and what it only can mean, is that they are unable to do so consistently with obtaining that rate of remuneration on their industry which is current in the United States. If only American laborers and capitalists would be content with the wages and profits current in Great Britain, there is nothing that I know of to prevent them from holding their own in any markets to which Manchester and Sheffield send their wares.

At last the cat is out of the bag. According to Mr. Cairnes—and he is an authority as great and as distinguished, let me say it with all due deference, in my opinion as the gentleman from Texas—according to Mr. Cairnes there is nothing to prevent us from holding our own in any market to which Manchester and Sheffield send their wares, provided our capitalists and laborers are content to take the wages and profits paid and received in Great Britain. Could this proposition be more tersely stated? It can be and it is more tersely stated by the same author in the same chapter. Speaking of the inability of America to compete with the pauper labor of Europe, he says:

> They can not do so and at the same time secure the American rate of return on their work. The inability no doubt exists, but it is one created, not by the drawbacks, but by the exceptional advantages of their position. It is as if the skilled artisan should complain that he could not compete with the hedger and ditcher. Let him only be content with the hedger and ditcher's rate of pay and there will be nothing to prevent him from entering the lists, even against this rival.

Now, that is the truth about the whole matter. The American workman can compete with any artisan in the world. Give them both the same wages and the American will drive him out of the field. We can to-day take the English markets if our men will be content with English wages. Pass this bill and the American workman must come in unrestricted competition with English workmen and submit to English wages, or starve.

THE TWO WAGE-RATES.

I asked our colleague, Mr. WEST, of New York, who is there known rather as the Ballston paper manufacturer than as Congressman, to furnish me the list of wages paid in his mills, and also, if he could, give me the English wages in like mills. "Why," he answered, "I have paper mills in both countries, and," pointing to an addressed envelope, "there is a letter to my son, who is manager of the mills in England." Here is his scale of wages, written by his own hand, even the reducing of the English money to our standard, so I could better understand it. He says he pays—

Occupations.	In America, per day.	In England, per day.
Masons	$3.50	$0.93
Machine-tenders	2.00	1.00
Engineers	1.50	.75
Carpenters	2.50	1.00
Helpers	1.50	.66
Machinists	2.50	1.20
Teamsters	1.50	.66

I then asked our distinguished fellow-member, who was also a wage-worker in other days, if I could safely use this list as representing the general wages of the two countries. He answered, "In some cases they may be higher or lower, but that list represents in all occupations the average wages of labor in both countries."

I next inquired the difference in the cost of living. He answered, "If they lived the same way the cost here would be 5 to 10 per cent. the higher." How do they live? "They have a bare subsistence," he said, "and they are without comforts and are in wretched poverty. Usually the mother and children must work out to help support the family. Here the laborer has substantial comforts. My per cent. of profits is about the same in both countries, but I prefer to do business here, for our laborers live like citizens; over there they live like serfs."

POPULATION AND WAGES.

Let us examine the declaration that the cause of low wages in Europe is the overcrowded condition of their great centers. New York is our overcrowded center, and yet it pays the highest rate of wages in this country. Throughout our country the more overcrowded a section the higher the rate of wages.

But gentlemen exclaim, "If protection creates high wages why higher wages in New York than elsewhere; has New York more protection than elsewhere?"

Well, yes, New York has more protection than elsewhere, as there is a larger gathering of producing interests at New York than elsewhere. The aggregating into one center of those forces which increase

wages will in that locality tend to stimulate the wages above the ordinary level. It is a folly assumed by no protectionist that protection alone is the arbiter of wages. A thousand forces, seen and unseen, play with accurate and important value about this pivot, around which centers humanity's struggle for subsistence.

Were one-half of the men in Indiana, by some fatal stroke, to die this night, wages would advance to-morrow, and continue to advance until common labor would be worth $2 per day, and so remain for a time; but it would not be accurate to say that the wages of Indiana were fixed by death. It would be the largest element in creating the existing rate, but not the sole one. If no one should die in that State for five years, and no one remove, there would still be a rate of wages. As with motives in men there is always a master, so in this sensitive and sentient index of human prosperity there is a greatest influence, and that master power which, superior to all others, lifts our breadwinner clearly beyond and unapproachably above the toiler of other lands is his protection by the tariff.

PROTECTION THE LABORER'S FRIEND.

The protective system demands duties on imported goods high enough to make sure of preventing ruinous competition with our people by the poverty wage-workers of Europe, and it rests on the broad principle that all industries in the United States—agriculture, manufacture, transportation, and all other employments—are so interlocked that they can not be separated, the prosperity of every one of them depending upon good living wages for all. Protection is the keystone of the American industrial arch.

Such earnings can not exist if the products of the poverty wages of Europe are permitted to enter into competition here. Such competition must come if the tariff on imported goods is reduced to conform with the theories of our revenue reformers. It should be understood that under present conditions every act of Congress to regulate or revise the duties on imported goods is a law either to protect or encourage American industry and the wages of American workers or a law to imperil or diminish them. We know what protective duties do for their encouragement, and for the other side we have only theories, with the condition of the wage-worker of the countries living under free trade as living illustrations.

In other countries a people who have no comforts of life and subsist on the bare necessities must, in the degrees of humanity, be rated as serfs or slaves. There can not be any general progress among any people who are "only able to live."

The progress possible to a people is in the gratification of tastes and aspirations in things above food and clothing. The saving or possible saving from wages is the best measure by which to estimate the improvement they will make, and the possibility of saving becomes a stimulus to save and to grow into a superior character.

A man earns double as much in America as in England and the purchasing power of a dollar is very nearly equal. The total cost of supplies for a family in America is about 5 per cent. more than in England. The official statistics show that the price of ordinary family supplies are not more than 5 per cent. in the excess here. Now you do not comfort a worker greatly to tell him that if he will vote for you he can buy for 95 cents what now costs him a dollar, especially if you "tell the truth" that at the same time instead of getting a dollar for a day's work he will get 50 cents. He is too good at figures to surrender 50 cents in order to save 5 cents. Now, this 5 per cent. more that a man's family costs him here than in England can be paid for the entire year by the extra American wages he receives in two weeks. That is, in two weeks' work the amount of wages he receives above what he would get in England pays the 5 per cent. extra expenses for one year. For the other fifty weeks in the year he can save his extra wages and still furnish his family the same things that it would require the whole of his wages to supply if he lived in England. In other words, if the families live just the same, the American wage-worker will at the end of the year have fifty weeks of the extra American wages in his pocket. The English workman will not have a dollar.

Because these things are true men leave Europe and come to America to live; because they are true men never leave America and emigrate to Europe. This man, on whose face stands the sweat of toil, and across whose muscle fate has laid ten hours of work a day, because they have hearts that love and home to rear, and aspirations to gratify, never emigrate the wrong way. They have coal, and steam, and machinery over there, the MILLS wage regulator, but they leave it all and come here, where the Government has written protection across the hand of toil. The instinct of these men is greater than an argument. Their reared homes, and schooled children, and clothed families tell the story of what the American condition is better than tongue can speak it.

As no progress can be made toward a betterment of the condition, except on the surplus of wages above the absolute necessities of family, so we must conclude that the actual condition of our people is as far above that of other countries as is the ratio of their wages above what they get in other countries.

The average possible earnings of a wage-worker in America are twice as much as in England, not that these extra earnings are always put in a savings-bank or a home; but it means that this surplus above Europe is spent in things that lift to a higher plane in life the American citizen.

Free-traders are compelled to acknowledge that free trade is a necessity to a nation of slaveholders because slavery is in opposition with industrial development. Hence our Southerners have always been free-traders. Therefore the amount of protection you extend to free labor becomes a measure of the laborer's progress.

HOW IT WORKS.

As a confirmation of all this let us raise the curtain and look on one scene. It is a warm summer Sunday evening in any town in America. Down the streets the people are moving. It is a stroll of pleasurable recreation. Lawyer, clerk, mechanic. Neither by the cut of the hair, or the shaving of the beard, or the fit of the clothes, or their quality, nor by the style of the man, nor his conversation, can you tell which is lawyer, or clerk, or contractor, or laborer. They are citizens of a common country. It is the only country in the world where such a scene can be witnessed. Conditions which permit such scenes as this had better not be tampered with.

WOOL.

The central feature of the Mills bill is free wool. At one sweep every vestige of protection is stricken from wool and the fleece put on the free-list. It is claimed that free wool is the backbone of the bill, and if it should be omitted, its distinguishing character as a Democratic measure would be gone.

Now, the entire revenue from wool last year amounted to but $5,000,000. That is about 11 cents to each citizen, and yet our friends take a spasm every time they see a sheep. Carolina and Mississippi can not endure a sheep. Calhoun always detested them, and John Randolph said whenever he saw a sheep he wanted to kick it. Until I read the statistics, I concluded the tariff on wool amounted to about $700,000,000 a year; but I find that it is $5,000,000, and amounts to 11 cents to the citizen. What is the cause of this antipathy to wool? It is not the tariff there is on it. It can not be that it is because they want the poor man to have a free blanket, for they would also want him to have a free sheet and a free shirt, and whoever heard a demand for a free sheet and a free shirt? The hours of Democratic oratory that have been spent here in pitiful pleading for the poor man's blanket have been innocent of any request for free cotton, for a free sheet and a free shirt. Why does this tariff reform in behalf of the poor man's covering stop at a blanket?

What reason is there for putting wool on the free-list that does not apply as well to coal and rice? Why shall wool go on the free-list to relieve the humble home from the cost of living, and the sugar tariff be retained? The tariff on wool is five millions a year; that on sugar fifty-eight millions a year. Would not free sugar in a larger measure lessen the cost of living in the humble home? Do sugar, rice, iron ore, and coal have greater claims for patriotic care than wool?

If this bill is passed our farmers must compete with the wool from India, South America, and Australia. The annual clip is 1,000,000,000 pounds. A boy and a dog may tend a thousand sheep the year round on their hillsides, which are unfit for cultivation and not worth 50 cents an acre. Before such a competition American sheep would disappear.

It has been suggested that the value in raising sheep is in the mutton. Why, then, when the wool tariff was reduced in 1883 did 6,000,000 sheep disappear in three years and the wool-clip shrink 43,000,000 pounds? When wool was free sheep were worth 50 cents apiece, and now they are worth $3. The capital is the sheep, the fleece is the interest-bearing bond, which is clipped every spring. Pass this bill with its free-wool and its free-animal importations and how long would it be until the slaughtered 25-cents-a-head sheep of the La Plata, in refrigerator ships, would be landed at $1 apiece in New York? I quote the figures showing the extent of this labor and the labor and capital employed:

For the year 1884 official statistics show:

Number of sheep in the United States	50,626,626
Pounds of wool-clip	368,000,000
Value	$91,168,000
Pounds of raw wool imported	87,703,931
Value	$13,593,299
Value of manufactures of wool imported	51,484,872

The statistics of 1880, as to domestic woolen manufactures, show:

Number of establishments	2,689
Capital invested	$159,091,869
Hands employed	161,557
Wages paid	$47,389,087
Value of product	267,252,913
Cost of material used	164,371,551
Value of sheep	119,902,709

These statistics do not include the value of lands, barns, sheds, and implements employed in sheep-raising, which is estimated at $408,000,000.

Sir, more than 1,000,000, or nearly one-twelfth of the voters of the United States are flock-owners, and the wool product is more valuable than pig-iron and than the combined output of our gold and silver mines. It exceeds in value our unmanufactured tobacco by $34,000,000, is of one-half the value of our coal mines, while woolen manufactures exceed in value those of cotton by more than $50,000,000.

The above table shows the value of the product at two hundred and

sixty-seven millions; the wages paid at forty-seven millions. Of course we all understand that in manufacturing statistics the wages estimated are those paid in the factory where the goods are made. This is termed the last process of manufacturing. The cost of material used is $164,000,000. This is the raw wool, the coloring, and a thousand other things that are used in the various processes of manufacturing, and all the labor that goes into the goods to prepare them for the last manufacture. The raw material has thus, by the processes in the first stage of manufacture, reached a value of $164,000,000 when it comes into the factory for its final manufacturing for consumption. In this factory $47,000,000 of labor are added to it, and the product when put on the market yields $267,000,000. This makes the raw goods and the labor placed upon it $211,000,000 and the product $267,000,000. There is an invested capital of one hundred and ninety millions, for which legal interest must be allowed, and we have 80 per cent. for goods and labor and 20 per cent. for the capitalist.

Wool is purely an agricultural industry. The President belittles it because the farmers have but from twenty-five to fifty sheep on an average. That is a special reason why we should have an interest in it. I would care very little if the sheep were in the hands of a few vast herders. The industry thus spread among the farmers gives the largest returns for the money invested of any other farm venture, and is capable of expansion until in a few years we can grow every pound of wool that we use.

We had 1,263 woolen mills with a capital of $30,000,000 in 1870, and they employed 43,000 people, and paid them $10,000,000 in wages. Ten years afterward we had 2,689 factories with $159,000,000 of capital and 161,000 employés, and $47,000,000 wages paid. The free-traders got up a pressure against wool in 1883, and the Republicans foolishly yielded and reduced the tariff. But for that fateful folly we would, in a few years more, have been growing all the wool used in this country. This very year by the ending of next June we will have imported of wool and woolen manufactures $65,000,000, every dollar of which goes to foreign wool-growers and manufacturers. Would it not have helped us if it could have been paid to our farmers and workmen?

Hon. George L. Converse, a Democrat, formerly a Representative of Ohio, in a recent address in this city, speaking of this industry, said:

> The production at home of wool and woolens, in quantities sufficient to supply the wants of the American people, is necessary for our defense in war and our independence and comfort in time of peace. Successful military campaigns can not be carried on without woolen clothes for the soldiers. More soldiers die from exposure than are killed in battle. Neither of these great industries, once destroyed, can be again restored within a short time. Their restoration would require many years, and the men who by legislation would knowingly destroy them here and remit them to the keeping of foreign nations can not be classed among the friends of the Union.

Our friends urge the necessity of competing with the foreign markets. I append an extract from the speech of my colleague [Mr. BROWNE] upon the value of the foreign market. He says:

> We are told that we need above all things to capture the foreign markets for our manufactures of wools; that to get these markets we must produce these goods more cheaply than they can be furnished by any other manufacturing nation. This means that the cheapest possible labor and material must be employed in these manufactures, for these are the chief elements of their cost. Can we afford to obtain these markets at such a cost? In the struggle this policy invites with the cheap wools of South Africa, South America, and Australia, and the cheap wages of Austria, Belgium, France, Germany, and Great Britain, we may not only fail to secure this wider market, but lose our own. And what are the markets of the world, and how do they compare in value and extent with our own? The five countries exporting woolen goods with the value of their exports last year are as follows:
>
> | | |
> |---|---|
> | Austria-Hungary | $10,935,541 |
> | Belgium | 15,381,328 |
> | France | 71,702,919 |
> | Germany | 51,701,216 |
> | England | 113,048,557 |
> | Total | 262,769,561 |
>
> Of the above the United States bought $45,000,000. Deduct this, and there is left of the world's market $217,000,000, while our own market is worth annually quite $300,000,000. Our home market is worth more, by nearly one-third, than the entire "world's markets, if we could capture them all."
>
> Protection has made our market for wool and woolens one-third larger than that of the markets of all the other countries combined. Wisdom suggests that we strengthen and widen this American market until it becomes in fact the best market of the world.

Last year I had a suit of clothes made, for which I paid $25, and I had occasion to ascertain how much I was being ruined by this robber tariff that the farmers were holding over me. There were 5 pounds of wool that went into the suit of clothes. The tariff on that wool was 10 cents a pound. If the duty is added to the price, then the increase of price of my suit is 50 cents. Now, if the duty was off and the 50 cents was not in the cost of the suit, how much cheaper could I have bought it? Every business man knows that a reduction of 50 cents in the producing cost of a $25 article never affects the price. The maker of the cloth, the mechanics, and the dealer absorb all such fractions.

A nation is not assuredly great that can not clothe and feed her own people. Yet this bill proposes to repeal the tariff where it protects one of the fundamental industries of the country, and flood our markets with the wool of South America, India, and Australia, and the consumer will not be benefited by it one cent, and the manufacturing dealer will receive all of the 50 cents.

Likewise, these gentlemen demanded a free breakfast-table, and the duty was taken off of coffee. It was said that $5,000,000 annually would be saved to the people, but in less than four months from that time Brazil, from whom we import nearly our entire supply of coffee, put on an export duty. Every pound of coffee leaving her shores since that time has paid a duty. Instead of the duty being paid at our own port and going into our own Treasury, where it is still our money and pays our national debt, it now goes into the Brazilian coffers and helps to pay the Brazilian debt. Brazil now receives from us $3,000,000 annually as an export duty on coffee. This is one of your ways of helping the poor man.

Did we get the article any cheaper? A syndicate took hold of it, and at this hour coffee is 40 per cent. higher than it was when the duty was removed.

We have had so much talk about the poor man's blanket that I will quote the words of the distinguished ex-governor of Iowa [Mr. GEAR], for he clearly exposes the folly and falsehood of this cry. The distinguished gentleman said:

> I was very much interested the other day when I heard the distinguished chairman of the Ways and Means Committee [Mr. MILLS] speaking in regard to the great burden in the shape of a tax which was placed on "the poor man's blanket." He talked so pathetically in regard to this subject that I wondered whether what he said could be true. I recollected that we had out in my State a woolen mill or two, and I concluded to send out to that State for a pair of blankets. I have those blankets here, and I ask that two of these page-boys take those blankets out into the area in front of the Clerk's desk that members may see them. [The blankets were exhibited in accordance with Mr. GEAR'S request.] Sir, there is a pair of blankets as good as can be made in England or anywhere in America. They weigh 5 pounds and 2 ounces, and it required for their manufacture 11 pounds of wool. They are made of Iowa wool in an Iowa mill by Iowa employés.
>
> The gentleman from Texas spoke of $2.50 as the cost in one case and $2.70 as the cost in another case of a pair of 5-pound blankets; and remember, each of these blankets is just 5 pounds. The gentleman from Texas said that the duty on those blankets would be $1.90 per pair, and that this was the amount which the manufacturer put in his pocket. Now, sir, to manufacture this pair of blankets which the House has before it took 11 pounds of wool, at 27 cents a pound. Now, 11 pounds of wool at 27 cents per pound would be $2.97; to that add 61 cents, which the gentleman from Texas says is the cost of making, and the amount will be $3.58; add to that the duty on blankets, $1.90, and the amount is $5.48. Now, if it be true that the amount of the tariff duty is added directly to the cost of the American blanket, the cost of these blankets should be $5.48; and, allowing the retailer a fair profit, they should sell at $6 per pair. But, sir, I have a certificate from the manufacturer certifying as to the quality and price. The wholesale price is $4.50, and the retail price at any store in Iowa is $5 per pair.
>
> I want to call attention to the fact that my friend from Texas in his illustration does not give the price at which the American blankets he talked about are sold—not at all; and I want to call attention also to the fact that the majority of the Ways and Means Committee, when they revise the tariff, and, as they say, take the tax off "the poor man's blanket," do not take off one penny in favor of the poor man. They impose an ad valorem tax on all kinds of blankets, and "the poor man's blanket" pays the same ratio of taxation that the rich man's blanket does. Yet our Democratic friends are posing around this country as the sole and only friends of the poor man.
>
> The manufacturer of those blankets, who lives in my district, is a gentleman who does not vote the Republican ticket; he is a good, old-fashioned Democrat.
>
> Mr. WARNER. But he will vote the Republican ticket hereafter.
>
> Mr. GEAR. I do not know, but one of the most prominent Democrats in my town told me this morning that if the Mills bill should pass no Representative in Congress from the State of Iowa who voted for it could come back to Congress. I ask the Clerk to read the letter and accompanying bill which I send to the desk.
>
> The Clerk read as follows:
>
> "[Office of Isaiah Meek, successor to Meek Bros., proprietor of Bonaparte Woolen and Flouring Mills, and dealer in wool and grain.]
>
> "BONAPARTE, IOWA, *May* 4, 1888.
>
> "This is to certify that I sold to JOHN H. GEAR blankets as per bill attached; that they are all wool; that at present the wholesale price is 90 cents per pound and retail price $1.
>
> "ISAIAH MEEK."
>
> "BONAPARTE, IOWA, *May* 4, 1888.
>
> "Mr. JOHN H. GEAR, Washington, D. C., bought of Isaiah Meek, successor to Meek Bros., proprietor Bonaparte Woolen and Flouring Mills:
>
> "One pair blankets, 5 pounds, $1 ..... $5.00
>
> "Received payment. ——— $5.00
>
> "ISAIAH MEEK."

It is true that the custom-house records show that almost no cheap woolens are imported here. The millions of dollars' worth of imported woolen products are high-grade goods, the kind of goods worn by the members of the Ways and Means Committee. These goods, having a large per cent. of hand-labor in them, are made cheaper in Europe than here, but they pay the tariff duty and can be sold, and have largely ruined the competing factories of this country. A gentleman's dress-suit that costs $65 here, can be bought in England for $35; but the workingman's suit that costs $10 here will cost him $9 there. Cheap goods are only 5 to 10 per cent. cheaper there than here. Hence it is these goods can not be profitably imported. Now, will it benefit us to strike down the 5 per cent. and let these goods in free, when every $2 worth imported keeps an American laborer idle one day? The commonest day-laborer gets here $1 a day. Ten days' work will buy him a suit of clothes. The same grade of labor in England gets 65 cents a day, and he must work 14 days to get the same suit of clothes over there.

A country so rapidly developing and so ever-changing in its commercial interests needs the details of its industrial laws closely watched

and frequently readjusted. Hence I regard with great favor the utterance of my party in Indiana in 1886:

We favor the reduction and readjustment of the tariff from time to time as circumstances may require. The duty should be reduced as low as will be allowed by a wise observance of the necessity to protect that portion of our manufactures and labor whose prosperity is essential to our national safety and independence.

In the light of this sound statement on the tariff let us examine the

MILLS BILL.

The title of this bill is, "A measure to reduce revenues." But if the purpose is to reduce the income of the Government, it can not be accomplished by the scaling down of duties. It is a well-known fact that a reduction of the tariff increases foreign importations and thereby increases the revenue. If any goods are imported under a tariff, it is plain that if you reduce it the importations will increase. For illustration, if there is a 2 per cent. tariff on glass, and we import from Belgium 50,000,000 pounds per year, it is evident if we reduce that tariff 25 per cent. Belgium will increase her sales to us. Now, we did decrease the glass tariff 25 per cent. in 1883, and last year we imported 61,000,000 pounds, and the revenues collected were $200,000 more than under the old law. On this point the minority in their report say:

The duty on braid, plaits, laces, and trimmings was reduced by the act of 1883 from 30 to 20 per cent. ad valorem, and the sum paid in duties in 1887 was $114,482.76 more than in 1883. The reduction on tin-plate under the act of 1883 was one-tenth of a cent per pound, while the duty collected in 1887 was $715,468.57 greater than in 1883. Bronze in powder was reduced by the law of 1883 from 20 to 15 per cent., yet the sum received by the Government for duty in 1887 was $14,000 more than was received from the same source in 1883. The duty on writing paper was reduced from 35 per cent. to 25 per cent. ad valorem. The receipts in 1883 under the higher duty were $19,406.87; under the reduced duty in 1887 the receipts were $242,216.27, showing an excess of duties of $222,000 in 1887 over 1883. The duty on wool was reduced by the act of 1883, and the increase of importations and revenue is probably the most striking of any in the schedule. The importations in 1882 were 63,016,769 pounds; in 1887, 114,404,174. The duty collected in 1882 was $3,854,653.18; that in 1887, $5,899,816.63.

These illustrations clearly demonstrate that a simple scaling down of duties from 20 to 30 or 40 per cent., more or less, will only increase revenues and therefore augment the surplus.

The only way to reduce the revenue is to make the tariff higher and thus more effectually shut out importations, or to take off the tariff altogether and let the goods come in free. The Mills bill will increase the revenue.

DISCRIMINATIONS.

The Mills bill is the first tariff measure in the legislation of our Government that has been open to the criticism of sectionalism. It places every article grown in the North and Northwest on the free-list, and retains the tariff on every article grown in the South. Hoop-iron or wire, when used to bale cotton, is imported free, but when used to bale hay pays 1½ cents duty per pound. Wire for fencing, an article unused in the South, but everywhere used in the North and West, pays the highest duty on the list.

Lumber, copper, salt, and wool, are placed on the free-list, while coal and iron ore, in which Virginia and Alabama are interested, are carefully cared for under the wing of protection. Rice is handled with gloves, and South Carolina retains 113 per cent. tariff on it. Louisiana, whose six Congressmen were going to fly the track and vote against the bill if sugar was molested in its 82 per cent. protection, is placated by readjusting the proposed 20 per cent. reduction in a way that is quite satisfactory, and the vote of the Louisiana delegation remains solid.

The bill is partisan, sectional, and unfair. It runs a dividing line through the country, and takes Pennsylvania in with the lower section because it is a necessary incident to Virginia and Alabama coal and iron ore. Any student of American history can discover that at least seven of the nine Representatives who formed this bill were in that generous environment where the demand for protection from one section received consideration, but where the pleadings from another section were unheard.

I know of no Democratic orator or paper that does not quote from the Chicago Tribune with vast approval, and I agree with many of the Tribune's conclusions, but have been obliged frequently to disagree with its line of reasoning. The Tribune has uttered a few vigorous sentences on the Mills bill which, not seeing quoted, I fear has escaped the notice of our friends, and for their benefit I append an extract from an editorial of March 3, 1888:

The Ways and Means Committee have blundered characteristically and agreed upon a bill which, unless it shall be amended in important particulars, has not and should not have any chance of adoption. But MILLS and his colleagues appear to have given their time day and night for some months to devising a scheme of tariff revision that would bear light on the solid South and heavy on the Republican sections of the country. Surrendering themselves to partisan and sectional influences the Democratic tariff reformers of the Ways and Means Committee gave full weight also to personal interests, as was shown by the refusal to put coal on the free-list—a refusal which shows how Congressman BILL SCOTT, one of the bosses of the Pennsylvania coal ring, got in his work as a member of the Ways and Means Committee.

Coal, of course, is not used either for heat or power in the South to anything like the extent of its consumption in the North, and the committee held that New England manufacturers might as well continue to pay a virtual tax on their power in the form of revenues to the Government, or rather bounties to BILL SCOTT's coal ring. There can be no chance to get such an article as coal on the free-list for the reason, apparently, that such a change would not particularly benefit the South nor specially discriminate against the North.

The bill proposes a reduction of $78,000,000. The President has said no just complaint should be made of internal-revenue taxes—that is, the tax on whisky and tobacco; and yet one-third of this reduction is made on tobacco. When the President says nothing is so well able to bear the burdens of taxation without hardship why do these gentlemen fly into his face and make $24,000,000 reduction on this article? And the assurance is given in advance that it will meet with Presidential approval. Is it because the Virginia and North Carolina committees came here and demanded that the internal revenue on tobacco should be taken off or their States would go out from the party on a strike?

Some gentlemen, filled with "sectional hate," have charged this as the real cause of the Presidential conversion, and the party, being a professional reformer, has made its first reform after an administration of three years by doing what it has been abusing the Republican party for wanting to do. Every man knows that if Ohio, Indiana, and Illinois had contained the tobacco industry, this tax would not have been repealed. I was in favor of the repeal of the tobacco duties, but I am indifferent now. I shall vote for it or against it, as the interests of the country may be best conserved on other questions involved. I am with tobacco as Stephen A. Douglas was with the negro in his debate with Mr. Lincoln—I do not care whether it goes up or down. For instance, if the repeal of the tobacco tax was joined with a measure to give us free sugar, lumber, coal, and salt, I would vote for it. You could scarcely construct an omnibus bill containing free sugar, lumber, coal, and salt, that I would vote against. But on the single proposition to repeal the tobacco tax I will vote no.

PROTECTION PAYS LABOR.

Du[illegible] the past year the amount of wages paid to our employés, in the last process of manufacturing, was $1,400,000,000. To produce the same amount of merchandise in England they would pay $784,000,000. These facts show the following result: We pay in this country $616,000,000 more to our wage-earners who produce a given product than would be paid in England for the same amount of product. The entire revenue collected by us on all importations during the year ending June 30, 1887, amounted to $218,000,000. If the wage-earners paid all of this amount, they would have a balance of $398,000,000 more than they would have if they were receiving English wages.

The manufacturers of this country are suffering to-day because there is an impression in England that the party in power here has started on a crusade that means free trade, and their mill-agents are flooding this country by the hundreds with styles and kinds of fabric that have never been offered in our markets before. It is estimated that the number of English salesmen soliciting orders in this country to-day, in comparison with 1884, is as 12 to 1.

THE WORKMEN THE MILLS BILL WILL HELP.

The Mills scheme of reducing the tariff will benefit England at the expense of America. When the Morrison bill was defeated in the Forty-ninth Congress, the London Daily Telegraph in an editorial said:

A bill to establish in America what the English call free trade has just been defeated in the House by a narrow majority of 4. The measure was of enormous importance to English manufacturers, as it would have enabled them to export goods to the States without the crushing tariff now imposed, and its fate was watched with intense interest by Englishmen. Were it passed, it would have been worth $500,000,000 per annum to British manufacturers.

If the Morrison bill would have added $500,000,000 to the trade of British manufacturers, the Mills bill, if passed, will add a thousand millions. On this estimate, made by Englishmen themselves, the wage-workers of this country would lose five hundred millions the year after the Mills bill passes. No man or party is entitled to the suffrage of our people who invites such a result.

IS DUTY ADDED TO THE PRICE?

It is claimed that the tariff duty is always added to the price of the article imported. Hence it is asserted that the $218,000,000 which we receive from import duties are taken from the pockets of our consumers. I will show this position to be erroneous presently, but for the present let us accept it as true.

"The tariff is always added to the price of the goods" is a fundamental doctrine with our opponents, and as I want you to have the highest authoritative statements on this subject, as it with wages forms the kernel of the industrial question, I will quote from the President's message. He says:

But our present tariff law, the vicious, inequitable, and illogical source of unnecessary taxation, ought to be at once revised and amended. These laws, as their primary and plain effect, raise the price to consumers of all articles imported and subject to duty by precisely the sum paid for such duties. Thus the amount of the duty measures the tax paid by those who purchase for use these imported articles. Many of these things, however, are raised or manufactured in our own country, and the duties now levied upon foreign goods and products are called protection to these home manufactures, because they render it possible for those of our people who are manufacturers to make these taxed articles and sell them for a price equal to that demanded for the imported goods that have paid customs duty.

So it happens that while comparatively a few use the imported articles, millions of our people, who never use and never saw any of the foreign products, purchase and use things of the same kind made in this country, and pay therefor nearly or quite the same enhanced price which the duty adds to the imported articles. Those who buy imports pay the duty charged thereon into the public Treasury, but the great majority of our citizens, who buy domestic articles of the same class, pay a sum at least approximately equal to this duty to

the home manufacturer. This reference to the operation of our tariff laws is not made by way of instruction, but in order that we may be constantly reminded of the manner in which they impose a burden upon those who consume domestic products as well as those who consume imported articles, and thus create a tax upon all our people.

The President is treating the subject from a broad standpoint, and he affirms as a principle of protection that the tariff is added to the price of the goods. He does not wish to be misunderstood. It matters not whether the goods are made here or in Europe, the tariff is a bounty for production. Every consumer has to pay that much on account of the tariff. It is, as ex-Senator McDonald describes Governor Gray, of Indiana, "a horse-leech, always present and always sucking."

Every opponent of protection unites on this, and if it is not true the strongest argument is knocked out of their opposition to protection.

THE FARMER BARON.

We will make the computation on the farmer, for above all other persons these gentlemen have been pleading for the poor and unprotected farmer all through this debate. One-tenth of his product is sold abroad; he must take what he can get there. But nine-tenths of his products are sold here, so that nine-tenths of the time he stands in uninterrupted receipt of whatever protection may place on his productions. I have a list of the farm products of this country of last year, and I find that the tariff adds to the farmers of this country $1,200,000,000. I have the list, and it may be verified by official statistics; and if you will take off the tariff imposed on each item of farm products you will find that, whatever the natural price may be, the tariff thus added makes the vast aggregate of $1,200,000,000. This sum lacks only $200,000,000 of being as much as the factory workers of the nation earned last year. Thus, if the tariff adds to the price of protected articles to the extent of the duty imposed, then the consumer pays to the American farmer $1,200,000,000 for his products more than that farmer could sell them for if there was no Republican protection. I here submit a list of our farm products in detail, the value of each article produced, the protective-tariff duty on it, and how much extra price the farmer gets because of it:

1885.	Corn produced	bushels...	1,936,176000,
	Gain at 10 cents per bushel duty		$193,617,600
	Wheat produced	bushels...	357,112,000
	Gain at 20 cents per bushel duty		$71,422,00
	Rye produced	bushels...	21,756,000
	Gain at 10 cents per bushel duty		$2,175,600
	Oats produced	bushels...	€29,409,000
	Gain at 10 cents per bushel duty		$62,940,900
	Barley produced	bushels...	58,836,000
	Gain at 10 cents per bushel duty		$5,836,000
	Potatoes produced	bushels...	175,029,000
	Gain at 15 cents per bushel duty		$26,254,350
	Hay produced	tons...	44,731,550
	Gain at $2 per ton duty		$89,463,100
	Tobacco produced	pounds...	562,736,000
	Gain at 35 cents per pound duty		$196,957,600
	Duty at 35 cents to $1 per pound.		
1887.	Cattle raised, 33,511,750 head	value...	$663,137,926
	Gain at 20 per cent. ad valorem duty		$132,627,585
	Horses raised, 12,496,744 head	value...	$901,685,755
	Gain at 20 per cent. ad valorem duty		$180,337,151
	Sheep raised, 44,759,314 head	value...	$89,872,839
	Gain at 20 per cent. ad valorem duty		$17,974,569
1880.	Wheat flour made		$315,394,385
	Gain at 20 per cent. ad valorem duty		$63,078,877
	Cheese made	pounds...	243,157,850
	Gain at 4 cents per pound duty		$9,726,314
	Butter made	pounds...	806,672,071
	Gain at 4 cents per pound duty		$32,266,882
	Molasses made	gallons...	46,811,523
	Gain at 4 to 8 cents per gallon duty		$3,745,081
	Sugar made	pounds...	124,516,685
	Gain at 1.40 to 3.50 cents per pound duty		$4,358,084
	Provision—meats	value...	$303,562,413
	Gain at 20 per cent. ad valorem duty		$60,712,482
	Hops raised	pounds...	26,546,378
	Gain at 8 cents per pound duty		$2,123,710
	Rice raised	pounds...	110,131,373
	Gain at 2½ cents per pound duty		$2,477,965
	Wool clips	pounds...	240,681,751
	Gain at 10 per cent.—per pound 2½ to 12 cents—duty		$24,068,175
	Pickles, etc	value...	$2,407,342
	Gain at 35 per cent. ad valorem duty		$842,569
	Beans and peas	bushels...	9,594,027
	Gain at 10 per cent. ad valorem duty		$959,002

RECAPITULATION OF SUPPOSED PROFITS.

Corn	$193,617,600	Cheese	$9,726,314
Wheat	71,422,400	Butter	32,266,852
Rye	2,175,600	Molasses	3,745,081
Oats	62,940,900	Sugar	4,358,084
Barley	5,836,000	Meats	60,712,482
Potatoes	26,254,350	Hops	2,123,710
Hay	89,463,100	Rice	2,477,965

Cattle	132,627,585	Pickles, etc	842,569
Horses	180,337,151	Beans, etc	959,002
Sheep	17,974,567		
Wheat flour	63,078,877	Total	1,203,954,994

Why do these gentlemen attack a system that on their own showing yields to the farmer such a splendid revenue? Why do you denounce as inequitable and illogical, and try to take from him, this only boon, without which he would be ruined? You put his every product on the free-list. Instead of 18 per cent. of his farms being mortgaged, you want to reduce him to the condition of the English farmer, in whose country 58 per cent. of the farms are mortgaged.

I think the charge that the tariff duty is added to the price of goods is the most effective made by our opponents, and I have halted long enough to cite the farmers' list to show you that if this is really the operation of the protective principle the farmer is enormously the gainer thereby.

A WORD ON HYPOCRISY.

So much has been said about "trusts" and business "combines" in connection with this bill that I ought to give it a word of notice; but in view of the fact that I shall be heard on the question at another time I need only say that I have a joint resolution before a committee looking to the repeal of the tariff on every article where an injurious trust has been formed. The indications are that Gabriel's trumpet would not be able to awaken the committee to act on that measure. The gentleman from Maryland [Mr. RAYNER] and the gentleman from Kentucky [Mr. BRECKINRIDGE] have similar resolutions before different committees, and either one of them, if passed, would result in the death of trusts and business combinations, whether protected or unprotected, and the overthrow of monopoly.

The reason for a lack of action on these resolutions is apparent, for, if passed, they would destroy the Standard oil, the cotton-seed oil, the coal, and the sugar trusts. You do not dare to pass either of them. Oil, coal, and sugar have your party by the throat. You may speak against trusts, for that is only an impotent rage, but you will not report and pass either of these resolutions. The managers of these trusts are a power in this House. You will not destroy them; they are necessary to your political existence. You attack protected trusts, and the greatest trusts in the land are anthracite coal, cotton-seed oil, and Standard oil. Neither of them are protected by a tariff. Sugar is the great protected trust, and you refuse to reduce its tariff an honest 10 per cent. A law that will reduce the iniquity of the trust in every form, whether protected or unprotected, you steadfastly refuse to pass. This House will adjourn without a law on this subject, and you will march into the campaign, valiant defenders of the oppressed people, and from every stump denounce the robber trusts with an oratory that will be hair raising. "Shall the thief become a saint because he cries 'stop thief' the loudest?"

STRANGE BEDFELLOWS.

The supporters of the Mills bill have taken up a new line of attack on the tariff. Heretofore they attacked the manufacturers, but they discovered that the wage-worker knew that he was indissolubly connected with the proprietor, and if the manufacturer was stricken down, he was struck also. So they have changed front; they have reformed, and become the friends and assistants of manufacturers. I am glad they have, for the guileless simplicity of the arguments they now make in behalf of the manufacturer shows them to be sincere, if it does lack intelligent manifestation.

MANUFACTURERS NOT THE MILLIONAIRES.

It is a fact long known to most people in this country that the vast fortunes and stupendous aggregations of wealth which our free-trade friends attack as having been amassed by protected manufactures are largely a myth. The manufacturers of this country are not its millionaire class. The robber barons at whom these stupid demagogues rage have won their fortunes out of conditions wholly separated from the tariff. Bradstreet reveals the fact that our millionaires are the bonanza kings, the railroad magnates, and the stock and real estate speculators! Are Mackey, Flood, O'Brien, Fair, and their like, manufacturers? Are WILLIAM L. SCOTT, member of the Ways and Means Committee, Deacon WHITE, also a member of this House, and LELAND STANFORD of the Senate, the Jewetts, the Pullmans, Potters, Jay Gould, and their like, manufacturers? Are Hutchinson and Potter Palmer, of Chicago, Sage, Field, Smith, and their like, manufacturers? These men and those dealing as they do, comprise the millionaire class of this country.

Some manufacturers make fortunes, as along every avenue of life some men strike fortune; but as a rule they receive only fair returns from their business. Edward Atkinson, a free-trader, from whom all quote as an authority, in a recent article said:

Our manufacturers clear less than 10 per cent. profit annually.

Abram Hewitt, the present great Democratic mayor of New York and proprietor of the Cooper & Hewitt iron and steel mills, offered this year to lease the plant to any one who would pay 6 per cent. on the investment. The facts are, business has so multiplied in this country, competition has cut margins so close, that large investors in manufactures receive only the current interest on their money—6 per cent.

At last our opponents cease their railing against manufacturers and have come to regard them as objects of commiseration and have presented here a bill, a part of whose pride and boast is that it gives to the poor, down-trodden manufacturer free raw material.

The chairman of the Ways and Means Committee [Mr. MILLS] even travels through the manufacturing districts of New England to describe to the waiting crowds with all the vigor of his picturesque style, adorned with the red lights of Texas eloquence, the manifold blessings that

will come to them when he unchains material and gives it to them raw.

FREE RAW MATERIAL.

They now claim that the tariff on the raw material is the American difficulty. If we could only remove that tariff, then we could produce against the world. If raw material is of such fundamental consideration that it would solve our industrial troubles, it is certainly an intrinsically valuable quantity. But I read in political economy that such is the beneficent provision of nature that her raw materials are almost valueless—of only a nominal worth when alone, but when the human hand touches them and lifts them from nature's inertia they begin to take on their first real value. As they progress from the raw, natural state, by the fashioning hand, they grow in worth until finally the completed product stands forth a suit of clothes, a builded house, a mowing-machine, a grand piano, so incarnate by the creative touch of toil that it seems instinct with life, and the raw material from which it sprang seems as inconsiderable to him who has formed it as clay to Deity when He had fashioned man. Nature intended to have it this way. There is no considerable value in anything except it has been put there by human toil. Nature is the first and most steadfast friend of labor.

PRACTICAL ILLUSTRATION.

There is an easy way to come to the apprehension of this truth. Who will put the measure of value on a ton of coal somewhere down in the earth? Twenty-five cents would be a high price. I am informed there is not a mine in the world, when it is worked on shares, that the owner receives 25 cents per ton. A ton of copper in the Lake Superior mines is worth little more. How valueless a ton of iron ore slumbering in the mountain! How cheap a tree waving in the forest! Statistics say it takes $1.12 to land a ton of coal on top of the ground in Illinois or Indiana. It takes a like sum of money to deliver it on a side track in Chicago; that is $2.24. The teamster charges 75 cents to deliver that ton at the home of the citizen. He can deliver but five loads a day on the average. That makes $2.99, and the consumer pays $3.50 for the coal. No one has ever quarreled with that price. The cheapness of material while in the state of nature, and the fact that value attaches to it just as labor is applied, is the solemn lesson this country is trying to teach the free-trader. That labor creates all values is an economical truth so apparent that all men, even men on the other side of this Chamber, ought to understand it.

Take another illustration. Twenty tons of iron ore asleep in the hillside; $5 is its full value. Here are 4 tons of coal in another hill; that is $1. Now, we have $6 invested, and I will let the Pennsylvania Railroad shops at Altoona build a steam-engine from raw material. They build it properly, so as to get the best service, and when that engine is completed and on the track for us it has cost $4,000. Six dollars' worth of raw material and the manufactured product worth $4,000! Not made for sale, but cost to the company from its own raw material to the hour of putting the engine on the track an expenditure of $4,000. This is their own cost, and it is one of the most conservative and thoroughly business-like organizations in the world. Six dollars is the value of the raw material; $3,994 is the dominion of labor.

There stands a 50-foot tree in the pineries. It is raw material. What will you take for it? Ten dollars is a big price. I cut the tree down and haul it 5 miles to a mill. When I lay it at the mill door it is worth $25. What makes it worth $25? Plainly the labor I put into it. But a saw-log is raw material. No, it is not; anything the human hand touches ceases to be raw material, and has started into the process of manufacture. To cut down that tree and haul the logs to the mill is as necessary a part of manufacturing as planing the weather-boarding or framing the door of the house. The very first step of labor in the process of production, cutting down the tree and delivering the logs at the mill, has added 150 per cent. to the value. Ultimately from this raw tree we have 4 bureaus worth $15 each; 4 bedsteads at $10 each; and 20 kitchen tables at $5 each; 25 desks for school children worth $4 each. Here labor's work has fashioned $390 worth of value out of $10 worth of raw material. The cabinet-makers and wood-workers are no distant manufacturers; they are located in our little towns all over the country. Coal, lumber, etc., are as cheap here as elsewhere, for where civilization has long ruled, an inexorable law has made raw materials of near the same value.

The free-trader says, let us relieve the manufacturer by giving him raw material so that he can make goods cheap. If he had it he could only make a fraction of a cent on the dollar. In view of the small amount made, it is certainly a cheap reform.

The only thing of value that can be gained is to let these articles be imported free; but we have seen we can not import raw material, because labor must needs fetch it, and the instant that labor has touched it you have added to its value from 150 to 500 per cent. Who receives the largest share of money for this increased value? The entire increase is labor.

Now, if these articles can be brought from other countries cheaper than we can get them to our mills, it is not because there has been a change in the value of raw materials, but because there is a difference in the price of the labor that has moved the raw material through the first process of manufacture. In foreign countries the men who do this first and crudest work add by their wages but 50 per cent. to value. As incoming vessels are glad to bring this raw material almost free of charge, in many instances having to load their holds with sand-bags for ballast, the foreigner is able to put these goods at the doors of our factories as cheaply as at the door of his own factory.

This so-called raw-material scheme to help manufacturers and workingmen puts the crudest and lowest-priced labor of this country still lower down by placing it in unrestricted competition with Europe's poorest-paid workers. The labor organizations have already discovered that the only effect of free raw material is to reduce the wages of the men who first give their hands to the process of production. He is no true knight in labor who does not stand by his brother, although he works in production's crudest form.

PROTECTION AND FOREIGN MARKETS.

Our opponents meet us with the statement that the protective system keeps us from selling goods in a foreign market. This is a strange proposition. They assert that a defensive wall around our shores keeps us from getting into the undefended territory of other countries. Their theory is that an army occupying a walled city is incapable of attacking and capturing an unwalled city. When they go out against the unprotected city some hidden and mysterious force transplants their own wall around the defenseless city, and makes it impregnable before them. This is the last resort and final argument of free trade. Most people will regard it as driveling folly. What country have we been driven out of by reason of our home tariff? Is it England, or Germany, or France, or South America, or China? Not out of any of these. The legislative body of no nation in the world ever dreamed of doing such a thing.

THE FOOLISH THEORY DISPROVED.

I cite an exhibit of our foreign exports from 1846 to 1880 to show what effect tariff laws have upon export trade. In what is called the free-trade era, from 1846 to 1860, our exports per capita were $9.94; in the protective era, from 1866 to 1880, it was $14.33 per capita. Our exports for each citizen of the United States were 50 per cent. more under protection than under free trade. The truth is, our foreign commerce never grew as rapidly as it has since we have had a protective policy. The increase of our foreign trade in 1846 to 1860 was 70 per cent., but from 1866 to 1880 it was 300 per cent. Our foreign commerce, imports and exports, in 1866 was $400,000,000; in 1880 it was $1,500,000,000.

Consult the last report of the Bureau of Statistics on commerce, and you will find that our exports to each foreign country do not have the slightest reference to our imports from that country. I find that the gentleman from Maine [Mr. DINGLEY] cites that we exported last year to Great Britain productions to the value of $363,000,000, but imported from that country only $165,000,000. We imported from the West Indies $70,000,000, but exported only $24,000,000.

Have these gentlemen heard of any one in this country who proposes to stop buying sugar in Cuba because she buys so little of us? We imported $53,000,000 from Brazil, but Brazil bought of us only $8,000,000. What becomes of a doctrine that we can sell only as we buy in the light of such facts as these?

The charge that the tariff keeps us from selling our goods in foreign countries is, by the commercial reports, so clearly shown to be untrue that we need not pursue the subject further.

THE FARMER.

I had supposed this bill would consider the farmer with peculiar care. Every speech on the other side has plead for him except when explaining how the bill was going to help the manufacturer, and I never was more astounded than when I read what the bill had done for the farmer. It places every article produced on the farm on the free-list.

The Republican party put a protective tariff on the farmer's products, as follows:

Wool, from 2½ to 12 cents per pound; potatoes, 15 cents per bushel; butter, 4 cents per pound; cheese, 4 cents per pound; wheat, 20 cents per bushel; rye and barley, 10 cents per bushel; Indian corn, 10 cents per bushel; honey, 20 cents per gallon; milk, preserved, 20 per cent. ad valorem; hams and bacon, 2 cents per pound; beef and pork, 1 cent per pound; lard, 2 cents per pound; pickles, 35 per cent. ad valorem; vegetables, 30 per cent. ad valorem; vinegar, 7½ cents per gallon; flax, $20 per ton; hemp, $25 per ton.

These duties should be increased, and particularly on rye, wheat, and potatoes, cabbage, and other vegetables, but the pending bill, instead of strengthening the farmer's protection, weakens it by putting such important farm products as wool, hemp, and flax on the free-list. And to these are added garden-seeds, beans, peas, meats, game, poultry, beeswax, and fresh vegetables.

Canada sells 3,000,000 bushels of rye into our country every year. In 1887 we imported 18,000,000 dozen eggs and 4,000,000 bushels of potatoes. In spite of the farmers' tariff we last year imported $57,000,000 worth of his products. The present bill proposes to strike down his protection and leave him defenseless before competition. Every one of our farm products is fenced out of Canada by her protective laws, but this bill proposes to let all of her goods enter our ports free. I enumerate a number of the farm products, with the Can-

adian tariff, the United States tariff, and the proposed rating by the Mills bill:

Articles.	Canadian rate.	United States rate.	Mills rate.
Potatoes	10 cents per bushel	15 cents per bushel	Free.
Beans	15 cents per bushel	10 per cent	Free.
Pease	10 cents per bushel	10 to 20 per cent	Free.
Tomatoes	30 cents per bushel	10 per cent	Free.
All other vegetables, including sweet potatoes.	20 per cent	10 per cent	Free.
Plums	1 cent per pound	1 cent per pound	Free.
Currants	1 cent per pound	1 cent per pound	Free.
Peppermint and other essential oils.	20 per cent	25 per cent	Free.
Blacking	25 per cent	25 per cent	20 per cent.
Bricks	20 per cent	20 per cent	Free.
Brooms	25 per cent	25 per cent	20 per cent.
Brushes	25 per cent	25 per cent	20 per cent.
Flax (raw)	$20 per ton	$20 per ton	Free.
Flax (hackled)	$40 per ton	$40 per ton	Free.
Tow	$10 per ton	$10 per ton	Free.

Rice is a farm product, just as hay, wheat, corn, oats, and potatoes. Can any one tell me why these latter should go on the free-list? The laborer in the rice-field of the South gets $8 a month. The labor cost of rice is less than 5 per cent. of its product, and yet, in the face of the protestations of the majority that there is already too great a difference between the amount of the tariff duty and the wages paid the laborer, the duty on rice is increased by this bill.

I will tell you how this extraordinary duty was placed on rice. Representatives of that interest came to the majority of the committee and said it would never do to put it on the free-list; that it would ruin them. As one of them said, "For God's sake, keep the protection on us." The rice-grower was heard and the protection was kept on. The representatives of the Farmers' Alliance received no hearing before this committee. Why was the rice-grower heard and the other plea unheard?

THE DOOR SHUT IN THE FACE OF LABOR.

The representatives of the labor unions begged to be heard on points wherein the bill would seriously affect labor wages, but they were not even admitted to the committee-room. Then they sent in a petition setting forth wherein labor was injured, pleading "For God's sake to keep up the protection." The gentleman from Maine moved that their petition be read, but the gentleman from Arkansas moved it be referred without reading, and his nine Democratic associates voted with him, the five Republicans voting against him. So the laborers' petition went into the pigeon-hole unread.

In England the farmer has free trade. She has a million paupers and seven millions on the verge of pauperism. Her unemployed masses attack Haymarket and demand work or bread. The wages in England have been declining these ten years; a million acres of her wheat area have passed out of cultivation within ten years. There is no profit on the wheat they grow, nor on cattle, hogs, or sheep. The farm laborer gets from 1 to 2 shillings per day.

GOOD SENSE.

Now, if instead of free trade, as this bill proposes for the farmers, you will keep on the tariff, so as to keep out his competing products and let our farmers sell us that $57,000,000 worth which is now imported, he will soon diversify his crops and every bushel he raises will be consumed at home.

When in spite of our farm protection fifty-seven millions of their products are annually imported, does any man question if the duty is taken off importations would spring to a hundred millions the first year?

If we strike down protection to the farmer, then before the year 1900 vessels loaded with the surplus wheat of India, which England can not consume, will drop anchor in New York Harbor with 30-cent wheat. But if we maintain our tariff, then will the farmer rejoice that his country has a party whose principle is to protect American interests against 7-cent wages. I am opposed to the Mills bill because it puts the farmer on the free-list.

WHAT TO PROTECT.

Let us consider the item of sugar. We all agree that sugar is one of the most important items in this bill. It is now protected by an 82 per cent. tariff, and this must be conceded a very considerable tariff on a necessary of life. No other article is so universally in use as sugar. Woolen clothing is discarded in the South during the summer and cotton is little used in the North during the winter months, but sugar is on every table every day the year round.

I do not see how any good citizen can complain of the tariff on an article of such general use, unless it fails to increase the production. If an article is in slight use, the tariff on it is of slight consideration; but when the article is one of every-day necessity, sound public policy demands that we produce our own supply; hence, protect that article to the utmost. There are some things that we can not raise here, because of our climate, soil, and for other reasons. We are unable to grow India rubber and quinine. We have also experimented with tea, but it has not proven a success. We ought not, therefore, to put any duty on these articles. What we can not produce in this country, or grow successfully as elsewhere, should be imported duty free. We should not have a tariff on any article that can not be produced successfully in this country, but protection should be applied to every article that can be produced here. If we can not ultimately, under the developing influence of protection, produce an article here as cheaply as in any country in the world, considering the extra wages we pay for labor, then the protection on that article should be withdrawn.

SUGAR.

An examination of the growth of the sugar industry is discouraging. It does not reveal any development. I am at a loss to locate the difficulty with this industry. It is not because the tariff is not high enough, because 82 per cent. on an article averaging 6 cents a pound is pretty near all of it.

Only one section of our country appears to be adapted to cane-growing, and it is claimed that even there it is not profitable. Some say that the failure is due to the lack of enterprise in the section of the country where it is grown. Whatever the facts may be, the Government reports show that sugar-growing has not developed here. I am surprised by an examination of the statistics of the sugar product covering a series of years; and I append a table which shows the amount of sugar and molasses produced in the United States during the years from 1852 to 1886, inclusive; this shows a gross production in 1861 of 528,321,500 pounds of sugar in Louisiana, and 11,509,000 pounds in all the other Southern States; with 34,216,000 gallons of molasses in Louisiana, and 3,502,000 gallons in all the other Southern States. And in 1885–'86 the production of sugar in Louisiana was 286,726,486 pounds, and in all the other Southern States 16,128,000 pounds. And in the same years the production of molasses was 17,863,732 gallons, and in all the other Southern States 3,645,000 gallons, while away back in 1853 Louisiana produced 31,000,000 gallons of molasses, almost double her product of 1885–'86.

Statement showing the quantities of sugar and molasses produced in the United States during the years from 1852 *to* 1886, *inclusive.*

Year.	Sugar.		Molasses.	
	Louisiana.	Other Southern States.	Louisiana.	Other Southern States.
	Pounds.	*Pounds.*	*Gallons.*	*Gallons.*
1852–'53	368,129,000	18,173,000	25,700,000	1,260,000
1853–'54	495,156,000	29,998,000	31,000,000	1,956,000
1854–'55	385,227,000	29,498,000	23,113,620	1,406,000
1855–'56	254,569,000	22,000,000	15,274,140	1,320,000
1856–'57	81,373,000	5,987,000	4,882,380	360,000
1857–'58	307,666,700	14,303,000	19,578,790	795,000
1858–'59	414,796,000	18,298,000	24,887,760	1,080,000
1859–'60	255,115,750	11,534,000	17,858,100	736,000
1860–'61	265,063,000	9,661,000	18,414,550	1,394,000
1861–'62	528,321,500	11,509,000	34,216,000	3,502,000
1862–'63	96,840,000	6,200,000	7,619,000	381,000
1863–'64	84,500,000	560,000	2,303,000	217,000
1864–'65	10,800,000	400,000	765,000	85,000
1865–'66	19,900,000	780,000	1,128,000	172,000
1866–'67	42,900,000	7,500,000	2,570,000	430,000
1867–'68	41,400,000	10,120,000	2,800,000	570,000
1868–'69	95,051,225	5,750,000	5,636,920	764,000
1869–'70	99,452,940	5,380,000	5,724,256	876,000
1870–'71	168,878,592	9,426,000	10,281,419	619,000
1871–'72	146,906,125	9,446,000	10,019,958	681,000
1872–'73	125,346,493	9,486,000	8,898,640	601,000
1873–'74	103,241,119	5,399,000	8,203,944	507,000
1874–'75	134,504,691	7,736,000	11,516,828	674,000
1875–'76	163,418,070	9,062,000	10,870,546	1,380,000
1876–'77	190,672,570	8,688,000	12,024,108	876,000
1877–'78	147,101,941	11,940,000	14,237,280	913,000
1878–'79	239,478,753	11,402,000	13,218,404	1,005,000
1879–'80	198,962,278	8,915,000	12,189,190	1,211,000
1880–'81	272,982,899	12,320,000	15,255,029	1,704,000
1881–'82	159,874,950	11,200,000	9,691,104	2,308,896
1882–'83	303,066,258	15,680,000	15,716,755	3,250,000
1883–'84	287,712,230	15,232,000	15,277,316	3,118,000
1884–'85	211,402,963	14,560,000	11,761,608	2,892,000
1885–'86	286,626,486	16,128,000	17,863,732	3,645,000

NOTE.—The data as to the production of Louisiana are from the Louisiana Sugar Reports, by A. Bouchereau, and the data of the products of other Southern States were furnished by Mr. A. Noel Blakeman, manager of the New York Shipping and Commercial List.

We produced 540,000,000 pounds of sugar in 1861, and but 300,000,000 pounds in 1885. Yet in 1885 we consumed more than 3,000,000,000 pounds. We consume more than ten times the quantity produced in this country.

FREE SUGAR.

In view of these facts, I believe the duty on sugar ought to be removed. Having failed to accomplish the purpose for which it was levied, the tariff ought not to be continued longer. The continuance of this tariff is not for the good of the country. It has become an enormous robbery. After twenty years of trial the industry is not increasing, but is decreasing; when it produces only one-tenth of what we consume its further continuance is unprofitable. The sole beneficiaries of this tariff are 17,000 planters.

Now what does the Mills bill propose to do? It offers a 20 per cent. reduction. This is so manifestly an injustice to the country that no one has appeared on the floor justifying it; and even this 20 per cent. is a pretense for the following reasons: The sugars imported are rated into classes called Dutch grades, just as cattle are graded prime, fair, and middling. Sugar is graded Dutch standard No. 13, Dutch standard No. 16, and so on. This bill juggles its 20 per cent. on the grading. It reduces the duty 20 per cent., but it changes the grades upon which the reduction is made, so that it puts the duty so high on sugar which is refined for table and cooking use as to practically prohibit its importation, while the low grades are reduced. Then the planter, who is in league with the sugar-trust refiners of New York, can sell his commercial sugar at a high price, and the sugar trust that refines imported low grades can also get the same high price.

A SAMPLE.

Two vessels load with standard island sugar at Cuba. It is a black tsuff unfit for use and worth 1 cent a pound; only after it passes through the refiners' hands can it come to our tables. One of these vessels lands in England and the other in the United States. When the Englishman gets his sugar from the refineries he gets it for 2 cents a pound less than we have to pay when we get it from our (sugar trust) refinery. To reduce the sugar tariff 20 per cent is trifling, but then to juggle the grades in the interest of the refiners' trust so that raw sugar will not be reduced 5 per cent. is the most infamous feature of this vicious and unfair bill.

THE COAL TRUST.

I hold the copy of an Indiana paper which speaks of a citizen's recent trip east. He speaks of the extortionate price of anthracite coal and the consequent suffering of the people last winter. Whereupon the editor denounces "these war-tariff taxes," and says in substance that Republican monopolists, by the votes of Republican Congressman, keep the hateful tariff tax of 75 cents per ton on this necessary of life and says the time has now come when any Congressman that is a friend to the coal monopoly must be beaten.

Now, these men speak with all the assurance of knowledge and all the confidence of ignorance. The fact is, there is no tariff on anthracite coal, and has not been for eighteen years. The people have been outraged and plundered by the anthracite-coal trust, and you Democrats continually assure them that it is the result of the protective tariff.

There is a tariff of 75 cents a ton on bituminous (soft) coal. When asked if a certain word in the bill would not put soft coal on the free-list, the distinguished chairman [Mr. MILLS] declared it would not, and the tariff on it should continue as it is. This is as I anticipated.

In my campaign in 1886, having previously voted against consideration of the Morrison bill, every opposition paper in the district charged I had voted in the interest of the Pennsylvania coal barons, in the interest, for instance, of my distinguished friend from Pennsylvania [Mr. SCOTT], who is a member of this committee. They had taken it for granted that such a necessary of life as coal was of course made free by the Morrison bill, but not having read the bill, they were not aware that it kept on the "old war tariff tax" that it has borne for twenty years. Like the man in the show, I did not say a word. I knew that at this session a tariff bill would be reported again, and I knew the tariff on coal would be continued, and I would have the opportunity, as I now have, on this open floor of declaring against this oppressive burden which is being kept upon us by the Democratic majority and placing myself on record in favor of free coal.

I will tell you why this tariff is kept on coal. It is because Kentucky has more coal than England, estimated by the geological survey. Missouri is full of coal and iron ore. Tennessee and Arkansas have vast deposits. Alabama and Virginia have measureless coal-fields and ore-beds. They are just now being touched by the impulse of an industrial life; they begin to see that the States believing in protecting industries have manifested their faith and are becoming giants in enterprise, while they, believing in free trade or the "tariff-for-revenue" principle, have manifested their faith and are without development—laggards in the race of the States. And hence they keep protection on coal. If there was no coal in your States this bill would have it on the free-list.

We have more coal than Great Britain and all Europe. It costs 8 cents more to put a ton on top of ground in England than in the United States, the reason being the vast depth of their mines and the necessary expense in running them. Our mines, so to speak, are on top of the ground. The coals mined in Indiana and Illinois are not affected by the tariff. After paying the rate agreed with labor it is confessed to be sold at a moderate compensation. But that which comes to us from the East bears a burden with it which is imposed by the barons, and no part of which does labor receive. One way to oppose the trust which has been built up in these coal-fields is to take off the tariff.

If you keep up the trust and extortionate prices after the tariff is off, as you are now doing with anthracite coal since its tariff is off, we will continue to demand that the Committee on Manufactures shall report the Rayner resolution, which prohibits the carrying of products beyond the limits of their respective States, the price of which is controlled by trust combinations.

LUMBER.

Lumber is placed on the free-list in order, it is claimed, that the people may have cheaper homes, but it is not probable that it would reduce the price 1 per cent. The chief import of lumber is from the British provinces (Canada) north of us. They are not a manufacturing people, and vast multitudes of their citizens gain a livelihood by felling trees in the forest. Their men are employed at 50 per cent. below our wages, and really they can pay import duties and sell their lumber at the fair American price.

I believe we should have free lumber, but for a very different reason from that of the committee. We have the most rapidly developing country in the world, and the destruction of our forests has proceeded at such a fearful rate that forestry associations have called attention to the fact, and Congress has passed an act to encourage timber culture. Shortly we will be practically denuded of timber, the result of which will be a great change in our climate, and we would also be placed at the mercy of the lumber dealers of the North. As a protective policy means the best conservation of all our forces, which includes our best interest for to-day and for to-morrow also, we ought to open our ports to all other forests, as it works no hardship now and avoids a hardship in the future. I agree with gentlemen for free lumber. Like Judge Chase, who sometimes renders his decisions but declines to give his reasons on the ground the decision might be correct and his reasons wrong. so it is my duty to agree with the committee, or any one else, when they have arrived at correct conclusions, and not disagree with them because their reasons happen to be fallacious.

SALT.

I am in favor of free salt.

A FEW ITEMS CONTROL.

I need not go further into the examination of this bill, as a few principal items control all tariffs; for instance, there are four thousand articles on the schedule with only eight hundred annually imported, and beyond a dozen articles all are of minor importance, although as a whole they make up a nation's commerce. I doubt if, with the exception of one man, the "father of the House" [Mr. KELLEY], any of us are capable of discussing a tariff bill in all its ramifications, and give the facts on each article. It requires an expert to do so. If the same singular attention to American interests attends all the items in this bill that is apparent on the articles here discussed, the darkness of Egypt was only a fog compared to the gross darkness of the measure, and the quicker the people can have it discussed before them and a vote on it the better for the country.

The most noticeable thing in the discussion of the Mills bill is the steadfast neglect of its friends to discuss it. They come to the issue with the bill hidden behind their backs and plead for tariff revision and for reduction; but it is the Mills bill we have to vote on. There is no difference on the reduction of the revenues, and no disagreement on the necessity of tariff revision; we are all agreed on this. I believe every article in the schedule ought to be gone over article by article and considered intelligently and practically, and each article revised or readopted. I advocated this in 1884 and again in 1886, and I desire at this session of Congress to vote for some proper measure of tariff revision.

The difficulty is, the Mills bill is presented as a reform of the tariff, when it is such in no proper sense. Yet because we refuse to vote for it you affirm that we are opposed to tariff revision. Because we refuse to vote for the most sectional and partisan tariff bill ever presented to Congress; you say we are against tariff legislation. Your impudence exceeds the unfairness of your bill. If you will not get frightened; if you will not amend this bill unless it be in items in close Democratic districts; if you have the courage to pass it just as you have reported it to this House, and as it has received the indorsement of the majority of your State conventions pending the new nomination of Mr. Cleveland, we will throw down to you the glove in the campaign, and overthrow you at the ballot-box in November.

Members have frequently referred to their own districts during this discussion. Now, sir, I believe the policy of the fathers in giving a member of Congress to every certain number of voters was that that Representative should on this floor express the sentiment and interest of the immediate constituency he represents, and that the aggregate result would be to the best interests of the entire country. It is a member's duty to thus act except when some national question overtops all local considerations. The district I have the honor to represent has five woolen-mills, one oil-mill, an iron and steel mill, and vast brickyards, in addition to the ordinary factories incident to a prosperous people. Seventy-five per cent. of its population are farmers. We are not cursed with millionaires, nor damned with poverty. Ninety-five per cent. of the people are what are denominated wage-workers. The district is a full type of American life. My opposition to the Mills bill, and support of the bill I propose, represents their best interests.

Let the candidate of the opposition in that district this fall not dodge the issue, as you have sought to do here, but support this measure fairly and defend its great leading features. I will take the leading features of the revision which I support, and which meets the approval of almost every Representative upon this side of the House, and I will have

an abiding confidence as to what a typical American constituency will do.

AN HONEST REVISION.

I heartily indorse the position taken by my colleague [Mr. BROWNE] in his splendid argument upon this floor, and especially on the revision he suggests. There is my friend from Minnesota [Mr. NELSON] who has introduced a tariff bill. I can cheerfully support his measure with the exception of free rice, and substantially my proposition follows his. I would not put rice on the free-list.

Without reference to any of the small matters that we can not consider in a speech, but for those items upon which we must go before the country for a final decision, I would make the following free-list:

Table showing amount of sugar, molasses, salt, coal, and wood and lumber imported, amount paid for duty, and per cent.

	Amount imported.	Amount of duty.	Ad valorem rate.
			Per cent.
Sugar	$68,882,884	$56,507,496	82.04
Molasses	5,336,730	1,496,863	28.05
Salt	1,455,385	676,866	49.92
Coal	2,811,158	683,728	24.32
Wood and lumber	8,223,505	1,503,185	18.28
Total	86,709,662	60,868,138	*64.78

* Total average.

All the foregoing figures are for the fiscal year ending June 30, 1887.

This gives us the free breakfast table about which we have heard so much, but the highest-priced article of which, sugar, our opponents propose to continue on the tariff-list, and I also cook that breakfast with a free fire.

With the exception, possibly, of salt, there are substantial reasons from a protection standpoint why these products should be free. This measure is not vicious nor inequitable nor illogical, but it is prudent, fair, in harmony with the principle of protection, and brings a needed relief to all our people.

Mr. Chairman, I have now expressed my views on tariff revision, but in addition to all this, I am opposed to the passage of the Mills bill until we have voted on the pension bill. If the Mills bill passes there can be no general pension legislation. The leader of the House [Mr. MILLS] and the chairman of the Pensions Committee [Mr. MATSON], who is Democratic candidate for governor of my State, have control of the situation. The one reported the tariff, the other the arrears bill. They can have a vote on either of these measures as they choose. What will you do, gentlemen?

Mr. Chairman, twenty-seven years of the American system have given us a prosperity without parallel in the history of nations. The party in power has brought us to a crisis, and we are to decide whether this splendid procession of increasing greatness shall continue or whether it shall here stop. Gentlemen on the other side have said that wool and farm products shall go on the free-list this year, and a general scaling of protective duties; and if the Democracy are returned to power this fall it would be the indorsement of the policy entered upon, and at the next Congress the entire protective system shall go.

I know not what the decision at the ballot-box will be. I do know what it should be. I do know if we withdraw the nation's arm of defense from our industries it will put in peril all our proud advancement. It will bring to the foreigner who has come hither to rear his family all that dread ruin he fled from Europe to escape. It will lift from the tired back of toil those magic words, "The nation protects you," and without which we are not a Government for the people. It will turn the home of comfort into a tenement of one room, and the children from school into the factory. This step once taken will be difficult of recall. The decreased earnings of the father and the wan face of the mother will tell the story of the American industrial system overthrown. Such a calamity should be averted.

We have started to build up distinctively a new nation. I gaze upon her limitless resources, her patriotic and honest citizens. I see the oppression that capital forever seeks to put upon labor opposed by a well-nigh universal voice, the nation avowedly legislating in behalf of toil, and wages double what they are in any other government. Public sentiment and legislation will still further crowd capital until a recompense from the profits of production more adequate and fair shall be given to labor. I see our people producing at home every necessary of life, and no tramp on our soil, and bright hope and sweet content shall lighten every step of toil. Our industrial system is the precursor of all that is triumphant in national life. Caste is breaking down and we are rising to the rule of the people. We have removed the tent of tribes and are building on these shores the temple of nations. Within it legal wrong, ignorance, and inequality are being overthrown, and we are filling it with the paradise of happy homes, intelligence, and prosperity. Slowly, it may be, but surely, we are solving the great problem and framing our nation into a mould of precious shape, where all her institutions shall be blessings, her laws liberty, and her people a citizenship grander than royalty. [Applause.]

The Tariff.

SPEECH

OF

HON. O. S. GIFFORD,

OF DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 9, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. GIFFORD said:

Mr. CHAIRMAN: I desire to favor in substance the amendment offered by the gentleman from Indiana [Mr. BROWNE], striking from the free-list "flax-straw."

The reason why I do this is obvious enough. Our people in Dakota raised nearly 4,000,000 bushels of flaxseed in 1887, and I have received thousands upon thousands of petitions from the farmers of Dakota praying for the retention of the present duty upon flax and flax products.

These petitions have all been referred to the Committee on Ways and Means, and it seems to me, inasmuch as they set forth fully the facts, that some consideration should be given them.

I venture to say that this bill, if it becomes a law, will take from the pockets of the farmers of Dakota from three-quarters to a million of dollars. That it will take from the pockets of the farmers, "prairie farmers" pure and simple, who reside in Dakota, Northwestern Iowa, Minnesota, and Northern Nebraska (an area of about 250,000 square miles), more money than any "manufacturing trust" ever extracted from the pockets of a like number of people upon the American continent.

No doubt the tariff concerning flax products needs revision. The present duty on flaxseed is 20 cents per bushel, specific duty. The duty on linseed-oil is 25 cents per gallon, specific duty.

One bushel of seed makes two and one-half gallons of oil; therefore it will be seen that a bushel of seed crushed into oil is protected to the extent of 62½ cents per bushel as against foreign oil, but the producer, the farmer, is only protected, when he puts his product upon the market, to the extent of 20 cents per bushel as against Russian and India flaxseed, where farm labor scarcely averages 25 cents per day in the former country, and not 7 cents per day in the latter country, board and all expenses included.

This unequal duty is not just to the farmer, and the duty on flaxseed should be raised to at least 40 cents per bushel instead of being placed upon the free-list, and the duty on linseed oil should be lowered. We have heard a great deal about this being intended to break up trusts and monopolies in the interest of the farmer. Right here is an example of how this is done. The product of the farmer is free of duty absolutely. Everything in the shape of raw product, flax straw, flax not hackled or dressed, flax hackled known as dressed line, tow of flax or hemp, and flax-seed, are all on the free-list.

The farmers who are striving to develop the bleak prairies of the Northwest, with but few manufacturing industries among them, must ship the raw material from their farms to the mills of other sections and to the markets, there to compete for a price with the raw products of other countries entered duty free, put upon the market by labor which does not average 20 cents per day, and when the farmer buys back this same product in the shape of oil, linen, or whatever it may be, he finds that the manufacturer is protected in his interests, in the production of this completed article to the extent of from 25 to 40 per cent. against foreign pauper labor.

Take every farm product of the Northwest, except wheat, and this same fact exists regarding it.

How long will the Western farmer be protected at his own home, upon our own shores, in the wheat he raises against the Hindoo wheat farmer if this bill should become a law? Certainly but a brief period. Wheat is produced in Russia and put upon the market for 10 cents per bushel; in India for from 5 to 7 cents. It only costs 1 cent per bushel more to place Russian or Indian wheat upon the markets of New York than it does at Liverpool. Potatoes and other vegetables imported from foreign countries have been constantly upon the tables in every city from New York to Galveston during the past winter.

We have heard a great deal said about this bill protecting the farmer, and having been framed in his interest. But whenever any farm product is under discussion we are told that there is a "combine" in the House to reduce duties wherever it can be done. Not a voice has been raised upon the Democratic side in favor of a single industry of the Northwest; not a farm product of that region is to be protected except wheat, and were it not for the winter-wheat raisers of the South this protection would be wiped out. Meat, beans, peas, and a vast number of farm products are added to the free-list. The natural and best markets of the Western farmer are the manufacturing districts and the Southern planter.

How are the interests of the Western farmer cared for? His hogs and cattle and all meats and hides therefrom unprotected.

The shoes and clothing he buys are protected to the extent of 40 per cent. He must sell his flax, potatoes, and all vegetables in an unprotected home market, and buy sugar and farm machinery protected in the amount of 35 to 60 per cent.

The Southern farmer is protected in the rice he raises and the sugar he produces to the extent of sixty millions at present, and estimated under this bill to the extent of fifty millions, a reduction of about 16 per cent. In the case of the Northern farmer, the reduction is 100 per cent. The material used by the Southern farmer in baling his cotton is absolutely free.

The Dakota farmer pays for nearly the same material used in baling hay a duty of from 40 to 60 per cent. This is what you call working for the interest of the Western farmer, is it?

In the abundance of your kindness what does this bill give the Western farmer, any way? You start out with a few sticks of Canadian lumber, not enough to build a pig-pen; then you propose giving us a few bundles of English shoddy, you pretend to give us a spoonful of salt, and do really give us one-sixth of a teaspoonful of sugar to sweeten the dose.

I do not believe this hook is baited right to catch "prairie suckers" successfully.

He must pay the freight both ways, lose the protection upon what he sells, and pay the protection upon what he buys.

The Western farmer believes that a reform and a reduction of the tariff upon some manufactured articles and products is desirable and necessary.

What reason is there for the American people paying fifty millions to protect a sugar industry only worth all told about six millions per annum? What justice is there in the Northern farmer or stock-raiser paying the rice-raiser or cotton-grower a tribute and getting nothing in return? We see here the result of "the combine to reduce taxation." This "combine" simply proposes, in its supreme selfishness, to strike down the weak and bolster up the strong, as represented in this House.

The Northwest are denied representation upon this floor, and at the other end of the Capitol by that same "combine to reduce taxation" to a considerable extent 600,000 people in Dakota are denied a single vote upon a proposition which affects their products to the extent of more than $1,000,000 per annum. It is not difficult to take the tariff from the products of a people who have no vote in this House. The gross injustice and absolute tyranny of the Government towards Dakota strikes deep and hard through this measure.

If raw material and farm products are to be imported into this country free of duty the Southern planter can well afford to have the duty upon his products reduced 7 per cent., as proposed under this bill, so long as he is still protected over 40 per cent.

Look again at flax.

The following is the duty upon raw flax:

The present duty on flax straw is $5 per ton; on flax tow, $10; on flax not hackled, $20, and on hackled flax, $40, a percentage respectively of 10.73 on flax straw, of 9.05 on unhackled flax, and of 7.06 on hackled flax, as shown by the importations and values last year. These percentages are very low, and certainly, if the growers and dressers of flax are to have any protection at all, as low as can reasonably be asked. The importations for the ten months ending April 30, 1888, amount to $1,404,722. For the year ending June 30, 1887, they amounted to $1,908,845.

The farmers of Dakota are now beginning to find a profitable market for their tow, and tow mills are being operated in many sections of our territory. But the protection upon tow and flax straw is altogether inadequate now, and to place it upon the free-list simply means that this portion of the product becomes absolutely worthless. Scarcely no product of our country is so poorly protected as raw flax.

The average duty to-day is but 8 per cent. upon raw flax products. This product is the poor man's crop. He can raise it the first year that he breaks the prairie, and with the proceeds can procure the necessaries for his family.

A few dollars protection in this is worth more to him and of greater value to the country than thousands to some other industries. This proposition appeals squarely to the hearts as well as the pockets of the American people. If he who is striving single-handed and, often in poverty, to develop the agricultural resources of a new and strange climate and soil can not be encouraged by this little protection, then abolish your custom-houses and let us have absolutely free trade.

Do you suppose that you can convince the farmer of the West, in the light of experience and history, that absolute free trade is best for him and his interests? What town or community upon our prairies would not give a bonus to secure a factory of some sort in its midst? What farming community would say no to the proposition that would place twenty-five, one hundred, or a thousand workmen near them to purchase their garden and farm products?

Talk about "combines" in Congress to reduce the tariff wherever it can be done! It must result in free trade for Western farm products and protection to those of the South and East.

A third of a century ago, or more, the British manufacturing establishments entered into a combine to establish free trade.

They reduced the wages of their workmen to the starvation and pauper limit. The child of the workingman there must go to the shop instead of the school-room, be it boy or girl, and earn the bare necessaries of life.

These manufacturers paid the Cobden Club alone more than a million of dollars a quarter of a century ago to establish free trade. They expended untold millions upon millions in underselling and driving out manufacturing establishments in this and other countries. The British Government lent its aid directly to the enterprise by paying enormous subsidies to steam-ship and transportation lines to insure transportation for the goods. The object accomplished, the competing and home factory closed, the British manufacturer at once places the price of his wares where they will net him a handsome profit, after paying him for all losses, and the poor lamb that has been cajoled by the foreign wolf must pay the price he asks or go without.

The first cry for free trade in England was made precisely as is now presented in this bill—free raw material and a slight reduction in manufactured goods. The average reduction in the duty on goods in this bill is 7 per cent., and 40 per cent. is retained, while nearly all raw material produced on the farm is duty free.

The moment this policy was adopted in England the farmer there commenced to suffer. Rents were reduced and tenants would not meet the reduction even. Millions of acres were turned into pasture or other grounds, simply because the farmer could not sell his product "in the free markets of the world" for sufficient to pay expenses. The misery in Ireland resulting from free raw material became oppressive and intolerable, and in England the farmers and peasantry became so reduced financially that their condition is no better than the "shilling-per-day hand" in the coal-pit.

This bill proposes to retain a high duty upon coal and iron-ore and protect amply the sugar trusts and rice interests. It proposes to place farm products upon the free-list and protect manufacturing interests to the extent of more than 90 per cent. of the present duty. It even places nearly every ingredient used in the manufacture of beer and other malt liquors and cheap rotgut whisky upon the free-list, including barley, a farm product, and taxes alcohol, which is used in the preparation of every medicine, nearly, and which is an absolute necessity in thousands of arts and many things a farmer and mechanic uses.

Castor beans and oil, a Southern product, is protected amply; Northern beans and peas are duty free, upon the principle, I suppose, that babies can not tell the difference between high-priced oil and cheap peas and beans.

My own impression is that a sight of this bill is sufficient to give a Northern baby the colic without the aid of cheap peas.

Does the American farmer desire to try the experiment of the English farmer? It is certain to follow under this bill. The Republican party has reduced taxation and reduced the tariff hundreds of millions of dollars since the war. The Democratic party has had a majority of the Lower House of from fifteen to seventy in Congress for the last twelve years, except one Congress, and have passed no measure through the House looking to any reduction of taxation. The Republicans revised and reduced the tariff in the Forty-seventh Congress (six years ago) many millions without disturbing the business interests of the country.

The Republicans, were they in power, would again revise and reduce the tariff, but it would be done in the interest of the Northern as well as Southern farmer, as well in the interest of the Western agriculturist as the Eastern manufacturer.

Farm products and raw material would not go upon the free-list. The Dakota farmer would not have the duty stricken from his flax-straw, tow, and other flax products, and be compelled to pay in return a duty of 40 per cent. upon his fence wire (which is a fact under this bill) and twine used in binding his grain. He would not sell his hay in the "markets of the world" almost free of duty and pay a tax of 40 per cent. upon the wire used in baling it, and a higher duty upon all the farm machinery used in connection with it from the time the grass sprouts from the ground until he gets the money for his crop. He would not pay 90 per cent. of the present duty upon sugar, 100 per cent. on coal, and more than 100 per cent. on rice, while competing in the "free markets of the world" with his meat and other products.

He would not pay a duty upon his clothing, his "warm blankets," his plow, his hoe, his wagon, his harness, his mower, reaper, the spoons and cutlery he uses, and the crockery in his "cupboard," while competing in the "markets of the world" with his wool, his dairy products, and every conceivable thing nearly that he produces.

I want to say a word about trusts. We are constantly told that high tariff produces and creates trusts. Let us see about this. The most gigantic and merciless "trust" to-day is the coal-oil trust. There is no duty upon coal-oil; therefore the tariff does not protect the trust. But it is proposed under this bill to aid this trust by the tariff. The Standard Oil Company uses more tin than any other company in the world, and the tin interests of Dakota and every other section of the country must be sacrificed upon the altar of the Standard Oil Company. Tin is made free of duty under this bill.

The next largest trust in the world is the "sugar trust," and it is

proposed to continue this by retaining nearly the present duty and compelling our people to pay each year about $50,000,000, or eight times more than the yearly product of the United States is worth, for that purpose. This trust is protected squarely by the tariff, and is the only one that is squarely protected, and the Mills bill continues the protection, as is well known.

The "coffee trust," which raised the price of coffee in this country a short time ago, had no duty to aid or protect it.

The richest grain and pork "trusts" are purely speculative and the tariff does not affect them.

It is said that linseed-oil is controlled by a trust. If so, it must have been to a very small extent indeed, because linseed-oil has declined in price continually, with a brief exception, from $1.40 in 1864 to about 50 cents in 1888.

The farmer gets from 80 cents to $1.10 per bushel for his seed (flaxseed). Who complains of any "trust" in this business? Does the farmer or mechanic? No one except a few pretended friends of the farmer, who want to see all farm products competing in the "markets of the world," and the farmer, who now gets but little remuneration for his toil, reduced to the same level as the pauper tenant farmer of Europe.

The farmers of the West want to see the tariff revised, and in this revision want to see the interests of American labor, American manufactures, and American farm products cared for.

The farmer wants a home market. He does not wish to be placed in competition with 10-cent-per-day labor in a foreign market, neither does he ask it of anybody else. He can not be cajoled into the belief that free salt, which while protected is only worth now 60 cents per barrel at the works in Michigan, for package and all, will induce him to cheerfully pay a duty on coal.

The removal of $2 duty per thousand feet put on lumber, when it is conceded this will not lessen the price, will not satisfy him for paying a duty to the sugar trust and woolen mills and rice growers.

If a Dakota farmer wants to invest in a flock of sheep, he must understand that his wool goes out into the "free markets of the world" under this bill, and comes back in the shape of cloth protected. He exchanges his meat and other products in the "markets of the world" free of duty, and receives farm machinery, fence wire, implements, etc., protected in the sum of 40 per cent.

Verily, I say, this hook will not catch "prairie farmers" to any extent.

Protection of American Fishermen.

REMARKS

OF

HON. NELSON DINGLEY, JR.,

OF MAINE,

IN THE HOUSE OF REPRESENTATIVES,

June 5 and 6, 1888.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

The Clerk read the concluding paragraph of the lumber schedule, as follows:

Provided, That if any export duty is laid upon the above-mentioned articles, or either of them, by any country whence imported, all said articles imported from said country shall be subject to duty as now provided by law.

Mr. DINGLEY. I move to amend by adding to the paragraph just read the sub-proviso which I send to the desk.

The Clerk read as follows:

And provided further, That all said articles shall be subject to the same duty as now provided by law when imported from any country which denies in its ports, to fishing or other vessels of the United States authorized to touch and trade at foreign ports, the same commercial privileges, including the right to buy provisions, bait, and supplies, and to transship any portion of cargo, as are granted to similar vessels of such country in the ports of the United States.

Mr. DINGLEY. Mr. Chairman, the House in committee has decided, contrary to my own judgment and vote, to place all kinds of manufactured lumber on the free-list. Whatever view any gentleman may take as to the effect on our own interests of legislation admitting Canadian lumber to our markets free of duty (for no lumber will come to us from any other country than Canada), it can but be conceded that the action of the Committee of the Whole on the lumber schedule, when consummated in law, will be a great boon to the Dominion.

So great a boon is it regarded by our Canadian neighbors that for more than forty years they have been seeking it by every means at their command. In 1854 they gave us for this boon free admission into their markets for many of our own products. After they had enjoyed the advantages of our markets for their lumber and fish for twelve years, and we had become satisfied that the advantages given us by the treaty of 1854 were far less than those we received, the people and Government of Canada stood ready to give us still larger compensation for the benefits which they received from the free entry into our markets. From the day the reciprocity treaty was abrogated in 1866 to the present hour the government of Canada has been seeking to again secure the advantages of our markets for her lumber and other products and has stood ready to render some equivalent.

In view of these facts it might be supposed that the Democratic majority of the Ways and Means Committee, after having adopted the policy of adopting free trade as to manufactured lumber, would have taken measures looking to the consummation of this scheme through an arrangement with Canada by which she would have given the United States an equivalent for so great a boon. But instead of doing this they have reported a proposition, and the Democratic majority of the House in committee have adopted it, giving Canada the benefit of free lumber, and asking nothing in return from the Dominion except the pitiful pledge that they will not impose an export duty on lumber sent to the United States.

What makes this proposition peculiarly amazing is the fact that at the time this great boon is tendered Canada, fishing vessels of the United States authorized to touch and trade at foreign ports are denied in Canadian ports those commercial privileges which every other civilized country freely grants to the vessels of other nations and which we freely give to similar Canadian vessels in our own ports, privileges which are ours of right under the reciprocal maritime agreement of 1830.

Mr. Chairman, while I strenuously oppose placing lumber on the free-list as a grave injustice to our citizens engaged in this industry, it seems to me as if even the gentlemen on the Democratic side, by whose votes this has been done, should be willing, nay should insist, that Canada shall not have this boon so long as she denies to American fishing vessels the commercial privileges, including the right to buy supplies, provisions and bait for a fishing voyage and the right to transship fish in bond, which we freely grant to similar Canadian vessels, and which Congress one year ago unanimously affirmed belonged to us as of right.

I need not present any evidence that the Canadians regard this proposition as a great boon to them, for every gentleman in this Hall is familiar with the efforts which they have made to secure it.

The interview with the United States consul at Ottawa, which I read a few days ago when the lumber schedule was taken up, brings out the fact that the timber lands of Canada are owned by the Government, and that only permits to cut timber are sold. In view of this the United States consul said that in his judgment, and the judgment of well-informed men in Canada, the effect of placing lumber on the free-list in the United States would eventually be to simply increase the revenue which the Canadian Government would receive for permits without giving the people of this country a dollar's benefit.

Evidently Sir Charles Tupper, the Canadian minister of finance, takes the same view, for in his recent speech in advocacy of the fisheries treaty in the Canadian Parliament he said:

Already we have action by the financial exponent of the Administration of the United States—I mean Mr. MILLS—the gentleman who in the United States Congress represents the Government of the day, and stands in the position most analogous in the United States to the finance minister in this House, the chairman of the Committee on Ways and Means, who propounds the policy of the Administration in the House. How is he selected? The Democratic party, sustaining the Government, selects a man as Speaker of the House of Representatives who is in accord with the policy of the Administration for the time-being, and Mr. CARLISLE, the Speaker of the House of Representatives, nominates the chairman of the Committee on Ways and Means and all the members of the committee; and therefore the chairman of that committee occupies the position of representing the Government in bringing forward such bills as will represent the views and sentiments of the Democratic party in the United States supporting the Administration. What have we seen? The ink is barely dry upon this treaty before he, as the representative of the Government and chairman of the Committee on Ways and Means, brings forward a measure to do what? Why, to make free articles that Canada sends into the United States, and upon which last year $1,800,000 of duty was paid.

* * * * * * *

I say that under this bill, which has been introduced, and which, I believe, will pass, for it does not require two-thirds of the Senate, where the Republican majority is only one in the whole House, to pass this bill; it requires a majority of one only, and I am very sanguine that this bill will pass during the present session. Modified it may be, but I am inclined to think the amendments will be still more in the interests of Canada than as the bill stands to-day. If this is the case, I think we may congratulate ourselves upon securing the free admission of our lumber, upon which was paid during the last year no less than $1,315,450. On copper ore, made free by the Mills bill, we paid—or there was paid, to make it meet the views of the honorable gentleman opposite more correctly—$96,945. On salt $21,992 duty was paid. This is rendered free by the Mills bill. I am sorry to find, as I hoped would be the case from the first copy of the bill that came to me, that potatoes were not included amongst vegetables. I am sorry to find there is a doubt as to whether the term "vegetables not specially enumerated" will not exclude potatoes.

Indeed, it is because the Canadians are so anxious to obtain our markets free of duty for their lumber and fish that they have resorted to such extreme measures, even to a denial of commercial privileges to our fishing vessels, in the hope that they might by these means force us to compliance with their wishes.

It is for these reasons, Mr. Chairman, that I have offered my amendment in the form of a proviso to the free-lumber schedule already adopted, in the hope that the Democratic majority may at least say to Canada, "You shall not have the privilege of entering our markets with your lumber without paying duty until you deal justly with our fishing vessels." [Applause on the Republican side.]

* * * * * *

THE FREE-FISH AMENDMENT.

Mr. BRECKINRIDGE, of Kentucky. I desire to offer an amendment to the amendment of the gentleman from Maine.

The CHAIRMAN. The amendment will be read.

The amendment was read, as follows:

And provided further, That whenever the said commercial privileges, including the right to buy provisions, bait, and supplies, and to transship any portion of cargo, are granted to the fishing and other vessels of the United States by the Dominion of Canada, then mackerel, herring, salmon, and other fish, smoked, dried, salted, pickled, or preserved, except anchovies and sardines, or other fish preserved in oil, shall be free of duty: *And provided further*, That whenever the Dominion of Canada admits products, wares, and merchandise grown, produced, or manufactured in the United States free of duty, then the products, wares, and merchandise grown, produced, or manufactured in said Dominion of Canada shall be admitted free of duty.

* * * * * * *

Mr. DINGLEY. Mr. Chairman, I rise to oppose the amendment offered by the gentleman from Kentucky. The original amendment, which I offered as a limitation to the free-lumber schedule, already adopted by the House in committee, provided, in effect, that manufactured lumber should not come in free of duty from Canada so long as the Dominion Government denies to American fishing vessels the commercial privileges to which this Government holds they are entitled.

The amendment to my amendment, offered by the gentleman from Kentucky [Mr. BRECKINRIDGE], provides that when the Dominion of Canada shall grant to our fishing vessels commercial privileges all kinds of fish, except fish preserved in oil and fish-oil, imported from Canada, may come into our markets free of duty.

Inasmuch as all kinds of fish products, except "fish, fresh, for immediate consumption," are on the dutiable lists in our present tariff, the proposition which the distinguished representative of the Democratic majority of the Ways and Means Committee makes is to buy from Canada the privileges which for many years, and up to the fatal hour in February last when the recent fisheries treaty was signed, we have constantly claimed belonged to our fishing vessels as of right, by giving to the Dominion the right to send her fish into the United States and sell them in our markets free of duty, in competition with the products of our own fisheries and our own fishermen.

THE FISHERIES TREATY OF 1888.

I am aware, Mr. Chairman, that the unfortunate treaty concluded in February last between our Government, represented by Secretary Bayard and Messrs. W. L. Putnam and J. B. Angell, and Great Britain, in behalf of Canada, represented by the British minister, Mr. West, and Messrs. Joseph Chamberlain and Sir Charles Tupper, proposes to surrender the privileges for which we have so long contended for our fishing vessels in Canadian ports, to wit, the right to buy provisions, supplies, ice, bait, and other merchandise for a fishing voyage, and to land fish in Canadian ports, to be sold on payment of duty, or to be transshipped and sent in bond to the United States, privileges which we freely grant to similar Canadian vessels in our ports.

I am aware also that one of the articles of that treaty provides that fishing vessels of the United States may have these commercial privileges when the United States shall admit Canadian fish free of duty; and that a *modus vivendi* submitted by the British commissioners and appended to the treaty proposes to extend these privileges to American fishing vessels for the term of two years, unless the treaty shall be sooner ratified, on the payment of $1.50 per ton burden of vessels per annum.

The fifteenth article of the treaty is as follows:

Whenever the United States shall remove the duty from fish-oil, whale-oil, seal-oil, and fish of all kinds (except fish preserved in oil), being the produce of fisheries carried on by the fishermen of Canada and Newfoundland, including Labrador, as well as from the usual and necessary casks, barrels, kegs, cans, and other usual and necessary coverings containing the products above mentioned, the like products, being the produce of fisheries carried on by the fishermen of the United States, as well as the usual and necessary coverings of the same, as above described, shall be admitted free of duty into the Dominion of Canada and Newfoundland.

And upon such removal of duties, and while the aforesaid articles are allowed to be brought into the United States by British subjects, without duty being reimposed thereon, the privilege of entering the ports, bays, and harbors of the aforesaid coasts of Canada and Newfoundland shall be accorded to United States fishing vessels by annual licenses, free of charge, for the following purposes, namely:

1. The purchase of provisions, bait, ice, seines, lines, and all other supplies and outfits.
2. Transshipment of catch, for transport by any means of conveyance.
3. Shipping of crews.

Supplies shall not be obtained by barter, but bait may be so obtained.

[Until this treaty is adopted, not to exceed two years, Canada, by the protocol attached to the treaty, agrees to give these privileges to fishing vessels of the United States on payment of $1.50 per ton.]

But this treaty has not been ratified by the Senate; indeed, I am confident, will not be ratified by the Senate, so that the rights of the United States remain the same as they were before this unfortunate document received the signatures of Secretary Bayard and his commissioners, although seriously weakened, I am bound to say, by their unfortunate surrender.

I can not better state what this Government has steadily claimed for our fishing vessels up to the signing of this treaty—a position which the people of this country do not propose to abandon—than by reading from the correspondence of Secretary Bayard and Minister Phelps with the British minister and British secretary for foreign affairs in 1886 and 1887.

SITUATION PREVIOUS TO 1871.

Before reading from this correspondence, however, a brief statement of the history of the fisheries question will materially contribute to an understanding of the merits of the controversy.

By the treaty of 1783 with Great Britain the citizens of the United States were recognized as entitled to equal rights with the people of Canada in the shore as well as deep-sea fisheries adjacent to British North America. Great Britain claimed that the war of 1812 abrogated this treaty. The counter claims of the two countries led to the treaty of 1818, by which the United States renounced the right of our fishing vessels under the treaty of 1783 to enter certain territorial waters of British North America (within 3 miles of any of the coasts, bays, creeks, or harbors) for the catching of fish or for any other purpose than shelter, repairs, wood, and water. When this treaty was made no vessel of either the United States or Canada was entitled to enter the ports of the other country on equal terms with national vessels. Therefore at that time our fishing vessels were given privileges which no other American or foreign vessel possessed. In 1830 Canada (through Great Britain) and the United States entered into reciprocal maritime relations whereby it was agreed that the vessels of either country should be accorded the same commercial privileges as national vessels in the ports of the other country—the coasting trade alone excepted—and from that time Canadian fishing as well as other Canadian vessels have been freely given full commercial privileges in all ports of the United States.

While the Canadian authorities have since 1830 maintained in correspondence that the reciprocal maritime arrangement of 1830 did not extend to fishing vessels, and that the letter of the treaty of 1818 still measured their privileges in Canadian ports, yet the United States has maintained to the contrary, and the fishing vessels of the United States have, up to 1886, continued to exercise the privilege of buying supplies, provisions, and bait for deep-sea-fishing voyages, and, with one or two exceptions (and those not sustained by the Canadian courts), the Canadian authorities have not undertaken to seize American fishing vessels for exercising commercial privileges. Seizures have been made for alleged illegal fishing or for alleged violation of the Dominion customs laws. The following from a communication from United States Minister Phelps to Lord Roseberry, the British secretary for foreign affairs, dated June 2, 1886, so clearly presents the status of American fishing vessels in ports of Canada just before the treaty of 1871 and after the abrogation of the fishery clauses of the treaty in 1885 that I accept it without comment. Says Minister Phelps:

The practical construction given to the treaty of 1818 down to the present time has been in entire accord with the conclusions thus deduced from the act of Parliament. The British Government has repeatedly refused to allow interference with American fishing vessels, unless for illegal fishing, and has given explicit orders to the contrary.

On the 26th of May, 1870, Mr. Thornton, the British minister at Washington, communicated officially to the Secretary of State of the United States copies of the orders addressed by the British admiralty to Admiral Wellesley, commanding Her Majesty's naval forces on the North American station, and of a letter from the colonial department to the foreign office, in order that the Secretary might "see the nature of the instructions to be given to Her Majesty's and the Canadian officers employed in maintaining order at the fisheries in the neighborhood of the coasts of Canada." Among the documents thus transmitted is a letter from the foreign office to the secretary of the admiralty, in which the following language is contained:

"The Canadian Government has recently determined, with the concurrence of Her Majesty's ministers, to increase the stringency of the existing practice of dispensing with the warnings hitherto given, and seizing at once any vessel detected in violating the law.

"In view of this change and of the questions to which it may give rise, I am directed by Lord Granville to request that you will move their lordships to instruct the officers of Her Majesty's ships employed in the protection of the fisheries that they are not to seize any vessel unless it is evident and can be clearly proved that the offense of fishing has been committed and the vessel itself captured within 3 miles of land."

In the letter from the lords of the admiralty to Vice-Admiral Wellesley of May 5, 1870, in accordance with the foregoing request, and transmitting the letter above quoted from, there occurs the following language:

"My lords desire me to remind you of the extreme importance of commanding officers of the ships selected to protect the fisheries exercising the utmost discretion in carrying out their instructions, paying special attention to Lord Granville's observation that no vessel should be seized unless it is evident and can be clearly proved that the offense of fishing has been committed, and that the vessel is captured within 3 miles of land."

Lord Granville, in transmitting to Sir John Young the aforesaid instructions, makes use of the following language:

"Her Majesty's Government do not doubt that your ministers will agree with them as to the propriety of these instructions, and will give corresponding instructions to the vessels employed by them."

These instructions were again officially stated by the British minister at Washington to the Secretary of State of the United States in a letter dated June 11, 1870.

Again, in February, 1871, Lord Kimberley, colonial secretary, wrote to the governor-general of Canada, as follows:

"The exclusion of American fishermen from resorting to Canadian ports, except for the purpose of shelter, and of repairing damages therein, purchasing wood, and of obtaining water, might be warranted by the letter of the treaty of 1818, and by the terms of the imperial act 59 George III, chapter 38, but Her Majesty's Government feel bound to state that it seems to them an extreme measure, inconsistent with the general policy of the empire, and they are disposed to concede this point to the United States Government under such restrictions as may be necessary to prevent smuggling, and to guard against any substantial invasion of the exclusive rights of fishing which may be reserved to British subjects."

And in a subsequent letter from the same source to the governor-general, the following language is used:

"I think it right, however, to add that the responsibility of determining what is the true construction of a treaty made by Her Majesty with any foreign power

must remain with Her Majesty's Government, and that the degree to which this country would make itself a party to the strict enforcement of the treaty rights may depend not only on the literal construction of the treaty, but on the moderation and reasonableness with which these rights are asserted."

I am not aware that any modification of these instructions or any different rule from that therein contained has ever been adopted or sanctioned by Her Majesty's Government.

Judicial authority upon this question is to the same effect. That the purchase of bait by American fishermen in the provincial ports has been a common practice is well known; but in no case, so far as I can ascertain, has a seizure of an American vessel ever been enforced on the ground of the purchase of bait or of any other supplies. On the hearing before the Halifax Fisheries Commission in 1877 this question was discussed, and no case could be produced of any such condemnation. Vessels shown to have been condemned were in all cases adjudged guilty either of fishing or preparing to fish within the prohibited limit; and in the case of the White Fawn, tried in the admiralty court of New Brunswick before Judge Hazen in 1870, I understand it to have been distinctly held that the purchase of bait, unless proved to have been in preparation for illegal fishing, was not a violation of the treaty nor of any existing law, and afforded no ground for proceedings against the vessel.

That Minister Phelps stated the situation correctly and in accordance with the views of the Administration is shown by the letter of Secretary Bayard to Mr. Phelps, acknowledging the receipt of a copy of the minister's communication from which I have quoted, in which the Secretary says that—

The views and arguments you [Mr. Phelps] adduce are fully in accord with the instructions already sent you.

TREATY OF WASHINGTON.

So many difficulties had arisen in consequence of the seizure of American fishing vessels for fishing in waters which the Canadians claimed were within the 3-mile limit, which, in several cases, they undertook to maintain should be determined by drawing a straight line from headland to headland of great bays—although this construction was never sustained by any court or even by the British Government—that when the treaty of Washington for the settlement of differences growing out of the operations of Confederate cruisers was under consideration in 1871, an agreement was reached for the settlement of the fishery differences on the basis of the admission of American fishermen and fishing vessels to the privilege of fishing in Canadian-shore fishing grounds on the one part, and the admission of Canadian fish into our markets free of duty on the other part, a commission and an umpire in case of disagreement to determine whether the privilege of fishing in Canadian waters was worth more than the privilege of our markets, and if so how much more. This settlement met the views of most of the fishermen at that time, because they regarded the Canadian fishing grounds as much more valuable than they proved to be. Nothing was said in the treaty about commercial privileges for American fishing vessels in Canadian ports for the very good reason that they were not denied, and our Government took the ground then, as we continued to maintain till last February, that we are entitled to these privileges as of right in return for similar privileges granted Canadian vessels. And during the fourteen years in which the fishery clauses of the treaty of 1871 were in force American fishing vessels continued to buy provisions, supplies, and bait without any question being raised in any quarter. The only difficulty that arose during this period grew out of the attempt of Newfoundland to hedge in our right of fishing in her waters by restrictive legislation, culminating in the Fortune Bay outrage on our fishermen in 1878. Secretary Evarts, however, promptly demanded the maintenance of our rights and reparation for damages, and Great Britain favorably responded and paid the bill.

The outrageous award of five and a half millions by the Belgian umpire to whom finally it fell to determine whether the United States should pay anything as the difference in value between the use of the Canadian fishing grounds and free admission of Canadian fish to our markets, led to a careful investigation of the actual value of the former, when it was found that the duties remitted on Canadian fish were much greater than the entire value of our catch in Canadian waters, to say nothing of the disastrous results to our fishermen of Canadian competition in our markets.

These facts led Congress in 1883 to unanimously request the President to give the required two years' notice to terminate the fishery clauses of the treaty of 1871. This notice was given by President Arthur, and July 1, 1885, these clauses of the treaty were terminated.

By a temporary arrangement the right of our fishing vessels to fish in Canadian waters was extended through the season of 1885, under a promise exacted from President Cleveland by the British minister that the former would recommend to the Senate the appointment of a commission to negotiate a new fisheries and trade treaty, the well-understood object of the Canadians being to use the fishery question as a lever to secure the free admission of Canadian fish and other products to American markets. But the Senate by more than a two-thirds vote disapproved of the project early in 1886.

Thus on the 1st of March, 1886, the fishery question stood precisely as it did before the treaty of 1871 was negotiated.

CANADA'S OUTRAGES IN 1886.

Thereupon, on the 5th of March, 1886, the Canadian authorities, for the evident purpose of forcing Congress to admit Canadian fish and Canadian lumber free of duty—two objects which Canada had been earnestly seeking for forty years—issued a proclamation notifying American fishing vessels that they would not be permitted to enter Canadian ports for any purpose except the four named in the old fisheries treaty of 1818, to wit, shelter, repairs, wood, and water.

At the opening of the fishing season of 1886 the Canadian authorities began to seize, harass, and warn off American fishing vessels which entered Canadian ports for the purchase of supplies. May 8, 1886, they seized the American fishing schoooner D. J. Adams, of Gloucester, Mass., for purchasing bait for use in deep-sea fishing.

I need not refer to more than a hundred other cases of seizure, detention, refusal to purchase supplies, or warnings of American fishing vessels during the fishing season of 1886. I will mention only a few of the instances set forth in the long list furnished Congress by the Secretary of State.

James A. Garfield.—Gloucester, Mass. Threatened, about June 1, 1886, with seizure for having purchased bait in a Canadian harbor.

Martha W. Bradley.—Gloucester, Mass.; J. F. Ventier, master. Warned off at Canso, Nova Scotia, between June 1 and 8, 1886.

Eliza Boynton.—Gloucester, Mass.; George E. Martin, master. Warned off at Canso, Nova Scotia, between June 1 and 9, 1886. Then afterwards detained in manner not reported, and released October 25, 1886.

Thomas F. Bayard.—Gloucester, Mass.; James McDonald, master. Warned off at Bonne Bay, Newfoundland, June 12, 1886, and refused privilege of buying bait.

James G. Craig.—Portland, Me.; Webber, master. Crew refused privilege of landing for necessaries at Brooklyn, Nova Scotia, June 15 or 16, 1886.

Novelty.—Portland, Me.; H. A. Joyce, master. Warned off at Pictou, Nova Scotia, June 29, 1886, where vessel had entered for coal and water; also refused entrance at Amherst, Nova Scotia, July 24.

N. J. Miller.—Booth Bay, Me.; Dickson, master. Detained at Hopewell Cape, New Brunswick, for alleged violation of customs laws, on July 24, 1886. Fined $400.

Rattler.—Gloucester, Mass.; A. F. Cunningham, master. Warned off at Canso, Nova Scotia, June, 1886. Detained in port of Shelburne, Nova Scotia, where vessel entered seeking shelter August 3, 1886. Kept under guard all night and released on the 4th.

Caroline Vought.—Booth Bay, Me.; Charles S. Reed, master. Warned off at Raspebiac, New Brunswick, and refused water, August 4, 1886.

Alice M. Jordan.—Refused permission to buy bait, June 5, 1886.

Mascot.—Gloucester; refused permission to buy bait, June 10, 1886.

Julia Ellen.—Booth Bay, Me.; Burnes, master. Boarded at Liverpool, Nova Scotia, August 9, 1886, and subjected to rude surveillance.

Mollie Adams.—Gloucester, Mass.; Solomon Jacobs, master. Warned off into storm from Straits of Canso, Nova Scotia, August 31, 1886.

Jennie Seaverns.—Gloucester, Mass.; Joseph Tupper, master. Refused privilege of landing, and vessel placed under guard at Liverpool, Nova Scotia, October 20, 1886.

Cynosure (schooner).—Booth Bay, Me.; L. Rush, master. Was obliged to return home before securing a full cargo, not being permitted to purchase provisions in Nova Scotia. (From statements from S. Nickerson & Sons, owners, Booth Bay, Me.)

Lottie E. Hopkins (schooner).—Vinal Haven, Me.; Emery J. Hopkins, master. Refused permission to buy any article of food in Canadian ports. Obtained shelter in harbors only by entering at custom-house. (From statement of Emery J. Hopkins, owner and master, North Haven, Me.)

Cora Louisa (schooner).—Booth Bay, Me.; Obed Harris, master. Could get no provisions in Canadian ports and had to return home before getting full fare of fish. (From statements of S. Nickerson & Sons, owners, Booth Bay, Me.)

Eben Dale (schooner).—North Haven, Me.; R. G. Babbidge, master. Not permitted to buy bait, ice, or to trade in any way. Driven out of harbors, and unreasonable restrictions whenever near the land. (From statements of R. G. Babbidge, owner and master, Pulpit Harbor, Me.)

Charles Haskell (schooner).—North Haven, Me.; Daniel Thurston, master. Obliged to leave Gulf of St. Lawrence at considerable loss, not being allowed to buy provisions. (From statements of C. S. Staples, owner, North Haven, Me.)

Willie Parkman (schooner).—North Haven, Me.; William H. Banks, master. Unable to get supplies while in Gulf of St. Lawrence, which necessitated returning home at great loss, with a broken voyage. (From statements of William H. Banks, owner and master, North Haven, Me.)

Nellie M. Snow (schooner).—Wellfleet, Mass.; A. E. Snow, master. Was not allowed to purchase provisions in any Canadian ports, or to refit or land and ship fish, consequently obliged to leave for home with broken trip.

Gertrude Summers (schooner).—Wellfleet, Mass.; N. S. Snow, master. Refused privilege of purchasing provisions, which resulted in injury to voyage.

Charles R. Washington (schooner).—Wellfleet, Mass.; Jesse S. Snow, master. Master was informed by collector at Ship Harbor, Cape Breton, that if he bought provisions, even if actually necessary, he would be subject to a fine of $400 for each offense. Refused permission by the collector at Souris, Prince Edward Island, to buy provisions, and was compelled to return home September 10, before the close of the fishing season.

John M. Ball (schooner).—Provincetown, Mass.; N. W. Freeman, master. Driven out of Gulf of St. Lawrence to avoid fine of $400 for landing two men in the port of Malpeque, Prince Edward Island. Was denied all supplies, except wood and water, in same port.

Zephyr (schooner).—Eastport, Me.; Warren Pulk, master. Cleared from Eastport, May 31, 1886, under register for West Isles, New Brunswick, to buy herring. Collector refused to enter vessel, telling captain that if he bought fish, which were plenty at the time, the vessel would be seized. Returned to Eastport, losing about a week, which resulted in considerable loss to owner and crew. (From statements of Guilford Mitchell, owner, Eastport, Me.)

Abdon Keene (schooner).—Bremen, Me.; William C. Keene, master. Was not allowed to ship or land crew at Nova Scotia ports, and owner had to pay for their transportation to Maine. (From statements of William C. Keene, owner and master, Bremen, Me.)

John Nye (schooner).—Swan's Island, Me.; W. L. Joyce, master. After paying entry fees and harbor dues was not allowed to buy provisions at Malpeque, Prince Edward Island, and had to return home for same, making a broken trip.

Asa H. Pervere (schooner).—Wellfleet, Mass.; A. B. Gore, master. Entered harbor for shelter; ordered out after twenty-four hours. Denied right to purchase food.

Nathan Cleaves (schooner).—Wellfleet, Mass.; P. E. Hickman, master. Ran short of provisions, and, not being permitted to buy, left for home with a broken voyage. Customs officer at Port Mulgrave, Nova Scotia, would allow purchase of provisions for homeward passage, but not to continue fishing.

Frank G. Rich (schooner).—Wellfleet, Mass.; Charles A. Gorham, master. Not permitted to buy provisions or to lie in Canadian ports over twenty-four hours.

Emma O. Curtis (schooner).—Provincetown, Mass.; Elisha Rich, master. Not allowed to purchase provisions, and therefore obliged to return home.

Pleiades (schooner).—Wellfleet, Mass.; F. W. Snow, master. Driven from harbor within twenty-four hours after entering. Not allowed to ship or discharge men under penalty of $100.

Charles F. Atwood (schooner).—Wellfleet, Mass.; Michael Burrows, master.

Captain was not permitted to refit vessel or to buy supplies, and when out of food had to return home. Found Canadians disposed to harass him and put him to many inconveniences. Not allowed to land seine on Canadian shore for purpose of repairing same.

The above are only specimens of more than a hundred instances of refusals to accord our fishing vessels privileges in Canadian ports, daily accorded in our ports during the same season to Canadian fishing vessels—refusals often accompanied with grave indignities.

SECRETARY BAYARD'S PROTESTS AND DEMANDS.

May 10, 1886, Secretary Bayard wrote to Sir Lionel West, the British minister, protesting against the seizure of the D. J. Adams and the detention of the schooner Joseph Story. After discussing the treaty of 1818, which describes the fishing waters exclusively reserved to Canada, and provides that fishing vessels of the United States may enter these reserved Canadian waters "for shelter, repairs, purchasing wood, and obtaining water," and contending that the reciprocal maritime arrangement made by the United States with Great Britain in behalf of Canada in 1830 had widened these privileges for all vessels of the two countries in each other's ports, Secretary Bayard said:

I ask you to consider the results of excluding American vessels, duly possessed of permits from their own Government to touch and trade at Canadian ports as well as to engage in deep sea-fishing, from exercising freely the same customary and reasonable rights and privileges of trade in the ports of the British colonies as are freely allowed to British vessels in all the ports of the United States under the laws and regulations to which I have adverted.

Among these customary rights and privileges may be enumerated the purchase of ship-supplies of every nature, making repairs, the shipment of crews in whole or part, and the purchase of ice and bait for use in deep-sea fishing.

In the same communication Secretary Bayard also said:

To prevent the purchase of bait or any other supply needed in deep-sea fishing, under color of executing the provisions of the treaty of 1818, would be to expand that convention to objects wholly beyond its purview, scope, and intent, and give to it an effect never contemplated by either party, and accompanied by results unjust and injurious to the citizens of the United States,

As this first communication made by Secretary Bayard to Minister West clearly and ably stated the American position on the rights of American fishing vessels in Canadian ports—the position unanimously maintained by the American people without distinction of party—up to the unfortunate day of February last when the fisheries treaty was signed, I ask the attention of gentlemen to the Secretary's language.

The Secretary declares—

First. That American fishing vessels, authorized by our laws to touch and trade, are entitled to the same privileges in Canadian ports as are freely allowed to similar Canadian vessels in our ports, to wit: the purchase of ship-supplies of every nature," "the shipment of crews," and the purchase of ice and bait for use in deep-sea fishing.

And he subsequently adds "the transshipment of catch of fish."

Second. That for Canada to attempt to prevent American fishing vessels from exercising these privileges in her ports, "under color of executing the provisions of the treaty of 1818, would be to expand that convention to objects wholly beyond its purview."

SECRETARY BAYARD REPEATS HIS DEMAND.

But, Mr. Chairman, Secretary Bayard's position and demands up to the time the commission assembled last November do not rest on one communication, but on many running through the season of 1886 and up to July, 1887. I ask the attention of gentlemen while I read many other communications from him embodying the same demand.

June 7, 1886, Secretary Bayard again wrote as follows to Minister West:

DEPARTMENT OF STATE, *Washington, June 7*, 1886.

SIR: I regret exceedingly to communicate that report is to-day made to me, accompanied by affidavit, of the refusal of the collector of customs at the port of St. Andrews, New Brunswick, to allow the master of the American schooner Annie M. Jordan, of Gloucester, Mass., to enter the said vessel at that port, although properly documented as a fishing vessel with permission to touch and trade at any foreign port or place during her voyage.

The object of such entry was explained by the master to be the purchase and exportation of "certain merchandise" (possibly fresh fish for food, or bait for deep-sea fishing).

The vessel was threatened with seizure by the Canadian authorities, and her owners allege that they have sustained damage from this refusal of commercial rights.

I earnestly protest against this unwarranted withholding of lawful commercial privileges from an American vessel and her owners, and for the loss and damage consequent thereon the Government of Great Britain will be held liable.

I have, etc.,

T. F. BAYARD.

Here was an American fishing vessel that had been refused permission to enter a Canadian port to buy supplies or bait, and Secretary Bayard, on the 7th of June, 1886, wrote to the British minister "earnestly protesting"—against what? Against something that the United States had no lawful right to ask for? Not at all, but against "the unwarranted withholding of lawful commercial privileges." And Secretary Bayard himself declares, in this communication that the commercial privilege in this case "unlawfully" denied was that of buying bait.

It was the right of an American fishing vessel to buy bait as well as supplies for a fishing voyage which Secretary Bayard demanded in 1886, and the Secretary not only demanded this right, but went further, and notified Sir Lionel that—

For the loss and damage consequent thereon [*i. e.*, on the refusal to allow the purchase of bait] the Government of Great Britain will be held liable.

June 7, 1886, Secretary Bayard wrote to Mr. George Steele, of Gloucester, Mass., in reply to a letter reciting the circumstances of the seizure of the fishing schooner Alice M. Jordan, as follows:

DEPARTMENT OF STATE, *Washington, June 7*, 1886.

SIR: I have to-day received your letter dated the 5th instant, accompanied by the affidavit of the master of the fishing schooner Alice M. Jordan, of Gloucester, Mass., alleging the refusal by the collector of customs at the port of St. Andrews, New Brunswick, to allow the entry of said vessel, duly documented as a fishing vessel, with permission to touch and trade at any foreign port or place during her voyage, the object of such entry, as stated by the master of the schooner, being the purchase of certain merchandise.

Although not disclosed by the affidavits, I suppose the merchandise in question was fresh fish for use as bait in deep-sea fishing.

I have made instant representation, accompanied by earnest protest, to the British minister at this capital, of this unlawful withholding of commercial rights from an American vessel and her owners, and of the loss and damage thereby sustained, for which, as I have informed him, the Government of Great Britain will be held responsible.

I have, etc.,

T. F. BAYARD.

GEORGE STEELE, Esq., *Gloucester, Mass.*

On the 13th of July Secretary Bayard wrote to Hon. Charles Levi Woodbury, of Boston, a well-known Democratic jurist and statesman, as follows:

DEPARTMENT OF STATE, *Washington, July 13*, 1886.

SIR: Your letter dated July 7, with twelve affidavits of Gloucester fishermen alleging their long-continued custom of purchasing bait in places and ports in Nova Scotia to be used in deep-sea fishing, has been received, and shall be placed on file for future reference in connection with claims for compensation, growing out of the unlawful prevention of this usage by the Canadian authorities.

I am, etc.,

T. F. BAYARD.

SECRETARY BAYARD INSISTS FISHING VESSELS HAVE RIGHT TO TRANSSHIP FISH.

The distinguished Secretary of State continued to iterate and reiterate his declarations of May and June, 1886, to the effect that American fishing vessels are entitled to such commercial privileges in Canadian ports. July 10, 1886, Secretary Bayard again wrote in indignant protest to Minister West, as follows:

DEPARTMENT OF STATE, *Washington, July 10*, 1886.

SIR: I have the honor to inform you that I am in receipt of a report from the consul-general of the United States at Halifax, accompanied by sworn testimony stating that the Novelty, a duly registered merchant steam-vessel of the United States, has been denied the right to take in steam-coal, or purchase ice, or transship fish in bond to the United States at Pictou, Nova Scotia. * * *

Against this treatment I make instant and formal protest as an unwarranted interpretation and application of the treaty by the officers of the Dominion of Canada and the Province of Nova Scotia, as an infraction of the laws of commercial and maritime intercourse existing between the two countries, and as a violation of hospitality, and for any loss or injury resulting therefrom the Government of Her Britannic Majesty will be held liable.

I have, etc.,

T. F. BAYARD.

I ask the House to note Secretary Bayard's "instant protest" of July 10, 1886, against the denial of the right to purchase supplies and ice and transship fish "as an unwarranted interpretation and application of the treaty" of 1818, and "as an infraction of the laws of commercial and maritime intercourse between the two countries."

SECRETARY BAYARD'S VIEWS, NOVEMBER 15, 1886.

I ask the House also to attentively consider the position occupied by Secretary Bayard and the President four months later, November 15, 1886, when the Secretary wrote to Minister Phelps to suggest what then seemed to him to be a "just, honorable, and satisfactory" plan for the settlement of the fisheries question, one provision of which was as follows:

United States fishing vessels are to have in Dominion ports the same commercial privileges as other United States vessels, including the purchase of bait and other supplies, subject to the ordinary port charges.

And the Secretary added:

Such facilities can not with any show of reason be denied to American fishermen in deep-sea fishing grounds in the localities open to them equally with other nationalities. * * * No construction of the convention of 1818 that strikes at or impedes the open-sea fishing by United States fishermen can be accepted; nor should a treaty of friendship be tortured into a means of such offense, nor should an end be accomplished by such indirection. Therefore, by allowing commercial rights to fishing craft we propose to prevent a ban from being put upon the lawful and regular business of open-sea fishing.

SECRETARY BAYARD'S VIEWS IN JULY, 1887.

When, on March 24, 1887, Lord Salisbury, replying to this *ad interim* arrangement proposed by our Government, stated that by the Canadian construction of the treaty of 1818 these commercial privileges were renounced by the treaty of 1818, and could not be allowed American fishing vessels, Secretary Bayard promptly responded:

The treaty of 1818 related solely to fisheries. It was not a commercial convention, and no commercial privileges were renounced by it. It contains no reference to ports, of which it is believed the only ones then existing were Halifax, and possibly one or two more in the other provinces, and these ports were not until long afterwards opened by reciprocal commercial regulations to vessels of the United States engaged in trading. * * * The purchase of bait and other supplies by the American fishermen * * * is not regarded as inconsistent with any of the provisions of the treaty of 1818. * * * Neither the treaty of 1854 nor of 1871 gave commercial privileges; yet during the existence of these treaties no question was ever made of the right of American fishermen to purchase bait and other supplies in Canadian ports.

And in July, 1887, Secretary Bayard sent copies of this letter to Minister Phelps to show the position of our Government at that time.

POSITION OF MINISTER PHELPS.

During all this time, Mr. Chairman, Minister Phelps, at London, was pressing the same views on the British secretary for foreign affairs.

June 2, 1886, Mr. Phelps wrote the British secretary protesting against the seizure of the D. J. Adams for purchasing bait in a Canadian port, and in his letter said:

It seems to me impossible to escape the conclusion that this and other similar seizures were made by the Canadian authorities for the deliberate purpose of harassing and embarrassing the American fishing vessels in the pursuit of their lawful employment. And the injury, which would have been a serious ones if committed under a mistake, is very much aggravated by the motives which appear to have prompted it.

I am instructed by my Government earnestly to protest against these proceedings as wholly unwarranted by the treaty of 1818, and altogether inconsistent with the friendly relations hitherto existing between the United States and Her Majesty's Government; to request that the David J. Adams and the other American fishing vessels now under seizure in Canadian ports be immediately released, and that proper orders may be issued to prevent similar proceedings in the future. And I am also instructed to inform you that the United States will hold Her Majesty's Government responsible for all losses which may be sustained by American citizens in the dispossession of their property growing out of the search, seizure, detention, or sale of their vessels lawfully within the territorial waters of British North America.

The real source of the difficulty that has arisen is well understood. It is to be found in the irritation that has taken place among a portion of the Canadian people on account of the termination by the United States Government of the treaty of Washington on the 1st of July last, whereby fish imported from Canada into the United States, and which so long as that treaty remained in force was admitted free, is now liable to the import duty provided by the general revenue laws, and the opinion appears to have gained ground in Canada that the United States may be driven, by harassing and annoying their fishermen, into the adoption of a new treaty by which Canadian fish shall be admitted free.

It is not necessary to say that this scheme is likely to prove as mistaken in policy as it is indefensible in principle.

And on the 18th of June Secretary Bayard, in acknowledging the receipt of a copy of Minister Phelps's note to the British secretary, said:

I have received and read it with much satisfaction.

What will the distinguished minister say when he is informed that the distinguished gentleman who represents the Democratic majority of the Ways and Means Committee has introduced a proposition to place fish on the free-list, in the face of the prediction of the distinguished minister that "this scheme is likely to prove as mistaken in policy as it is indefensible in principle!"

What did our distinguished minister think when he heard that the Secretary of State had united in a treaty which surrendered the essential rights for which he had so ably and convincingly argued, and provided that our fishing vessels could have these privileges only by consenting to have Canadian fish admitted free of duty—the very thing which Minister Phelps, on the 2d of June, 1886, said the Canadians were striving to bring about by harassing our fishermen?

SECRETARY MANNING SAYS REFUSAL OF PRIVILEGES TO FISHING VESSELS IS UNJUSTIFIABLE.

Mr. Chairman, it is not simply Minister Phelps, but the late lamented Secretary Manning and every member of this House who voted for either the so-called retaliation bill presented by my friend, the gentleman from New York [Mr. BELMONT], or the bill which finally became a law (and every member of the House at the last session of the Forty-ninth Congress favored either one or the other bill), all of whom one year ago maintained the position that American fishing vessels have the right to purchase supplies and provisions for a fishing voyage and to transship fish in Canadian ports, who are now required to abandon that position and concede the correctness of Canada's contention in order to support the fisheries treaty negotiated by Secretary Bayard and the proposition of the gentleman from Kentucky to place fish on the free-list.

Following the line of argument maintained by Secretary Bayard throughout the fishery correspondence, Secretary Manning in reply to a House resolution of inquiry, January 10, 1887, discussed at length the justice of the claims of our fishing vessels to the privilege of buying supplies, provisions, and bait and transshipping fish in Canadian ports, and gave expression to the policy which then received the unanimous support of the American people, in the following patriotic language:

During the past summer, while American [fishing] vessels regularly documented have been excluded from the hospitality and privileges of trading in Canadian ports, Canadian fishing vessels have been permitted to enter and use American ports along the New England coast * * * While this Department protects Canadian fishermen in the use of American ports, the Dominion of Canada brutally excludes American fishermen from Canadian ports.

So it seems that January 10, 1887, Secretary Manning maintained with Secretary Bayard that American fishing vessels had the same privileges in Canadian ports that we freely accord to Canadian fishing vessels in our ports.

If he were living to-day I doubt not he would still maintain that position, and condemn any treaty or any proposition like that proposed by the gentleman from Kentucky, which proposes to surrender these rights.

MR. BELMONT AND HOUSE COMMITTEE ON FOREIGN AFFAIRS DEMAND SAME PRIVILEGES.

My friend from New York [Mr. BELMONT] in his report from the Committee on Foreign Affairs to the House January 18, 1887, on the North American Fisheries, referring to the Canadian claim that American fishing vessels have no right to enter Canadian ports for trade, purchase of supplies, or provisions and transshipment of catch, said:

The treaty of 1818 furnishes no more excuse for the exclusion of a deep-sea fisherman from the port of Halifax or any other open port of the Dominion of Canada than for the exclusion by the Secretary of the Treasury of a deep-sea fisherman from entering the ports of New York, according to the forms of law and for the ordinary purposes of trade and commerce.

And again, continued Mr. BELMONT:

The British crown has denied to American fishing vessels commercial privileges accorded to other national vessels in Canadian ports. The motive and purpose of such denial have been openly and plainly avowed by Canada to be, first, the punishment of such vessels, because the United States levies a duty on Canadian fish not "fresh for immediate consumption," such as the Government levies on all such fish not the product of American fisheries and imported from any foreign place whatever; and, secondly, to coerce the United States to exempt such Canadian fish from all customs duties, and to enter into other new reciprocal customs relations with the Canadian Dominion and Newfoundland. It is a policy of threat and coercion, which, in the opinion of your committee, should be instantly and summarily dealt with. The circumstances will warrant and require, in the opinion of your committee, not only non-intercourse with Canadian vessels bringing Canadian or Newfoundland fish to our ports, but an exclusion of such fish from entry at our ports, whether brought by railway-cars or by any other vehicle or means.

Brave and patriotic words from the chairman of the Committee on Foreign Affairs!

Surely he does not propose to swallow those words and indorse a treaty or vote for a proposition which surrenders what but little more than a year ago he declared was ours by right.

Surely my friend from New York [Mr. BELMONT], who declared January 18, 1887, that "the motive and purpose of such denial (to American fishing vessels of commercial privileges in Canadian ports) have been openly and plainly avowed by Canada * * * to coerce the United States to exempt Canadian fish from all customs duties," and who patriotically added that "in the opinion of your committee it is a policy of threat and coercion which should be instantly and summarily dealt with," will not fail to repeat his brave and manly words, now that just such a policy as that he so stoutly denounced has been embodied in a treaty and laid before the Senate!

CONGRESS UNANIMOUSLY INSTRUCTS PRESIDENT TO MAINTAIN THESE PRIVILEGES FOR OUR FISHING VESSELS.

Mr. Chairman, I desire to call the attention of such members of the present House as were members of the last House to the fact that every one of us, as well as every member of the Senate, voted for a so-called retaliatory bill, one provision of which read as follows:

Whenever the President of the United States shall be satisfied that any American fishing vessels or fishermen having a permit under the laws of the United States to touch and trade at any port or place in the British Dominion of North America are or then lately have been denied the privilege of entering such port or place in the same manner and under the same regulations as may exist therein applicable to trading vessels of the most favored nation, * * * or shall be prevented from purchasing such supplies as may be there lawfully sold to trading vessels of the most favored nation, * * * it shall be the duty of the President of the United States, in his discretion, by proclamation to that effect, to deny vessels, their masters and crews, of the British Dominions of North America any entrance into the waters, ports, and places of or within the United States, and also to deny entry into any port or place of the United States of fresh or salt fish or any other product of said dominions.

Here was a unanimous declaration by Congress that American fishing vessels have the same commercial privileges, including the purchase of supplies in Canadian ports, as regular trading vessels, and a direction to the President to withdraw similar privileges to Canadian vessels in our ports in case the Canadians deny such privileges to our fishing vessels.

DECLARATIONS OF PROMINENT DEMOCRATS.

Are gentlemen who one year ago supported this bill and its declaration of the rights of American fishing vessels prepared to admit that they were wrong? Are they prepared to now concede that Canada was right in refusing to give American fishing vessels privileges which we freely concede to Canadian fishing vessels?

Some of the gentlemen who are before me will remember that in the discussion which took place in the House on this bill, the only question which arose was as to whether we ought not to substitute a bill which went further than the one that finally passed—a bill which also authorized the President to stop railroad trains from running between the two countries—in case Canada continued to deny American fishing vessels the right to buy provisions, supplies, and bait for a fishing voyage, and to transship fish in Canadian ports.

The gentleman from Georgia [Mr. CLEMENTS] favored the stronger measure of retaliation because, as appears in the RECORD, he thought that a denial by Canada of these privileges to our fishing vessels was so outrageous a procedure that absolute non-intercourse with Canada was not too severe a punishment for her. Surely he will be as earnest as ever in opposing a complete surrender of those privileges.

The gentleman from Virginia [Mr. DANIEL], who has since been promoted to the Senate, also thought that the severer measure should be passed, and eloquently dwelt on the wrongs to which our fishermen had been subjected, saying that "the injury to one of them is an injury to the country and all its citizens which can not be dealt with as a mere scrimmage about fish." Surely the distinguished Senator still feels as keenly as he did one year ago the dishonor which would come to the nation if we should surrender the rights of our fishermen in Canadian ports.

My friend from Kentucky [Mr. MCCREARY], who, in this debate one year ago, declared that "we are claiming for our [fishing] vessels commercial and trading privileges which are ordinarily accorded by one civilized nation to another, and such as we have conceded for many years in American ports to Canadian and British vessels," and who said further that the retaliation bill was "an announcement to our people and to the people of Great Britain that the Government of the United States pro-

poses to maintain its dignity and protect its citizens," of course still stands by his guns and refuses to surrender convictions so pointedly expressed, because the Secretary of State has surrendered.

The gentleman from Texas [Mr. REAGAN], who has since been transferred to the Senate, where, of course, his voice will be heard in defense of the rights of American fishing vessels in Canadian ports, seemed to appreciate the danger we were in from the skillful diplomacy of Great Britain, when he said in this House May 27, 1886, soon after the first seizure of our fishing vessels by Canadians:

There is no one who has examined the treaties between the United States and Great Britain on the Canadian fisheries but must feel humiliated by the fact that we have always been cheated. The Canadian Government, or the British Government if you please, now puts the pressure upon us in engaging in diplomacy, of putting our fishermen's vessels at a disadvantage and of holding that pre-sure on them to get the advantage in any future diplomatic arrangements that may be made for a full settlement of this question. I trust—

He added—

that Congress will show to the Executive Department of the Government and to the British Government that we mean to insist on equal privileges and equal fairness between Canadian and American vessels. If we become so diplomatic as to help to unnerve the Executive Department and strengthen the aggressiveness of the British Cabinet on this subject, we may expect another treaty in which we shall again be cheated.

RESULTS OF FAILURE OF PRESIDENT TO ENFORCE THE LAW OF 1887.

Mr. Chairman, Congress did give the Executive Department full power to place the fishing vessels and the fish of Canada at the same disadvantage that Canada had placed ours, in order that both parties might enter upon negotiations on equal terms, as Mr. REAGAN contended we should; but the President declined to exercise that power. The result was that when negotiations with Great Britain opened the representatives of the United States were under a pressuré to conclude some kind of a treaty to which the representatives of Great Britain were not subject. The latter could prolong the discussion and take their own time to secure their ends, because Canadian vessels were receiving full privileges in all our ports. The former were, as they mistakenly believed, constrained to accept whatever they could most readily obtain, by the fact that American fishing vessels were not only deprived in Canadian ports of the privilege of purchasing supplies, provisions, and bait, and transshipping fish in bond—which the Canadians contended we had no right to do,—but even the privileges of shelter, repairs, wood and water, which the Canadians conceded to us, were purposely illegally and unjustly hedged about so as to seriously interfere with their exercise.

The result under such unequal conditions is that we have come out of the negotiations practically defeated. With great skill the British and Canadian negotiators have made it appear that they were making concessions to the United States in granting American fishing vessels the exercise of the admitted rights of shelter, repairs, wood and water without obstruction, and such slight privileges as the right to unload and transship a catch of fish where it is necessary for a vessel damaged by a storm to do so in order to repair, and the right to buy provisions for a homeward voyage—privileges which I have already said a nation of barbarians would not deny.

Because we started in conceding to Canadian fishing vessels in our ports not only those privileges which humanity exacts of every nation, but also other commercial privileges, Messrs. Chamberlain and Tupper were able to make it appear that our negotiators must meet the Canadians with a surrender of all the real points in issue as an offset to Canadian concession of points not really in issue; whereas if we had entered upon the negotiations denying to Canadian vessels and fish precisely what Canada denied to American vessels and their catch of fish, then we should have been in a position to say to Canada we will arrange our differences by restoring to your vessels and your fish in our ports the same commercial privileges that you will give to us.

Instead of this fair and just compromise, we have come out of the negotiations conceding to Canadian fishing vessels the privilege of entering our ports not simply for purposes demanded by the claims of humanity, but also for purchase of provisions, supplies, bait, and landing and selling and transshipping fish, while American fishing vessels are refused the privilege of entering Canadian ports for the same commercial privileges unless we will either pay Canada $1.50 per ton or else put imported Canadian fish on the free-list. And the gentleman from Kentucky [Mr. BRECKINRIDGE] now proposes that Congress shall complete the surrender by placing fish on the free-list.

Mr. Chairman, no gentleman of discernment can have any difficulty in seeing that this is not a just compromise, but a complete surrender without compensation.

PRESIDENT'S VIEWS OF THE FISHERIES TREATY.

The President and the Secretary of State, who are responsible for this treaty, however, do not seem to regard it as a surrender of the rights which they sought, but, surprising as it seems to me, insist, in the language of the President in his message transmitting the document to the Senate, that it "will be found to contain a just, honorable, and therefore satisfactory solution of the difficulties which have clouded our relations with" Canada. "Especially satisfactory," the President adds, "the proposed agreement will be found by those of our citizens engaged in open-sea fisheries adjacent to the Canadian coast and resorting to these ports and harbors under treaty provisions and rules of international law." And further on the President says: "The right of our fishermen under the treaty of 1818 did not extend to the procurement of bait and distinctive fishery supplies (*i. e.*, provisions, ice, nets, etc.) in Canadian ports and harbors, and one item supposed to be essential, to wit, bait, was plainly denied them by the explicit and definite words of the treaty of 1818."

SECRETARY BAYARD'S EXPLANATION OF THE TREATY.

Secretary Bayard is even more explicit and more jubilant over what he styles the "successful result of his negotiations." In an interview with the Washington correspondent of the Boston Herald, published in that paper February 20, 1888, speaking of the fisheries treaty, the Secretary says:

It gives us everything I demanded in my correspondence with Great Britain on the fisheries question.

Summing up what had been secured by the treaty in addition to the delimitation of the 3-mile limit (and I do not stop to discuss the loss of fishing territory to which we are subjected by the reservation to Canada of bays under 10 miles in width at their mouth, instead of the 6-mile width, which we have always contended for), the Secretary said:

Hereafter the rights secured to us by the treaty of 1818—of shelter, repairs, wood, and water—are to be freely exercised without any such friction as the vexatious customs regulations of Canada have produced. * * * Nay, more, United States fishing vessels under stress of weather or other casualty may unload, transfer, or sell all fish on board in a Canadian port; may replenish outfits, provisions, and supplies damaged or lost by disaster; may ship men to supply vacancies arising from death or sickness, and may purchase supplies for a homeward voyage.

Adding that—

If such a treaty as this had been in force during the past three years we would have never had a complaint from our fishermen.

And then, as if conscious that the material rights demanded by our fishermen had been overlooked, the Secretary continued:

But, say the critics, the treaty does not secure us the right to buy bait and other fishing supplies unless we admit fish, and fish, whale, and seal-oil free of duty as a consideration. How else, I would ask, could we get that right? It was expressly excluded from the treaty of 1818.

* * * * * * *

What Canada does say is that, if she becomes our partner in the fishing business, supplying us with bait and seines and other fishing supplies, she shall be allowed to share the market with us. But this is all over and beyond the real and substantial advantages secured to us by the treaty.

After which the Secretary jubilantly closed in the following strain:

I do not believe the country will see a peaceful and honorable settlement, promoting good neighborhood, the object of all treaties, set aside by a little knot of partisans for political ends. I do not believe the country wants to see our northern border lined, first with custom-houses and then with forts, our intercourse with Canada broken up, and our fishermen absolutely excluded from Canadian waters.

And in a letter to the Canadian Club of New York City, March 1, 1888, regretting that he must decline to accept an invitation to be present at a dinner given to Mr. Chamberlain, Secretary Bayard further said:

The treaty has been framed in a spirit of just and mutual conciliation and advantage, and I earnestly hope that the blindness of partisanship or the influence of local selfishness or ignorance may not be suffered to deprive the two countries of its great benefits. Its defeat would be a great public calamity which I hope patriotism may arrest.

MR. CHAMBERLAIN MORE THAN SATISFIED.

At this dinner of the Canadian Club Mr. Chamberlain, the British commissioner, was the principal speaker, and in his speech he used substantially the same terms as those employed by Secretary Bayard in describing the "success" of the negotiations, evoking cries of "Hear!" "Hear!"—and no wonder—as he glowingly announced the advent of the first millennial triumph in the following words:

I say that in this treaty both sides have substantially gained what they contended for.

The distinguished British commissioner, in a burst of eloquence, described what had been gained by the United States by the general phrase of "the claims of humanity," which when analyzed means simply the concessions which the pirates of the Formosa coast would grant. He was explicit, however, in his statements as to what Canada had declined to concede, using this language:

The treaty of 1818 declares in express terms that the fishing vessels of the United States shall have access to the harbors and ports of Canada for four purposes—for wood, water, shelter, and repairs—and for no other purposes whatever. It is impossible for language to be plainer. And yet at the present moment we find the opponents of the present treaty ignoring altogether the provisions of the treaty for which it is a substitute, and they try to construe the words of the convention of 1818, "for no other purposes whatever," as though they were for every other purpose whatever. ["Hear! hear!"] * * * Canada declines, and always has declined, to allow her ports and harbors, which Providence has placed in close proximity to the fisheries of the banks, to be made the base of operations for competitors who rigidly exclude her from their markets, but these facilities are offered freely in return for an equivalent. As long as this equivalent is denied Canada feels justified in declining these facilities.

SECRETARY BAYARD AND MR. CHAMBERLAIN AGREE.

It will be seen, Mr. Chairman, that both Mr. Chamberlain and Secretary Bayard agree that the proposed treaty embodies the following basis of settlement:

First. That the treaty of 1818 and the commercial arrangements between Great Britain and the United States entitle American fishing vessels, authorized by our laws to touch and trade and employed in deep-sea fishing, to enter Canadian ports only for shelter, repairs, wood, and water. This has been the contention of Canada since 1886.

Second. That the United States concedes that American fishing vessels have no right to enter Canadian ports to purchase supplies, provisions, or bait, to ship men for a deep-sea fishing voyage, or to ship fish; and Canada offers to grant these privileges until the treaty is ratified—not to exceed two years—to such of our fishing vessels as will purchase the privilege by paying a license tax of $1.50 per ton per annum, and subsequently without such license tax if this country will admit all Canadian fish free of duty.

Third. That Canada engages to give American fishing vessels without obstruction the four port privileges of shelter, repairs, wood, and water, and also, in the interest of "humanity," to allow American fishing vessels to enter her ports (1) to unload and transship fish where the vessel has been so badly damaged by any casualty as to necessitate repairs, (2) to buy supplies to take the place of those lost or damaged in a storm, (3) to ship a man to supply the place of one who has died or is ill, and (4) to buy provisions enough to last on the homeward voyage.

This proposed treaty, according to Mr. Chamberlain, "gives to both sides substantially all that they contended for;" and according to Secretary Bayard, "gives us everything I demanded in my correspondence with Great Britain on the fisheries question."

I can understand, Mr. Chairman, how a victorious diplomat, conscious that his triumph would be incomplete without a ratification of his treaty by the Senate of the United States, would regard it as simply in line with the shrewd diplomacy which had already gained half the battle to tickle the vanity of the people of this country with smooth diplomatic words, which when closely examined are seen to be meaningless, for it is impossible that substantial antagonistic claims of two countries can be adjusted so as to give both all that they claimed.

TREATY COMPARED WITH SECRETARY BAYARD'S DEMANDS.

But I do not understand what Secretary Bayard can mean when he says:

The treaty gives us everything I demanded in my correspondence with Great Britain.

If the Secretary has secured "everything he demanded" in his correspondence, then I do not wonder that he declares that those who oppose the ratification of the treaty are either "narrow partisans, locally prejudiced or ignorant"—because, so far as I know, not only every member of Congress and every American citizen concurred in the view that the distinguished Secretary, and especially Minister Phelps, presented the claims and demands of our fishermen in an able, satisfactory and convincing manner.

For myself, Mr. Chairman, and I think I may add for other gentlemen who object to the proposed treaty, I am willing to stand by the position taken by Secretary Bayard in this correspondence, which I have read and to which I appeal for justification or condemnation, as the communications of the distinguished Secretary may require. If the treaty "gives us everything I [Secretary Bayard] demanded in my correspondence with Great Britain," it will appear from a comparison of the Secretary's demands in his letters to Minister West, and his statement of what he has secured by the treaty, from both of which I have read.

ILLUSTRATED BY THE CASE OF THE D. J. ADAMS.

Take the most conspicuous seizure—that of the fishing schooner D. J. Adams, seized by the Canadian authorities May 8, 1886, for purchasing bait for a deep-sea fishing voyage.

May 10 Secretary Bayard wrote to the British minister protesting against the seizure, saying that—

To prevent the purchase of bait or any other supply needed in deep-sea fishing under color of executing the provisions of the treaty of 1818 would be to expand that convention to objects wholly beyond its purview, etc.

June 7, 1886, Secretary Bayard protested against the refusal to allow a fishing vessel to purchase bait as an—

Unwarranted withholding of lawful commercial privileges from an American vessel, and for the loss and damage consequent thereon the Government of Great Britain will be held liable.

But Secretary Bayard and the President now say that fishing vessels of the United States never had any right to buy bait and supplies in a Canadian port for a fishing voyage; and the treaty concluded concedes this.

Does not the case of the D. J. Adams, then, clearly present an instance of a demand made by the Secretary of State, to wit, the right to buy bait, which has been given up? Possibly the Secretary may undertake to avoid this conclusion, as some of his defenders have, by insisting that the D. J. Adams was seized and held nearly two years for a violation of the Dominion customs laws.

It is true that after the Adams was seized for buying bait an additional charge was made against her for violation of customs laws in not reporting. This subterfuge of the Canadian authorities was clearly exposed by Minister Phelps in his communication of June 2, 1886, in which Minister Phelps said:

The occupation of the vessel [the D. J. Adams] was exclusively deep-sea fishing, a business in which it had a perfect right to be employed. The ground upon which the capture was made was that the master of the vessel had purchased of an inhabitant of Nova Scotia, near the port of Digby, in that province, a day or two before, a small quantity of bait to be used in fishing in the deep sea, outside the three-mile limit.

The question presented is whether, under the terms of the treaty and the construction placed upon them in practice for many years by the British Government, and in view of the existing relations between the United States and Great Britain, that transaction affords a sufficient reason for making such a seizure, and for proceeding under it to the confiscation of the vessel and its contents.

I am not unaware that the Canadian authorities, conscious, apparently, that the affirmative of this proposition could not be maintained, deemed it advisable to supplement it with a charge against the vessel of a violation of the Canadian customs act of 1883, in not reporting her arrival at Digby to the customs officer. But this charge is not the one on which the vessel was seized, or which must now be principally relied on for its condemnation, and standing alone could hardly, even if well founded, be the source of any serious controversy. It would be at most, under the circumstances, only an accidental and purely technical breach of a custom-house regulation, by which no harm was intended and from which no harm came, and would in ordinary cases be easily condoned by an apology, and perhaps the payment of costs.

Indeed after the Canadian authorities had secured from Secretary Bayard the treaty of last February, the Dominion Privy Council voted to release the D. J. Adams and the Ella M. Doughty to their owners, the substance of the order of surrender being as follows:

OTTAWA, ONTARIO, *February* 27, 1888.

Upon the recommendation of the Minister of Justice, the Privy Council has authorized him to discontinue proceedings in the cases of the David J. Adams and the Ella M. Doughty, the United States fishing vessels which were libeled in the Admiralty court at Halifax for purchasing bait within the territorial waters of Canada. The Government takes the ground that as these seizures were made to assert and establish the right of Canada to prevent the purchase of bait or supplies, or the shipping of crews in her territorial waters, under the convention of 1818, and inasmuch as those rights have been recognized and established by the recent convention at Washington, it is unnecessary that the proceedings should continue.

Can there be more conclusive evidence of the fact, first, that the D. J. Adams was seized and held for buying bait in a Canadian port; second, that Secretary Bayard protested against her seizure, and demanded that our fishing vessels be given the privilege of buying bait and other supplies; and third, that the treaty which the Secretary has negotiated surrenders the right of our fishing vessels to buy bait, provisions, and supplies for a fishing voyage, and provides that these privileges can be exercised only on condition that Congress puts fish on the free-list, although the *modus vivendi* graciously tendered by Canada for the term of two years unless the treaty shall be ratified previously, allows an American fishing vessel to purchase these privileges by paying $1.50 per ton burden annually?

And this is the treaty which the distinguished Secretary avers "gives us everything I demanded," and of which he says, "had it been in force during the past three years, we would have never had a complaint from our fishermen."

Pray, how could the D. J. Adams, the Ella M. Doughty, and scores of other fishing vessels have obtained bait or supplies, or transshipped their catch of fish in Canadian ports under this treaty without paying $1.50 per ton burthen of vessel?

And even this privilege of obtaining commercial rights for our fishing vessels on the payment of $1.50 per ton is to terminate the hour the treaty is ratified—the only mode provided by the treaty for obtaining these rights after ratification being by putting fish on the free-list—and in no event is the *modus vivendi* to continue longer than two years.

THE "SATISFACTORY" MODUS VIVENDI.

This is the treaty which the President says "will be found especially satisfactory by those of our citizens engaged in the sea fisheries."

"Especially satisfactory!" for men who incur so great labors and dangers to earn small wages to be obliged to pay $1.50 per ton ($150 for a small vessel of 100 tons) for the privilege of entering a Canadian port to buy supplies or bait or transship cargo, when Canadian fishing vessels are given all these privileges freely in our ports, and after the Secretary has again and again declared that we are entitled to such privileges in Canadian ports as of right. The fact that fishing vessels are paying this toll for these privileges in Canadian ports is by no means evidence that it is "satisfactory" or decent. It is simply proof of the shameful neglect of our Government to secure to our fishermen privileges to which they are entitled as of right without the payment of tribute to Canada. "Especially satisfactory!" to our fishermen to be able to obtain these privileges after the treaty is ratified only by admitting all kinds of Canadian fish free of duty. If the Administration had had no intention of insisting on the right of our fishing vessels to buy provisions, supplies, and bait in Canadian ports for deep-sea fishing, how much better off we should have been to have accepted the offer which it is understood was made by Canada before the commission met, to extend the fishery clauses of the treaty of 1871 indefinitely, without compensation, thereby securing to our fishermen the right to fish in Canadian waters, in addition to the commercial privileges in Canadian ports which had always been accorded in exchange for free fish; for now, if the treaty be ratified, we can obtain only commercial privileges for free fish.

In the face of the fact that Congress in 1883 unanimously voted to direct the President to give the two years' notice required to terminate the fishery clauses of the treaty of 1871, for the reason that we had reached the conclusion, after twelve years' trial, that even the liberty to fish in Canadian waters, in addition to the commercial privileges always accorded, was not a sufficient compensation for the admission of Canadian fish free of duty (although in 1871 our fishermen favored the fishery arrangement made by the treaty of Washington), it is amazing that the present Administration should have thought it wise in 1888 to

enter into another treaty which surrenders the privilege of buying supplies, provisions, and bait for fishing voyages, and the right to transship fish in bond to the United States, and provides that we can have them permanently only by placing fish on the free-list.

It is all the more surprising that the right to transship fish in a Canadian port should have been surrendered, because of the fact that the treaty of Washington secures the right of transshipment of merchandise in each other's ports to both Canada and the United States; and Canada depends largely upon such a use of our ports in the winter season for communication with Europe. A suggestion that this Government would withdraw this transshipment privilege in our ports for Canadian goods unless American fishing vessels should be allowed to exercise the same privilege in Canadian ports would have brought Canada to terms.

THE EXCUSE THAT FISHERMEN SAID THEY DID NOT WANT THE PRIVILEGES.

But it is said in justification of this arrangement that the fishermen themselves said they did not care for the commercial privileges which have been surrendered.

When, where, Mr. Chairman, did they ever make this declaration?

A quotation is made from the testimony of several fishermen before the Senate committee of inquiry, when, speaking of bait, they declared that they could get along without going into Canadian ports to buy it, and did not care for the privilege at the cost of surrendering our markets to Canadian fish by putting it on the free-list. That was the bargain then proposed, and it was with reference to such a bargain that the fishermen all affirmed that neither the privilege of buying bait, nor supplies, nor provisions in Canadian ports was to be considered as of any consequence to the fishermen as compared with the value of proper duties imposed on Canadian fish. The fishermen always regarded the privilege of buying bait and supplies in Canadian ports as of some value, because it rendered a less expensive outfit practicable, but of no more value than the privileges freely given Canadian vessels in our ports.

But all through the controversy the fishermen have insisted that under our reciprocal arrangements with Great Britain, we are entitled to the same privileges in Canadian ports that Canadian fishing vessels receive in our ports; and Secretary Bayard all through the correspondence with Great Britain insisted on these rights, and protested as strongly against their denial to our vessels as did our fishermen.

To attempt to excuse a surrender of these rights by quoting the expressions of our fishermen when comparing the value of these rights with Canada's offer to no longer withhold them if we would place Canada on the free-list, is to add insult to injury.

THE CHAMBERLAIN SUGGESTION.

Mr. Chamberlain, in his after-dinner speech, referred to the fact that a few Canadians condemn the treaty as an offset to the grand chorus of disapproval with which it has been received in this country, and as evidence that on the whole it must be an adjustment which ought to satisfy fair-minded men; and some Americans have adopted Mr. Chamberlain's ingenious appeal.

No one who has carefully followed the Canadian programme will be deceived by the objections made to the treaty by those Canadians who fully expected that by withholding from our fishing vessels commercial privileges they would drive us to what they call trade reciprocity. The Canadians have expressed disappointment that a reciprocal trade treaty was not concluded, but not a single Canadian, so far as I have read the debates in the Canadian Parliament or the comments of the Canadian newspapers, has expressed an opinion that so far as the treaty went—so far as the controversy over the rights of fishing vessels was concerned—the Canadians had not obtained a recognition of all that they claimed. A few Canadians have condemned Sir Charles Tupper for not obtaining a trade treaty also.

The Montreal Gazette, in summing up the results of the treaty, justly says:

We secure every right for which we have contended in the correspondence of the last two years. The Americans are debarred from the "touch and trade" and transshipping privileges. We have obtained everything we ever claimed—the right to deny trading privileges to American fishing vessels, to prohibit the purchase of bait, ice, seines, lines, tackle, and other fishing outfit, the transshipment of cargo, and the shipping of seamen.

A correspondent of the Boston Journal, who interviewed the leading Canadian fishermen at Halifax, quotes them as follows:

S. S. Forrest, one of the largest lobster packers, thought that the treaty was a splendid one for Canada. Joseph Wood said that Canada had secured a settlement of two dangerous questions—headlands and three-mile limit—by conceding the courtesies of humanity by allowing vessels short of provisions to purchase supplies upon their homeward voyages only, and by allowing vessels putting into our ports in distress or for repairs to transship of their cargoes. "Pending the ratification of the treaty all American vessels are given the right to purchase bait and supplies and transship cargoes, but only upon payment of $1.50 a ton liscense fee, which would be a tax of $100 to $150 to each American vessel and protection to Canadian fishermen to that extent. Under the treaty they are to get free bait for free fish. But if we do not get free fish the Amecans will find that our concessions amount to very little. Under the treaty the rights of Canada are fully and explicitly reserved and conserved." E. D. Tucker said: "The more the treaty is looked into the more favorable it will appear for Canada." Albert Gayton, a member of the Legislature for Yarmouth and direct representative of the fishermen, thought the treaty and free fish for free bait would give a large degree of satisfaction to the Canadian fishermen.

The London Times put the truth in a nutshell when it said in a leading article a few days after the treaty was made public:

The more carefully the treaty is studied the more it will be seen that it is a shrewd and satisfactory settlement.

"Shrewd" certainly on the part of Mr. Chamberlain and Sir Charles Tupper. "Satisfactory" to the Canadian fishermen, but unsatisfactory in the highest degree to American fishermen and their friends, and calculated to awaken grave solicitude for the future of American fishing interests.

DIFFICULTIES GROWING OUT OF THE TREATY.

The grave difficulty is that, if ratified, the treaty surrenders all the important privileges which we claimed in Canadian ports, and leaves a lever which will be industriously worked until fish is put on the free-list and the finishing blow given our fishing industry. Indeed, the presentation by the gentleman from Kentucky [Mr. BRECKINRIDGE] of an amendment placing fish on the free-list shows that the Canadians did not overestimate the value of this lever. Even if rejected, as of course it will be, it will be almost impossible to regain the position we occupied before the treaty was entered into, because the fact that the present Administration have conceded that our fishing vessels have no right to enter Canadian ports to purchase supplies or provisions for a fishing voyage, or to transship fish, will always stand in our way. The St. John (New Brunswick) Sun clearly sees this, and says of it:

The advantages of our present position will be sufficiently evident when the next controversy arises, which will be when the first American fisherman is prevented from doing something he wants to do. Should he be prevented from purchasing bait, forwarding supplies, or shipping a crew on our coast, the usual outcry will be raised, charges of brutal treatment and of uncivilized conduct will be made, and the President will be invited to retaliate by proclaiming non-intercourse. It will then be open to Mr. Foster to remind the Secretary of State that he has himself admitted the right of Canadians to do these things, and has agreed to a formal treaty recognizing that right. Nor will it be longer open to Mr. Bayard to use the language which he has rather freely employed heretofore, and which more clamorous politicians and less responsible men of his nation have used more freely than he. The President may retaliate, but if he does he will be retaliating to a nation which is doing what the President and his Cabinet and the President's chosen commissioners have admitted to be within the right of that nation to do.

A year and a half ago the country was united in demanding commercial privileges for our fishing vessels in Canadian ports as a right; the members of the Administration and the Democratic leaders in the Senate and House vied with Republicans in insisting that Canada should permit our fishing vessels to buy provisions, supplies, and bait and transship fish in Canadian ports, and that if she refused Canadian fishing vessels should be shut out of our ports and Canadian fish excluded from our markets; Secretary Bayard was vigorously demanding of the British Government a prompt concession of these demands and courageously notifying the British minister that Great Britain would be held responsible in damages; Secretary Manning was sending a communication to Congress calling attention to "the brutal exclusion of American fishermen from Canadian ports;" the House Committee on Foreign Affairs was unanimously reporting through Mr. BELMONT that Canada was trying "to coerce the United States to exempt Canadian fish from all customs duties" by excluding American fishing vessels from her ports, "a policy of threat and coercion which," as Mr. BELMONT and the unanimous Foreign Affairs Committee then said, "should be instantly and summarily dealt with."

"Alas! how are the mighty fallen." Within eighteen months after the President and Secretary Bayard were making these demands on Great Britain they sent a treaty to the Senate surrendering what had been demanded, accompanied with communications affirming that they had concluded "a just and satisfactory" settlement of the differences with Canada. And promptly most of the political friends of the Administration, who have adopted the mistaken view that it is their duty to follow wherever the Administration goes, ignore their words and acts of but a few months ago, "right-about face" on this important question, and become advocates of a policy which they then earnestly condemned.

And now, if I may judge from the unanimity of the utterances to which I have listened, the Democratic members of the House propose, with but few exceptions, to give the Canadians the benefit of their vote for the amendment submitted by the gentleman from Kentucky, which proposes to place Canadian fish on the free-list if the Dominion will only graciously permit American fishing vessels to exercise in Canadian ports the commercial privileges which we are freely granting to similar Canadian vessels in our own ports, and which the Administration and every member on this floor fifteen months ago said were ours as of right.

And so potent have been the influences which emanate from the White House that in my own State of Maine the Democratic State convention has praised this summersault of the Administration on the fishery question as a feat of statesmanship, and made the treaty a part of the Democratic faith, in the following glowing terms:

Resolved, That we most cordially approve the course of the President of the United States and the Secretary of State, who, in accordance with the ancient policy of the Democratic party, in protecting the interests of our fisheries have now offered the Senate of the United States a treaty which thoroughly secures to them the peaceable pursuit of their dangerous and poorly-paid occupation, and also affords a reasonable hope of terminating the controversies which have heretofore caused a sacrifice of our fishing vessels, and unjustly driven them from Canadian waters, without their receiving at any previous time practical protection or redress, and we especially applaud the President for refusing to yield to the demands of those selfish monopolies which have clamored for the use of the Federal power, even to the extent of endangering our general commerce, for the purpose of compelling facilities for shipping in foreign ports aliens to man our fishing fleet in competition with our own citizens.

THE WAR DODGE.

We are gravely told, Mr. Chairman, that gentlemen who object to

the surrender of the privileges in Canadian ports which we demanded as ours of right one year ago, contemplate the alternative of non-intercourse and war; and dismal pictures are drawn of the consequences of an appeal to arms against the august power of Great Britain.

Such talk as this hardly rises to the dignity of decent nonsense. The alternative to a surrender of the commercial privileges which we claim for our vessels in Canadian ports is neither non intercourse nor war, but that contemplated by the so-called retaliation act, which was intended to authorize the President to withdraw from Canadian fishing vessels in our ports and Canadian fish products seeking to enter our territory precisely the same privileges as the Dominion refuses to accord to us, and not to go further than Canada has gone. In other words, it is the application of the rule of maritime reciprocity in precisely the same manner as we applied the rule to Spain less than two years ago when she undertook to discriminate against American vessels in Cuban ports. The President by proclamation withdrew from Spanish vessels in our ports privileges denied to our vessels in Spanish ports. Nobody then thought that this was non-intercourse or provocative of war. The result showed how easily a prompt and firm withdrawal from another country of privileges which she attempts to deny to us secures a peaceable remedy, for in less than a month Spain reconsidered her action, restored the privileges withheld, and the President withdrew his proclamation.

Why can not we have the same firmness and promptness in applying the rule of maritime reciprocity to Canada, even if she is backed by the power of Great Britain, that was shown by the President when little Spain was the aggressor? Surely no one is so weak as to suppose that if the President had exercised the power given him by the last Congress to issue his proclamation withdrawing from Canadian fishing vessels in our ports and Canadian fish seeking to enter our markets the same privileges which Canada denies to our fishing vessels and our fish, it would have led to war. Canada had no fears of war when she issued her proclamation denying these privileges to American fishing vessels and fish. Pray, why should we fear to do what Canada has done?

"A FEW FISHERMEN!"

But it is said with a sneer that this Government does not propose to go to war for "a few New England fishermen."

Mr. Chairman, I remember that in the discussion which took place in the last House, when the so-called retaliatory bill was passed, the gentleman from Virginia [Mr. DANIEL], since promoted to the Senate, said that "the injury to one fisherman is an injury to the whole country and all its citizens, which can not be dealt with as a mere scrimmage about fish." And the declaration was applauded by the House.

Surely if the rights of one fisherman seemed one year ago to be a subject of such concern, what shall we say of the rights of 131,426 fishermen in the Unitad States, 37,043 of whom are in New England, who use in their hazardous calling 6,605 vessels, and the product of whose industry in 1880 reached $43,046,053? They ask only the same protection that the nation affords to citizens in other callings. They ask that the nation shall see to it that their vessels receive the same consideration and the same privileges in the ports of Canada that American vessels engaged in other business receive, and the same that similar Canadian vessels receive in ports of the United States. They ask that the products of their industry may be protected against the imported products of Canadian fishermen, which are sustained by a large Dominion bounty, by the same duties as are imposed upon other imported products coming into competition with home industries. Under existing laws these duties are too low, and even this low protection is seriously impaired by the Treasury decisions which admit free of duty fish preserved by ice and other artificial means as "fish, fresh, for immediate consumption."

Instead of removing all protection against the bounty-fed fishermen of Canada, as the amendment of the gentleman from Kentucky proposes, a policy which, if adopted, would surely destroy the American fishing interests, Congress should increase this protection by increasing the duties, and especially by correcting the decision which last year allowed Canadian fish to the value of over $1,000,000 to come in free of duty under the guise of fresh fish for immediate consumption. Instead of abandoning the hardy fishermen of the country, the men upon whom the country must rely to man its cruisers in time of war, the nation should imitate the example of other maritime nations, which have given bounties from their treasuries to encourage and maintain an industry which they have justly regarded as a nursery for the training of seamen and an invaluable resource for the navy in time of need. [Applause.]

Mr. Chairman, the heroic deeds of the fishermen of the United States, the fishermen of New England, if you please, as recorded in the history of the Republic, ought to awaken in the halls of Congress as well as in every patriotic breast a determination to stand by their interests. [Applause.] It was the fishermen of New England who in large part officered and manned the armed vessels which sailed under John Paul Jones and bore so gallant and conspicuous a part in our war for independence. It was the fishermen of New England who contributed a generous quota to the gallant crews of the naval vessels which won such conspicuous laurels in the war of 1812. It was from the fishermen of New England that the nation drew liberally to man our blockading fleet in the late civil war. Surely such men as these are deserving not only of the protection but of the gratitude of the Republic. [Applause.]

The Tariff.

SPEECH

OF

HON. JONAS G. HOWARD,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 15, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. HOWARD said:

Mr. CHAIRMAN: There is now a surplus in the United States Treasury of about $100,000,000, and daily receipts into the Treasury are about one million and a quarter, making about seventy-five millions a year, or a quarter of a million a day taken from the people and the channels of business, in excess of the needs of the Government, and locked up in the vaults of the Treasury. This bill proposes to so modify the tax laws as will insure a reduction of revenue to the basis of the needs of the Government, economically administered, and relieve the labor and industries of the country from the burdens of unnecessary taxation. The present high protective tariff not only causes large sums to be drawn from the avenues of trade and kept from the use of the people, but it greatly increases their cost of living, and tends to restrict and diminish our trade with foreign countries, much to the injury of the American producers. It is manifest that in the last quarter of a century our foreign trade has not kept pace with the growth and development of the country. In 1860 our exports were equal to the exports of England. In 1887 England exported, of her manufactured products, nearly $2,000,000,000 in value, while the United States during the same year exported of her manufactured products but a little over one hundred millions.

In 1887 England exported into Mexico (our next-door neighbor, and whose trade ought to belong to us) more than $750,000,000 in value of her productions, while the exports of the United States into Mexico during the same were less than fifty millions. Hence we see that the export trade England now has with Mexico alone is almost as great as the export trade the United States has with all the world. England has also monopolized the trade of South America—a country with a population of 55,000,000—very nearly as great as the United States. But our Republican friends claim that this loss of foreign trade is more than compensated by securing our home market for our own producers; they insist that a high protective tariff will so stimulate and diversify our industries that our sixty millions of people will furnish an adequate market for all our productions. Under such a theory the main question is not, what can we produce, but what can we consume? If we can produce more than we can consume, then the producer will have to suffer. And in that event the farmer is more injured than any other class of producers, for this reason, that he can not regulate and gauge his productions to simply meet the demands of a limited market as the manufacturer can do, by putting out his fires, stopping his mills, and discharging his labor until his supply is exhausted. But if the farmer can not find a market abroad for his surplus after the home market is supplied he is ruined. It is a fact that can not be successfully contradicted that in no like period in the last forty years have the farmers suffered more from depression in the price of their productions than in the last five years; nor has there been a time in the last forty years with less encouragement to the farmer than the present, although we have had a high protective tariff continuously for the last twenty-seven years.

The fact is a high protective tariff has not done, and can not do, for the country what its friends claim for it. A high tariff can not furnish a home market for the vast productions of this giant country with its inimitable resources. Nature never designed that a nation like this, embracing every variety of climate and soil, unparalleled in mineral and other resources, watered by mighty rivers and inland seas, and surrounded by great oceans, free highways for our commerce to the homes and habitations of more than a thousand millions of people, should be limited in its productions to the consuming capacity of sixty millions.

No; the restrictive home-market theory of the Republican party is not adapted to our country, and will not do, and the farmers and manufacturers are finding it out. The experience our industrial enterprises have had for the last fifteen years under a high protective tariff has been of some value to the country. The manufacturer has learned that under a high protective tariff his industry may languish, and that it will not, as his Republican friends have promised, furnish him a home market for all his productions. The farmers have likewise been admonished.

No financial and industrial depression ever caused in this Government greater distress and more widespread dismay and desolation than were witnessed from 1873 to 1879 and from 1882 to 1886. Our ability to produce is so much in excess of our capacity to consume, large portions of our manufactured and agricultural productions are annually left on

the hands of the producers for want of a market. Our farmers have to seek a foreign market for more than 20 per cent. of their surplus productions and 45 per cent. of the surplus of their wheat, and where it has to be sold in competition with the wheat raised by the cheap labor of India, Russia, France, Hungary, Spain, Italy, and Turkey, and where the price is fixed upon every bushel of wheat raised for market in the United States. Thus, while the farmer is compelled to sell his surplus wheat in the cheap markets of the world, he is not permitted to buy such articles as he may need to operate his farm or for the comfort of himself and family, but is forced to purchase all such necessaries in the home market at an increased price of 45 per cent. on the dollar.

This is called protection to labor, and sometimes our Republican friends go even so far as to call it protection to the farmer; but it is now generally believed that the farmer has had about enough of this kind of protection. To limit the farmers in this country to the home market would work their utter ruin. In 1880 the United States produced over 500,000,000 bushels of wheat, nearly half as much as was produced in 1887 in all Europe, with a population of nearly 400,000,000. In that year the United States exported 190,000,000 bushels of wheat, being over 60 per cent. of the surplus of the wheat production of that year, while at home we found a market for only 135,000,000 bushels, or about 40 per cent. of his surplus. Yet in the face of these facts our Republican friends have the audacity to advise the farmers to rely upon the home market, to vote for the continuance of a high protective tariff, which tends to destroy their foreign market, upon which they chiefly rely, and without which they would have to limit their production to the consuming capacity of 60,000,000 people, when they have the ability to produce enough to supply the wants of 150,000,000.

There is another objection to the farmers and manufacturers relying upon the home market, which is, that our ability to produce in excess of our capacity to consume will increase from year to year, as new farms are opened and new enterprises developed, and as inventions and improvements in machinery progress. So marvelous have been the improvements in machinery in the last thirty years that now with its aid one man can do the work of five and five the work of twenty-five, and so on, thus constantly increasing our ability to produce and diminishing our demand for labor, until it begins to appear that the time may come when the work done by machinery will be so far in excess of the work done by hand that the latter may cease to be a factor in the cost of production in our industrial enterprises. Under such a condition of things what chance will there be in this country for the farmer or lacorer, if we are restricted to the home market? None whatever. And a high protective tariff will aggravate rather than mitigate the evil.

In discussing this subject President Arthur, in his last message to Congress, in December, 1884, said:

> One of the greatest of the problems which appeal to the wisdom of Congress for solution is the ascertainment of the most effective means for increasing our foreign trade, and thus relieving our industries from the depression under which they are now languishing.

If President Arthur was right in saying that our labor was depressed for want of employment, and our industries were languishing for want of a market, and that the only remedy for the evil was to be found in the increase of our foreign trade, then our Republican friends who try to belittle the importance of our foreign market, and insist upon the continuance of the high-protective, restrictive, home-market policy are wrong. If Arthur was right, then it is suicidal to restrict our farmers and manufacturers to the home market of 60,000,000 people for their production sufficient to supply the wants of more than 100,000,000.

Again, in December, 1884, Hon. Hugh McCulloch, Secretary of the Treasury under the Arthur administration, in his last report to Congress said:

> The demands of the Government during the late civil war for nearly all kinds of manufactured goods and the high tariff greatly stimulated production. After the war stimulus was found in railroad building and extravagant speculation induced by a superabundant currency; and the time has now come when the manufacturing industries of the United States are in dire distress from a plethora of manufactured goods. Some manufacturing companies have been forced into bankruptcy, others have closed their mills to escape; few mills are running on full time, and as a consequence a very large number of operatives are either deprived of employment or are working for wages hardly sufficient to enable them to live comfortably or even decently.
>
> Nor are the manufacturers and their employés the only sufferers by the present depression of our manufacturing industry. So large and widespread has this industry become, so interwoven is it with other industries, so essential is it to the welfare of the whole community, that it can not be seriously depressed without injuriously afflicting the business throughout the Union. The important question, therefore, is, how shall the country be released from the plethora of manufactured goods, and how shall that plethora be prevented in the future? It is obvious that our power to produce is in excess of our present or any probable future demand for home consumption. The existing iron, cotton, and woolen mills, if employed at their full capacity, could meet in six monts, perhaps in a shorter time, the home demand for a year.
>
> It is certain, therefore, unless markets now practically closed against us are opened, unless we can share in the trade which is monopolized by European nations, the depression now so sorely felt will continue, and may become more disastrous. The question, how shall our foreign trade be increased? is the question which now comes to the front and demands prompt and careful consideration. If the duties on raw materials is an obstruction those duties should be removed. If the duties upon other articles are an obstruction, they should be modified. Whatever may be required to increase our foreign trade, whether it be a repeal or a modification of existing duties, should be demanded by the manufacturers themselves.

Here we are told by this Republican Secretary of the Treasury, under the sanction of his official oath (after we had been living nearly a quarter of a century under a high protective tariff), that our manufacturing industries were in dire distress; that many manufacturing companies had gone into bankruptcy, and that others had closed their mills to avoid it, and but a few were running on full time, and as a consequence many laborers were out of employment or working for wages inadequate for a decent support, and because there was no market for their productions.

Under this high protective tariff we have seen in the last ten years the price of the farmer's wheat go down from $1.15 per bushel to 65 cents per bushel, and his other productions in the same ratio; and his farm lands have depreciated from 25 to 40 per cent. in value. Now, how can a high protective tariff remedy these evils which are found to exist under it?

This question will not be easily answered. Under a high protective tariff the condition of the farmer and the laborer has been constantly growing worse for the last fifteen years, and they are demanding a change of treatment. They are getting tired of being burdened and oppressed by high taxation for the benefit of a favored class. They know that where one man who labors finds employment in tariff-protected industries fifteen are laboring in non-protected industries. They know that the protected industry does not pay any higher wages than the non-protected industries. They know that not a single laborer is protected by the tariff who works in a car factory, a foundry, a ship-yard, a cooper-shop, a machine-shop, a wagon-maker's shop, a blacksmith shop, a carriage-shop, a carpenter's shop, a tin-shop, a paint-shop, a brick-yard, a rock-quarry, on a railroad or in its construction, on a turnpike, in building and repairing streets, at teaming, at boating, on a farm, and many other classes of business too numerous to mention. They can not see the justice of taxing the fourteen men who work in these various non-protected industries for the benefit of the one who works in the protected industry, even though the tax accrued to his benefit; but when it turns out that it does not, and the tax is for the sole interest of the manufacturer, the injustice becomes more apparent.

Notwithstanding this great injustice, the Republican party is in favor of continuing this burdensome and oppressive taxation upon the great body of the people for the benefit of a favored class; and that the people may the more readily give their necks to the yoke, the very moment the Democratic party proposes or attempts to remove those burdens from the people by a reduction of taxation, the Republican party and every tariff-protected manufacturing company in the country raise the cry of free trade and the pauper labor of Europe, knowing at the same time that no political party in this country ever favored the abandonment of the present system of raising the revenue to support the Government by laying and collecting duties on imports, and no party can be a free-trade party that supports or favors such a system for raising the necessary revenue to support the Government. Our Republican friends know well when the charge is made that it is false. But it is made with the hope that the people will be humbugged and deluded into the belief that a reform in the tariff is a strike at their interest.

President Arthur, in his message to Congress in December, 1882, but a little over five years ago, said:

> I urge upon Congress the necessity of relieving the labor and industries of the country from the burden of unnecessary taxation.

Now, what did President Arthur mean by such a statement? Did he not mean that the then existing high tariff, instead of helping labor was depressing it? Did he not mean that the then existing high tariff instead of aiding our manufacturing industries was depressing them? He certainly did so mean. Now, let the advocates of a high protective tariff answer how the continuance of a policy which depresses can give relief.

Much has been said upon the other side of the House during this discussion in censure of President Cleveland's recommendations in his late message to Congress in regard to the surplus in the Treasury and the reduction of taxation. For the benefit of all those critics on the subject I here insert an extract from the annual report of Hon. Charles J. Folger, Republican Secretary of the Treasury under the Arthur administration, to Congress in December, 1882, and commend it to their careful consideration:

REDUCTION OF TAXATION.

The Treasury Department was created by act of Congress, Chapter XII, of the year 1789. By the second section it was made the duty of the Secretary "to digest and prepare plans for the improvement of the revenue." The word "improvement" meant enlargement. The need was for more revenue, and the lack was of subjects from which it might be taken. In that sense that duty is now without care. The times have changed. What now perplexes the Secretary is not wherefrom he may get revenue and enough for the pressing needs of the Government, but whereby he shall turn back into the flow of business the more than enough for those needs that has been drawn from the people.

There are now in the Treasury unused assets to a large amount, and the daily receipts into the Treasury from customs and internal-revenue taxation are about a million and a quarter.

It is plain from this, and the statement with which this report begins of the estimated expenditures for the next fiscal year, that the receipts from revenue are, and are likely to be, in excess of the needs of the Government.

From the inequality between daily large receipts and comparatively small daily disbursements there comes an evil effect upon the business of the country. The collections by Government are taken out of the money market in sums and at dates which have little or no agreement with the natural movement of money, and are returned to it with the same inadaptation to commercial or

financial requirements. Occasionally the large disbursements of the Government have created a plethora of money; more frequently its large and continued withdrawals of money have caused such a scarcity of floating capital as to check the proper movement of legitimate business.

It is not only that the amount in the Treasury is so much kept from the use of community; the fact becomes an incentive and an aid to men who for their own ends conspire to keep from that use other large sums.

We have believed that the laws of the States against primogeniture, the entail of estates, and the accumulation of personal property stood in the way of heaping up wealth in single hands, and gathering in single hands the power over others that great wealth gives. But so it is, that to-day there are men so rich that by conspiring together they can at will put and hold hand on near as much money as Government can lay hand to, save by the use of its credit. The power thus had is used from time to time. It results that violent and sudden contractions and expansions afflict the business community, and the Government is an unwilling aider and abettor therein.

It has come about that the Treasury Department is looked to as a great if not a chief cause of recurring stringencies, and the Treasury is called to for relief. Every Secretary of the Treasury for years past has had it brought clearly to his mind, and official expedients have been used to remedy the evil. Little of lasting value has been accomplished thereby.

And the radical cure for the evil is the reduction of taxation, so that no more money will be drawn from the people than the needs of the Government require.

The foregoing statements of the learned Secretary of the Treasury ought to be read and studied by every voter in the United States. He shows how the Government, by the abuse of its taxing power, has become an unwilling aider and abettor in the schemes of the rich to plunder the poor; how by class legislation men have become so rich in this country that by combining together they can at will control the market value of the productions of all our industrial enterprises in their own interest. They can and do fix the price of the farmer's wheat, his corn, his pork, his beef, his lands; in fact, of everything of value he possesses.

This power, concentrated in the hands of a few men over the industrial and financial interest of the country by reason of vast wealth, is certainly alarming. The value of all the property in the United States is estimated at $50,000,000,000. It is also estimated that there are five thousand men in the United States who are worth one-half said amount, or $25,000,000,000. If this be true, is it any wonder that individual enterprise is being crushed out and trampled under foot everywhere in this country and given place to gigantic monopolies and combinations which control the price of labor, the price of productions, the price of lands; in fact, the price of everything that is placed upon the market? Much of this vast wealth has been accumulated by the aid of class legislation, unwarranted by the Constitution. Governmental powers are held in trust for the whole people and can not be rightfully used to advance the interest of one class of citizens at the expense of another class; and as there is a constant conflict between power and the rights and privileges of the people, the latter should remember that eternal vigilance is the price of liberty, and should never permit their public servants to go one step beyond the limitations of power. They should promptly repel every attempt of the Government to overleap those limitations, no matter what may be the pretense; for, in the language of Chief-Justice Story, "If you permit one step to be taken in violation of the Constitution," "that step will invite another and another until, while the form of the Government will remain, the spirit will have departed."

The Tariff.

SPEECH
OF
HON. FRED. T. DUBOIS,
OF IDAHO,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, June 14, 1888.

Amend by striking out "lead ore and lead dross, three-fourths of 1 cent per pound."

Mr. DUBOIS said:

Mr. CHAIRMAN: In behalf of the Territory I represent, I desire to enter my protest against this section of this bill. The fact that one hundred thousand people living in Idaho have no vote upon this measure, the fact that millions of dollars, in labor as well as in cash, would be affected by its provisions if it should become a law, ought to add weight to the protest that I now make.

The development of Idaho has been carried to just that extent that great lead and silver mines have been opened, and enormous sums invested in the machinery necessary to develop them. The Territory has just started upon a career of unexampled prosperity. But the mines of Idaho, those that are now attracting the most attention and contributing most to the growing wealth of the country, are low-grade silver-lead mines, that need the fostering care of the Government. Their wealth consists in large bodies of ore that, with the present price of lead and silver, may be worked at a profit. Destroy the price of lead and you simply annihilate the two great industries of Idaho. A blow at lead is a stumbling-block, well-nigh insurmountable, in the path of our progress.

The elaborate theories of the gentleman from Kentucky [Mr. BRECKINRIDGE] exemplifying the beauties of great tariff reductions, the broad philanthropy of the gentleman from Louisiana [Mr. GAY], and of the gentleman from Michigan [Mr. TARSNEY], who are willing that their constituencies shall be injured a little for the common good, are pretty and romantic.

I can not raise myself to that exalted pitch of patriotism, however, that I can submit to the destruction of every industry in my Territory because the gentleman from Texas [Mr. MILLS] guesses that somebody somewhere may be benefited by it.

If you will examine the signal maps in the Hall you will discover that no place in the United States has so good a climate the year round as Idaho. By examining the statistics you will find that the ratio of mortality in Idaho is the lowest of any State or Territory. We have the most abundant supply of water of any Territory, and as much agricultural land as there is land in the State of Indiana. While our population in 1880 was 32,000, to-day it is more than 100,000. Rich mines in great numbers have been discovered, which employ many men at good wages and expend many thousands of dollars for machinery. Ranches have been taken up by the hundred. Flourishing towns have sprung up by the dozen to supply the demands of these mines. Practically no produce is shipped out of the Territory, nor can it be for some time to come.

As I have said, you paralyze every industry when you strike down lead and silver. Our miners will be compelled to leave the Territory; the merchants who supply the trade produced through the mines will be compelled to close their houses; the railroad companies will be compelled to raise their freights, and the farmer to consume what he produces and pay double for what he buys. We have every element to make us a great and prosperous State, but at present, and until railroads and population crowd our country, our prosperity depends on our mines. All we ask (and it is little enough) is to give silver its rightful place. Let us deposit our bullion in the nearest assay office and get silver certificates for it, and protect our lead from competition with the lead produced by the pauper labor of Mexico and the Old World.

This debate has given rise to wonderful exhibitions of selfishness.

The President's message proposes to reduce the duty on wool, but is friendly to the sugar industry. No single article is more universally used by the people of all classes than sugar. Now, by some strange coincidence, all the Southern men talk about is wool, and if they live far enough from the iron districts of the South they occasionally give iron the benefit of their views. A Senator from Texas, only the other day, spoke for sugar and against wool. Well, I would speak for lead and against sugar if I were to pursue the same policy.

As I ask for protection to lead, I would be willing to give the same benefits to other interests. If we could purchase our steel a little cheaper it would be very desirable; but if our steel is to be cheapened at the expense of a profitable market for our lead; if in return for buying sugar at a little better rate our great industries are going to suffer, and the splendid era of development upon which we have entered be checked, if not stayed altogether; if in return for a cheaper pair of blankets we must witness the disappearance from our mountain sides of the vast flocks of sheep that industry, economy, and the fostering hand of the Government have collected there, then, I say, ten thousand times over, let us pay the old price, but let not the onward march of progress be stayed.

The selfishness which would protect one section of the Union and let another section suffer, is a doctrine too monstrous to be entertained by this House. Yet, thus far, it has been the keynote of the debate.

Before reducing the tariff on lead, let us examine the subject a little.

While there has been a steady increase in the production of lead in the United States, which will continue at a rapid rate unless checked by hostile legislation, the price has steadily decreased, as will be seen by the following tables:

Production of lead in the United States from 1830 *to* 1887.

[In tons of 2,000 pounds.]

Year.	Tons.	Year.	Tons.	Year.	Tons.
1830	8,000	1850	22,000	1870	17,330
1831	7,500	1851	18,500	1871	20,000
1832	10,000	1852	15,750	1872	25,883
1833	11,000	1853	16,800	1873	42,540
1834	12,000	1854	16,500	1874	52,080
1835	13,000	1855	15,800	1875	59,640
1836	15,000	1856	16,000	1876	64,070
1837	13,500	1857	15,800	1877	81,900
1838	15,000	1858	15,300	1878	91,000
1839	17,500	1859	16,400	1879	92,789
1840	17,000	1860	15,600	1880	97,825
1841	20,500	1861	14,100	1881	117,085
1842	24,000	1862	14,200	1882	132,890
1843	25,000	1863	14,800	1883	143,957
1844	26,000	1864	15,300	1884	139,897
1845	30,000	1865	14,700	1885	129,412
1846	28,000	1866	16,100	1886	135,629
1847	28,000	1867	15,200	1887	144,980
1848	25,500	1868	16,400		
1849	23,500	1869	17,500		

The price is now so low that the profit is narrowed to the point where no further reduction can be sustained.

The world's production of lead for the past few years has been as follows:

[In short tons of 2,000 pounds.]

In 1880, 372,527 tons, of which in United States, 97,825 tons.
In 1881, 448,701 tons, of which in United States, 117,085 tons.
In 1882, 479,574 tons, of which in United States, 132,890 tons.
In 1883, 516,040 tons, of which in United States, 143,957 tons.
In 1884, 492,225 tons, of which in United States, 139,897 tons.
In 1885, 519,947 tons, of which in United States, 129,412 tons.
In 1886, 517,536 tons, of which in United States, 135,629 tons.
In 1887, 144,980 tons.
Total tons, 3,346,450, of which in United States, 896,695 tons.

While the imports into the United States have been:

[In pounds avoirdupois.]

Fiscal years ending June 30—	Ore and dross.	Pigs and bars.	Sheets and shot.
1880	.....	6,723,706	1,120
1881	5,981	4,322,068	900
1882	21,698	6,079,304	1,469
1883	600	4,037,867	1,510
1884	419	3,072,738	.....
1885	4,218	5,862,474	.....
1886	.....	11,005,083	24,087
1887	814,142	11,148,211	19,260

Of the 144,980 tons produced in the United States in 1887, only 25,148 tons were non-argentiferous. Of the 144,980 tons produced in the United States in 1887, at least 20,000 tons, or one-seventh, was produced in Idaho.

The mining experts state that one-sixth of the entire production of the United States will come from Idaho in 1888.

My statement in regard to the lead output of Idaho is very conservative. The producing capacity of the Cœur d'Alene's can not even be estimated. I read the following clipping from a newspaper in regard to the Cœur d'Alene mines alone:

In view of the present fluctuating price of lead, arising from the tariff-tinkering of this Administration, it will be well and wise for the mining men of the Cœur d'Alene to take the following extract from a correspondence of the Pioneer Press and paste it in their hats:

"The output of the Cœur d'Alene mines to-day is about 2,700 tons per month, worth about $100,000, or at the rate of nearly $1,200,000 per year. A. M. Esler, of Helena, than whom no one is better posted in the resources of the Cœur d'Alene, estimates that next season the output will be 300 tons per day, or between 8,000 and 9,000 tons per month. Assuming that the Cœur d'Alene ores will average 70 per cent. in lead, the yield in lead, on the basis of A. M. Esler's computation, next year will be 300 tons per day, or 75,600 tons per year. Whitney and Casney estimate the gross output of the United States and that of the world at 444,000 tons per year. So that the Cœur d'Alene next year should produce one-half as much as the present output of the United States, and one-sixth of the gross output of the world."

Nearly all our lead is desilverized. The silver-bearing ore carries 65 per cent. per ton of lead, at the lowest.

What does this mean? It means simply and plainly—so plain that any one who is at all fair can understand—that a reduction of the price of lead, to any extent, means the shutting down of our low-grade silver mines.

The production of lead in the United States is about one-quarter of that of the world. The world's production in 1886 was 517,536 tons, of which 135,629 tons came from the United States. As I have said, nearly all our lead is argentiferous, and the margin of profit is so narrow that any material reduction, such as $15 per ton, proposed in this bill, would practically destroy the industry.

I append the prices of lead in New York City for the past few years:

Year.	Average price.	Year.	Average price.
1870	$7.18	1879	$4.18
1871	6.80	1880	5.05
1872	7.14	1881	4.80
1873	7.20	1882	4.90
1874	6.67	1883	4.32
1875	6.72	1884	3.73
1876	6.74	1885	3.95
1877	6.74	1886	4.63
1878	3.64	1887	4.47

For the past five years the average price has been $84.40 per ton at New York; $40 per ton of this goes to the transportation company.

Our miners get from $2.50 to $4 per day. This is not a high price to pay for labor in the mountains, because of necessity the cost of living is higher there than in agricultural communities or in places nearer to market.

Since this tariff debate commenced the greatest producing mine in Idaho was compelled to shut down, because of a considerable rise in freight. What would they do if you lowered the price of lead $15 per ton, as contemplated in this bill?

The importation of lead has steadily increased since 1884. With their cheap labor in Austria, Italy, Spain, Germany, Great Britain, all lead-producing countries, to say nothing of Mexico, they can almost compete with us now. We are as far from the market as they are, and it costs us as much to get our production on the market. Can you not see the one inevitable result of the passage of this bill?

The States of Nevada and Colorado and the Territories of Idaho, Montana, Utah, New Mexico, and Arizona gave to the world $29,000,000 of silver in 1887. The profit in these silver mines in Utah, Montana, and Idaho especially is in the lead. There are 150,000 American citizens engaged in this industry. They not only give these precious metals to the world, thus aiding the cause of struggling humanity everywhere, but they give employment to thousands of others in the mountain regions.

Were it not for our mines our farmers would have no market for their produce. The more productive the mines are, the more mines found, the more agricultural communities spring up to supply their wants. Ninety per cent. of the trade of our mercantile houses in Idaho comes directly or indirectly from the mines. The mines are the greatest source of revenue to the transportation companies. Six hundred and thirty thousand tons of freight were shipped last year by the Union Pacific Railroad Company alone into Utah, Idaho, and Montana, the direct product of the mines.

The Northern Pacific and Denver and Rio Grande shipped as much. Take from these companies the freight which they carry to these Territories to supply the trade produced by the mines, and they would be compelled to double their freight rate in order to live, and our people would pay the added freight.

I believe that four-fifths of the people of Idaho are dependent on this industry for a living, and I believe the reduction of the tariff contemplated would deprive them of that living. And what good purpose would be subserved by it? Who would be benefited?

It would not even permanently benefit a few lead refiners and manufacturers in the East, and I can think of no other class who would be benefited at all.

I am curious to hear some sound reason given for the proposed reduction. It seems to me that in their eager zeal to reduce the tariff the free-traders struck blindly and unadvisedly at lead.

I am not speaking for political effect, nor as a Republican, but in behalf of the people of my Territory. There is no difference of opinion among them. There is not a Democratic newspaper nor an intelligent Democrat in the Territory who does not condemn this proposed reduction. Their partyism does not carry them to the point where they will advocate ruin for themselves and section in order to demonstrate their blind obedience to their ill-advised party leaders. There is not a Democratic Delegate on this floor, for they all come from mining Territories, who does not know this reduction means a fatal blow to his people. I challenge any one of them to indorse this part of the Mills bill. Their efforts for justice to their Territories have been so futile that they will probably keep silent now.

Gentlemen of the House, and countrymen, you have seen the Delegates on this floor, unitedly, without regard to party, make a vain fight for better mail facilities and surveys of our public lands in the Territories, and for our brave people generally. You have seen every proposition voted down which they have made, tending to aid these pioneers, these bold, energetic, ambitious, and superior Americans in their struggles to subdue the forces of nature. Not once has our cry for recognition been heeded, and now you come forward, against our protest, with a proposition to destroy the industry upon which our prosperity depends.

And this is not all. The Secretary of the Treasury by a ruling has put lead on the free-list if silver is the component of chief value. The law is plain enough that all lead ore is subject to duty, whether it contains silver or not. The ruling of the Secretary is in direct violation of law. His evasion, when he says, "The ore, if it is more valuable in silver than in lead, the value to be determined in Mexico, shall come in free," is striking terror to the lead miners of the Pacific coast. Considering that Mexico is as near the market practically as the Territories, it is placing our miners on precisely the same plane as the peons of Mexico.

Give us the assistance which every other portion of the Union has enjoyed, and we will grow in strength and wealth and power as we are doing, until you will gladly refer to the Territories of the great Northwest as sisters; give us the shield under which Pennsylvania, indeed all the East and New England have grown rich, powerful, and prosperous, and the Union will be proud of the Northwest. We have no vote upon this bill; we are at your mercy; we are protected only and entirely by your sense of justice and your disposition to investigate our needs. Therefore, in the name of justice and in behalf of those whose mouths are sealed while their future trembles in the balance, I beseech you to protect our Territory from this assault upon its youthful industries.

Taxation.

"The world is governed too much."

REMARKS

OF

HON. W. S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 1, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. HOLMAN said:

Mr. CHAIRMAN: With more than $109,000,000 lying idle in the Federal Treasury, and a system of taxation in full force that increases that enormous sum daily, even while the Government, in the effort to restore this accumulation of wealth to the proper channels of industry, is paying as high as 27 per cent. premium on its 4 per cent. securities not due, is certainly a state of affairs that should arrest the attention of the American people.

And this is the final outgrowth of our financial policy of the last twenty-five years! A public debt created on the basis of paper money, greatly inflated by the exigencies of war, being paid at an enormous premium in gold before maturity to restore the surplus money collected by unnecessary taxation to its proper employment in the business and industries of the country! With such legislation is it a matter of surprise that an unexampled centralization of the wealth of this country should have occurred?

We are therefore confronted by two of the greatest evils that can afflict a people, excessive taxation and a surplus of money in the Treasury. The former discourages industry, "takes," in the language of Jefferson, "from the mouth of labor the bread it has earned," and, more than all, destroys the equality in the condition of the people, for no power yet devised can so effectually increase the wealth of the few and impoverish the many as heavy and prolonged taxation.

The whole volume of money in the United States on the 5th day of last November, gold, silver, and paper, was $1,806.817,165, and there was in the Treasury, independent of bullion, $440,404,816, reducing the available money in the United States to about $1,366,512,349; and yet during the last fiscal year, as shown by the report of the Secretary of the Treasury, our people paid taxes into the Federal Treasury to the enormous sum of $371,403,277.66.

If labor cries out that the Government has no need for so much money, the answer is, the law compels its collection. Taxation never lets up; it gives no respite. Year after year labor pays this money into the Treasury; the whole working force of over sixty-five million of people are called upon for this tribute. If this money went back again in any form to these sixty-five million people it would be all right, but it never goes back to them. It goes to a few hundred thousand instead of sixty-five million. It creates or enlarges the estates of a small number. It crystallizes into a few large estates. It never again reaches the labor by which it was amassed, except in a small degree in the form of wages grudgingly paid by those who have secured it through the countless channels of taxation. This exhaustive taxation goes on without pause. Our fathers escaped it by frugal government, and gloried in the contrast between the tax-oppressed people of monarchies and those of free America. The school-boys of thirty-five years ago read in their school-books with astonishment the story told of British taxation. Yet are we not drifting into the old taxing methods from which our fathers believed they had forever rescued their posterity?

The vastness of this sum of $371,403,277.66 is only seen fairly by comparing it with the entire actual currency of the United States, that is, $1,366,512,349, so that our people, on the basis of $1,366,512,349 of money in actual circulation, pay Federal taxes to the amount of $371,403,277.66. The single payment of so vast a sum of money on some great emergency would not materially affect so great and fortunate a people as ours, but this $371,403,277.66 under our present system of tariff and internal-revenue taxation must be paid into the Federal Treasury every year. It is as remorseless as death. With every revolution of the seasons this $371,403,277.66, or substantially that sum, if the labor of the country can bear it, must be paid into the Treasury.

The last report of the Secretary of the Treasury presents the following statements of the volume of money in circulation in the United States on the 1st day of July, 1886 and 1887, and of money and bullion in the Treasury at the same dates:

CURRENCY CIRCULATION.

The increase and changes in the circulation among the people of money and its representatives, and of money and bullion in the Treasury since July 1, 1886, have been so extensive and interesting that it is well to here give the following tables:

Comparative statement showing the changes in circulation from July 1, 1886, *to November* 1, 1887.

	In circulation July 1, 1886.	In circulation Nov. 1, 1887.	Decrease.	Increase.
Gold coin	$358,790,428	$392,585,770	.....	$33,795,342
Standard silver dollars	52,469,720	62,934,625	.....	10,464,905
Subsidiary silver	46,156,256	51,290,051	.....	5,133,795
Gold certificates	76,044,375	99,684,773	.....	23,640,398
Silver certificates	88,116,225	160,713,957	.....	72,597,732
United States notes	323,812,700	331,419,950	.....	7,607,250
National-bank notes	304,475,950	267,883,223	$36,592,727	.....

The people of this country can well afford to pause and consider this extraordinary state of their affairs.

It is true that this $440,404,816 of money actually in the Treasury, excluding gold and silver bullion and trade dollars, includes the $100,000,000 in gold held for redemption of greenbacks, and includes large sums held for actual and possible liabilities of the Government; leaving on the 1st day of November, 1887, the sum of $49,459,361.77 as an absolute and admitted surplus, which had increased to $55,258,701.19 on the 1st day of December, 1887, and now exceeds a hundred and nine million.

In 1884 the extraordinary accumulation of money in the Treasury was made a matter of public boast by gentlemen who had favored the legislation which produced this result!

Now, sir, let us consider the annual taxation borne by the people of the United States for the support of their Federal Government alone.

The revenues of the Government from all sources for the fiscal year 1887, as reported by the Secretary of the Treasury to Congress, were as follows:

From customs	$217,286,893.13
From internal revenue	118,823,391.22
From all other sources	35,292,993.31
Total	371,403,277.66

So the fact is that in the fiscal year 1887, with $1,366,512,349 of money in actual circulation, the people of this country paid a tax for the support of the Federal Government of $371,403,277.66, or nearly 25 per cent. of the whole.

Comparing the expenditures of our Government with those of other governments, if the tax paid by the people of the United States for the support of the Federal Government was the only taxation to which they were exposed, the showing would be reasonably favorable to us. It would well illustrate the value of republican institutions in the care the people themselves display in forbidding unnecessary appropriations of their labor for the pretended needs of Government.

But the truth is that our fathers in forming the Federal Union contemplated only a Government of limited powers, organizing the States of the Union into one nation representing them in all foreign affairs and regulating commerce between the States and between them and foreign nations. Its powers of taxation were carefully limited. The taxing power is defined by section 8, Article I, of the Constitution.

SEC. 8. The Congress shall have power to lay and collect taxes, duties, imposts, and excises, to pay the debts and provide for the common defense and general welfare of the United States, but all duties, imposts, and excises shall be uniform throughout the United States.

Confined to the purposes for which our Federal Union was formed, the range of taxation, except as to obligations incident to war, would be severely restricted.

But one of the misfortunes incident to republican institutions is that the principles of the greatest value are the most readily perverted. In organizing our system our fathers sought to place all the proceedings of government, as far as was possible, under the immediate supervision of the people; hence our admirable system of local governments, the germ of which on this continent was the town meetings of New England. In considering, therefore, the subject of taxation in the United

States and other governments we are compelled to confront the fact that, while in other governments the national budget expresses in the main, and in most instances completely, the entire taxation and expenditure, with us it expresses only the taxation and expenditure of the Federal Union, while the States of the Union possess the powers—except as to Army and Navy—out of which naturally the greatest necessities for taxation arise.

Professor Spofford, the Librarian of Congress, a gentleman of marvelous attainments in every field of intelligence, has published in the American Almanac and Treasury of Facts for the present year the following table:

Debts, revenues, expenditures, and commerce of nations.

[Compiled from official documents. The figures are for the latest attainable years as to each country.]

Countries.	Public debt.	Revenue.	Expenditures.	Imports.	Exports.
Argentine Republic	$158,829,650	$46,172,645	$46,151,387	$117,123,120	$77,418,611

Total debts	31,919,975,459				

*In Austria-Hungary. †In German Empire.

It will be seen from the examination of this table that there are five nations with larger debts than ours, France, the German states, Italy, Russia, and Great Britain; and five with larger revenues, France, the German states, Great Britain, India, and Russia; and five with larger expenditures, France, Great Britain, the German states, Italy, and Russia.

But the $371,403,277 which the above table shows to have been the revenue of the United States in 1887 does not fully express the extent of taxation of our country. The last census shows that the sum of $312,750,721 was collected under State and local taxation during the year preceding the taking of the census, and there is no public statement showing that since the census was taken the aggregate of our local taxation has been reduced. Adding this $312,750,721 of local taxation to the $371,403,277 of Federal taxation the aggregate certainly ought to arrest attention.

It is clearly seen that our admirable system of State and local government "home-rule" opens an almost unlimited field of taxation. This, however, is no argument against our system of local governments, for it is unquestionably the best that human wisdom can devise; but it suggests the imperative duty that rest upon the citizen to resist the ever active tendency in governments of every form to increase the burden of taxation.

Professor Spofford, in his admirable work to which I have referred, issued for the year 1879, says:

"The problem of taxation, always of commanding interest in the policy of any government, becomes peculiarly so from an American point of view. In this country the divided jurisdiction between the Federal Government and the government of States renders the whole question of taxation a remarkably complex one. The citizen of the United States who is taxed to maintain the central government which manages foreign relations and legislates for commerce and navigation, public lands, pensions, patents, copyrights, currency, and other interests of national consequence, owes also allegiance to a State government which taxes him to maintain a large body of legislative, executive, and judicial officers, an extensive public-school system, many institutions for the care and maintenance of the unfortunate classes, for the punishment of crime, and frequently for a system of public and internal improvements of great extent, besides numerous collateral objects of expenditure.

But the taxation does not end here. After the citizen has contributed his share to the two hundred and forty millions of national expenditure, and has added to it his contribution to the millions of State expenditure, he is still further required to contribute his quota to the county expenditure, including highways, and the administration of justice, besides, in frequent cases, taxes for public buildings, bridges, or other objects of county necessity or ambition. But even here the much-taxed citizen does not rest; for after he has discharged his obligation to the United States, to the State in which he lives, and to the county in that State to which he belongs, he is still further subject to taxation, frequently very onerous, to maintain a city or town government in the place of his immediate abode.

It sometimes happens, too, that the ambitions or extravagance of municipal government far exceeds, in its demands upon the resources of the taxpayer, the combined drafts of all the other tax-gathering governments, national, State, and county, combined. Nor can the much-plundered tax-payer lay the flattering unction to his soul that, although his pocket is depleted and his means of living curtailed by these complicated contrivances to support what is called government, he has, nevertheless, the satisfaction of bearing an influential part in making the laws which tax him.

It has too often happened in the experience of communities, even in Democratic America, that so far from the public authorizing the expenditure which piles up debt, interest, and taxes mountain high, such expenditure has been created by irresponsible bodies in the most flagrant abuses of trust and in defiance of the most wholesome restraining laws. It is eminently true in regard to the abuses and excesses of power by legislators or executive officers that to the tax-payer eternal vigilance is the price of exemption from oppression. Unless citizens everywhere take a zealous personal interest in the conduct of government, and watch with continual scrutiny the levying and expenditure of taxes, whether national, State, or local, they will too often find themselves the unwilling victims of unjustifiable and avoidable extravagance."

The American citizen will find in this article on taxation much food for reflection, for the very excellence of our system—the divisions of political power—leaves it more exposed to the ingenious methods by which the property of the citizen who bears the burden of taxation is transferred to those who reap the profits of taxation than any other system of government.

In our country, as well as in all other civilized governments, I fear the new force that will seek to control the world will be the power of taxation.

With the mighty advance, in our era, of intelligence, feudalism has disappeared; the present generation will see the end of human slavery in civilized nations. Under the old order of things direct force divided the world into the favored few and the oppressed multitude.

But the growth of the national debts of the world as presented in the foregoing table ought to alarm all men who feel an interest in the question of labor. There are but two well-defined and active forces in the field of government—capital and labor. The table shows that the aggregate debts of the civilized nations amounted in 1887 to the prodigious sum of $31,919,975,459. The magnitude of this can only be measured by comparison. The wealth of the United States and the Territories, by the last census, the value of all property, real and personal, of this, the foremost of all the nations and occupying the most favored portion of the globe, was placed at $43,642,000,000.

But even this enormous sum does not fully express the indebtedness of the nations, for in the foregoing table the actual indebtedness of the United States of $1,700,771,948 is alone stated, while the last census shows that the total bonded debt of the States and Territories, counties and cities, towns and townships, etc., of the United States amounted to $1,117,585,546.

This indebtedness of the nations is represented by bonds—public securities—largely, as in case of the United States, exempt from taxation.

Nor should the fact be overlooked that this whole system of public debts and public securities is the creation of the present century, and its effect on taxation and the burdens of government is a matter of the highest moment. The aggregate public debts of all nations was, in 1870, $17,730,000,000, and in 1883, $27,423,074,682, in 1887, $31,919,975,450. How rapidly are the demands growing that will oppress the labor of the world!

I have called attention to these facts in this discussion of tariff and internal-revenue taxation to arrest, if possible, attention to the fact that the underlying forces of all existing political systems threaten through this new agency of national debt and taxation to reinstate the old order of things (even in our own favored country) in which the few appropriate to themselves the profits of the labor of the many.

National debts, public securities, mean taxation, for they are valueless without it. The judicial tribunals of all nations and all the forces of Government are remorseless in their determination that the integ-

rity of public securities shall be maintained. There are in every nation high motives in the value of public credit that this rule shall be absolute, hence the only escape from these burdens is in the determination of those who must bear the burden that such securities shall not be issued.

Increased public expenditures, increased public indebtedness, all men know, means increased taxation. I need hardly assert that taxation, whether direct or indirect, falls almost exclusively on the productive labor of a country in the field and the work-shop, and on the tangible property employed. To illustrate this as to State and local taxation, under ordinary circumstances the real estate and personal property, as shown by writers on political economy, of a State, including money and all forms of capital, would be about equal in value. Yet investigation has clearly shown that real estate as a general rule in this country bears three-fifths of the burden or more. In Indiana in 1879 (and I am certain the same relation still exists) the assessed value of real estate for taxation was $638,246,860, and the personal property, money, credits, public securities, and all were appraised for taxation at $222,362,781. So that real estate in Indiana bore 74 per cent. of the burden of taxation, and personal property, money, bonds, credits, and all bore only 26 per cent. of the taxation.

Besides all this, it is manifest that the great mass of public securities issued by States, counties, cities, towns, townships, and parishes, as well as by railroad and other corporations, almost entirely escape taxation; they readily evade the eye of the assessor; but in addition to that a vast amount of these public securities are held by men who almost cease to be American citizens, living in the capitals of Europe in such opulence and vulgar display of wealth as to dishonor their country, and this, too, on public securities that entirely escape taxation.

It is true that our people with unexampled wisdom have persisted in the reduction of their public debt, but it must be remembered that the value of the bonds representing this debt, long after they were issued, was enormously increased in value by an act of Congress, and the burden on the tax-payers of the United States correspondingly increased, including the extraordinary act which demonetized the silver coinage of the United States. The two acts, one declaring that bonds the principal of which was payable in lawful money (greenbacks for which they were issued) should be paid in coin, the other striking silver from the coinage of the country, are certainly measures without precedent, and it also should be remembered that this debt of ours, according to the report of the Secretary of the Treasury, was still on the 1st day of this month $1,706,833,377.17, and that the interest on the same last year was $47,741,577.25, and sinking fund $47,903,248.15.

I feel therefore justified in calling attention to the extraordinary state of public indebtedness and of public securities in America and Europe, and the vast burden of taxation this new employment of the powers of government will impose on productive labor. I think it is obvious that if the intelligent laborers of the world shall consent that the governments shall continue to enlarge this new basis for taxation as displayed during the last quarter of a century in all nations, the struggle of the laboring man for competency and independence will soon be as hopeless as it was in the darkest period of the feudal age.

THE SURPLUS IN THE TREASURY.

But the taxing power becomes absolute tyranny when it draws into the public Treasury from the countless fields of industry money not required for the support of Government and hoards it up. Every dollar of this useless hoard expresses the reduced comforts of some home, the scrimping of some care-worn mother, the wretchedness of some fireside! A surplus in the Treasury! Money of the people drawn from their pockets by remorseless taxation and not required for the public good! Injustice can go no further! It has done its worst!

This surplus not only cripples industry, impoverishes the people, embarrasses trade and enterprise, but it does more, it inflicts an evil on Government by provoking extravagance and profligate expenditure, which in a Government like ours can only be palliated by an uprising of the people demanding reform, but never can be cured. The example for evil is everlasting.

The presence of the surplus in the Treasury, now exceeding $109,000,000, and daily increasing, notwithstanding large purchases of the public bonds at enormous premiums, is fatal to good government and prudent legislation.

Ten years ago the current ordinary expenses of the Government, deducting the pension-list of $27,963,752.27, was $107,326,433.07.

In 1887, last year, the ordinary current expenses of the Government, deducting the pension-list of $75,029,101.79, was $145,161,500.93, an increase in ten years of $37,835,067.32, a sum nearly equal the entire expenses of the Government thirty-eight years ago, and yet I assert with perfect confidence that the Government was better administered in 1878, with an expenditure of $107,326,433.07 (pensions excepted) than in 1874, the year of the great increase of salaries, when the current ordinary expenses of the Government (pensions also excepted) were $165,080,570.34, yet the difference in the burden upon the people was $58,580,870.46, a sum greatly exceeding the entire expenses of the Government only thirty-five years ago.

In 1878 you had no surplus in your Treasury.

But I cite this example only to show that a surplus in the Treasury renders honest government impossible. Neither the heads of the Departments nor Congress can resist the countless schemes of expenditure, public and private, always specious and plausible, generally without merit, working their way into the Treasury, and the member of Senate or House who objects to organized systems of public plunder becomes in the nation's Capitol and public press a subject of ridicule and denunciation. Statesmanship in this condition of affairs is lavish expenditure; economy and honest government is cheese-paring and contemptible!

So much, sir, as to the existing and ever-growing surplus in the Treasury.

If we are to have honest government the revenues must be heavily reduced. If the countless corrupt schemes now organized to reach the fruits of the labor of our people are to be defeated, taxation must be reduced, the money not actually needed by the Government must remain in the pockets of the people.

How shall the revenues be reduced? Both parties agree, as all parties have in the past history of the country, that in a time of peace like the present the revenues should be mainly raised by tariff duties; it is an indirect tax on our people and easily collected; but experience has demonstrated that an excise tax, derived from articles of luxury which are not indispensable to the comforts of home, such as the articles embraced in our present internal-revenue system from which the following taxes were collected last year:

From distilled spirits	$65,829,221.71
From tobacco	30,108,067.13
From fermented liquors	2,245,456.20
From oleomargarine	723.948.04
From banks not national	4,288.37
From penalties, etc	22,978.70
Total	118,837,301.06

is cheaply and readily collected.

Surely if taxation is to be imposed on anything these are legitimate objects of taxation. But in all our history Federal taxation must be a matter of compromise. The friends of tariff protection insist that all taxation shall be imposed on imported goods; that the tax on spirits, tobacco, beer, banks, and all shall be abolished. I admit that only extreme protectionists demand this.

For myself I would only consent to exclude tobacco from the list. It stands on different ground from any other article we tax for Federal purposes. It is a raw product of land, a farm product; the producer is harassed in disposing of his crop. He can only sell to licensed dealers. If he sells in the open market he is subject to fines and penalties. Surely this is un-American. Besides, tobacco, if a luxury, as is assumed, is about the only luxury of the great mass of our laboring people. It is an article (whether beneficial or injurious) of almost universal use. I am very willing that our native tobacco shall be relieved from Federal taxation, but I admit I am in favor of a high tax on imported tobacco as an article of luxury; but I feel sure that no considerable portion of the intelligent people of this country will consent that the other articles now subject to internal-revenue taxation shall be exempt from taxation for the purpose of keeping up or increasing the tax on the prime necessities of our homes.

THE TARIFF.

Both of the great parties of the country have promised the people to revise the tariff. No fair-minded man pretends that a tariff in a time of peace should be kept up on the basis of the inexorable demands of war. And yet we are considering in a time of peace the revision of a tariff exacting a higher rate of duty on dutiable imports than was ever before with rare exceptions exacted in our history. The average duty on dutiable goods under the present tariff is 47.10 ad valorem and would be under the pending bill 40 per cent. ad valorem. Surely this is a moderate reduction.

It is well to keep in mind the rate of duty on imported goods from the beginning of our Government. I present the following tables of rate of duty ad valorem by decades from 1791 to 1881 and on to 1887. The first table, extending from 1791 to 1811, presents, according to the form in which the records were then kept, the average ad valorem rate on both free and dutiable goods. The other table shows the ad valorem rate on all importations of free and dutiable goods, as well as dutiable alone, in separate columns down to 1887. I am indebted to General WHEELER for these tables.

Net imports and duties collected thereon from 1791 *to* 1887.

Year ending September 30—	Value of net imports.	Amounts of duty collected.	Average ad valorem rates of duty.
			Per cent.

a Nine months.

It will be seen from these tables that, beginning with an ad valorem duty in 1791 of 15.34, we had reached in 1887 an average ad valorem rate duty of 47.10; dutiable the exact rate, however, is 47.6.

All parties agree that the revenues shall be reduced. I am free to say that in my judgment the free-list ought to be enlarged. Lumber, coal, salt, and sugar should be placed on the free-list; these are prime necessities of the homes of our people, but even here compromise is inevitable. The majority of the House Committee on Ways and Means in their pending bill reduce the duty on sugar 20 per cent. I think it should be reduced 50 per cent; I should vote the more freely to place it on the free-list. A tax of 82 per cent. on sugar ad valorem, an article of universal use, is, in my judgment, indefensible. The tax paid last year by our people on this article used in every home was the enormous sum of $58,016,686. I am willing to compromise at a reduction of 50 per cent. on sugar, but I think that sugar, like lumber, salt, and coal, should be free.

The pending bill which proposes an ad valorem rate of tax on dutiable goods of 40 per cent., proposes to put certain other articles on the free-list, among others paintings and statuary. I am unalterably opposed to this. These articles are special luxuries and only found in the homes of the rich. There are now in Europe multitudes of gentlemen who have amassed imperial fortunes in our manufacturing industries and through enormous subsidies we have granted to railroad corporations, gentlemen who, after acquiring fortune, spend much time in Europe hobnobbing with the European nobility; these gentlemen, as is well known, adorn their homes in this country with costly paintings and statuary imported from Europe. Are not such articles proper subjects for taxation? Surely they are, and the present tax of 30 per cent. is a moderate tax, and I hope will be maintained. Wealth, which so largely controls our Government ought to bear a just portion of the burden. A reasonable income tax would be wholly just and honest, and the time will come when labor will demand it.

RAW MATERIAL.

An important feature of the pending bill is the proposition to place the raw materials that enter into manufactures on the free-list. It will be remembered that during the late war the exigencies compelled extraordinary taxation. The imported raw materials entering into the manufacture of goods were heavily taxed. The manufacturers were compelled to pay a heavy internal-revenue tax on the goods they manufactured. This almost double taxation operated heavily on the manufacturer, and he, with a fair show of justice, demanded a corresponding increase of protection. This was especially true of the woolen, iron, and steel manufacturers, hence the enormous increase in the tariff taxation of woolen goods, iron, and steel. Since the war the internal-revenue tax on manufactures has been abolished, and it is believed that the abolition or reduction of the tax on imported raw materials which enter into the manufacture of goods, will justify a large reduction of the duties on imported goods, especially woolen goods, the cheapness of which is of such especial importance to all classes of our people.

It is a curious fact that wool was at a higher price during the revenue-tariff period from 1846 to 1860 than at present. The great wool-producing sections of this country in the early future must be New Mexico, Arizona, Colorado, and California, and perhaps Western Texas. The high-priced lands of Ohio, Indiana, Illinois, and other States can not successfully compete with the free mountain ranges of New Mexico, Arizona, Colorado, and California or the cheap lands of Western Texas—lands and climate especially adapted to sheep-raising, especially in the production of coarse wools.

I visited the Navajo Indians of New Mexico and Arizona two or three years ago, and was surprised to find in that arid region vast flocks of sheep. Those Indians claimed to own four millions of them; they were inferior Mexican sheep, for the Indian is not a very good farmer or herdsman, but their enormous flocks indicated the capacity of that vast region of country for sheep-raising. In that section of the Union you find flocks of many thousands of sheep, each flock under the charge of a single shepherd and his dog, pasturing upon the free mountain slopes—the shepherd generally a Scotchman and the owner of the flock an English or Scotch capitalist.

When you consider the vast extent of this region of country, specially adapted to sheep-farming, it is clear that in the early future the larger portion of our wool, especially our coarse wool, will be produced in that section of the United States. The wools which are imported are the coarse, cheap wools, and now protected at the rate of 2½ cents per pound. The higher-priced wools, bearing a higher duty, it is clear, will not be affected by giving the manufacturer free raw material; and yet it is equally clear that every family in the United States will be largely benefited by the large reduction in the cost of woolen goods that must follow.

But with free raw material or reduced duties on wool the duty on woolen goods ought to be reduced largely. I am not satisfied with the proposed duty of 40 per cent. on woolen goods. Nineteen years ago, when the tariff was under discussion, there being at the time several large establishments for the manufacture of woolen goods in Southeastern Indiana, I received a letter from the president of the company controlling the largest establishment, urging the policy of cheap raw material and the reduction of the duty on woolen goods to 25 per cent. ad valorem. "I deem it," said this gentleman, a leading Republican, "of vital importance to the woolen manufacturing interests of the country that the duties on wool, dye-stuffs, and olive-oil be reduced, or, indeed, wholly removed, and a general reduction of the duties on manufactured woolen fabrics of every description to 25 per cent. ad valorem. Some Congressional action of this kind must be had soon, or the looms of the woolen mills of the country must lie idle."

Such were the views of a leading woolen manufacturer of Indiana nineteen years ago, a gentleman who believed in the policy of protection, but who clearly saw the necessities of the times. He saw that countries where everything is taxed heavily could not compete with countries where the raw material was free. He saw that our heavy taxation of raw materials, cheap wools, and the like, drove them into the European markets, where they were sold at an almost nominal price, which enabled the European manufacturers to under sell our manufactured products in our own markets and everywhere else. His prediction was verified, for within a few years the woolen manufacturers of Southeastern Indiana went down in hopeless bankruptcy.

But I am not satisfied with wool on the free-list and woolen manufacturers protected to the extent of 40 per cent. ad valorem, as proposed by the pending bill. It is true that 40 per cent. is a heavy reduction on the present enormous duties on woolen goods, but still 40 per cent. is an unjust protection to the manufacturer if the producers of wool in the interest of cheap woolen goods are not protected at all. If woolen goods are still to bear a tariff tax of 40 per cent, I will feel it my duty to vote for a reasonable tariff on wool, especially if coal and iron ore are not placed on the free-list. We of the West must insist that there shall be no discrimination against the producers of wool.

LUMBER.

I have said it was not my purpose to consider the tariff in detail. It has been done already with a bewildering display of figures. But to illustrate in a single instance the unjust burdens imposed on productive industry, and the effects of our system of favoritism in legislation, I take the single article of lumber.

We impose a tariff tax of $2 a thousand feet on rough pine-boards. This tax can not benefit labor for it will be readily seen that labor will cross and recross the line wherever the best wages can be secured, for our great forests of the Northwest bordering on the Great Lakes and westward as well as eastward are opposite the great forests of Canada, Ontario and British Columbia. We granted in former years to railroad corporations without price and sold to capitalists for a mere nominal price all of the great forests of Michigan, Wisconsin, Minnesota, and westward, and now tax every laboring man who builds a house, or a barn, or a fence, $2 a thousand feet on the lumber he uses, for the exclusive benefit of the few men we have permitted to monopolize our timber lands.

The loudest demand for protection of lumber comes from the Pacific coast, and from Michigan and Wisconsin, from the land grant and railroad corporations, and from men who have monopolized the public lands in vast tracts at $2.50 per acre under existing laws, when it is fully established that the timber on the larger portion of these lands is worth from $50 to $100 per acre. Surely these men who have secured under our system of legislative favoritism a monopoly of the most valuable portion of our timber lands as Congressional gifts, or at a nominal price, ought not to be permitted to add to their wealth by taxing every man who uses lumber, an article so necessary and indispensable to the comforts of human life.

This lumber taxation is an admirable exemplification of our whole system of taxation. We have granted to railroad corporations a large

portion of the most valuable forests in the United States, or in the world—millions upon millions of acres now worth $50 to $100 per acre for the timber alone. These railroad grants of pine forests in Michigan, Wisconsin, and Minnesota—strips of timber country from 10 to 20 miles in width and hundreds of miles in length, as they appear on maps of those States, present the appearance of a vast checker-board!

Ingenious gentlemen who understood the coming value of these immense forests seized upon the period of railroad land-grabbing when our people in the fervor of patriotism were watching the movements of armies instead of the law-making power at this Capitol, and readily obtained grants of millions of acres of this public wealth, and then these successful lobbyists insisted on and secured the tax on imported lumber at the rate of $2 a thousand feet, thus taxing the whole Northwest, indeed the whole people of this country, to increase the value of their imperial possessions.

Let us see how this tariff of 1833 promotes in this field alone the special interests of capital at the expense of labor. This tariff of 1883 imposes a tax of $2 a thousand feet on common pine lumber of universal use. But by this same tariff of 1833, now in force, you provided specially for three interests in this matter of lumber. "Woods, namely, cedar, lignum-vite, lace-wood, ebony, box, granadilla, mahogony, rosewood, satin-wood, and all cabinet woods, unmanufactured," come in free of tax. So that all the woods that are used in the manufacture of articles of luxury and taste are admitted free. In the next place "logs, round, unmanufactured timber not specially enumerated or provided for in this act, and ship-timber and ship-planking" are placed on the free-list; and again all "railroad cross-ties" are placed on the free-list. So, under the present tariff law of 1883 all wood used in the manufacture of articles of taste or luxury are admitted free. All "ship-timber and ship-planking" manufactured by the pauper labor of Canada for the benefit of the ship-builders of the Eastern coast are admitted free of duty. All "railroad cross-ties" sawed or hewed by the pauper labor of Canada are admitted free of duty. But when we propose that the farmers and all workingmen of this country who build houses or barns or fences shall have their rough boards also admitted free of duty there is a burst of indignation from the ship-builders of the Eastern coast, who get their lumber free, from the railroad kings, who hold millions of acres of your pine forests as a free gift from Congress, and who, under the present law, import their cross-ties, sawed and hewed by Canadian labor, free of tax, and from the English and Scotch capitalists who in the States of California and Oregon and Washington Territory have monopolized vast bodies of your timber lands on the Pacific coast at nominal prices, and others who are annually shipping from the Pacific coast millions of feet of the products of your forests to the ports of Europe—from all these and all other great timber-land owners comes a fierce and fiery protest against the effort of the farmers and other laboring men of the Northwest and elsewhere to get rid of this tax of $2 a thousand feet on the rough boards they use in their industries!

I am glad this clear issue is presented at the very threshold of the consideration of this bill. No one subject can better illustrate the real position of the great parties as represented on this floor, the Republican party, as ever, standing by special interests, the interests of the few, the interests of monopoly and corporate power, the Democratic party by the interests of the whole people!

What a commentary this tariff taxation of lumber is on the remorseless cupidity of wealth, what a display of the merciless grasp of capital on the labor of mankind even in our great Republic! Lumber! An article of universal use, yet more employed by the men connected with labor than by men of wealth; a free gift of a beneficent Providence to the human race, indispensable to the comfort of human life. Specially and heavily tax lumber! This article of universal use must be protected by remorseless taxation for the benefit of the wealthy men who by gift of Congress or at a nominal price, have monopolized your magnificent forests! Where are we drifting to in this great Republic?

But beyond all this, will the American people encourage a policy that will rapidly exhaust our forests? These forests of ours, under our protective policy, are disappearing with fearful rapidity. Have gentlemen considered the effect of those forests in regulating the rainfall, atmospheric changes and their influence on the health of our people, and the regulating and beneficial influence of those forests on the flow of our great rivers? And shall we pay a bounty of $2 a thousand feet to secure their early destruction? And yet you are expending this very year $10,000 to ascertain how your forests can be preserved! If the forests of Canada or of any other portion of the globe can aid us in postponing the evil day when our forests will be consumed, should we by giving bounties for their destruction prevent it?

But the truth is, and the misfortune to the country is, you have to stand by the wealth that demands protection to lumber in the Northwest and on the Pacific coast, for if you do not they will desert you in protection elsewhere!

AGRICULTURE.

The census of 1880 put the number of persons engaged in the principal occupations in the United States at 17,392,099. Those engaged in agriculture, 7,670,493; in professional and personal services, 4,074,238; in trade and transportations, 1,810,256; in manufacturing, mechanical, and mining, 3,837,112; in all, 17,392,099. So that agriculture is still, as it always has been, the leading employment of the American people. Manufacturing industries have steadily grown since the organization of the Government, but the greatness of our Republic, our unexampled progress and development as a people, must be attributed to our vast domain of fertile lands, salubrity of climate, and variety of production. It must be considered fortunate that agriculture holds so important a place in our Government, for no employment is so independent and conservative, while the other great industries, especially that of manufactures, are entitled to high consideration, and ought to have the fostering care of our Government, surely that of agriculture, which is the foundation of all, can not be overlooked in any system of taxation.

I have already shown that in our State and local taxation, direct taxation, lands bear more than three-fifths of the burden, and it is clear that under the present tariff system the farmers bear the greatest burden without any corresponding benefits. The cost of every article the farmer consumes or employs in his industry (except tea and coffee) bear heavy taxation, salt, lumber, sugar, every article of iron, steel, or tin, crockery, clothing, boots, shoes, ropes, and everything else pays its tax into the Treasury. In all these instances with only rare exceptions the tax falls directly on the consumer, and those exceptions only occur when there is overproduction stimulated by the tariff tax; and then (a most unfortunate but natural result of our system) comes in the trusts and pools of the manufacturers to stop overproduction, and workingmen are mercilessly turned out of employment.

The condition of things in this country is anything than encouraging to the farmer. I have already shown that more than three-fifths of all the taxes for the support of State and local governments fall on real estate, when in fact it ought not to exceed one-half.

But when we come to tariff taxation, the inequality is still more apparent. Every article used by the farmer, every implement used in his industry is subject to a high protective duty, and yet the products of his labor must compete with the industries of the world, the price of his wheat, corn, beef, pork, and all others of his product must depend on the prices paid in the general markets of the nations, for the price of his commodity will be fixed in Chicago and New York by the price at European ports, by the foreign demand.

A large part, a very large per cent., of the products of the farms of this country will of course be consumed at home and in the United States; but the price of the surplus will always control the price at which the products of the farm will be sold in this country.

The exports from this country last year to foreign markets amounted to the enormous sum of $703,022,923; of which $523,073,798 was product of the farm. It had to go abroad for a market, else the reduction in price would have been enormous.

So that while the farmer pays a heavy duty on every article he uses, every implement and machine he employs, no matter what, he must compete with the markets of the world for the price of his commodities. The prices of wheat, pork, beef, cotton, or whatever product the farmer may produce, will be regulated, as all men know, by the price of the surplus of production in the current markets of all nations.

Is it therefore a matter of surprise that the farming interests of the West are depressed? This indirect tax can not materially increase his home market, for the manufacturers claim that the home market for manufactured products is already oversupplied; hence pools and trusts to stop production and keep up prices.

With local taxation resting so largely on the farmer, paying as he does a high tariff tax on every manufactured article he uses of wood, iron, steel, leather, wool, cotton, hemp, or flax, or in any other form his home or industries require, for the benefit of protected industries, is it remarkable that farming is unprofitable?

He sells in a market where values are fixed by the current demand and supply of all the nations that export or import commodities, but purchases every article his farm requires on the basis of a tariff averaging 47.6 per cent. Of course he can not be prosperous. Farming as a matter of course is unprofitable.

It is no satisfaction to the farmer of the West that he hears of an enormous increase of deposits in the savings institutions of the Eastern States, of the general prosperity of the manufacturing districts, of the vast investments in railroad enterprises and extension of the railroad system by which the general wealth of the country is increased; the fact remains that the great body of the farmers of the West are not prosperous under the present system of taxation, tenants are struggling for life, and the farmer who controls his own farm can hardly make the ends of the year meet.

The fact is that under the present order of taxation the farmers of the West are falling behind and the money-lenders of the East are absorbing the life-blood of the West. Can anything account for this except the effects of high taxation with no corresponding benefit? It is well known that the capitalists of the East have made extraordinary investments in the West not only in railroad enterprises but in direct mortgage investments on farming lands.

As to the direct investment of Eastern capitalists by way of mortgage on Western farms, it is impossible to speak with certainty. The New York Times estimates these investments in the States of Ohio, Indiana, Illinois, Wisconsin, Michigan, Minnesota, Iowa, Nebraska,

Kansas, and Missouri in the aggregate at the enormous sum of $3,422,000,000. The St. Louis Republican estimates these mortgages in the aggregate at $4,531,000,000. It is alleged that these statistics have been gathered up by the grangers of the Western States. One of these reports, and the lowest estimate, places the mortgaged indebtedness of Indiana farmers at $398,000,000. It seems to me impossible, or at least improbable, that this should be correct; the sum named would reach so large a per cent. of the value of the farms in that great region of our country as to render these estimates of indebtedness appalling.

All of these estimates of the indebtedness of the Western farmers I hope and believe are greatly exaggerated, but the fact remains that farming under the present state of taxation, State, local, and Federal, is unprofitable. The farmers are not getting ahead. A man who has lived all his life as I have done in the midst of a farming community can fully appreciate the effects of heavy taxation on the freeholders of small farming estates.

Thirty years ago these farmers felt no anxiety about taxes; the small, direct tax, almost nominal, was readily paid without materially affecting the income of the farm, and the moderate tariff taxation was scarcely felt in the slightly increased cost of the articles purchased, so that after the great financial crash of 1839–'40 and until 1860, there was a steady development and advance in all the industries of this country, including agriculture, without any example in our history. Our statistics and census reports of 1850 and 1860 fully confirm this. It was a period of moderate taxation, State, local, and Federal, the Federal Government depending alone on tariff taxation for its revenues. The progress of our people and the development of our resources during that period were in perfect harmony with our institutions; wealth steadily increased everywhere in all of the communities of the Union, and it nowhere centralized into great States. It was a period of general, not special prosperity, of increased comforts for all, not of great estates for the few.

History will point to the period of time between 1845 and 1860 as a period of unexampled prosperity and solid progress of a whole people, and will note that it was a period of moderate taxation, State, local, and Federal, and all this notwithstanding the financial crisis of 1857, an event that did not even interrupt the general prosperity of the country. The friends of moderate taxation may well point to that period and place it in contrast with the high taxation, State, local, and Federal, of the last twenty-five years. These twenty-five years have witnessed an enormous enlargement of the wealth of this country, but high taxation, State, local, and Federal, has centralized this augmented wealth into great estates. During a part of this twenty-five years high taxation for Federal purposes was the inevitable result of a great war; our people met its demands, as became a patriotic people, without a murmur, but high taxes, whether in peace or war, lead to one result in all nations, great estates and an impoverished people.

But when the exhaustive period of inflation incident to the war passed, the State and local governments, following the Federal example of lavish expenditure, continued, with the Federal Government, high taxation. The natural effects began to appear in agricultural regions. With taxation ever remorseless as death, and every article needed on the farm raised by high tariff legislation above the natural order of things, the farmer with a short crop must borrow money from his friends to meet his local taxes, and if crops still fail, or the price of farm products happen to be low, or the accidents so often incident to human life involving unusual expense occur, he becomes the debtor of a bank.

How soon interest and excessive taxation, State, local, and Federal, each remorseless in their demands, bring on the desperate struggle of the farmer to save his home, then comes another failure of crops and hopeless despair, then the court and the sheriff, and the once independent freeholder, a wife careworn and old even in her youth, with children happily only half conscious of their misery, turned out of a once happy home to find shelter at best in the cheerless cabin of a tenant! Such are the fruits of high taxation. If this picture is true, and surely it is, who can defend the wickedness of taxation that draws from labor more than a hundred million dollars to lie idle in the Treasury? State and local taxation, oppressive as they are, have at least the manly quality of making their open demand on the citizen.

Indirect taxation exhausts his resources by stealth, but both direct and indirect taxation equally exhaust his ability to support his wife and children. "The world is governed too much." The truth is, government, to which our people and all people pay such deference, is being used as a method of taxing the whole people for the benefit of the few. If the only purpose of government was to secure the proper administration of justice, protect the feeble, educate the children, suppress wrong, carry out in good faith its obligations, and do justice to citizens who have imperiled their lives in its defense, the taxes which enrich the few and turn the unfortunate freeholder, his wife and children into the public streets would be unknown.

WAGES.

As to the wages of American workmen in the manufacturing industries, the wonder is that their wages are so low, not that they are higher than the wages of the less favored nations; and the most melancholy part is that while in all our manufacturing districts during the last twenty-five years princely fortunes have been made by manufacturers, the great body of laboring men, whose skill, intelligence, and labor have built up these excessive fortunes, have remained comparatively poor, not even with independent homes in multitudes of cases for their wives and children. Does this speak well for the system?

It is said that protection has reduced the price of manufactured articles in iron, wood, and everything else; if so, how could reduced prices increase the capacity of the manufacturer to pay better wages—even if it were true, which it certainly is not, that the capacity of the manufacturer to pay better wages secured better wages; for if that were true how could it happen that the manufacturers in countless instances in our past experience acquire overgrown estates, while the skilled workmen remain comparatively poor?

The fact is that the productive power of labor by the increased intelligence of laboring men and the marvelous inventive skill of American mechanics and the enormously increased facilities of transportation has immensely reduced the price of manufactured goods, not only in the United States but throughout the world. I am not entering into detail; but to illustrate the astonishing increase of the productive power of labor and the corresponding decrease in the price of manufactured commodities, I take a single article as reported by your Bureau of Statistics. It simply illustrates the difference between hand production and that of skilled labor with machinery:

Relative production, value of product, and earnings of a spinner using hand and power machinery.

Industry.	Year.	Description of unit.	Product of one spinner per week.		Earnings of one spinner per week.		Hours of labor per week.
			Amount.	Value.	Highest.	Lowest.	
			Pounds.				
Cotton yarn	1813	No. 10	3	$2.25			60
Do	1880	No. 10	3,000	450.00	$9.30	$7.20	60

With such results of inventive skill, increased intelligence of laboring men, reduced cost of transportation, the wonder is that labor is not better paid and that the cost of manufactured goods is not more greatly reduced. Who, then, gets the profit of the inventive skill and increased intelligence of American workmen? Not the workmen, for they are still poorly paid. No, sir; the skillful capitalists, not skilled labor, under our system monopolize the profits which ought to inure to labor.

All men see that there is something radically wrong in the present order of things. The intelligent skilled workmen in the United States turn out vastly more products than the workmen of any other country. This is clearly established. They are entitled to far better wages than are paid elsewhere, yet whenever a body of American workmen strike for fair play and reasonable wages, new men, often undoubtedly brought into the country in defiance of a law inaugurated by a Democratic House of Representatives making such importation a penal offense, are made to partially supply their places, defended by an armed force; combinations, trusts, and pools are formed in every field of manufacturing industry to reduce production and keep up prices, turning multitudes of men out of employment and inflicting untold misery on their wives and children; and the labor employed in agriculture, the greatest of American industries, is unprofitable and the laborers in its great field poorly paid. Labor nowhere fairly participates in the measure of prosperity it creates.

And yet great private estates are multiplying in our manufacturing districts.

But it is claimed that high taxes will give the farmer a home market for his products by increasing the number of consumers. But this is for the present period manifestly delusive. Manufacturers in every field of the manufacturing industries are even now complaining of overproduction, and organizing trusts and pools on every hand to limit production and keep up prices, and yet the number of farmers steadily increase. Every year witnesses the opening up of vast regions of the virgin lands of our great Territories into productive farms.

The farmers can not form trusts or pools to limit production; the men engaged in an employment so dependent on the blessings of Providence, happily for mankind, can not resort to artificial methods of regulating production. Their numbers are too great to justify combination; their dependence on the forces of nature and the favor of the Father of mankind is too great to justify methods which would control and regulate the production of food for the human race. Providence and human industry must combine in agriculture, and Providence gives no countenance to trusts and pools to enrich the few and impoverish the many!

Besides all this, the farmer is and always has been his own master. His farm supplies the wants of his family, and the price of the surplus, the measure of his gain, must as a general rule depend on the supply and demand for his commodity in the markets of the world. I therefore submit that the farmer, who bears the greater burden of State and local taxation, who is a large consumer of the products of manufacturing industries, the price of whose products is regulated and controlled

by the demand and supply of agricultural products in the general market of all countries, who can only secure at best after years of patient labor a modest competence, ought to be considered in arranging any system of indirect taxation. The tariff tax on lumber, salt, farming implements indispensable to his farm, woolen and cotten goods, boots, shoes, and sugar for his family certainly ought not to be greater than the demands of his Government economically administered may require. None of these articles of prime necessity should be taxed merely to enlarge the fortunes of men engaged in more favored industries. Yet all of the articles I have named bear a taxation never known in this or perhaps any other country for any considerable period, in a time of profound peace.

It is an extortion and robbery to compel that large portion of our people engaged in agriculture to pay a tax not required by the necessities of their Government, to promote the prosperity and enlarge the wealth of men engaged in more remunerative employments than their own.

This country of ours has become one of the wealthiest of all countries. Its natural resources are such as to render it absolutely certain that the wealth of the American people will at an early period greatly surpass that of any nation of ancient or modern times. With this wealth well diffused the future would be secure. During the first seventy-five years of our Government under just and equal legislation there was a steady and wholesome increase of wealth; it was displayed in the steady increase of happy and prosperous homes; no opportunity for great estates could be found in such legislation, but during the last twenty-five years the exigencies of a great war demanded extreme legislation for the most patriotic purpose that could inspire a people, the life of a republic.

Under the shelter of this uprising of the people for the Union began the legislation which has changed completely the condition of our affairs. The advantages to wealth secured under the vast demands of that period have been maintained until the present hour; and more than that, by way of illustration, the income tax which in 1866 reached the sum of $72,982,160, and taxes on manufactures and corporations have been entirely repealed, relieving capital interests entirely from Federal taxation, leaving the burden to rest on productive labor. During this period a form of wealth to which I have referred, almost unknown in former years, was developed, public securities, Federal, State, and local, and it should be added the vast body of securities recognized by the courts as public securities, issued by the great corporations of this country. All of this wealth which enters so largely into the increased aggregate wealth of the nation in the census of 1880 is a form of wealth in direct antagonism to the current wealth of the nation, as expressed in former years, for it is a wealth that rests directly on labor, and ceases to be wealth unless upheld by labor.

Of the thousands of American citizens of princely fortunes, now residing in Europe in elegant luxury, I am sure you will not find a single American farmer, and shall the American farmer be excessively taxed to enlarge their overgrown estates? Among those gentlemen of princely estates you will find the men who have skillfully and in most instances unscrupulously monopolized your magnificent forests, land grants, salt and sugar productions, and great manufacturing industries. Under the present order of things the men who labor, whether on the farm or in the workshop, hardly keep the wolf from the door, while the men who enjoy the profits of the system riot in excessive wealth.

Taxation and land monopoly are the two forces which in all the centuries have in Europe destroyed the natural equality of mankind and filled the land with palaces and huts. The taxation in our country necessary to support an honest and frugal government and enable it to meet all of its obligations never has and never will oppress our people. Confined to such purposes, even with the most just and liberal recognition of the claims of citizens who have imperiled their lives in the public defense and their widows and orphan children, equitably and justly applied, with wealth on the one hand and labor on the other bearing a fair and reasonable portion of the burden, the taxation necessary to support this Government would be unfelt; it would scrimp the comforts of no home, sadden no fireside.

But the American people now stand face to face with the fact that within the period of a single generation a great change has occurred in the forces that control their public affairs; that forms of property almost unknown in former years, stocks and bonds of powerful corporations, public securities of Federal, State, and local governments, property which, resting for its value directly on all the productive industries of the country in a very large degree, escapes all forms of taxation, now constitute a vast portion of the aggregate wealth of the United States; that the issue now upon us is whether this Government shall represent the powerful corporations and great private estates into which this form of wealth naturally centralizes or the republican simplicity of the great masses of our people. The former encourages the dazzling embellishments, the extravagance and luxury in government which are always incident to great estates, because all these tend to strong government, under the shelter of which overgrown estates only feel secure; the latter demand the dignified simplicity of republican institutions, that the greatness of the nation shall be seen in the happiness and prosperity of its people, and not in the splendid establishments which only express the measure of taxation labor is compelled to endure.

Every friend of his country and of mankind will cling to the hope that the ever-growing intelligence of the American people will be found more than sufficient to counteract the unfriendly forces which have grown up in our midst of excessive wealth and great estates, hitherto in all the history of the world fatal to republics.

But it is absolutely certain that in the midst of the carnival of luxury and extravagance incident to the vast accumulation and centralization of wealth which our legislation has encouraged during the last quarter of a century, with their natural allies, corporate power and great special interests ever seeking to bend legislation to their own ends, if the American people intend to maintain the supremacy of their free institutions they must at least see to it that by compelling moderate taxation and reasonable expenditure their Government remains honest and frugal.

The Tariff.

SPEECH

OF

HON. JONATHAN H. ROWELL,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 20, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. ROWELL said:

Mr. CHAIRMAN: It has been a favorite war-cry of the Democracy to accuse the Republican party of a friendship for monopolies and to pretend an exalted regard for the common people; and yet every Democratic candidate for the Presidency since 1860 has been taken from the State of New York, and with express reference to obtaining the friendship and support of the money power of that State. Its chances for success in a national campaign depend upon the vote within twenty miles of Tammany Hall, a vote now, as in the past more under the control of monopoly power than all the remaining votes in the entire Union.

It is an open secret that the party is now in executive control of the nation because of the friendship of the money powers of New York City for its candidate, or rather for the Secretary of the Treasury selected before the election.

It is current history no longer open to dispute that every important executive act of the present Administration has been in the interest of this same moneyed power.

Your President-elect sounded the alarm and proclaimed impending disaster from the further coinage of silver before he had taken upon himself the obligation of his high office in the interest of this same power, in whose ranks only was there any demand for action. In the same interest there was a cessation of payment of the interest-bearing debt of the Government for ten months after the Administration came into power, in order that the accumulations in the Treasury, including the $100,000,000 gold reserve, might be used for paying off and canceling the greenback currency of the country according to the recommendation of the Administration through the Secretary of the Treasury.

In its interest was the value of national bonds enhanced as a security for Government deposits by order of the Administration.

In its interest came the suggestion of doubtful power to purchase bonds and the deposit of $60,000,000 Government currency in the national banks, upon deposit of this security, so enhanced in security value, and so increased in market value, by direct act of the Administration.

In the interest of this same power the will of Congress has been ignored and defied in the refusal to exercise the authority granted by Congress to settle the fisheries question and to use the surplus in purchasing our outstanding interest-bearing debt.

In the reclassification of imported articles so as to lower the duty, or transfer to the free-list, the same interest has been consulted.

Even in dealing with the cattle-men occupying Indian lands, and in neglecting all efforts to secure for settlement the Oklahoma country, this same interest has been tenderly guarded. In hostility to all pension legislation, the Administration has listened only to the voice coming from the great money centers, and has turned a deaf ear to the cry which has come up from every other section of the country. To cover the tracks which all lead to Wall street, this new cry about trusts is raised by the President and dinned into our ears by his subservient followers.

Now, the only trust which existed in this country prior to the advent of this Democratic Administration was the Standard Oil Trust, a trust which need fear no attack from the national Administration until the

present Cabinet is reconstructed and the chief adviser in the kitchen Cabinet is deposed.

With the advent of this Administration came a brood of trusts. Why just at this particular period I do not know, unless it was because of a knowledge that the Treasury would furnish an unlimited amount of money to sustain them, and that at least one Cabinet minister would watch carefully after these interests.

It is a coincidence that they have come and that they appear to flourish, and that the only attempt to put an end to them has come from Republican Legislatures.

Now, in my judgment there is no more direct connection between the tariff and trusts than there is between the tariff and the weather.

The true, most powerful trusts in this country are admittedly outside of any tariff influence. Success in the oil trust without a tariff demonstrates the possible success of every other kind of trust without reference to tariff, and demonstrates the other fact that human ingenuity has discovered a new method of defrauding the people, which requires of State Legislatures vigorous criminal laws to punish the perpetrators of the fraud, and that is all there is of the question.

In this country, as in all others, selfishness is always trying to erect barriers against the sharp competition which cheapens prices and lessens profits. Combinations of some kind are as old as civilization, but inasmuch as combinations to enhance prices and limit production are against public policy, and therefore not enforceable at law, they have never been able to maintain existence for any considerable time. As fast as formed and in working order, enterprise and new competition breaks them up, force the discovery of cheaper methods, and lead to cheaper prices, except in cases where there is the protection of patents, or in railway transportation lines having exclusive control of a section of the country.

The other exception is in great lines of imports, where competition can not so readily enter; and so it has always happened that the people always pay exorbitant prices for imported goods which do not come into competition with domestic production.

These modern trusts are simply a new discovery of a way to prevent members of the combination from drawing out when self-interest otherwise would induce them to do so.

By transferring the ownership of the property to trustees the individual owner abdicates power over his own. It no longer remains a matter of free will to remain in or go out. The pool becomes self-operating, and avoids the dangers of going to pieces, which have characterized all other attempts at combination; and hence the danger and the requirement of vigorous law to break them up and restore the era of competition.

But it does not lie in the mouth of a free-trader to oppose them. Hands off! is his war-cry. Let men do as they please with their own. No interference of the law to direct the course of trade or to encourage the development of industries.

Let nature's law work out our salvation, is the demand of the free-trader as it is the cry of the trust-builder.

They ask for no corporate franchise, because that would necessitate legal limitations. All they ask is that the law should keep its hands off.

Why may I not convey my property to a trustee to be operated for my benefit, or why may not all others having a like kind of property, if it is no public concern what I do with my own—where I buy and where I sell—or whether those great industries upon which the comfort and happiness of the people depend flourish in one country or another?

We who believe in protection believe in it for all the people for whom we have power to legislate, and that means protection from being driven out of business by unequal competition from foreign countries or from unequal competition by trusts, whether foreign or domestic, and therefore we believe in the efficacy of law to accomplish the end sought.

We say to the foreign competitor, "You shall pay for the privilege of entering our markets when our own workmen are capable of supplying those markets," and we say to the builders of trusts who seek by a combination of capital to keep all others out of business that "your act shall be declared a crime against the people."

Custom-houses for our foreign rivals and jails for our domestic enemies of free participation in all the privileges of a free country is Republican doctrine, by which we will abide and appeal to the intelligence of the people for our vindication.

The language of the platform upon which we go to the people will not need an interpreter nor a declaration that the words we use do not mean what they plainly say, but have an occult meaning only to be interpreted by the man whom we have consented to consider infallible.

When we charge our shortcomings upon a minority, as you of the other side of the House are constantly doing, and as your national convention has recently done, it will be time for us to acknowledge our inability to understand and provide for the needs of the Government; but until then it ill becomes the majority of the House to charge upon us and the principles we advocate friendship for trusts and monopolies, for this charge will deceive nobody. As you are free-traders and we protectionists, let us have a fair contest before the people, and abide the result.

The Tariff and the President's Message.

Our labor is honorable in the eyes of every American citizen; and as it lies at the foundation of our development and progress, it is entitled, without affectation or hypocrisy, to the utmost regard. The standard of our laborers' life should not be measured by that of any other country less favored, and they are entitled to their full share of all our advantages.

* * * * * * *

The simple and plain duty which we owe the people is to reduce taxation to the necessary expenses of an economical operation of the Government, and to restore to the business of the country the money which we hold in the Treasury through the perversion of governmental powers. These things can and should be done with safety to all our industries, without danger to the opportunity for remunerative labor which our workingmen need, and with benefit to them and all our people, by cheapening their means of subsistence and increasing the measure of their comforts.—*Message of Grover Cleveland, December, 1887.*

SPEECH

OF

HON. SAMUEL DIBBLE.

OF SOUTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, May 11, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. DIBBLE said:

Mr. CHAIRMAN: The line of my special duty in this House has not led me to an investigation in detail of all of the various items proposed in tariff legislation. In the first instance that task is imposed upon the Committee of Ways and Means, and the great body of the members of the House have the opportunity of passing upon their action when the bill is read by paragraphs and sections in Committee of the Whole. But the subject of tariff reform is one which commands the serious attention of every American citizen, and in common with my fellow-members of this body I have devoted to it much of reflection and observation in the past as well as in the present Congress. And I am gratified to observe, from the attention which has been given to this debate by the representatives of the people, that the American Congress regards it, and justly so, as the vital question of the hour. I trust, Mr. Chairman, that this great issue will be considered and decided when we come down to the details of the propositions before this Committee of the Whole; not in a partisan or sectional spirit; not simply for the sake of manufacturing campaign documents to send out amongst our constituencies to influence their votes pending an election; but let us hope that it will be treated in that broad spirit of statesmanship which befits the representatives of the American people assembled to discuss and decide grave issues affecting the prosperity of our common country from one end of it to the other.

There are various responsibilities, sir, in relation to this subject. The Executive, in the exercise of his undoubted prerogative, has communicated his views upon it to the Congress in a message so clear and precise in every expression that I have been startled and surprised at the way in which its contents have been misinterpreted in the debate upon the floor; and if the limited time allotted me permits I will submit for the consideration of this committee some of the remarks of the President in his message which cover its salient points and indicate unerringly his position, which has met with so favorable a response in every section of the Union.

HOME INDUSTRIES NOT ASSAILED.

But our duty in the consideration of a proposition to reduce taxation is a very different one from his. Under the very first clause of the Constitution "all legislative power" is vested in Congress, and it becomes our responsible prerogative, in view of the peculiar circumstances of emergency which now surround us, to bring forward, to discuss, to amend wherever necessary, and finally to pass a tariff bill during the first session of the Fiftieth Congress. And while there is no measure covering so wide a field as a general revenue bill which may not be improved in some particulars in the Committee of the Whole, composed of all of the members of the House and representing every part of our broad land, yet I can not see how any one can fail to support the general proposition upon which the present bill is based—that the tax reduction to be made is not to inflict any material injury upon any home industry nor destroy any of the infant or aged manufacturing enterprises of the American people.

We have heard to-day, in the eloquent and carefully prepared address of my distinguished friend from Iowa [Mr. GEAR], who has just preceded me, a historical recital of the policy of this Government on the tariff question as he interprets it; and he has endeavored to bring up as a precedent for our present guidance the action of Congress in the early days of the Republic, when we had just secured the right of self-government and had wrested our political independence from the grasp of British tyranny, but were weak in resources and at the mercy of foreign powers for almost every manufactured article of prime neces-

sity. He refers to the fact that one of the early acts of the first American Congress was for the encouragement of manufactures by a tariff law. Why, Mr. Chairman, what were the conditions then as compared with the situation now? Then the manufacturing enterprises of the country were not even in their childhood; they had not yet been born; they had not yet become infant industries. What is the condition to-day? We find factories all over this broad land, so prosperous and thriving that not only are they able to stand alone, but, sir, under the operation of the present tariff law, these industries are drawing from the people by indirect taxes larger amounts than are necessary to sustain them.

THE PRESIDENT'S MESSAGE.

Speaking for myself, Mr. Chairman, I may as well say here that in levying taxes under our Constitution there is ample room for such incidental protection as our manufacturers actually require under the provisions of a strictly revenue tariff; that a tariff levied for revenue only, if you please, has room in it for all requisite incidental protection, so heavy are the demands for the ordinary maintenance of the Federal Government. And neither does the President in his message nor does the Committee of Ways and Means in its report propose to strike a blow at American industries or to imperil American manufactures. Let us see what the President says. In speaking of the tariff he uses these words in his message:

It is not proposed to entirely relieve the country of this taxation. It must be extensively continued as the source of the Government's income, and in a readjustment of our tariff the interests of American labor engaged in manufacture should be carefully considered, as well as the preservation of our manufacturers. It may be called protection or by any other name, but relief from the hardships and dangers of our present tariff laws should be devised with especial precaution against imperiling the existence of our manufacturing interests.

And a similar tone pervades the entire message. In discussing the questions of labor and of wages, when ascertaining from the statistics of the last census that out of seventeen millions of laboring population there are but little more than two millions and a half who enjoy the benefits of the protection which the tariff affords, he distinctly states that there should be no disposition to press the argument that because protected workingmen constitute a minority of labor they should give way and be sacrificed for the greater number of laborers who have no such protection. On the contrary, he uses these words, which are plain and emphatic in their meaning:

There should be no disposition to answer such suggestions by the allegation that they are in a minority among those who labor, and therefore should forego an advantage in the interest of low prices for the majority; their compensation, as it may be affected by the operation of tariff laws, should at all times be scrupulously kept in view.

But the President does say in his message that under the operation of the present law, instead of such protection as arises incidentally from a revenue tariff, such as secures to capital and labor engaged in manufacturing, or farming, or other industry, that reasonable profit which the citizen should have in return for his toil or his investment, there is given undue and exorbitant advantage of one industry over another, and there have been excessive profits derived from capital invested in overprotected enterprises; and the objection to those enormous profits is that they have been unjustly taken from the pockets of the consumers of the country. That position is distinctly taken, and is sustained by existing facts. For while under this system the Government has not paid any bounties directly to these industries from the Treasury of the United States, yet our fellow-citizens who are consumers have been required to pay directly to manufacturers prices largely in excess of reasonable profits on their several industrial products, because high duties prevented any competition from abroad.

THE AMERICAN CAPITALIST, THE AMERICAN WORKMAN, AND THE AMERICAN CONSUMER.

In fact, sir, there are three parties interested in the rate of duty to be imposed on any article imported, whose interests we should care for in our legislation. They are the capitalist at home, the home workman, and the home consumer. The capitalist should have a fair return for his investment, the workman should have good wages for his labor, and the consumer should have protection from overcharges by means of speculative combinations and corners, or by reason of such obstructions as shut off all foreign competition. And where duties imposed are higher than the difference of wages here and abroad, and any other disadvantage which stands in the way of the domestic producer in comparison with the foreign producer, then all of the excess is solely in the interest of the home capitalist, at the expense of both the workman and the ordinary consumer, for the capitalist does not share his speculative or extra profits with his employés. Therefore, wherever such duties exist they should be reduced simply to such a figure as will cover the difference of cost of production here and abroad. As to established industries, this is the practical rule invoked by the President in the clearest and most unmistakable terms. I read again from the message:

But the reduction of taxation demanded should be so measured as not to necessitate or justify either the loss of employment by the workingman nor the lessening of his wages; and the profits still remaining to the manufacturer, after a necessary readjustment, should furnish no excuse for the sacrifice of the interests of his employés either in their opportunity to work or in the diminution of their compensation.

THE SURPLUS.

And now, sir, let us consider the surplus. Not only are consumers required to pay bounties to the manufacturers, but the effect of these extravagant duties is to accumulate money in the Treasury faster than it can be paid out, and the Government becomes a miser, hoarding the money that should be in circulation, as the medium of exchanges from day to day, and stringency of the money market is the result. And yet, Mr. Chairman, with this disastrous effect upon the country, with the surplus accumulating in the Treasury, and the consequent reduction and diminution of the currency available for circulation from hand to hand among the people, to stimulate the business of the country, with the necessity for reducing these duties and removing this inordinate protection, it is not proposed by the Committee on Ways and Means to say to those industries which have been thus overfed and overprotected, "You have had too much in the past; the consumers and the country at large have suffered by it; now because you have had too much in the past you shall have too little in the future." Not at all. Such is not the spirit of the President's message; such is not the proposition of the bill submitted by the Committee on Ways and Means.

THE MILLS BILL NOT A FREE-TRADE MEASURE.

The proposition now pending permits the manufacturer to retain the excessive profits already acquired, and neither by legislation nor otherwise is it proposed here that any one of these favored ones be brought to penury or bankruptcy; and yet with all this forbearance the cry is echoed and reiterated from the other side of this House that a crusade is made against the manufacturing interests of the country. I have been amazed, sir, to hear gentlemen of the Republican party, gentlemen whose attentive industry leads me to believe that they have read the President's message carefully—I repeat, sir, I have been astonished at hearing them speak of the President's message as a free-trade document; and I have thought, Mr. Chairman, that they would hardly have the temerity to publish as an appendix to their speeches the document they have so misconstrued, and let their constituents judge for themselves. Let the President speak for himself. This is his language:

Our progress toward a wise conclusion will not be improved by dwelling upon the theories of protection and free trade. This savors too much of bandying epithets. It is a condition which confronts us—not a theory. Relief from this condition may involve a slight reduction of the advantages which we award our home productions, but the entire withdrawal of such advantages should not be contemplated. The question of free trade is absolutely irrelevant; and the persistent claim made in certain quarters, that all efforts to relieve the people from unjust and unnecessary taxation are schemes of so-called free-traders, is mischievous and far removed from any consideration for the public good.

And, sir, the spirit of the Mills bill, as the proposal of the Committee on Ways and Means is called, and the disposition of the Democratic party in this House furnish no justification for the assertion that it is proposed to pass a free-trade measure. We must realize, Mr. Chairman, as all business men must realize, that the country has been under a policy of protection, and whatever may be the individual views of members of this House, whatever theories may be entertained about "free trade" or "protection," whatever private views may prevail on the constitutional and economic questions in the abstract, there is a proposition upon which all can heartily agree, and it is this: that in a measure affecting the industries of the country, steps taken in correction of existing evils must be gradual and moderate, so as not to produce shock and consequent disasters. It must be borne in mind that we are not originating a policy for a government at the beginning of its career. We are simply taking the country as it is to-day, with regard to the present adjustment of its economic relations; and true statesmanship, in my judgment, consists in always approximating to something better, while we are trying to get, step by step, a perfect system.

REPUBLICAN PROPOSITIONS.

Such is the proposition of the majority as it is submitted to this Committee of the Whole. Let us compare it with the proposition which has been developed in this debate by the other side. What is their proposition? While they have not introduced a bill, their programme has been fully outlined in the remarks of one after another, showing that there has been consultation and the resulting concert of action; and yet it seems to me that it does not command their own united support, for I observe that their speeches may be divided fairly into two classes—first, those speeches which are full of tirades against the President's message and the Mills bill on the mistaken assumption that they are free-trade measures; and, secondly, those speeches which propose such details as the most of the gentlemen on the other side agree to as the proper legislation on this subject. Let us consider, then, the only legislative proposition advanced by the Republican side of the House. It was dwelt on yesterday by the gentleman from Pennsylvania [Mr. YARDLEY], and to-day by the gentleman from Iowa [Mr. GEAR], who preceded me. First, a reduction of the internal-revenue tax. Well, so far as that is concerned, the proposition of the majority also embraces a reduction of the internal-revenue tax of between twenty and thirty millions, as well as a reduction of tariff duties.

WHO ARE FRIENDS OF THE TARIFF?

And perhaps it may be proper just here, before proceeding further in the comparison I am pursuing, to notice a remark that has been heard frequently in this discussion, that the tariff should be revised only by its friends. I for one am not willing to concede to gentlemen of the

other side the position they have always so boastfully claimed of being the only friends of the tariff system. I am one of those who believe that a tariff is to be, and ought to be, the main source of the Federal revenue. I have been educated in the school of strict construction of Federal powers, and when I find that the Constitution of the United States forbids the States from levying customs duties without the consent of Congress, and provides that the net proceeds shall be paid into the Federal Treasury, the conclusion is irresistible to my mind that the fathers, when surrendering customs duties to the exclusive control of the General Government, intended that in all other fields of taxation the concurrent jurisdiction of the several States to raise revenue for local purposes should never be impaired by the methods of raising money for Federal purposes.

THE INTERNAL REVENUE.

As a States-right Democrat, I hold that the States have need of the other sources of revenue, and especially the impoverished States of the South, and that the General Government should exercise its power in this direction only in times of great emergency, such as war or public calamity. But, Mr. Chairman, the entire abolition of internal taxes is not proposed by either party. If we were going to lay taxes anew, who would now propose to levy a direct or internal-revenue tax? But the same principle applies here as is applied to reduction of the customs. We find a condition of affairs existing in which this tax is already upon us. If it is to be reduced or abolished, it should be done by steps. The Committee on Ways and Means have tendered to us a reduction of internal-revenue taxes, in accordance with this principle, which, in my humble judgment, is the statesmanlike way of dealing with this subject. It is probably enough to meet present requirements, and it leaves room for a moderate and substantial reduction of customs duties, to correct crying evils which bear much more heavily upon the consumers than the internal-revenue taxes. So that, so far as the reduction of internal revenue is concerned, it is merely a question of degree.

Mr. BUCKALEW. And of time.

Mr. DIBBLE. Methinks, Mr. Chairman, that possibly the gentlemen on the other side of the House may ask for a larger reduction of the internal-revenue side of this tax business, not simply for the sake of getting rid of internal taxation, but because that method of tax reduction will leave less room for us to correct the evils of overtaxation arising under the present customs laws. They desire to take more of the internal revenue away, in order to get the surplus reduced without taking away any of the excessive protection enjoyed by the over-favored industries under the tariff.

THE REPUBLICAN SCHEME SECTIONAL.

But, Mr. Chairman, after this digression, let us return to the proposition of the other side, for tax reduction. I have shown that both parties favor a reduction of internal taxes; now let us see what is the policy of the Republican party in regard to tariff reduction. They say that they will reform the tariff also, and let us consider their proposition for such reform. Where do they propose to touch the customs? Do they touch anything that will affect all parts of the country alike? Do they select some industry, which is wide-spread, extending from Maine to Texas, from Oregon to Florida? It seems not, Mr. Chairman. I have heard from the Republican side of the House suggestions as to reductions in the revenue derived from the tariff, but I have heard such suggestions only in relation to Southern products—the sugar of Louisiana and the rice of the Carolinas and Georgia. Is that the proper spirit, I ask in all kindness, is that the spirit in which, actuated by motives higher than mere partisan bias, we should approach a great economic question?

Suppose I concede, for the sake of argument merely, that these industries are overprotected. I do not concede this in fact; and if time permit I think I can show to every unprejudiced member of this House that these industries are not excessively protected; and I shall endeavor to do so in print, under the indulgence of the House, if I find I have not time to do so on the floor; but admitting, for the sake of the argument, that they are overprotected industries, are they the only favored ones in the country? Are they so exceptional in this respect that the suggestion should be gravely made by gentlemen on the other side of the House that the protection on the sugar and the rice of the South is the only protection that must go? I think that upon reflection gentlemen will consider such a suggestion to be unworthy of this brightening day, so far removed from the animosities of the past. I think that possibly, instead of claiming the proposition of the majority to be adapted only to a former period of our history, they will see that this suggestion of theirs belongs rather to the time when they levied the cotton tax, entirely sectional in its character, by which sixty-eight millions were taken from the Southern people—a tax which four out of eight judges of the Supreme Court of the United States pronounced unconstitutional.

Let us come to this work as citizens considering the good of the whole country, and let every section share alike in this reduction of taxation. Let us not array ourselves on sectional lines. In this connection, Mr. Chairman, an appropriate thought occurs to me. I can not refrain from expressing my profound admiration for that intense regard which my Republican friends affect here for the laboring men of this country, and especially for the freedmen of the South, a large number of whom are part of the constituency which I have the honor to represent upon this floor. The Republican members of the House have laid down as an incontrovertible proposition—a proposition which on their theory admits of no dispute, and which they have attempted to elevate to the dignity of an axiom—that if you take one cent of duty from a protected article, that cent does not affect the pocket of the capitalist, but must inevitably reduce to that extent the wages of labor. I confess I am surprised that, when they present here a proposition which, according to their theory and argument, must result in reducing the wages of the daily toil of workingmen, the only objects they can find upon whom to inflict that alleged reduction are the negroes who dwell in the humble cabins by the rice fields of the South, and those who cultivate the sugar plantations of Louisiana!

Mr. KERR. May I interrupt the gentleman a moment?

Mr. DIBBLE. Yes, sir.

Mr. KERR. Has not the proposition to which the gentleman refers as having been made on this side of the House always been accompanied with a proposition to protect that labor by an equivalent bounty?

Mr. DIBBLE. I have heard the word "bounty" in connection with sugar. I live in a country where these colored constituents of mine raise some sugar-cane for their consumption at home, and sometimes make a little molasses out of it. But I have not heard anything of a bounty on rice. And the gentlemen on the other side very well know that in proposing a bounty they are making a proposition which is impracticable. They know that the majority of this Congress is not prepared to give a bounty; and I think I might safely say if the other side of this House had the majority they could hardly rally their party to it. The proposition, therefore, amounts to this: Take off this duty, and we shall be willing to put on something that we know is not going to be put on.

Now, I say to my friends who have been so anxious to make the negro believe that the Republican party contains all the philanthropists and negrophilists in the country, that the schoolmaster has been abroad in the land. In those humble cabins around the rice-fields and about the sugar plantations there is the schoolmaster to-day; and the negro is not as ignorant a being as he has been in the past. He has the understanding to discriminate and to see when his interests are affected.

RICE.

Mr. SPOONER. Will the gentleman give way for a question?

Mr. DIBBLE. Yes, sir.

Mr. SPOONER. I desire to inquire whether it is not the fact that the production of rice at the present time is a very remunerative employment.

Mr. DIBBLE. I will say to my friend from Rhode Island [Mr. SPOONER] that I have some statistics on that subject, which I will print. But for the fact that I have only fifteen minutes of my time left I would inflict them on the House upon the gentleman's suggestion; but I shall publish them with my remarks, and I commend them to his attention. The substance of what they show is that the rice industry is not very remunerative when you take it from year to year in connection with the expenses attending it.

Mr. SPOONER. I shall examine the gentleman's statistics with a great deal of interest. I would like to ask him another question. Does he not think it is a discrimination quite different from anything urged on this side of the House, when a protective duty of 113 per cent. is maintained on rice; and is such a duty necessary to protect wages, which I understand, as paid by the planter in South Carolina, are only $7 a month?

WAGES OF RICE LABORERS.

Mr. DIBBLE. In regard to the wages of labor on the rice plantations of South Carolina and Georgia, I may as well give the information here, though I have not quite reached that part of my remarks.

The rice planter furnishes to his hands a cabin, a garden spot, fuel, an acre of seeded rice to each adult, and half an acre to each half hand, free of charge. He then pays wages of labor to half hands and full hands ranging from 35 cents a day up to $1, and sometimes, in the emergencies attending rice-culture, $1.25 a day. I have here among my papers a statement of the ordinary wages of labor, and that compensation exceeds $7 a month.

From a letter recently received from a prominent rice-planter of Georgetown County, South Carolina, Mr. William Miles Hazzard, I submit the following table:

RATE OF WAGES PER DAY FOR RICE-FIELD LABORERS, EIGHT HOURS, IN SOUTH CAROLINA, NORTH CAROLINA, GEORGIA, AND LOUISIANA.

Women, per diem, 40 cents to 60 cents; house, fuel, garden lot, and 1 acre rice land free.

Men, per diem, 40 cents, 60 cents, to $1; house, fuel, garden, and 1 acre rice land free.

Boys, per diem, 25 cents to 35 cents; with parents, one-half of an acre of rice land free.

Girls, per diem, 25 cents to 35 cents; with parents, one-half of an acre of rice land free.

From a recent report of a committee to the Rice Association of Savannah, Ga., I beg leave to submit the following extracts on the subject of wages:

Since the emancipation of the slaves the cost of agricultural labor in the South has been greatly increased. In the rice districts of the Carolinas and Georgia

field labor ranges from 40 to 60 cents, and the best expert (not mechanical) labor to $1 per diem, this without the efficiency to be expected from free labor. The laborers frequently refuse to undertake tasks, easy under a sterner system, and essential to rice cultivation. A day's labor is commonly reduced to six hours instead of ten. For such reasons great waste attends the harvests, which, from the peculiar conditions required in curing this grain, do not as yet, despite the efforts of invention, admit the horse-reaper and are still conducted with the sickle.

But, as to the value of labor in the rice-fields of China, we learn from a report of the United States minister at Peking (United States Consular Report No. 83, September, 1887, page 489) as follows: The average wages of an able-bodied young man is $12 per annum, food, straw shoes, and free shaving.

In Japan, field hands receive their food and lodging, with wages from $8.60 to $12.96 per annum. The wages of females are about $6 per annum. (See United States Consular Reports No. 48, December, 1884, page 732.)

In British India, we learn from the British Indian Famine Report, 1871 to 1881, that, in Delhi, occasional labor is paid, for males, per diem, 6 cents; for females, 1½ cents; for children, 1 cent. In Kurnal, the highest permanent wages, with or without one meal per diem, is per month 50 cents. In Borat, men employed by the year, get from 80 to 100 pounds of grain per month, and from 44½ cents to $1.98 per annum. In Bombay and Madras, laborers are paid from 6 to 12 cents per diem, and when employed throughout the year, if furnished food, 22½ cents per month, and without food, 50 cents per month.

EXPENSES OF RICE CULTURE.

But let us look into this rice industry (and the sugar industry is in the same category in principle). I feel satisfied that those gentlemen on the other side, who have made an attack upon rice, and speak about this heavy percentage of protection, have done it under misapprehension of the state of that industry, and of the conditions that surround it and make it exceptional in its expenses and its vicissitudes. There are several of these to be taken into consideration.

Ordinarily, the farmer buys his land, clears it off, puts in his plow, and cultivates his crop with machinery, and then expects the rains of heaven to fertilize it, and harvest time comes, and he gathers it in. But the rice crop of South Carolina and Georgia is raised upon lands which are reclaimed from the swamp. In the first place, the swamp, over which the waters are accustomed at certain seasons to flow, is to be reclaimed from the timber upon it, and from the dense undergrowth. Then there is to be built a dam around it, protecting it like the levees of the Mississippi River. Then the plantation has to be checked off in squares by similar embankments and by ditches through it for the purpose of irrigation.

I have a statement in this connection which I will print with my remarks. It is an extract from an address delivered by Col. John Screven, of Savannah, before the Georgia State Agricultural Society in 1884, and published in the report of their proceedings for that year:

In order that the character and extent of the embanking and drainage system may be understood in a general way, I will venture, before concluding, the statement of a few facts in regard to these, the chief extraordinary burdens of a rice plantation.

The storm flood of 1854 rose about 11.5 feet above mean low water in the Savannah River. This would make the still-water level of the flood over the fields 4.8 feet. The storm flood of 1881 was about 6 feet maximum over the fields, or 1.2 feet higher than that of 1854. No rice-field embankments exist which could repel such storms as these. If any were constructed high enough to reach the still-water level of the flood, its waves which surge like those of the ocean and to a height quite double the elevation of that level, would roll over such embankments and submerge the field as effectually as if no such protectives existed. No effort, therefore, has yet been made to bar off extraordinary cataclysms like those of 1854 and 1881, and the rice-planter raises only such embankments as will defend his fields against ordinary storm floods.

The exterior embankments of a rice plantation are usually originally constructed 4 feet wide on top, 5 feet in height, with a base of 10 feet. On insular plantations—and, in fact, all rice plantations are practically insular, because each is necessarily self-dependent—these dimensions are carried entirely around the property. Unless creeks and other surface irregularities increase the quantities, these embankments contain 6,845.5 cubic yards per mile. Thus the exterior embankments of a plantation of 640 acres, 1 mile square (which is used here for easy estimates), would be 4 miles in length and contain 27,378 cubic yards, or 44 cubic yards to the acre. Such interior embankments as are thrown up along canals or are used for roadways exceed the exterior embankments, and may be assumed as 6 miles in total length, and in solid contents to measure 49,284 cubic yards, or 77 cubic yards per acre. If, now, this plantation be divided into 36 squares of, say, 17.5 acres each, the divisions, which are called check banks, will roughly be 8 miles in length, with contents of 34,417 cubic yards, or 53 cubic yards to the acre. It should be stated that on many rice plantations the squares or fields will average less acreage than is here assumed. As a rule the area of the fields is in some measure governed by the character of the surface of the land, the more irregular the surface the smaller the area and the more numerous the check banks. But summing up the statement of embankment, its gross length is 18 miles, its contents are 111,079 cubic yards, or 174 cubic yards to the acre.

But the drainage of the rice-fields and its annual maintenance is a servitude more burdensome than their embankments. It is, however, also true that while the rice plant of the tidal lands is aquatic, or perhaps more correctly, amphibious, it is paradoxical in demanding the most thorough drainage for its successful growth. * * * Interior embankments not necessary to the safety and convenience of the fields may demand no more than perfunctory renewals, but the drains imperatively require to be not only thoroughly excavated in the origin, but to be constantly kept down to their original depth, and, as the land settles, to be lowered to the same relative depth.

A properly arranged plantation of 640 acres, looking to the best control of flowing water and to thorough drainage, would require four parallel canals, each 20 feet in width and 5 feet in depth. The total length of these would be 3.33 miles. Each would require a flood-gate at its extremity on the river, so arranged as to admit or bar the tide-water at pleasure. Along these canals, one on each side of each field, or two to the field, are laid small flood-gates, commonly called trunks, by which the watering and drainage of each field is independently regulated. The main flood-gates of the canals are frequently true locks, so that canal and river navigation may be united. The four canals mentioned call for the excavation of 48,889 cubic yards, or 76 cubic yards per acre.

In addition to these canals, which are the great arteries of the rice-fields, each square or field must be surrounded by a main or margin ditch, cut 6 feet wide by 4 in depth, and parallel drains, called quarter drains, must be sunk through the fields from 1.5 to 2 feet in width, by 3 feet in depth, usually 75 feet apart, but in some instances still nearer. If now, for easy computation, we throw off spaces not actually cut through margins and embankments, which would not seriously affect the result, it will be found that the lineal measurement of this drainage will be 94 miles, and the excavation 157,226 cubic yards, or 246 cubic yards per acre.

To sum up for this illustrative rice plantation, we have—

	Lineal miles.	Cubic yards.
Embankment	18.0	111,079
Drainage	97.3	206,115
Total	115.3	317,294
Total to the acre	.18	496

This illustrates a plantation of 640 acres, having over 18 miles of embankment, exceeding 100,000 cubic yards in contents, and having 97 miles of canals and ditches, requiring the excavation of over 200,000 cubic yards of earth. It may as well be stated here that these embankments and canals are not only necessary for protection from freshets, and for drainage, but for the purpose of irrigating the growing crops, which require to be flooded with fresh water, introduced by means of trunks and gates erected in the outer and inner embankments, from three to four times at intervals during the season, the ground at such times being entirely submerged to a depth varying, according to the height of the plant at the time, from a few inches to over a foot of water; a rice-field at this stage of its cultivation presenting the appearance of a series of small ponds, striped with rows of light green rice-shoots, rising a few inches out of the water.

Mr. MILLIKEN. Will the gentleman allow me to ask him a question for information simply?

Mr. DIBBLE. Certainly.

Mr. MILLIKEN. Is not the cultivation of rice in countries which compete with South Carolina—say Japan, for instance—attended with the same outlays and expenses; and in Japan do they not even have to depend upon irrigation?

Mr. DIBBLE. In Japan labor, which is the element which makes ditching and canal-building expensive as well as raising the crop—the labor used in rice culture in Japan is paid as low as the rate of 50 cents per month. [Laughter and applause.]

Mr. GROSVENOR. I do not want to occupy the gentleman's time, but I would like to ask him the question whether it is not wrong, according to his view, for the Government to protect, to the extent of 132 per cent., that single product, instead of allowing us to go and buy it where we can buy it the cheapest? [Laughter.]

Mr. DIBBLE. My friend will understand this, that the rice industry is the only industry for which that section of the country is available.

Mr. GROSVENOR. Yes.

Mr. DIBBLE. They have tried other industries. They have attempted, in view of these expenses and outlays in cultivating rice plantations, to raise other productions, but it has been found at last that this is the only industry which is available to them.

There is a settled population there to-day, a population of laborers who have been reared in that industry, and those laborers would be thrown out upon the community, and they would have to abandon that section, and it would become a waste if the cultivation of rice were to cease.

Now, as has been said before, we are not dealing with theories; but on the contrary, we are dealing with conditions. I am not, nor is the Democratic party, nor is the President advancing upon any free-trade theory.

Mr. GROSVENOR. Will not the gentleman——

Mr. DIBBLE. The gentleman will permit me to answer him before I yield further. I say further, the protection of the rice-planter and of the laborer who cultivates rice is not a burden to the consumer of this country under this alleged protection of 113 per cent., which is an exaggerated estimate; that it is not a burden upon the consumers of the country, as is the case with some other articles which are in universal use.

Mr. GROSVENOR. Now, just a word——

Mr. DIBBLE. In a moment. The industry of rice-planting, or, rather, the product of that industry, is an article of daily food in the section of country where it is produced; but in the other sections of the country where it is not produced it is not an article of daily food.

Every man in the country, whether he lives North or South, wears a coat upon his back, and that coat and the clothing for his family—for men, women, and children all over the country—are affected by the operation of the tariff. But other cereals furnish the common food of the masses, and are the choice of the people in every section where rice is not cultivated; and rice is really, outside of the immediate region where it is cultivated, rather an article of luxury than of daily food.

WOOL.

Mr. GROSVENOR. Will you not allow a further question in the line of the argument you have been pursuing? There are thousands of acres of land in the North that are totally unfitted for any species of farming, or, in fact, for any purpose except possibly the grazing of a few sheep, and perhaps they raise a few berries on them.

Ought they not to be protected, under the argument of the gentleman from South Carolina, as well as the rice lands of the South? The gentleman says the rice swamps would not be worth anything for any other purpose. These lands to which I refer are worth nothing for any other purpose.

Mr. DIBBLE. I doubt whether the condition of things exists where land could graze sheep and nothing but sheep; and as far as the sheep industry is concerned I have not heard a word of argument to show that there is anything in free wool that is going to hurt the sheep-raiser. I have heard the sheep men themselves, in speaking to me in private conversation—owners of sheep, raisers of sheep—say that in their judgment they will not be hurt by free wool; and I am speaking in favor of it from the producer's standpoint.

SUGAR AND RICE.

Mr. WEBER. Will the gentleman permit me to ask if it is true that the sugar lands—and I ask the question for information—are unfitted for any other purpose?

Mr. DIBBLE. I am not familiar with the sugar-culture in Louisiana. The sugar-culture in my State is limited to the culture for plantation use. They raise the sugar-cane for that purpose, grind it, and use the product, as well as the sirup made from it, for home consumption.

Mr. WEBER. I asked the question for the reason that the information the gentleman has given, so far as the rice fields are concerned, is entirely new to me, and I was glad to know the fact. I should also be glad to know if the same condition applies to the sugar lands.

Mr. DIBBLE. I am satisfied that the members of the House generally, without respect to party, looking at the question from a business point of view, will see that the rice industry (and my information is that the sugar industry is equally expensive) is not one that produces the enormous profits which have been spoken of in connection with it.

I know from my own experience a great many planters who have been bankrupted by putting the little capital they possessed into rice-culture. I presume the number of those who have failed to succeed in rice-culture in the last twenty years will equal those who have made even a moderate fortune from it. It is subject to many varying conditions. It is subject to freshets; it is subject to the danger which arises from the possible breakage of the embankments, like the breakage of the levees of the Mississippi; it is subject to heavy annual expense for the repairs of the dikes and the dams; and the contingencies of the seasons affect it very seriously. Some seasons the rice-planter makes a good crop and realizes a handsome profit; but possibly the next year he may make no profit at all, and the next year a disaster may come upon the crop, either from drought or freshet, and he may lose all the profits of the previous years.

THE LABOR QUESTION.

And again, Mr. Chairman, there is another point for consideration. The industries of the South, so much are they dependent upon climate, come into competition, not with Caucasian labor, but they come into competition with the very cheapest organized labor on the face of the earth.

Mr. WILLIAMS. I understand the gentleman to mean, then, that he believes in protecting American labor?

Mr. DIBBLE. I believe in protecting American labor from such competition as will make it unremunerative. I have no other doctrine. But I believe also that under the provisions of a revenue tariff such protection can be virtually obtained without the objectionable features exhibited in the operation of the tariff to-day, which will continue to exist unless it be amended, and which give to the capitalist who invests in special branches a bounty he does not require, a bounty above a reasonable profit; and by the operation of the tariff law that bounty is not paid out of the Treasury of the United States, but by the consumer directly to the capitalist, who has the money invested in the protected industry.

CLASSIFICATION OF RICE.

In this bill a reduction is proposed in the duty on rice. It is proposed on the three great classes of rice, according to the classification adopted by those who produce the article here; and it is also the classification by which the foreign article is rated where it is purchased for shipment to this country.

I have here with me some samples of rice. This [holding it up] is what we call paddy, which is rice with the hull on it; and there, you may say, the planter's production of the rice ends as a purely agricultural process. That is Carolina paddy, and a very fine sample of it. I was not able to procure a sample of foreign paddy, because rice is not largely imported in that condition.

Each grain of rice has on it a very coarse hull, which has to be removed by machinery. It has, besides, an inner cuticle, which is a film over the grain of the rice. I have in my hand a sample of rice imported for the Charleston market, and I will read the particulars of its importation from the label upon the vial containing it. It was furnished to me by the collector of customs at Charleston, and was sealed up and labeled in his office.

The label is as follows:

> Uncleaned rice,
>
> ex S. S. Bengloe, 14,135 bags from Hiogo, Japan, to New York, March 2, 1888.
>
> In bond to Charleston, S. C., March 23, 1888.
>
> Pr. schs. Geo. R. Vreeland ..... 6,180 bags.
> Jno. A. Griffin ..... 4,733 bags.
> Benj. F. Lee ..... 3,222 bags.

This is the uncleaned rice of commerce, shown by a sample of actual importation, being rice with the outer hull off and the inner cuticle still on the grain.

[Here the hammer fell; but Mr. DIBBLE, under the general leave granted to the members, extended his remarks as follows:]

I have another sample, in a similar vial, showing some of the same cargo of rice after it has undergone the cleaning and polishing processes. The cleaning process removes the inner cuticle from around the grain, but leaves a flour or dust, which is brushed off; and this brushing off is called "polishing." The polishing process gives luster and beauty to the grain, but is not an essential process for rendering the grain suitable for use as food; for every good cook washes rice before cooking it; and the washing of it by the cook will remove the dust or flour from the grain. So that we have three distinct grades for the classification of rice, as follows:

1. Paddy, or rice having the outer hull on.
2. Uncleaned, or rice free of the outer hull and still having the inner cuticle on.
3. Cleaned, or rice free of the outer hull and inner cuticle.

In addition there are—

4. Rice flour, which is the flour or dust which is brushed off from the grain in the polishing process.
5. Rice meal, which is produced by actually grinding the grains into meal.
6. Granulated rice, which is an article used by brewers, in coarser granules than rice meal, and which has been defined by a decision of the Treasury Department, with the concurrence of the growers, millers, and brewers, all of whom agreed upon the standard adopted, which was a sample from a cargo imported in 1885.

REDUCTIONS OF DUTY ON RICE.

The duty on cleaned rice at present is 2½ cents per pound; the Mills bill proposes 2 cents per pound—a reduction of over 11 per cent.

The duty on uncleaned rice is 1½ cents per pound; the Mills bill proposes 1¼ cents per pound—a reduction of over 16 per cent.

The duty on paddy is 1¼ cents per pound; the Mills bill proposes 1 cent per pound—a reduction of 20 per cent.

BREWERS' RICE.

There is an error of classification in the change proposed concerning rice imported for brewers' use, in proposing No. 10 brass-wire sieve as a standard test with aperture seven hundred and eighty-seven ten-thousandths square. An aperture of this size—nearly one-twelfth of an inch square—will easily pass half grains of most of the rice imported now classified as cleaned and uncleaned, and an article entirely distinct from the granulated rice used by brewers. The standard sample of the Treasury for granulated rice is properly tested by a brass-wire sieve, known commercially as No. 14, made of brass wire No. 25, according to Stubs's wire-gauge.

I have ascertained this by actual trial of such wire sieve, with a part of the standard sample furnished by the Treasury. In this particular the bill should be amended, either by striking out the clause relating to a sieve altogether, or by designating a No. 14 sieve, of the size of wire specified, which exactly defines the present standard of the Treasury Department, well understood by importers, brewers, millers, and rice-growers. It is needless to say that in specifying the sieve it is requisite to name the size of the wire of which it is composed, as well as the number of meshes to the running inch each way, in order to define exactly the aperture through which granulated rice will pass, for granulated rice is tested by size of granules.

PRICES OF RICE.

The production of rice during the last twenty years has been gradually increasing, as the owners of the abandoned rice-fields have become able to reclaim them from the dilapidation into which they had fallen during the late war, and as the labor employed in the cultivation of the grain has become more efficient than it was during the period of misrule and anarchy, extending as late as twelve years ago in some sections. So that we find in the crop year of 1886–'87 the total domestic production was 155,707,060 pounds, while the consumption of the article during the same year was 244,175,060 pounds. The annual importation of rice from foreign countries is about 90,000,000 pounds, nearly three-eighths of the consumption. In 1873–'74 the domestic production and the importations were about equal in amount, but since that year the domestic production has exceeded the importations.

A reference to the table (in the American Almanac of this year) of highest and lowest prices of rice in the New York market shows that in 1873, when the consumption of rice in this country was only one-half the present consumption, and was supplied equally by domestic production and by importation, the wholesale prices of rice at New York were from 7 to 9½ cents per pound, while in 1886, when the consumption of rice was double that of 1873, and five-eighths of the supply was from domestic production and only three-eighths was from importations, the wholesale prices of rice in the New York market were from 3 to 5 cents per pound.

We find therefore that the consumer of rice has been benefited by a reduction of prices to one-half during a period of thirteen years just past, in consequence of the domestic supply increasing 158 per cent., while the foreign supply increased 50 per cent. These figures show that the healthy competition between the domestic and the foreign producers of rice under the existing tariff has inured to the benefit of the American purchaser, and demonstrates that the present rate of duty is not only not prohibitory but that it gives the consumer the option of purchasing from the home or the foreign producer, thus insuring minimum prices and preventing monopoly by combinations either at home or abroad.

It is therefore questionable whether a reduction of the duties on rice will benefit the consumer in lower prices, as the present duties leave our markets accessible to foreign rice on such terms as occasion increased importations; and this circumstance demonstrates that rice-planting at the South can not be fairly considered to be one of the over-protected industries; nevertheless, in view of the large surplus in the Treasury, rice has been subjected to a reduction of duty in common with articles much more highly protected in comparison.

But I have digressed from the line of my argument, and have said much more in relation to rice than I had intended, because the questions of the gentleman from Rhode Island [Mr. SPOONER] indicated that some members of the House did not understand the true condition of the rice industry in the South, and the interest manifested by him and by other gentlemen on the subject has induced me, at the expense of a large part of the hour allotted me, to attempt to make it clear to them.

At the time of my digression I was comparing the Mills bill with such propositions for revenne reduction as have been offered by gentlemen on the other side of this debate; and I had expressed my surprise that the Republican members of the House had found no place for tariff reduction except in the rice and sugar schedules affecting only Southern producers and laborers, especially when these gentlemen all maintain that tariff reduction causes reduction of the wages of labor; and this being their view, their attack upon the rice and sugar schedules is entirely inconsistent with their avowed friendship for the negro laborer of the South; for according to their theory they are attacking his wages. But I forbear to press this dilemma upon them further.

THE RICE AND SUGAR CONSUMERS.

And now, sir, aside from sectionalism and mere partisanship, I invite this Committee of the Whole to consider with me the effect of their proposals for free rice and free sugar. As I have already stated, there are three interests which the Congress should endeavor to guard equally when bringing an excessive tariff down to a revenue standard, and these are the American consumer, the American capitalist, and the American laborer. All these are home interests. I think I have demonstrated as to rice that the consumer is not a sufferer by the existing law; and as to sugar, the prices are very low, and there is also the fact that the wealthy use it so much more extensively than people of moderate means that the burden of the duty, so far as the consumer bears it, presses upon the rich rather than the poor. So much, therefore, for the consumer.

THE RICE AND SUGAR PLANTERS.

As for the Southern rice or sugar planter, a brief retrospect as to the condition in which he was placed at the close of the civil war may be useful in considering his interests as an American capitalist. His ancestral home was, in most cases, destroyed. The rank semi-tropical vegetation of the swamp had taken possession of his fields and turned them into a wilderness, and the vicissitudes of the seasons, with freshet and hurricane and other violent natural causes, had converted the costly improvements of the plantations into ruins, or they had been laid waste by the devastating hand of war. The entire labor system of the South had been overturned in the abolition of slavery, and had not yet been succeeded by any substitute. With no resources but his lands, without the money to engage in the work of restoration, in a section where there was no money to be borrowed, and with no disposition of capital in any other section to invest in an attempt to revive these prostrate rice and sugar industries, the outlook was discouraging, even to the most earnest and resolute.

Added to these obstacles, the period of war was followed by years of tyrannical and corrupt local governments, which clogged the wheels of enterprise and interrupted the avocations of peace with constant outbreaks and disturbances, the natural consequences of oppressive misrule. Look at this picture, in that broad, impartial, non-partisan spirit, in which I believe Republicans and Democrats alike are capable of viewing it, and then inquire of yourselves, my fellow Representatives, whether the men who, by their courage in disaster and energy in emergency, have overcome such obstacles, do not deserve your consideration.

Men of the North, when the war was over your past developed, under the impulse of victory into a present of glorious prosperity, and the vista opened towards a future of progress and wealth unexampled in the history of civilization. Our past was buried in a sepulcher, with nothing but an epitaph. Our orderly condition of society was succeeded for a time by chaos, and the lessons of life, which had been the oundati on of our civilization, the very axioms of our political and economic organization, had to be unlearned. The irrepressible conflict was over which has had no parallel save in the days when Scipio and Hannibal marshaled the warrior hosts of Rome and Carthage in the struggle for the mastery of the world. But with the close of the conflict the parallel ceases. From the ashes of Carthage no phenix arose; but from the ruins of a desolated South her vanquished children, refusing to despair, are restoring her arable fields and are causing her waste places to blossom as the rose. I submit to the candid and patriotic judgment of this Committee of the Whole whether these efforts for recuperation should be obstructed, and these Southern industries should be the only ones selected for tariff reductions.

THE RICE AND SUGAR LABORERS.

But it is admitted by all that the American laborer should have full consideration, as well as the consumer and the capitalist. The laborer in the rice and sugar industries is the Southern negro, now elevated from slavery to the condition of a free citizen of the Union. Let us for once look upon his condition as it is, calmly and without prejudice. It is beyond dispute that he requires aid from us to help him to become fit for his new position, which has responsibilities far greater than he is yet capable of realizing. And I make no unreasonable claim when I assert that the white men of the South, from their immediate relations with the negro, from their knowledge of his character in its brightest as well as its darkest aspects, from their direct interest in his welfare as a part of their political and economic systems, are in a better position to deal properly with the problem of his material, moral, and mental improvement than those who, living at a distance from him, form their opinions from hearsay testimony through partisan, prejudiced, or venal witnesses.

There is no better illustration of this than is furnished by the history of the injudicious plans which were devised for the benefit of the negro by those who attempted the amelioration of his condition without the co-operation of the white people of the South. It is only necessary to contrast the state of the mass of the negroes during the period of those experiments and their condition to-day. It may be said that this is merely evidence of their progress due to their emancipation; but the answer to this is, that the mass of the negroes made no progress at all during the years when they were the dominating political factors in the South, and shaped its legislation, assisted and guided only by white men from other sections; but they began immediately to improve their condition as soon as the Southern whites were in control ot the Southern States, and have done so ever since, under the operation of judicious and beneficent laws, based upon the true theory, that the two races should co-operate in developing the material prosperity of the South, under intelligent home leadership. And I am glad to say that material assistance has been rendered to us by the people of the North in their contributions to the education of the negro, and in their liberal donations in times of calamity and misfortune from freshet and pestilence and earthquake, at which period the negro, as the poorest class of the community, was the most helpless sufferer.

But while the negro is now making satisfactory improvement in his material condition, evinced by his being less illiterate, better clad and housed, more expert in his labor, more careful in his habits, yet there is much yet to be done by him and in his behalf. The superficial observer who visits the South to-day and sees the colored farmer driving into town with a sleek and well-fed horse or mule, with a good buggy and harness, and remembers that ten years ago, after thirteen years of freedom, the same freedman appeared driving a gaunt, starved bunch of bones in front of a patched-up cart with a cotton plow-line for reins, imagines that the task of his regeneration is complete. But to the student of this problem, who is conversant with the entire situation in all of its details, there is much yet to be solved.

As I have just remarked, we of the South who are in daily contact with this question are the ones who are most intensely interested in it; but there is an obligation on the part of the people of the Union to throw no obstacles in the way of the freedman struggling to better the condition of himself and his family. And when you strike at the sugar and rice industries of the South you need to be reminded that if you make them so unprofitable as to be abandoned by the whites, who furnish the lands and the money capital, while you may impoverish the owners of the plantations you simply drive to other occupations men who have been already schooled in the field of adversity and are of that indomitable Caucasian blood which will not yield to despair however discouraging the prospect. But the negro has not yet the equipment of intelligence and energy to enable him to retrieve his loss of employment, and you consign him to a condition lamentable indeed. Knowing no other kind of labor but the peculiar agricultural work in which he has been trained; attached as the negro always is to the

locality where he has passed his days and the social circle in which he has always moved, you will find that he will remain near the abandoned rice and cane fields, eking out a precarious subsistence and retrograding all the time, if he does not actually relapse into a savage state. Those who are not acquainted with these sections and their colored population may regard this picture as overdrawn, but I can tell them that in many instances communities of negroes in those parts of the South, prior to the rehabilitation of the rice and sugar industries by the whites, had already gone back into a savage condition nearly as abject as that of their ancestors in Africa. And I submit, Mr. Chairman, that their situation is exceptional and should not be judged by the same rules that apply to normal conditions elsewhere. And yet gentlemen here who are eloquent in reciting the glories of emancipation and in asserting their great concern in the advancement of the freedman are the ones who are ready to strike this blow at his means of subsistence.

FREE WOOL AND FREE LUMBER NOT SECTIONAL.

For these reasons, Mr. Chairman, the cry raised by the gentlemen on the other side that the Mills bill is sectional because it proposes free lumber and free wool and does not propose free rice and free sugar has no foundation in reason. They forget that the South has more forests, and in some States more sheep than the North, while rice and sugar are not grown at the North at all. And while I am not specially wedded to the doctrine of free lumber or free wool, being content, as a tariff reformer, with a material reduction of the duties on these products in common with others, yet when I hear gentlemen from Northern States, where the lumber and wool of my own and other Southern States are marketed to-day, inveighing against free wool and free lumber as sectional legislation against the North, the conclusion is irresistible that they have confined their conceptions of the subject within absurdly narrow limits, and have forgotten that in this country many trees grow in other places, and many sheep bleat in other fields than those of their immediate constituents.

FEDERAL AND STATE TAXING POWERS.

Mr. Chairman, I have dwelt long on these propositions of the other side of this House, because they have been advanced by many Republican members upon this floor, and with much pertinacity and vehemence. But there are other branches of this subject which I desire to discuss briefly ere I close.

The Federal Government, from the foreign trade of the country, must secure its necessary and ordinary revenue. Under the Confederation at the close of the Revolutiouary war, and prior to the adoption of the Constitution, the General Government was dependent on the States for their contributions for its support, a precarious and unsatisfactory method of getting funds, and in practice a failure. It made the United States, as to credit and resources for carrying on the Government, too weak to be respected at home, and without credit or power abroad. This state of affairs led to the formation of the present Union under the Constitution, in which the States transferred to the General Government the exclusive control of the customs, as the prime source of revenue, and in addition gave the United States general taxing powers, such as the States themselves exercised.

But in doing so, the States did not anticipate that the Federal authorities would ever exercise any of these powers of taxation held in common with the States, in such a manner as to render it impossible for the States to use them for raising money for State purposes; and Congress should never levy any direct or excise tax to such an extent as to leave no room for the States to levy a similar tax if any of them should wish to do so. And whenever Congress enters upon this common ground of taxation, and levies a tax so burdensome as practically to leave no room for similar State taxation, the spirit of the Constitution is manifestly violated. For this reason, such a tax as the 10 per cent. tax on the circulation of State banks being prohibitory, prevents such circulation, and thereby deprives the States deriving revenue from taxing such circulation should they wish to do so, and is therefore clearly unconstitutional. And so far as the same principle can be applied to taxes on oleomargarine, tobacco, and spirits, the conclusion is inevitably the same. Of course, in periods of war or other great peril of the country, all these taxing powers can be exercised for the safety of the Republic to their full extent; but in time of peace it is otherwise, and the balance of power between the Federal Government and the State governments in matters of taxation should be religiously maintained inviolate.

THE RESERVED RIGHTS OF THE PEOPLE.

Hence, Mr. Chairman, the tariff should be the principal source of revenue. But as in other modes of taxation all rights not expressly granted are reserved to the States so, in the tariff system, in which the States have no reserved rights, there are certain rights reserved to the people.

The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the people.—*Constitution, amendment X.*

The people did not expressly grant to Congress the right to make unjust discrimination in fixing customs duties, so as to benefit one American citizen at the expense of another. There is, therefore, no power in Congress to enrich the producer at the expense of the consumer, nor to ruin the producer for the benefit of the consumer. And whenever Congress attempts, by tariff legislation, to give certain home producers a monopoly, and deprive consumers, by prohibitory duties, from enjoying their right to buy where they please, it exceeds its prerogative; and it does likewise when it endeavors to favor certain home consumers by admitting free of duty articles of foreign production, whose introduction will prostrate or destroy established American industries. We should therefore reduce existing duties in all cases where we see producers growing suddenly rich by reason of excessive profits which they are enabled to enjoy because they are protected against fair foreign competition, and thus can charge the consumer more than he ought to pay, but in so reducing the tariff we should leave such duties as will enable the American producer to pay his workingmen proper wages, and have for himself a reasonable profit on his capital. The adjustment of this is a matter of detail, and the object to be aimed at is to let the duty represent the difference of cost of production here and abroad.

A TARIFF FOR REVENUE.

For example, an American consumer desires an article which the foreign seller can with reasonable profit place in the port of New York, outside of the custom-house, for $5; but the home producer can not sell the same article and make a fair profit for less than $6. In this case a duty of $1 puts the American and foreign seller in fair competition, prevents monopoly, and gives the American consumer the advantage of choice of sources of supply, thus insuring low prices, enables the American capitalist to make a fair profit on his investment and to pay proper wages to the American laborer; and the foreign seller buys some American product for his return cargo, thus stimulating some other American industry and increasing our commerce. After a while the American producer, under the stimulus of competition, invents improved machinery or utilizes improved methods of transportation or exchange, and is able to put his article on the market for a little less than $6; and the foreigner, in order not to lose a foothold in the American market, is compelled to do likewise to the further benefit of the consumer.

A TARIFF FOR PROTECTION.

But suppose, in this instance, where the foreign seller can offer the article at $5 and the duty, and the American producer can not profitably sell for less than $6, the duty were placed at $2. The American consumer is no longer able to buy from the foreign producer; and the American producer, instead of being content with the $6, which gives him a fair profit, charges $6.50, making an excessive profit, and enjoying still a monopoly, since the duty excludes the foreign product, which at $5 and the duty would cost $7. And as the foreign producer does not send his goods here, there is no return cargo of American products sent abroad. For a short period the American monopolist makes excessive profits, but this attracts capital to the same field, and then follows overproduction, and the home competition reduces prices to the $6, and temporarily below $6, perhaps. But as soon as prices go down from a surfeit of the market, the capitalist begins to call on his wage-workers for a corresponding reduction of wages, for capital does not part with even its excessive profits, if it can shift the loss of profit upon labor. The only alternative to this result is the formation of a combination or "trust" to keep up prices at the expense of consumers, and the crushing out and destruction of all competitors who decline to enter the "combine." This is the second phase in which the tariff presents itself, and is the working of a tariff for direct protection.

FREE TRADE.

Another illustration supposes free trade. The article which the foreigner can ship to our shores for $5 is admitted free to drive out the home product, which can not be profitably made for less than $6. The result is that the home producer quits a profitless field, and capital is withdrawn from the industry assailed, and the operatives are sent adrift to learn some other way to get their living. Either this, or starvation wages. The consumer during the struggle gets cheaper prices, but after the conflict ends then becomes dependent on foreign producers, who speedily fix prices to suit themselves and take advantages of the distance of the supply to corner the market whenever practicable. Can any sensible, fair-minded consumer consider such a condition desirable? In this last case it is true that there is an opportunity for return cargoes of American products, and there is a stimulus of commerce, which is not the case in the instance of a protective tariff; but I see on the whole nothing else to make this free-trade policy more desirable than a protective policy. Both of them fall short of the advantages afforded by a tariff for revenue such as is recommended by the President in his message.

PROTECTIVE DUTIES UNFAIR.

Our tariff to-day follows no rule or system. It was adapted to exigencies when greater revenues were required, at a time when all the resources of the country were strained to the utmost to meet the expenditures of the civil war. In 1883 it was modified to some extent, but without removing many of its incongruities. Under its operation at present capital invested in certain industries which are extravagantly protected from outside competition returns immense profits, and the owners of this capital make sudden fortunes at the expense of consumers. It was Daniel Webster who eloquently inveighed against a condition of society which enabled a favored class to accumulate inordinate wealth, while the masses struggle for the ordinary necessaries of life. Such is our condition now, and it demands immediate action by the representatives of the people. A government resting on uni-

versal suffrage can not hope to be sustained by an intelligent body of voters if it fail to adjust its necessary burdens so as to fall equally on all classes of citizens.

OVERTAXATION UNFAIR.

In addition, Mr. Chairman, the General Government now controls the circulating money of the entire country. By the prohibitory effect of the 10 per cent. tax on the bills of State banks the States are deprived of the power of meeting local demands for currency and of giving that elasticity to the volume of money within their respective borders which is necessary to a healthy condition of finance. This being the case, the entire responsibility rests upon the Federal Administration to keep the people of the United States, in every section, supplied with all moneys not needed in the Treasury for current demands. But if the revenue is greater than the expenditures, the surplus of a fund collected from the people at large can never be returned to them in the proportion in which they have respectively contributed it. In a distribution of such surplus some persons and sections will get too much and others too little, or none at all. Hence great care should be taken that no more shall be raised than is needed in the first instance.

Besides this, the currency of the country, like its railroads and its water ways, is a common carrier of trade; and it is like reducing the number of trains on a railroad when you lessen the supply of money for the people to handle; and when you accumulate it in the Treasury, there to remain idle, it is like gathering the locomotives in the round-house, there to stand unemployed, instead of hauling trains with them. And this contraction of the circulation affects the poor man in the most direct manner, because the rich man can draw his check upon his bank account, but the poor man has no similar substitute for actual currency. In view of these facts I submit for the consideration of the Republican minority whether they should not co-operate with the majority in relieving the masses of the people from this impending scarcity of money, arising from the ever-growing surplus.

PROTECTION'S TRIBUTE TO FOREIGN LANDS.

Mr. Chairman, there is another evil resulting from a protective tariff, of which we have notable examples to-day. Foreign capitalists, who have no permanent interest in our prosperity, bring their capital here inside our borders, and import their labor, easily evading our contract-labor laws, in order to enjoy the immense profits realized in overprotected industries, and carry those profits abroad to be enjoyed by their owners in their foreign homes. A few years of excessive profits, drawn from American consumers, suffice to return the entire capital invested, and after this is accomplished all future profits thus carried out of the United States are a direct drain upon the resources of our country. And the same is true in cases of domestic capital invested whenever the accumulations are spent in foreign lands. And when I hear of princely establishments abroad, owned by those who are interested in American factories, I can not but think that each American consumer of the fabrics which they manufacture is paying tribute, not simply to benefit some one else in our own land, but is really paying it to add to the accumulating resources of foreign countries.

CONCLUDING REMARKS.

Shall not these evils I have depicted be remedied? Shall not the American Congress in these matters legislate to give relief to the whole people rather than to maintain a plutocracy created by the operation of unjust laws? Sooner or later the issues now before the people of the Union will cease to be clouded with specious sophisms, and will stand forth clearly, so that all may understand them, and if we are not ready to be leaders in the reform demanded by the occasion we are not equal to the duties assigned us by our constituencies.

Let us, therefore as the representatives of the people, exercise our prerogative of legislation so as to correct abuses whereby the people suffer, and let the burdens of war no longer oppress the country in the days of peace.

The Tariff.

SPEECH

OF

HON. ORMSBY B. THOMAS,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES.

The House being in Committee of the Whole House on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. THOMAS, of Wisconsin, said:

Mr. CHAIRMAN: The matters under discussion and to be settled by this bill involve, as I believe, the welfare and prosperity of this great nation. I believe, sir, that if this bill as it comes from the hands of the committee shall be adopted and become a law it will strike down with a most cruel, vicious, and unnecessary blow the industries of a large portion of the people of this land, will permanently cripple the enterprise and prosperity of the country, and eventually bring ruin and bankruptcy upon the nation.

This bill is a most crafty, insidious, and determined effort to ingraft upon our revenue laws, so far as the great industries of the country are concerned, the doctrine and ideas of free trade, ideas long since exploded and abandoned in nearly every civilized land and maintained fully in only one, England, on account of the peculiar situation and circumstances surrounding that nation.

And, sir, I will say right here that the inspiration that is animating those who are so persistently attempting to foist free trade upon this country is beyond question derived and imbibed from that nation, a nation that has expended millions upon millions of British gold to break down the protective system of the United States, and that has attempted to poison the public mind through its Cobden clubs and the organizations formed by its manufacturers and importers, who have been looking with longing and greedy eyes upon the vast and rich fields waiting ready at their hands if they could only break down the barriers that now and have for over twenty-five years kept them out—twenty-five years of protective tariff, twenty-five years and more of protection to the laborer, the mechanic, the farmer, the manufacturer, and to all classes that, notwithstanding the great and terrible destruction of property and values, as well as human life, caused by the most gigantic civil war during that time that the world ever saw, a war prolonged and aided to our great and irreparable injury by these same British free-traders—I say, notwithstanding all this, during this period of protection to American industries the country has prospered to such an extent as it never prospered before; prospered during that time as no other country has ever prospered; has grown and prospered by reason of and under its protective system until to-day.

Sir, we are the wealthiest and the mightiest nation on the face of the earth. A nation, sir, so prosperous that the great and all-absorbing question to-day is, in what manner shall we reduce the vast and accumulating surplus in the national Treasury? While all other nations, not excepting the great English free-trade nation, whom our friends on the other side desire to pattern after and be controlled by, are seeking in every conceivable way how to increase the revenues of their governments, we alone are cudgeling our brains as to the best method of reducing the revenues. This is the condition of this country under a system of protection, and any attempt to make it appear either at home or abroad by the free-trade element of the country that this great and general prosperity is due to other sources and causes than protection has utterly failed, and must of necessity fail, because it is in fact untrue.

It becomes a matter of some importance to know to what amount we are required to reduce the revenue by this or any other bill in order to know what we are really required to do. The Secretary of the Treasury tells us that it will require for the fiscal year beginning July 1, 1888, the sum of $326,530,000 to meet the demands of the Government. The amount derived from all sources other than taxation is $35,000,000, which will require the sum of nearly $292,000,000 to be provided for by taxation. At the present rate of taxation now provided by law, the amount, including internal revenue and customs duties, amounts to $348,000,000, of which sum $228,000,000 are derived from customs, thus showing an amount above the requirements of the Government of something over $56,000,000—put it in round numbers $60,000,000. But in these estimates there is no adequate provision for our coast defenses, for the building up of such a navy as should be maintained by a great nation like ours, and no provision for the payment to our soldiers of such pensions as we in justice ought to pay them.

These gentlemen upon the other side, who are so terribly frightened at the prospect of this surplus, at the last session of Congress, when a proposition was seriously made by this side to do what we justly and reasonably might for the soldiers, voted it down, except upon the condition that a special tax on incomes should be levied to meet any such expense. When we pointed out to them that this surplus existed and that it was unusual and unnecessary thus to make special provision, they made no other answer than an insistance upon the income tax; and now, sir, at this session, when we have urged, as we have most persistently, that pension legislation should have a day, it has been so far denied, and undoubtedly if we insist upon this demand the same proposition as was made at last session will be insisted upon at this, which will in my judgment be an insult to the soldier and an injustice to him. Sir, it is not so much the surplus that troubles our free-trade friends as it is an anxiety on their part to put in practice in this country the free-trade notions with which they are imbued.

I have noticed with surprise that many of the advocates of this bill deny with great vehemence that they are free-traders or that the bill is draughted upon that idea; but, sir, the honorable chairman of the Ways and Means Committee, whose name has been given to the bill, and who presented it to the House, said in his speech in favor of the same (RECORD, page 3330):

If we had no tariff, if all the custom-houses were torn down and the Government was supported by direct taxation, not more than 10 per cent. of all the manufactured products consumed by all the people would be imported into the country.

Now, if this means anything it means that a tariff, so far as the interests of the people are concerned, so far as the manufacturers, the laborers, the mechanics, the farmers are concerned, is of no benefit what

ever. If this is not free trade in its broadest sense, then I fail to understand the meaning of language. To more strongly emphasize the fact that he is a free-trader, he further says:

Nine-tenths of all the manufactures consumed in the United States can be produced more cheaply here than in England.

He further adds this question:

What use have our manufacturers for the tariff at all?

Of course the chairman of the committee expresses the sentiments of the majority who have framed this bill. This fact will appear more fully and conclusively by the remarks of another member of that committee, the learned and eloquent gentleman from West Virginia [Mr. WILSON], who cites with approbation the action of England, and extols that nation for entering upon what he calls "that career of industrial emancipation which she faithfully pursued to its full and final issue." He says, referring to England's history on the subject of free trade:

In the ratio in which duties were reduced, in that ratio manufactures grew and flourished, and when finally duties were entirely abolished, it went boldly forth and contended in the markets of the world.

And so, sir, I could go through the speech of each gentleman upon the other side and show that the foundation of the argument presented as a reason why this bill should be passed by this House is that free trade is the true policy of this great nation, and that protection is in violation of the natural rights of man, and in theory and practice is detrimental to the interests of the people of this country. For instance, the honorable gentleman from South Carolina took occasion the other day to make an elaborate argument in favor of the doctrine of free trade, in which he claimed with great earnestness that it was the right of every freeman to make his purchases, without any restraint or imposition or tax, where his taste inclines him or his judgment dictates. I think that if anything can be determined by the utterances of gentlemen who prepared this bill, there can be no doubt whatever that it is and was intended as a long stride towards free trade in this country.

I am a sincere believer in the system of protection. I believe it vitally affects the interests of the farmer, the laborer, the manufacturer, the merchant, and every class of the community. Their prosperity depends upon its continuance. It increases the rate of wages; it diversifies labor; it furnishes consumers at the door of the producer; it creates a home market for the farmer; it stimulates production so as to induce competition, thereby reducing the price of the manufactured article below the price that would be imposed by the foreign manufacturer if he had a monopoly of the market. It is what has made our country what it is to-day, the grandest, the wealthiest nation in the world; that has caused it to bound with such prodigious strides in every good direction—in wealth, refinement, education, in everything that is to be most desired in the greatest, the most powerful, and the most civilized nation on earth.

It is a common thing in this discussion to sneer at these claims, and while admitting all we claim for our country and its position amongst the nations of the world, to contend that the tariff has nothing to do with it. To such, argument and proof are useless.

The equally sneering charge that labor gets none of the benefits of protection is unjust and without the semblance of foundation. Now I could cite innumerable facts and figures to prove that labor, in consequence of protection, is higher here than elsewhere; but fearing that I may be doubted I bring as my witness to this fact the chairman of the Committee on Ways and Means of this House, who admits that the laborer's wages are higher in this country than in England. While he does not give as I think the correct difference, he does admit the fact that the rates of labor are higher in this country than in England. He says (RECORD, page 3332):

Twelve per cent. higher in cotton manufactures, 25 per cent. higher in the manufacture of woolens, 26 per cent. higher in iron and steel, and 128 per cent. higher in boots and shoes.

These he gives as illustrations. If he had pursued his inquiry further he would have found it to be the fact in relation to every other protected industry in this country.

He contends, however, that the reason that wages are higher in this country than in England is that the manufacturers have seized upon coal, steam, and machinery, the three powerful agents, as he contends, that multiply the product of labor and make it more valuable, his idea being that by improved machinery a vastly greater quantity of the manufactured article is produced in a given time than formerly, and as an illustration he says:

In 1830 the total number of yards of cloth produced by each operative was 4,321 per annum, while in 1884, mainly by the aid of improved machinery, it had been increased to 28,032 yards. The cost of the labor per yard was 1.9 cents in 1830 and but 1.07 cents in 1884.

The central idea being in this whole argument that though the laborer gets less on each yard manufactured than formerly, the increased number of yards made per day give him a larger amount of wages, and that this is due entirely to coal, steam, and improved machinery, and that the tariff has nothing whatever to do with it. He further contends that it is only necessary to take the tariff off of machinery and from raw material and we can successfully compete with England.

Now this is the entire scope of the reasoning of the leading champion of this bill in its favor. First, he admits that American workingmen receive better wages than the wage-workers of England. He accounts for that from the fact, as he contends, that we use better machinery, so that with the aid of coal and steam we can manufacture a greater quantity within any given time than can be done in England. His remedy is to take the tariff off of machinery and raw material. This, he contends, would make us successful competitors with foreign countries without interfering with the rate of wages. In answer to that I ask, can not England use the same kind of machinery? Will not her coal, steam, and machinery be as effective, if necessary, as the American? I should like to know what would prevent England, if it should be found necessary to do so, from using the same machinery as the American uses? Then with her coal, steam, and machinery, and her free raw material and her pauper labor, what would prevent her from manufacturing cheaper than the American could with his high-priced labor? Upon such arguments and such alone are we asked by the leader of the House to vote for this bill. Mr. Chairman, I contend that all these visionary speculations should be put aside and that a question of this character should be regarded from a standpoint not of party or of theory, but of sound business principles.

Is it well, in a business point of view, to place our wage-earners on a level with the pauper laborers of Europe? Will the American laborer submit to such an imposition? Will he not at once insist that he must have the higher wages to which he has been accustomed, or that he will go upon the vast domain where a home and land are freely granted to him by the Government? If the manufacturer complies with his reasonable demands he becomes bankrupt, for no one can pay wages greater than the business will admit of and make a financial success. The inevitable consequence must be the closing up of our own factories and the driving of a vast majority of our own people into agricultural pursuits, and, as a further necessary consequence, compelling us to depend entirely upon foreign manufacturers. We have prospered immensely by diversifying our labor, so that while a part are engaged in agriculture, others are consumers.

Would not the farmers of Wisconsin, Iowa, and Minnesota, if their Representatives should by their votes destroy their home market, have a right to complain? Now nine-tenths of the productions of the farm are consumed in this country. Destroy that home market and add to the force that is now producing by driving the manufacturer to the field and farm, and productions are vastly increased without any increased demand from abroad, and I think we shall have succeeded by this meddling in also destroying the prosperity of the farmer. It is said we should have an increased demand from abroad for our farm productions. If they need our productions what prevents us from sending them now? The fact is we furnish them all they will take of us. It is said, further, that the farmer is compelled to-day to be governed by the quotations from the foreign market; that, for instance, the Liverpool market governs the price of wheat in this country. This may be true, but if sufficient of our people were consumers to use 100 per cent. of our farm production, instead of 90 per cent., would this not produce a shortage in the foreign market to the extent to which we have heretofore supplied them, which would increase the price, and, on the other hand, would not the destruction of our home market throw such a surplus upon the foreign market as to greatly decrease the price? I think these illustrations amply answer the objection that we are at the mercy of a foreign market.

There is another thing that interests the farmer as much as it does the manufacturer. Suppose, as gentlemen suggest, we have no tariff and that the custom-houses be torn down—and this bill is really the initiatory step toward that policy—would not the European manufacturer have a clear field? History tells us what would be the result in such a case. The importer, having the market to himself, would not only make us pay what the American manufacturer now charges, but having broken down competition here he would charge all that the trade would bear—the history of our country shows this to be a fact, a fact, too, that has caused, whenever it has been tried, bankruptcy and ruin in the land—for in such a case every manufactured article is higher in price; this would be felt by the farmer more than by others; the sheetings, calicoes, woolens, and everything the farmer and his family use would be dearer, while, being at the mercy of a foreign market, his own having been broken down, he would get absolutely less for everything he produces.

The great fallacy in the argument against protection is that the amount of duty imposed is added to the price of the article, whether purchased of the home manufacturer or the importer. This is false in fact, and has not a shadow of foundation in truth. Protection is properly applied to only such articles of commerce as we can produce in sufficient abundance in this country to supply the demand. As soon as that is done the law of competition begins to take effect; mills and factories spring up on every hand; their productions come into competition; this spurs inventive genius to create new methods and less expensive ways in order that the price may be brought down to the lowest possible figure, and the consequence is that the manufactured article is sold for as low a price as it can possibly be afforded, so that in actual truth every article that is protected is lower to-day under such a system than it has ever been before, and vastly cheaper than it would be if not protected. The self-evident reason for this is that if protection had not been given, the competition would have been wanting, the factories and

mills would not have been established, and the manufacturers abroad would have had control of the market, and, having that, would have put the prices to such a figure as the trade would bear. The effect of this would have been and always has been to destroy home industry and make us dependent upon the foreign market.

There is much said in this discussion about pools and monopolies, but the people will find, if they are delivered over to the tender mercies of the foreign manufacturer and the importer, that there has as yet been no trust or monopoly established in this country that has been able to oppress them and to suck the life-blood from their veins with the same dispatch as these. As far as trusts are concerned, they should be prohibited by law, whether upon protected or unprotected articles. Most of these trusts are upon articles not affected by the tariff. All of the trusts upon protected articles in this country are duplicated in the free-trade countries upon a much more gigantic scale, as I am informed. It is thought by many that manufacturing is a very profitable business, and that these people are growing unduly rich out of their business, and that for that reason they should no longer be protected. The error and absurdity of this proposition is shown by referring to the fact that millions, yes, hundreds of millions, of money are now waiting for investment in any surely profitable business. The Government could to-day borrow a thousand millions of dollars at 3 per cent. per annum. Any sum almost could be raised to invest in a business paying 6 per cent., and if the money was exhausted in this country as much would be supplied from Europe; but the fact is that manufacturers find their business precarious and often unprofitable, and failures are frequent, so that the charge so often paraded here, that this tariff protection was in the interest of monopolists, is without foundation. It is in the interests of and for the benefit of the people. Its destruction would be the destruction of the prosperity of the people. To this condition of destruction it would appear the Democratic party—a party controlled by its Southern wing—is anxious to bring us. Free trade will not affect the South as much as the North. Their labor to-day is much like the pauper labor of Europe. The South has but few manufacturing establishments where intelligent labor is employed, and its leading men have been educated in free-trade schools. It is believed by them that the building up of a foreign commerce, even at the expense of our own, will open a vast field and increased demand for the cotton of the South, which is now king there as much as in the days of slavery. This might after a time be disastrous, even to the cotton interests. After you have destroyed the cotton mills and factories of this country your masters from abroad might dictate terms to you.

The fact is, a wise, far-seeing policy would discover no conflict in interest between the different sections of the country; we should all be really interested, North and South, in the prosperity of this great country, and of the whole of it, but unfortunately the committee have seen fit to strike down Northern manufacturers and Northern productions and to protect Southern. It proposes to retain a protective duty upon sugar and rice, soft coal, and iron-ore, for the benefit of the South, and put wool, salt, lumber, and other Northern productions upon the free-list. Is there any justice whatever in such legislation? Sugar is protected for the benefit of a few thousand Louisiana planters. The principle of protection has ceased to apply in this case, for the reason that the section where the sugar-cane can be raised has been fully occupied and the utmost production that is possible has already been fully developed. It is an admitted fact that over nine-tenths of all the sugar consumed in this country is imported from abroad; $60,000,000 per annum are paid into the Treasury, derived from the duties on sugar. What argument has been or can be used in favor of putting lumber, salt, or any other Northern production on the free-list that is not applicable to sugar? If it were a Northern production is there the least doubt it would have been put there?

Rice, an article of universal consumption throughout the country, and of which the production is not one-half the consumption, is also heavily protected in this bill, higher than it was during the war.

If these two articles were placed on the free-list, the reduction in the revenue would be sufficient to almost entirely do away with the surplus, and would at the same time benefit every family in the land by cheapening the price of these articles, as the protection in these cases does not lessen but increases the price, as they are articles that we can not produce in quantities to meet the home demand. This bill upholds, protects, and fosters every distinctively Southern interest that was protected by what gentlemen are pleased to call the war tariff of 1861, while every Northern industry receives in the bill a most merciless free-trade treatment. If there is no desire to favor the South at the expense of other sections of the country, what is the objection to furnishing cheap food for the people by abolishing the duty upon sugar and rice, and thereby taking off the revenue to the extent of sixty to seventy millions of dollars and lessening the surplus to that extent? Why are the farm and garden productions of the people who may be brought into competition with the producers of the Canadian Dominion put upon the free-list and these Southern productions so heavily protected? Why is wool, that nearly every farmer produces in the North, put upon the free-list?

The duties collected upon the importation of wool are less than five and a half millions of dollars. There are about one and a quarter millions of persons engaged in sheep-raising in this country; the capital invested is between three and four hundred millions of dollars. Protection is absolutely necessary for this industry, and in that respect differs from the sugar and rice industries. Under protection the two last productions have decreased in quantity and importation has increased, whereas, by reason of the protection offered before the reduction of the tariff of 1883, the number of sheep increased in the period of about fourteen years nearly 100 per cent., and by reason of the reduction of the tariff in 1883 the number of sheep in this country have decreased in the short space of four years about 14 per cent.

Now, Mr. Chairman, I would in all sincerity inquire whether good judgment, sound business sense, as well as the dictates of justice, would not require, in case the protective feature is to be retained at all in this bill, that wool instead of sugar and rice should be protected. But as I have said, and repeat, this bill puts wool on the free-list, thereby reducing the revenues but little, but striking a fatal blow at sheep-raising, and at the same time retains and imposes a heavy protective duty on sugar and rice, that if put on the free-list would not seriously injure the producers and would reduce the surplus sixty or seventy millions. What must be thought of a party that insists upon taking a tax of $30,000,000 off tobacco, and at the same time insists upon taxing the people $50,000,000 on sugar? What must be thought of a party that indirectly repeals the tax on the distilling of whisky, as is done by the Democratic party in this bill, thereby depriving the Treasury of vast millions, but insists upon taxing the necessaries of life required by every person in the land? This bill, by its provision in relation to illicit stills, opens the door to frauds which will in effect repeal the internal-revenue laws to an extent that will amaze the people. It is cunningly done, and if adopted will have its intended effect.

If this bill had been framed in the real interests of the people, and had put upon the free-list sugar, rice, salt, coal, and such other articles and necessaries of life as are in general use among all classes of people, and omitted the slashing and cutting of duties upon the great manufacturing industries of the country, and which are so done with the evident intent of breaking these industries down, there could have been no just complaint of its sectional character or free-trade tendencies.

Besides being sectional and oppressive, there are a vast number of incongruities and illy-digested provisions. In many cases the raw material has a heavy duty attached and the manufactured article is on the free-list; but there is a general and systematic endeavor to so reduce the tariff as to greatly embarrass, if not destroy, the leading manufacturing interests of the country. This attempt to go back to free trade or to break down protection in this country we have been warned against by our own history; the country has always prospered under a protective system, and under the free-trade or tariff-for-revenue policy it has been the exact opposite—poverty, bankruptcy, and distress attending all such legislation.

There is another thing that ought to be noticed: the pretended necessity for this bill is that the surplus must be reduced. The danger to the country from this surplus has been the theme of Presidential message and Democratic oratory in this House, yet, sir, there is no prospect of securing a reduction of revenue under its provisions; the reductions are so great that foreign importations will be immensely stimulated and the revenues will thereby be increased; this is the effect beyond question. Heretofore such radical reductions have produced an increase instead of a decrease of revenue, and there is no reason why the same thing should not occur now. Thus the pretended object to accomplish which this bill is brought forward fails, but its real object, the destruction of protection, will be accomplished.

I believe the interests of the people require me to vote against the bill, and I am sure that if the people of this country have an opportunity to express their opinion at the polls they will most emphatically declare against it.

Admission of New Mexico.

SPEECH

OF

HON. ANTONIO JOSEPH,

OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, May 28, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9377) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1889, and for other purposes—

Mr. JOSEPH said:

Mr. CHAIRMAN: The gentleman from Missouri [Mr. WARNER] in his remarks upon the admission of New Mexico as a State has made certain comparisons between Dakota and New Mexico, which are intended by him to be greatly to the disadvantage of the latter Territory. It is a pleasure to find that this gentleman, who stands so high in the esteem of all who know him, has left the low and vulgar plane of scan-

dalous abuse, adopted in the minority report of the Committee on Territories, to which his name is signed, and now by use of argument seeks to enforce his views rather than by the use of scandal, unworthy alike of so honorable a gentleman and of the records of this House. Upon this plane of argument it gives me gratification to meet him, for it is as easy to show the error of his deductions from the few one-sided and misleading facts presented as it was to expose the scandalous untruth of the minority report. The gentleman has done himself the honor and the people of New Mexico the justice to publicly apologize for the language and positions of that report, and I do not doubt that he will make equal haste to withdraw his misleading though ingenious collation of facts, when a full statement of all the facts in their true light demonstrates that his argument is that of an ingenious advocate of a partisan policy rather than that of a representative of the people of the United States, whose only wish is to deal justly with the advance guard of civilization in the far West, whose interests are confided to the kind treatment of a body in which they have no vote.

The chief argument advanced by the gentleman to show that New Mexico is not fit for statehood is that Dakota surpasses her in the production of wheat, oats, and corn. He stated that Dakota ranked sixth, twelfth, and twenty-second in the order of States and Territories in the respective production of these grains, while New Mexico ranked far below. From this he would have us infer that New Mexico is not entitled to statehood. It is not my purpose to follow the gentleman in the thankless task of belittling the production of wealth of any State or Territory. The enormous wealth and wonderful natural resources of Dakota challenge my heartiest admiration; it is a striking sign of the greatness of our Union to see Dakota and New Mexico joining hands with Montana and Washington to demand that share in the National Government to which their population and resources entitle them. Those hardy pioneers of Dakota who brave its inhospitable climate and withstand the perils of snow, ice, and blizzards of the Dakota winters and the hardly less dangerous floods, cyclones, and hail of its other seasons demand my heartiest applause in their happily successful efforts to produce grain for the hungry multitudes of the East. "Peace hath her victories no less renowned than war." The hardy pioneers of the West are among our country's noblest heroes. But all this affords no reason for refusing justice to New Mexico.

The gentleman's argument is much too broad; its fallacy is self-apparent. If the correct criterion of fitness for membership in this Union is the number of bushels of wheat raised in the Territory of Dakota, then there are no States in the Union fit for membership except Minnesota, Ohio, Indiana, California, and Iowa, for Dakota surpasses all but these in yield of wheat. If Dakota's annual crop of oats is the fit criterion, then California must be excluded, and Illinois, New York, Wisconsin, Pennsylvania, Missouri, Kansas, and Nebraska may be added to the elect named above, for Dakota surpasses all but these in yield of oats. In corn the criterion is easier. Dakota's crop of this great staple, whose total annual value in the United States exceeds by $100,000,000 the combined value of the wheat and oats, being more than one-fifth in excess of these, places her below all but fifteen States, these including all New England and some of the cotton States. Must we conclude from the gentleman's reasoning that all the New England States, as well as South Carolina, Florida, and Louisiana, are wholly unfit for the Union because so far below Dakota in these three great staples? Or that the only States who by force of merit deserve their places in the Union are those five great States whose wheat crop surpasses that of Dakota? Yet the argument can not be applied to New Mexico unless capable of this application also.

The partisan purpose of this fallacious argument is clear when it is remembered that the minority of the committee, of which the gentleman from Missouri is one, do not propose the admission of Dakota as one State, but its division into two States, one of which is largely in advance of the other in population and resources. What the annual production of North Dakota is in these three staples I do not know. The figures given by the minority in their report (page 56) state that in North Dakota alone five million more bushels of wheat were raised in 1887 than were raised in the whole of Dakota in 1886, as shown by the report of the Commissioner of Agriculture (page 376).

When figures present such results as this we are tempted to question the old adage that "figures won't lie." But the minority also join in recommending the admission of Washington and Montana. If the annual production of wheat, oats, and corn in the whole of Dakota is the test of fitness for admission it needs no knowledge of arithmetic to prove that both portions can not be more than half fit for admission, and it needs but the slightest examination to show that Montana is far below the standard so fixed.

The corn crop of North Dakota for 1887 is stated by the minority in the exaggerated figures referred to at 1,000,000 bushels, and it is safe to say that this is at least one-fourth exaggerated, while the official figures show that the corn crop of 1886 of Montana was but 19,580 bushels. If the annual production of corn is the true test of fitness for admission as a State, how can the minority be found recommending the admission not only of North Dakota, but of Montana, while they recommend the exclusion of New Mexico, which in 1886, according to the official figures, produced 797,860 bushels of corn? I protest against any such false and irrational criterion as the annual production of wheat, oats, and corn to show the fitness of a Territory for admission. But even by this standard New Mexico, while not competing with the young giant of the Northwest, Dakota, a Territory so large that the minority proposes to divide it into two parts, nevertheless holds her own in comparison with many States with whose presence in the councils of the nation we could not well afford to dispense, although their yield of wheat, oats, and corn may be far below that of Dakota. In the yield of corn during the year 1886 New Mexico surpassed the States of Oregon, Colorado, Rhode Island, and Nevada, and nearly equaled that of Maine, surpassing the latter State in the quantity of merchantable corn, while it far outstripped all the Territories besides Dakota. In the quantity of wheat raised in the same year New Mexico surpassed Maine, New Hampshire, Massachusetts, Connecticut, Rhode Island, Mississippi, and Nevada; and while the average yield in the United States during the period from 1880 to 1886 was 12.1 bushels of wheat, New Mexico, by the method of irrigation, succeeding in reaching an average of over 20 bushels.

But I see no reason why I should not be equally privileged to select a criterion by which the eligibility of a Territory for admission to the Union should be judged.

The beet supply of the Union now comes, to a large extent, from west of the Mississippi River, and the cattle of the country lying around the base of the Rocky Mountains are one of the greatest sources of the wealth of the West. Why can not I choose cattle as the truest test of fitness for statehood rather than wheat?

Again, what staple is more important to the people of this country than wool? No one will sooner admit its value and necessity than the farmer of Dakota, who owes to the sheep industry his protection from winter's cold. Then I am as free to select wool as a standard of comparison as the gentleman from Missouri to select oats.

Taking the two great wealth-producing industries of cattle and sheep raising, let us see whether in these New Mexico does not hold a high enough rank to entitle her to a place in the Union.

According to the report of the Commissioner of Agriculture for 1886, New Mexico surpassed in number of cattle within its limits every State and Territory except seven, Dakota possessing little more than half the number of cattle of New Mexico. The number of cattle in New Mexico exceeds those in the whole of New England, or the combined numbers in the States of Virginia, North Carolina, and South Carolina, or Alabama, Mississippi, and Louisiana.

The supremacy of New Mexico as to sheep is almost unquestioned. In 1886 she was surpassed only by Texas, California, and Ohio, and in the case of the latter State by a very small number. The number of sheep in New Mexico in 1886 is officially stated at 4,328,755. The increase in this number has been so great that it is not unfair to say that she is now the greatest sheep-raising State or Territory in the Union. The number of sheep now in New Mexico is estimated at 5,000,000. Against these enormous figures Dakota's 253,372 seems small. Yet I do not say that Dakota is poor in these sources of wealth in which she is so far surpassed by New Mexico. Her wealth of cattle and sheep is great, but that of New Mexico is pre-eminent. Stating these facts with a full acknowledgment of the greatness of Dakota and her fitness for statehood, I ask the gentleman from Missouri by what right does he assume to say that the world-wide celebrated staples of Dakota afford a better criterion of fitness for statehood than the flocks and herds of New Mexico?

The gentleman has seen fit to quote from a report made by me on the subject of irrigation in the Territory of New Mexico, showing that of all the land in the Territory but a small portion could be cultivated without irrigation, and he has sought by his remarks to intimate that land requiring irrigation is necessarily desert land, or less fit for agriculture than those prairies which are watered by the rain from heaven. Does the gentleman know that half the agricultural world uses irrigation as an aid to agriculture? Has he never heard of the vast expenditure of the British Government in India for irrigation, with such success that India to-day is the sole menance of our Southern States in the cotton markets of the world? Has the gentleman never heard of irrigation in Spain or France or Italy? Has he never heard of the wonderful results attained in Southern California by a judicious system of irrigation? Or does he not know that the agricultural prosperity of Western Kansas and of Colorado is largely dependent upon an artificial supply of water to the fields? And lastly I would ask the gentleman, who has sought to deride the people of New Mexico by a reference to their religion, whether he has so far forgotten the sacred history which he learned at his mother's knee as not to remember that the wonderful and unexampled fertility of Egypt was due to the periodic overflow of the Nile, and that in that wonderful seat of early civilization agriculture received no aid from the fall of rain?

The Department of Agriculture has recently made an exhaustive study of irrigation in the United States, and in the report thereon refers (page 150) to the antiquity and prevalence of systems of irrigation, in these words:

> Irrigation of land is an art that existed for many centuries previous to any authentic written history. The traditions of the Chinese people are very ancient, and irrigation is mentioned in their earliest history as extensively practiced. In Egypt, Syria, and the ancient kingdoms of Eastern Asia agricult-

ure depended almost wholly upon irrigation, and still so depends in those countries where the people have survived the political changes of thousands of years. The irrigation of gardens, vineyards, and fields is frequently mentioned in the Scriptures; one of the earliest books speaks of it, and one of the prophets refers to "furrows of the plantation." * * * *

The enormous sums expended by the British Government in India in irrigating works and the profit derived from them will serve to sustain the arguments put forth by Mr. Cole and others, that while Great Britain is engaged in India not only in the construction of reservoirs for the storage of the waters and streams, but for gathering in the rains and dews for the purposes of irrigation, spending millions annually in such works and in keeping them in repair, our own country, possessing vaster domains than any nation of the world, and of incomparable value, has only to enter upon her own possessions, and, by trenching her mountain sides, beget reservoirs as enduring as the foundations of the earth.

I commend that report to the attention of the gentleman from Missouri, whose long residence in that wonderful, growing city on the Missouri River has unfitted him for the discussion of agricultural questions. The reading of that report must convince any critical mind that, notwithstanding the increased expense of ditching in order to bring the water to the fields, the increased certainty of a good and regular crop year after year renders agriculture by irrigation far superior to dependence upon the fall of rain. The farmer who cultivates his land without irrigation is absolutely at the mercy of the season. Two weeks' drought at a critical period may destroy the ripening fruits of the most industrious labor, while too heavy rainfalls may beat down his standing grain or mildew his newly-harvested crop. What farmer would not rejoice to enter upon a system of agriculture where these uncertainties are unknown, and where every year produces alike a bountiful crop under a system guarantying a regular and gentle supply of water which can be graduated to the need of the crop? Those who have studied the subject of irrigation agree, too, that the water thus brought to the land not only refreshes the growing crops, but is the best fertilizer in existence. Every stream of running water holds either dissolved or suspended vegetable matter of different kinds brought down from the higher regions from which the stream flows that forms the most efficient stimulant to the growth of the crops. This fertilizer, renewed every year without expense, possesses all the advantages of those expensive artificial fertilizers upon which the farmers of our country are relying more and more every year, while land subjected to its gentle and natural influence increases its productive capacity instead of wasting under the burning influence of artificial fertilizers.

The report before referred to, in speaking of irrigation in Colorado where the conditions are substantially the same as in New Mexico, uses this language:

> Such a thing as a drought is not dreaded by the agriculturist of Colorado. The cultivation of the soil is subject to a condition different from those which prevail in the East. Irrigation, although a necessity, bears with it some of the greatest blessings.

The report of the Commissioner of Agriculture for 1886 shows that the average production per acre throughout the United States from 1880 to 1886 was, of wheat, 12.1 bushels, and of oats, 26.7 bushels. Yet by the system of irrigation the figures for Colorado are thus officially stated:

> The average yield of crops in 1885, where agriculture is exclusively carried on by irrigation, is estimated as follows: Wheat per acre, 27 bushels; barley, 33; oats, 55; potatoes, 150 to 200; onions, 250.

The same holds true of New Mexico, surprising as these results may seem, even to those who have been accustomed to the wonderful soil of Illinois or Dakota. I have seen fields in New Mexico, established by history to have been under cultivation for from two to three hundred years, in which wheat had been raised for from ten to fifteen successive years, and then averaging from 25 to 30 bushels to the acre, and frequently exceeding this amount. A double crop of oats can be cut from many of our irrigated fields in one year, the second crop springing up without additional sowing after the first has been gathered, while from three to five crops of the wonderful alfalfa or Lucerne grass can be mowed in a single year, averaging from 2 to 4 tons an acre at each mowing, and this grass is of such a nutritious character that stock can be fattened upon it instead of being fattened upon grain. It is the part merely of ignorance to say, because New Mexico depends upon irrigation for her agriculture, that she will never become a great agricultural State. I venture to assert that when the extravagant modes of agriculture now prevalent in many of our Western States and Territories have by far diminished the fertility of those wonderful prairies, New Mexico, by her self-fertilizing system of irrigation, will be steadily proceeding on an upward scale in agriculture.

The people of New Mexico are thoroughly alive to the value of common-school education. The Territory has entered upon the settled policy of building a school-house and establishing a school at every point where a sufficient number of children of school age can be gathered to form a school, and the Territorial school tax of 3 mills on the dollar is as large as if not larger than that of any other Territory. The New Mexicans regard popular education in the same light as the people of the Eastern States, and there is a strong determination in the Territory of New Mexico that the public schools shall be steadily built up and that every year shall mark a decided increase in the number of schools, in the length of the school year, in the accommodations, and in the character of instruction. In spite of the great difficulties arising from the vast extent of New Mexico, her schools have steadily improved, and no people hold more dear than the people of New Mexico this essential element to the success of popular government.

New Mexico became a part of the United States by the treaty of Guadalupe Hidalgo, made on February 2, 1848 (9 Stats., 108). The eighth article of that treaty contains the following provisions:

> Mexicans now established in territories previously belonging to Mexico, and which remain for the future within the limits of the United States, as defined by the present treaty, shall be free to continue where they now reside, or to remove at any time to the Mexican Republic, retaining the property which they possess in the said territories, or disposing thereof, and removing the proceeds wherever they please, without their being subjected, on this account, to any contribution, tax, or charge whatever.
>
> * * * * * * *
>
> In the said territories, property of every kind, now belonging to Mexicans not established there, shall be inviolably respected. The present owners, the heirs of these, and all Mexicans who may hereafter acquire said property by contract, shall enjoy with respect to it guaranties equally ample as if the same belonged to citizens of the United States.

Article IX reads as follows:

> Mexicans who, in the territory aforesaid, shall not preserve the character of citizens of the Mexican Republic, conformably with what is stipulated in the preceding article, shall be incorporated into the Union of the United States, and be admitted at the proper time (to be judged of by the Congress of the United States) to the enjoyment of all the rights of citizens of the United States, according to the principles of the Constitution; and in the mean time shall be maintained and protected in the free enjoyment of their liberty and property, and secured in the free exercise of their religion without restriction.

Article XI contains the following provisions:

> Considering that a great part of the territories which by the present treaty are to be comprehended for the future within the limits of the United States is now occupied by savage tribes, who will hereafter be under the exclusive control of the Government of the United States, and whose incursions within the territory of Mexico would be prejudicial in the extreme, it is solemnly agreed that all such incursions shall be forcibly restrained by the Government of the United States whensoever this may be necessary; and that when they can not be prevented they shall be punished by the said Government, and satisfaction for the same shall be exacted, all in the same way and with equal diligence and energy as if the same incursions were meditated or committed within its own territory against its own citizens.
>
> It shall not be lawful, under any pretext whatever, for any inhabitant of the United States to purchase or acquire any Mexican, or any foreigner residing in Mexico, who may have been captured by Indians inhabiting the territory of either of the two Republics, nor to purchase or acquire horses, mules, cattle, or property of any kind stolen within Mexican territory by such Indians.

The people of New Mexico on becoming citizens of the United States had a right to expect that all these provisions of the treaty should be kept inviolate. They properly believed that the Government of the United States would carry out in every particular the agreement into which it had thus solemnly entered. A large proportion of the inhabitants of the Territory held their lands under lawful grants by the Spanish and Mexican Governments, and they had a right to demand that some mode should be established by the Government of the United States whereby these titles could be preserved and confirmed and the ownership made so secure that transfers of land could take place with the same celerity and security as in the States of the Union. It is now over forty years since that treaty, and up to the present time but seventy-one of the Spanish or Mexican land grants have been confirmed, out of over one thousand claims presented. Thousands of land-owners throughout the Territory to-day find themselves, by reason of the failure of Congress to legislate on the subject, in the possession and ownership of lands which intending settlers will not buy because of the want of definite confirmation of title, while the development of the whole Territory has been kept back through the inattention of Congress to the matter of securing the title to the lands to those who wish to settle in New Mexico. With titles still unsettled in spite of this treaty pledge, the people of New Mexico may well think themselves the subjects of grievous neglect at the hands of the Government of the United States.

The provisions of Article XI above quoted fall very little short of an absolute guaranty by the United States of the citizens of New Mexico against losses by the depredations of Indians, yet how sadly this pledge has been broken is shown by the fact that over $5,000,000 of losses by depredations have occurred in the Territory of New Mexico, and that these still cry for payment with seemingly no early prospect of satisfaction.

No definite time was set by Article IX of this treaty for the admission of New Mexico as a State, but it is evident that the people of New Mexico regarded this article as intending immediate statehood. So definite was this expectation that in the year 1850 New Mexico elected two Senators and a Representative to the Congress of the United States and sent them here, only to be confronted by the act organizing New Mexico as a Territory. Certainly Article IX of this treaty, viewed in the light of this contemporaneous understanding of its meaning, can not be considered as binding New Mexico to wait for over forty years before admission. The Congress of the United States more than fourteen years ago awoke to this fact, and in 1874 both Houses passed an act to enable New Mexico to enter the Union, which failed of approval only by differences between the two Houses on questions of non-essential detail. The Senate in 1876 again passed a bill for New Mexico's admission.

Thus New Mexico has three grievous wrongs to complain of, each in violation of the spirit, at least, if not of the letter of the stipulations of the treaty under which she became a part of the United States. Her land titles are still unsettled, her citizens have been left to the depredations of savage Indians, and their claims for losses are still unpaid, and her rightful demands for admission as a State have been for forty years unheeded. Certainly in view of these facts she is entitled at least to the utmost consideration and the most absolute courtesy. Yet

what has occurred in this very Congress? The minority of the House Committee on Territories, the distinguished gentleman from Missouri being one, in denying to New Mexico admission to the Union, accompany this declaration by adopting and approving the most scandalous utterances against the whole of the people of the Territory which have within my knowledge befouled the pages of the public record. I do not believe that the official utterances of the responsible branches of this Government from its foundation until the present date contain anything surpassing in foul abuse those pages of the minority report on the bill to admit certain Territories into the Union, which deal with New Mexico's right to admission. The people of New Mexico resent such treatment as forcibly as possible. I quote the following from one of the papers of the Territory, giving the resolutions adopted at one of the numerous mass-meetings held by the people of New Mexico in consequence of this report:

ALBUQUERQUE SPEAKS.

At the mass-meeting held in Albuquerque the following resolutions were adopted:

Whereas the majority report of the Committee on Territories of the national House of Representatives on the bill to authorize certain Territories, including New Mexico, to admission into the Union as States, basely and outrageously vilified and slandered the people of our Territory: Therefore be it

Resolved, That all of that portion of said report which in any manner reflects upon the character of the entire population of New Mexico is false and slanderous in the extreme, and we denounce the authors as ignorant, malicious calumniators or the base tools of such.

Resolved, That as loyal, law-abiding citizens, the people of New Mexico will compare favorably with the people of any State in the Union, and as American citizens, irrespective of party, knowing our rights, we demand of Congress decent and respectful treatment when any subject comes before it directly affecting our Territory; and we respectfully, but firmly, request that all of the said slanderous report which refers to our people, being totally false, be expunged from the records; and be it further

Resolved, That said minority report reflecting upon New Mexico is an abuse of the privilege of a committee of the National Legislature in thus falsely slandering the entire population of the Territory, and that we court investigation to prove the malicious falseness of the sentiments expressed by said report; and be it further

Resolved, That we respectfully request our Delegate in Congress, Hon. ANTONIO JOSEPH, to demand that said slanderous matter be expunged from the records, and we earnestly appeal to every honorable, fair-minded member of the House of Representatives to so expungate said report, and in so doing correct a great wrong and injustice upon 200,000 American citizens, who are deprived of proper representations in Congress.

Resolved, That a copy of these resolutions be sent to the President of the Senate and Speaker of the House, and chairman of the Committee on Territories of the House of Representatives and to the delegate from this Territory.

This report endeavors to make party capital out of the fact that a large proportion of the people of New Mexico are adherents of the Catholic Church. No doctrine is more strongly intrenched in the American Constitution than the independence of church and state, and no principle is more strongly held by the American voters than that religion is a matter not to be introduced into political discussion. In the field of politics we meet not as Catholic or Protestant, Christian or infidel, but as American citizens. But the partisan fervor of the signers of the minority report so far outran their discretion that they have sought to make party capital through religious prejudices. They seek to prevent the admission of New Mexico on the ground that a majority of her citizens are devout members of the Catholic Church, a church which numbers among its followers thousands of the most patriotic of American citizens. The Protestants of New Mexico are unwilling even to have the semblance of approving the sentiments of this minority report; the presbytery of Santa Fé promptly repudiated its sentiments by the following vigorous and praiseworthy resolutions:

[From the Las Vegas News, April 7, 1888.]

RESOLUTIONS TO THE POINT.

The Santa Fé Presbytery of the Presbyterian Church in New Mexico passed the following resolutions, which speak for themselves:

"Whereas in a recent report of the minority of the Committee on Territories of the House of Representatives in the Congress of the United States, upon a bill pending in favor of the admission of New Mexico as a State, there were inserted the following and many other kindred statements and charges against the people of the Territory of New Mexico, to wit:

"1. That the people of New Mexico have retained all the vices and none of the virtues of their ancestors.

"2. That the practice of the two sexes living together out of wedlock, and raising families in this unholy connection, is the almost universal custom.

"3. That the custom of carrying fire-arms is so common that when the people repair to the house of God they go better prepared to resist the assassin than to worship their Maker; and

"Whereas the above statements have been printed and published officially in the records of Congress, and also by a large part of the public press of the United States: Therefore,

"*Resolved*, That we, the Presbytery of Santa Fé, of the Presbyterian Church, representing the entire Territory of New Mexico, and composed of ministers, evangelists, and ruling elders from all parts thereof, and being now in session at Las Vegas, N. Mex., do hereby express our sincere regret that such untruthful and slanderous statements should be used by our Congressmen and be officially published by them and the public press, to the great injury of the fair name of our Territory and her citizens and the cause of Christ in the Territory.

"*Resolved*, That we solemnly declare that such a state of affairs, or anything approaching it, does not exist in our Territory now, nor do we believe that such a state of affairs ever did exist in said Territory since its organization, unless possibly in small and isolated spots, and, in our opinion, such statements originated in the fertile, but sensational, brain of some person who was probably never nearer the Territory of New Mexico than his statements are to the truth.

"*Resolved*, That, as a refutation of such charges, we, as a presbytery, declare that the Presbyterian Church is making rapid progress in said Territory. Churches have been and are being erected in all parts of the Territory and the membership rapidly increasing, both from our American and native population; that it is our belief that other denominations of the church are making rapid progress also; so that all Christians coming to said Territory can find a home in the church of Christ, and be as free from harm or molestation as in any State in the Union: that the cause of education is making rapid progress everywhere, and that the majority of our people will compare favorably, in point of morals, with those of any other Territory and many, if not all, of the States.

"*Resolved*, That we declare the statement to be false that it is the custom of people to carry fire-arms to church, but, on the contrary, we point to the fact that we have on our statute-books a rigid law against the carrying of deadly weapons at any time—so rigid, indeed, that a stranger or other person carrying a concealed weapon to a town or village must disarm himself within fifteen minutes after his arrival therein; this law is in advance of the laws of the States. And further, we believe that the Territory of New Mexico is about if not the only Territory or State in the Union that punishes train robbery with death.

"*Resolved*, That we call upon our people and all Christians, as well as the public press, both sacred and secular, to denounce publicly such false and injurious statements, and in that way set us right before our countrymen and Christians everywhere, as far as can be done in this way, since it is justice we ask, and nothing more.

"*Resolved*, That if the author of said statements is still living, we desire to call vividly before him the case of Ananias, and also express the hope that God may have mercy on his soul.

"J. M. McGAUGHEY, *Stated Clerk*."

The following letter, from one of the leading business men of Albuquerque, who served with honor during the war in the Second Kansas Cavalry, and was subsequently governor of Kansas, and is now engaged in developing the resources of New Mexico, well illustrates the feeling of all the people on this subject:

OFFICE OF THE AZTEC COAL COMPANY,
Albuquerque, N. Mex., April 10, 1888.

MY DEAR SIR: The people of New Mexico are very indignant, and justly so, over the minority report of the House Committee on Territories on the question of the admission of New Mexico into the Union. I have not seen the full report, but only extracts from the newspapers, but from what I have seen I must say that a more shameless, outrageous prostitution of the privileges of a committee of Congress I never heard of. A more lying, slanderous report was never uttered, and it should consign its authors to everlasting infamy. I am confident, Mr. JOSEPH, that you will treat the report and its authors as they deserve when the opportunity occurs, and you certainly will have the support of all honorable members of Congress and the thanks of a grateful constituency at home.

I have several personal friends in Congress, and I have written several of them on the subject, and I wish you would ask Hon. JOHN A. ANDERSON, Hon. E. N. MORRILL, Hon. E. H. FUNSTON, and Hon. THOMAS RYAN to, as a personal favor to me, denounce these vile slanders as they properly deserve. That the sayings of a vile blackguard, of thirty-five years ago, should be incorporated in a report to Congress against as loyal, law-abiding people as in the United States is one of the greatest outrages ever perpetrated by any community, and Congress owes it to an outraged people and its own dignity to expunge the report from the records and discharge the members from all committees promptly. The people of Bernalillo County and Albuquerque desire to thank you most cordially for your faithful services in their behalf, and will long remember you for your faithful services.

Very respectfully,

E. S. STOVER.

Hon. ANTONIO JOSEPH, M. C.,
Washington, D. C.

Both parties alike are indignant at this report. The Republicans of New Mexico feel that in the face of such language as this no party lines can divide them from their Democratic brethren. The following telegram, found in one of the St. Louis papers, shows that all the inhabitants of New Mexico, without regard to politics, are united against such slanders:

NEW MEXICO POLITICS.

ALBUQUERQUE, N. MEX., *April* 21.

Democrats and Republicans held their county conventions in this city to-day. The Democratic delegates were instructed to vote for the renomination of Grover Cleveland. The Republican delegates were uninstructed. Both conventions denounced in scathing terms the minority report of the Committee on Territories. The people of New Mexico, regardless of politics, are in favor of statehood. This feeling has been intensified of late by the numerous slanders concerning the Territory which have been industriously circulated in Washington.

The truth of this matter seems to be that the gentlemen signing this minority report felt themselves free to speak as they liked of a Territory which to their minds seemed so far away as New Mexico, represented on the floor by a Delegate without a vote. How could the people of New Mexico affect their interests? How could an action of libel be sustained when the libel was committed upon a whole people? How could their political prospects be clouded by the indignation of the New Mexican people? With this sense of utter irresponsibility these gentlemen have far surpassed legislative rules, and have assaulted the people of New Mexico with a partisan fury which broke into utter recklessness. Happily, however, the people of the United States are animated with a sense of fairness, and know that there are some rules setting limits even to the wide extent of political discussion. One of these rules that can not be disobeyed is that questions of religion are not to be brought into politics. The citizens of Missouri are not willing that this rule should at all be relaxed, and the voice of the Missouri Republican, published at St. Louis, brings home to the gentleman from Missouri the knowledge that he can not thus wantonly assault the people of New Mexico without bringing upon himself the condemnation of his own justice-loving people.

[From the Missouri Republican, April 22, 1888.]

RELIGION IN NEW MEXICO.

Delegate JOSEPH, of New Mexico, has presented to Congress a number of documents refuting the charges against the people of the Territory, made by Hon. WILLIAM WARNER, of Missouri, and other Republican members of the Committee on Territories in their minority report. The charges made in this minority report were that the New Mexicans are mostly Roman Catholics, dissolute, ignorant, vicious, violent, and superstitious. Congressman WARNER and his associate Republicans supported these charges with quotations, the general tenor of which may be judged by the following:

"In times gone by the church conduced much to this state of things; a majority of the priests themselves lived in open prostitution, and the most abandoned characters retained their standing in the church if they were regular at the confessional and paid the customary dues without fail.

"As a race, the people of New Mexico are extremely superstitious, and which prevails to a greater or less degree among all classes, the intelligent as well as the most ignorant. They have an abiding faith in saints and images, and with

the mass of the inhabitants their worship appears no more than a blind adoration of these insensible objects. The second summer of my residence there there was a severe hail-storm in the month of June, when the people, in order to protect their crops, stuck up crosses in their fields; and it is no uncommon thing for them to have their fields blessed by a priest after the seed is put into the ground, in order that they may bring forth good crops."

The publication of this report caused no small excitement in New Mexico—as well it might, for a more extraordinary document was never submitted to Congress since Congress was organized under the Constitution, which guaranties religious liberty. Indignant protests were adopted, and among the number of these which Delegate JOSEPH has read to Congress is one from the Santa Fé presbytery, contradicting the Warner report at all points. The resolutions of the presbytery bearing on the Republican objection to admitting the Territory on account of the prevalence in it of the Roman Catholic religion are as follows:

"*Resolved*, That we solemnly declare that such a state of affairs, or anything approaching it, does not exist in our Territory now, nor do we believe that such a state of affairs ever did exist in said Territory since its organization, unless, possibly, in small and isolated spots, and in our opinion such statements originated in the fertile, but sensational, brain of some person who was probably never nearer the Territory of New Mexico than his statements are to the truth.

"*Resolved*, That as a refutation of such statements, we, as a presbytery, declare that the Presbyterian Church is making rapid progress in said Territory, churches have been and are being erected in all parts of the Territory and the membership rapidly increasing, both from our American and native population; that it is our belief that other denominations of the church are making rapid progress also; so that all Christians coming to said Territory can find a home in the church of Christ, and be as free from harm or molestation as in any State in the Union; that the cause of education is making rapid progress everywhere, and that the majority of our people will compare favorably in point of morals with those of any other Territory and many if not all of the States."

Another charge of the report was that when a certain New Mexican was very ill his family brought a small altar into the room and "performed some ceremony" which the minority's witness did not understand, but which seemed to him to be "a semi-heathen incantation." This was, perhaps, a recitation of the prayers for the dying, or the administration of the communion. The resolutions of the presbytery cast no light on this point, and as the general denial applies to the spirit and not to the minute details of the charges, it may be true that the reverence of New Mexican Catholics for the cross and other symbols of their religion may have manifested itself in ways which, though simple and touching to those in sympathy with their simplicity, might strike a Republican Congressman as evidences of fetishism and blind superstition.

Clearly, however, the Presbyterians of the Territory take no such view of it. They dissent from the Republican opinion that the Territory should be kept out of the Union on account of the religion of its people. The fact that Presbyterians disuse a great part of the symbolism of the Roman Church does not blind these liberal Christians to the falsity or the enormity of the charges of the minority. Not only do they protest as Presbyterians, but they "call upon all Christians, as well as the public press, both sacred and secular, to denounce publicly such false and injurious statements."

Mr. JOSEPH has done well in making these documents a matter of public record. Everything bearing on the Republican attempt to class New Mexico with Utah as a Territory unfit for statehood on account of the religious belief prevailing in it is a matter of great public interest, and these documents will be valuable for reference.

To the honor of the gentleman from Missouri it is to be said that he has apologized for these slanders, and to some extent relieved himself of their opprobrium. It is to be hoped that the constituents of all those who signed this infamous report will join in similar expressions of dissent, to the justice of New Mexico and to the confusion of these gentlemen, and then perhaps these gentlemen, too, will awake to the fact that their self-respect demands like apologies from them.

In spite of the long-continued neglect by Congress of the people of New Mexico, they yield to none in attachment to the Government of the United States. They have been for forty years citizens of this country—a longer period than the average of the citizens of many parts of the West which have been settled by European immigration. At the outbreak of the war, when the Confederate forces invaded New Mexico, her people, who had been but thirteen years under the American flag, promptly responded to all calls upon them for aid in repelling the invasion. More volunteer troops were raised in New Mexico than in all the other then existing Territories combined, including the present States of Nebraska, Nevada, and Colorado. These troops were in greater part commanded by persons of Spanish descent, and the ranks were filled by the same race, people who had but thirteen years before been citizens of a different country. Their allegiance was rendered to their new country as though they had been lifelong citizens of the United States.

Among the officers of the New Mexican volunteers appear the names, all showing their Spanish descent, of Col. José Maria Valdez, Col. Diego Archuleta, Col. Manuel Chavez, Col. Facundo Pino, Col. J. Francisco Chavez, Col. Francisco Abreu, Maj. José D. Sena, Maj. Rafael Chacon, and many others equally well known. These fought side by side with such men as Col. Christopher Carson, who commanded the First Regiment of New Mexico Cavalry, and Col. Ceran St. Vrain, an officer who came to New Mexico from St. Louis and cast in his fortunes with the people of that Territory. The people of New Mexico look with pride upon the achievements of these noble heroes. In the storm of battle they proved their title to American citizenship, and having then responded so nobly and so freely to the call of patriotism, it is now too late, after forty years of American citizenship, to dispute the devotion of the New Mexican people to the American Constitution and the American Government.

New Mexico, the oldest in settlement and civilization of all the States or Territories of the United States, desires to prove her devotion to these principles by an equal share with her sisters in the responsibilities of the nation. Statehood accomplished, the wonderful resources of New Mexico will be understood and developed, and her inevitable rapid increase of population and wealth will soon place her among the most brilliant of the stars of the American Union.

The Tariff.

SPEECH

OF

HON. CHARLES E. HOGG,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

June, 1888,

On the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue.

Mr. HOGG said:

Mr. SPEAKER: Two systems of taxation may be employed by the Federal Government to raise the revenues necessarily required to carry on its operations. One of these two methods, the indirect, has always been used by us, and at no time in the history of our country was ever an effort made to abandon it entirely. This indirect mode of taxation imposes a duty upon foreign merchandise brought here, and was offered by Mr. Madison in the first Congress that sat under our Federal Constitution, and was considered by him the more desirable because the people would pay the taxes thus raised without the presence and annoyance of Federal tax-gatherers whom, in point of fact, they had no voice in choosing, and to whom in most instances, perhaps, they were total strangers. And for the further reason that the tax thus paid would to some extent, at least, be in the nature of a voluntary payment.

This system is now known as "the tariff," and was called by Mr. Clay the American system, and was devised solely in the interest of the Government. It was adopted to raise money to enable us to carry on the necessary operations of the Government. Its chief and distinctive characteristic was revenue. It had no protective features in the sense in which the term protection is now understood. The people would never have given their assent to a system whose only effect would be to enrich the few and impoverish the many.

Nothing was ever said about giving protection to American manufactures, so far as the debates of this House are concerned, until after the war of 1812, when we found ourselves with a depleted Treasury and a heavy debt as a consequence attendant upon the prosecution of this war.

When the tariff was revised in 1816 it was for the purpose of raising the necessary revenue for the uses and purposes of the Government, although the increased revenues were so distributed as to give some encouragement to American manufactures.

This was a mere incident of the law, and by no means its prime object. It has always been the policy of the people in the past history of this country to endeavor as much as possible to fix the rate of duties upon a scale commensurate with the actual demands of the Government. When this scale was too low it was raised, and when too high it was lowered.

This has been the case from the days of President Jefferson down to the present time. In proof of this I here call the attention of the House to several extracts bearing on this point, taken from various Presidential messages, and which I will insert in the RECORD as a part of my remarks:

EXTRACTS FROM PRESIDENTIAL MESSAGES BEARING ON TARIFF TAXATION.

[President Jefferson.]

Considering the general tendency to multiply offices and dependencies, and to increase expenses to the ultimate term of burden which the citizen can bear, it behooves us to avail ourselves of every occasion which presents itself for taking off the surcharge; that it may never be seen here that after leaving to labor the smallest portion of its earnings on which it can subsist, government shall itself consume the residue of what it was instituted to guard.

[President Madison.]

To impose taxes when the public exigencies require them is an obligation of the most sacred character, especially with a free people. To dispense with taxes when it may be done with perfect safety is equally the duty of their representatives.

[President Adams.]

If the tariff shall be found by experience to bear oppressively upon the interests of any one section of the Union, it ought to be, and I can not doubt will be, so modified as to alleviate its burden. To the voice of just complaint, from any portion of their constituents, the representatives of the States and people will never turn away their ears.

[President Jackson.]

It is desirable that arrangements be adopted to relieve the people from unnecessary taxation. In the exercise of that spirit of concession and conciliation which has distinguished the friends of our Union in all great emergencies it is believed that this object may be effected without injury to any national interest.

Under our present revenue system there is every probability that there will continue to be a surplus beyond the wants of the Government, and it has become our duty to decide whether such a result be consistent with the true objects of our Government.

To retain it in the Treasury unemployed in any way is impracticable. It is, besides, against the genius of our free institutions to lock up in vaults the treasure of the nation.

[President Van Buren.]

To burden the country with increased taxation when there is in fact a large surplus revenue would be unjust and unwise.

[President Tyler.]

The Government under which it is our happiness to live owes its existence to the spirit of compromise which prevailed among its framers. Jarring and discordant opinions could only have been reconciled by that noble spirit of patriotism which prompted conciliation and resulted in harmony. In the same spirit the compromise bill, as it is commonly called, was adopted at the session of 1833. While the people of no portion of the Union will ever hesitate to pay all necessary taxes for the support of the Government, yet an innate repugnance exists to the imposition of burdens not really necessary for that object.

[President Polk.]

One of the difficulties which we have had to encounter in the practical administration of the Government consists in the adjustment of our revenue laws and the levy of the taxes necessary for the support of Government. In the general proposition that no more money shall be collected than the necessities of an economical administration shall require all parties seem to agree.

[President Fillmore.]

A high tariff can never be permanent. It will cause dissatisfaction and will be changed. It excludes competition, and thereby invites the investment of capital in manufactures to such excess that when changed it brings distress, bankruptcy, and ruin upon all who have been misled by its faithless protection. What the manufacturer wants is uniformity and permanency, that he may feel a confidence that he is not to be ruined by sudden changes.

[President Pierce.]

The principle that all moneys not required for the current expenses of the Government should remain for active employment in the hands of the people, and the conspicuous fact that the annual revenue from all sources exceeds by many millions of dollars the amount needed for a prudent and economical administration of public affairs, can not fail to suggest the propriety of an early revision and reduction of the tariff of duties on imports.

[President Arthur.]

In view, however, of the heavy load of taxation which our people have already borne, we may well consider whether it is not the part of wisdom to reduce the revenue.

[President Cleveland.]

The difficulty attending a wise and fair revision of our tariff laws is not underestimated. It will require on the part of the Congress great labor and care, and especially a broad and national contemplation of the subject, and a patriotic disregard of such local and selfish claims as are unreasonable and reckless of the welfare of the entire country.

Under our present laws more than 4,000 articles are subject to duty. Many of these do not in any way compete with our own manufactures, and many are hardly worth attention as subjects of revenue. A considerable reduction can be made in the aggregate, by adding them to the free-list. The taxation of luxuries presents no features of hardship; but the necessaries of life used and consumed by all the people, the duty upon which adds to the cost of living in every home, should be greatly cheapened.

When we consider that the theory of our institutions guaranties to every citizen the full enjoyment of all the fruits of his industry and enterprise, with only such deduction as may be his share towards the careful and economical maintenance of the Government which protects him, it is plain that the exaction of more than this is indefensible extortion and a culpable betrayal of American fairness and justice. The wrong inflicted upon those who bear the burden of national taxation, like other wrongs multiplies a brood of evil consequences. The public Treasury, which should only exist as a conduit conveying the people's tribute to its legitimate objects of expenditure, becomes a hoarding-place for money needlessly withdrawn from trade and the people's use, thus crippling our national energies, suspending our country's development, preventing investment in productive enterprise, threatening financial disturbance, and inviting schemes of public plunder.

The question thus imperatively presented for solution should be approached in a spirit higher than partisanship and considered in the light of that regard for patriotic duty which should characterize the action of those intrusted with the weal of a confiding people. But the obligation to declared party policy and principle is not wanting to urge prompt and effective action. Both of the great political parties now represented in the Government have, by repeated and authoritative declarations, condemned the condition of our laws which permit the collection from the people of unnecessary revenue, and have, in the most solemn manner, promised its correction; and neither as citizens or partisans are our countrymen in a mood to condone the deliberate violation of these pledges.

Our progress toward a wise conclusion will not be improved by dwelling upon the theories of protection and free-trade. This savors too much of bandying epithets. It is a *condition* which confronts us—not a theory. Relief from this condition may involve a slight reduction of the advantages which we award our home productions, but the entire withdrawal of such advantages should not be contemplated. The question of free trade is absolutely irrelevant; and the persistent claim made in certain quarters, that all efforts to relieve the people from unjust and unnecessary taxation are schemes of so called free-traders, is mischievous and far removed from any consideration for the public good.

The simple and plain duty which we owe the people is to reduce taxation to the necessary expenses of an economical operation of the Government, and to restore to the business of the country the money which we hold in the Treasury through the perversion of governmental powers.

No nation or country can rightfully call upon its citizens to surrender more of their substance than is actually necessary to conduct the legitimate operations of the Government. This is a principle founded not only upon reason and justice, but also upon the great laws of trade and business. The disregard of so wise a rule in political economy as this must always disturb the business of the country and ultimately be a detriment to the peace and harmony of the citizens.

To permit the accumulation of money in the coffers of a government beyond any use to which it can properly be applied is a flagrant violation of this rule, and one to which our people can not submit and the consequences of which they can not endure.

The reason for this is that it takes from the arteries of trade and commerce the money which is so much needed by our labor and business interests, and the very interests, too, which money is designed to conserve. Money is the measure of values, and when it is taken from the people and hoarded in the vaults of our Government its volume is unnecessarily lessened, and this injures all persons except him who deals exclusively in money; that is, the money-lender and he who has his capital invested in interest-bearing securities, and to some extent it is even a disadvantage to these two classes of business.

This contraction of the volume of our currency by its withdrawal from commercial and business uses and keeping it idle in our Treasury is more dangerous and ruinous in its consequences than its real and actual contraction by express enactment of laws, because the operation of this withdrawal of currency from business is insidious and continuous, and the money market becomes each day more and more difficult to reach and its offers more and more restricted. It is needless for me to say that this affects all, the farmer and the merchant, the laborer and the mechanic, alike. It makes the farmer's corn cheaper and the laborer's toil less valuable.

We now take from our people every year about $213,000,000 under our present system of tariff taxation, to say nothing of the vast sum in addition to this derived from other sources. If this were needed by the Government the American people in their patriotism would bear this burden without a murmur. They have never yet refused to meet every demand made upon them by their country, even to the extent of laying down their lives upon the field of battle. Mothers give up sons and wives husbands for the love of a common country. But this is not asked except when the imperious demands of the country require it. We should take nothing from our citizens except that which the Government actually requires. We should not curtail their natural liberty except so far as the good of society and government require.

This is the very foundation and corner-stone of our Republic, and we should not attempt to disturb the repose and happiness of our people by unjust, unequal, and oppressive taxation.

How is the present tariff system operating to day upon our people? It is driving them into business distress and bankruptcy. Furnaces are shut down because labor demands a just compensation for its toil while struggling to obtain the necessaries of life. Mines are closed because the miner, who exposes himself to the dangers of dark, damp entries under ground, demands an adequate compensation for his labor. The farmer sees his home sold under his very eyes because he is unable to raise the money to pay the annual interest of the debt which he in good faith contracted. The farmer's land has decreased in value, his products have lowered in price, and ofttimes he can not find a market for them at any price, and he is compelled to borrow the money required to pay his taxes. The laborer sees his wages declining year after year and employment becoming every day more difficult to obtain. Fair compensation for a day's work and steady employment is all the laboring man of America asks, and this is what he should have. He knows to his sorrow that under the present tariff law he does not obtain this. If this be due to the present law, is it not the part of good statesmanship to revise it? Is it not high time to make an honest attempt, at least, to bring about a healthful change in the present condition of affairs?

The present law at the time of its adoption was passed to meet the exigencies of war. I say this because, in my judgment, its modification in 1883 did not materially change its operation or eliminate its vicious features. Furthermore, it was without practical operation in those States then constituting the Confederacy.

These States and the people who participated in the work of secession took no part in framing this law, and yet, after they have surrendered and laid down their arms and renewed their allegiance to this grand and glorious Union, bear their share of the burdens of taxation and have met the gallant Federal soldiers upon the plane of peace in fraternity and love, they are not to be permitted to join in revising a law that is paralyzing their industries and destroying their material interests. The reason of this is because the bitterness of hate toward them lingers in the Republican heart.

The true reason really is because the devotion of these people to democratic principles and democratic methods constrain them to adhere to the Democratic cause, and to break the effect of this our Republican friends pretend great friendship to the workingman.

This war accomplished the abolition of African slavery, but under the present system inaugurated by the Republican party the white man is now doing double the work that the Southern slave performed, and that, too, at less than a living rate of wages. Besides all this the corporations and monopolies that have fattened upon his toil do not clothe his children, care for and treat him in sickness, and provide him with that comfortable home which his manhood and honor entitle him to.

In this situation of affairs the Democratic party say there ought to be a revision and a change in the tariff laws with a view to ameliorating the condition of labor, and in this way not enable the monopolist to lord it over his employé, the laboring man. Since this law was enacted the Confederate States have come back in good faith to us to bear their share of the burdens of taxation and to maintain and protect this Union, and hence there is on this score a strong reason for lowering the rates of taxation, as there is much more wealth and population added to the Government to contribute to our revenues than when this law was passed, and hence the rates should be lower, as these are always accommodated to our wealth and population; and as a certain amount is to be raised, the greater the wealth the lower the rate must be. However, our Republican friends seem to think that a Southern Confederacy still exists, and that this law only operates upon the States that were always loyal.

With all their professions of love and devotion to our loyal brethren,

they still insist upon protecting (?) them by an exaction of high-tariff taxes. It is protection in name, but oppression in fact.

But now that the Democratic party is endeavoring to keep its promise made to the people that it would reduce taxation by modifying the existing tariff law and reducing the rates of duty upon imports, we are met by the charge from certain Republican members of Congress that we are free-traders. When they make this assertion they know it is ill-founded. There can, in the very nature of things, never be any free trade in this country until we adopt the system of direct taxation—a system to which the Democratic party is unalterably opposed and to which we shall always remain opposed. Then as we must raise an immense revenue to carry on the operations of the Government and ultimately to pay off the public debt, whose liquidation I am heartily in favor of at the earliest practicable day, and as we must raise the means from our internal-revenue system, small sales of public lands, and our tariff system, upon what ground can there be free trade with us as between ourselves and foreign countries?

There is a wide difference between tariff reform and free trade. Every intelligent voter knows what tariff reform means. He knows it does not mean anything like free trade. It can have no such meaning. It simply denotes that the evils of the present tariff law shall be eradicated so far as it is possible to do so by removing the inequalities existing therein and by lowering present rates when they affect the necessaries of life and by making a slight increase in the free-list.

What we now propose is no new measure offered to the American people. The tariff law has been revised time and again in the past to adjust it to the then existing condition of affairs. The people now demand a revision of the tariff. Both parties have declared for this in their various State and national platforms.

As I have just remarked, this matter of revising the tariff is no novel scheme proposed by us on this (the Democratic) side of the House. It is only a remedy proposed by us for existing evils. The first tariff law that was enacted (1789) remained in force with some slight modifications until 1816, when it became necessary to revise it, and this second law remained in effect until 1824. The duties under these two acts were very low as compared with existing rates.

Then we had a compromise act of 1833, and this remained without substantial changes until 1846, when the Congress of the United States revised the tariff, and gave to our people what is to-day known as the "Walker tariff."

This last act greatly reduced the rates of duty indeed in some instances, making marked changes, and the enemies to this wise and beneficent measure predicted dire evils as a consequence of its enactment. They declared our industries would languish and perish; that labor would go without employment; that poverty and hunger would become his unbidden companions; that the farmer's field that had once been the source of his prosperity and happiness would spring up with thorns and thistles.

But these political prophets were not true prophets. Instead of their predictions being verified, the very reverse was the case.

Our industrial enterprises went marching on, flourishing as they had never done before; labor was employed, well paid, happy, and contented, and the farmer's field blossomed as the rose and the plowman's song was merrier than it had been before.

No one would have dared attempt to raise the duties upon imports, as was done in 1861, but for the existence of a great civil war, in which eleven States had withdrawn from the Union, and an urgent necessity at hand for men and all the munitions of war required to put down a great rebellion.

It is true the consequences of this civil strife entailed upon us results in the form of pensions, a public debt and its interest that required heavier taxation than was needed prior to its inauguration, and yet all this has been met in a spirit of true patriotism, and still there is an immense surplus locked up in the Treasury vaults of the United States, amounting in the aggregate to the vast sum of $150,000,000, with a threatened increase this year of nearly $80,000,000. This has been accumulating after the payment of the net ordinary expenses of the Government, the payment of a vast sum of money to rebuild and equip our Navy, after paying the interest on the public debt and also paying a part of the principal, and also paying about $75,000,000 to our deserving pensioners, though this year it reaches over $80,000,000 in pensions to our Union soldiers.

After paying all the ordinary as well as extraordinary expenses of our Government we have left in the form of an annual surplus about $80,000,000. That is, we take from our people this amount of money every year for which we have no use at all, but simply take it from their business and hoard it up in the Treasury.

To make the statement plainer, we require every man, woman, and child in our great Republic to pay in the form of taxes at least $1.25, for no purpose whatever except to sink it in the vaults of the Treasury, there to lie idle and unemployed.

Assuming that our population in West Virginia is 800,000, it can here be stated with perfect truth that our State pays into the national Treasury for no purpose whatever not less than $1,000,000 annually. Suppose our State government required her citizens to pay into the State treasury $1,000,000 more than is needed for the purposes of our State government?

Would our citizens not demand a change in our local tax laws? To be sure they would, and any man or party who would oppose such revision would be consigned to everlasting oblivion, contempt, and condemnation, and justly so.

Now, then, the bill under consideration proposes to save to the citizens of the whole country the enormous sum of $80,000,000 a year, and to the State of West Virginia not less than $1,000,000 annually.

Can any man, without regard to party, decline to give his assent to such a measure? I think not. I for one, as the humble representative of a great people, shall support this bill with all my energy and what little ability God has endowed me with. Furthermore, I stand on my party platform as to this, and I believe my people will sustain me in this course. If they do not, I shall be utterly surprised, and will be constrained to confess that in my association with them, which has been long and intimate, I have signally failed to appreciate their sentiments and interests.

I am here to represent them, and speak to and vote for those measures which will best promote their true interests. This I intend to do, looking to God and my country for the full vindication of my acts.

But in doing this I am confronted with the charge that I am not in sympathy with American labor.

This is utterly unfounded and false. I am now, always have been, and am resolved to remain a friend to the laboring man of this country. He is a free, independent American citizen. He asks no more protection than you give to others. In the eloquent language of my eloquent friend from Mississippi [Mr. HOOKER], he made you and made the Government, and gave you all that money that now lies bursting the coffers of your Treasury. Where do you get the money from with which you propose to grant your protection? It comes from the laborer. He does not want your protection, because it does not protect. All the protection he asks is that which every other citizen has a right to demand—protection from high and unnecessary taxation. Do not take our money unnecessarily, for it is labor that makes money. It is the thews and the muscles, and the sinews and the blood, and the bone and the brain of the laboring man, whether it be the labor of the head or hand that does it and makes money.

So far as I am concerned I am in favor of giving all the protection to the laborer that it is possible to afford him. But I do not believe that a high-tariff tax does or can protect him. I believe he is already awake to the truth that a high tariff does not protect him, but, on the contrary, robs him and consigns his family to want and discontent. I can never give my assent to a system that robs and impoverishes the laborer. I can appreciate his struggles, his toils, and his sacrifices. What does your high tariff amount to when he is compelled to work at the price dictated by the capitalist or else yield his place, with his little one crying for bread, to the pauper labor imported from Europe by the capitalist who, with his plethoric pocket filled with ill-gotten gains, can defy his demands? Gentlemen, you must change this law now bearing down upon labor. All he asks is equal rights, and until you concede them to him he will bang at your doors for admittance until they swing open to him and the welcome voice is heard, "Come in and share with us the justice of equal laws for all, made alike for the rich and the poor."

This is what the laborer demands and nothing else. He does not ask you to do for him what you would not do for others, but he does insist that you shall not make him bear all the burdens and pay all the taxes. There is said to be a great difference between the pay of an American laborer and one who resides in England. This is in part true, and I am proud of it. The American laborer ought to receive more than the English laborer because he works a greater number of hours, is more intelligent, more skillful, and, above all, he is a free citizen and one of the noblemen of earth and as good as a king. He has something to live for. He is the father of a family in which he takes a just pride. He knows that nothing can be denied his children that may be within the reach of any citizen. Why should he not be better paid than English labor? But this is not owing to the tariff. He commands better wages in spite of the tariff. He makes his way here and bears his burden of taxation when he is ill able to afford it.

The Republican party has pretended great friendship for American labor; but in these professions they have been insincere and untrue. Take, for instance, the law that was passed in 1864, whereby an American capitalist could take his money and go into the pauper fields of Europe and bring into this country the degraded element of the laboring classes of Europe and place them in competition with the noble and high-minded laboring man of America. Thousands and thousands of prosperous workingmen of this country were crowded out of employment and consigned to want because of this unjust and unwise measure. This was an act of the Republican party, and it is needless for me to say that its repeal originated in a Democratic House of Representatives. It originated with a party that has always been the friend of the laboring man, and who is to-day his sincerest and staunchest friend—a party that comes to him with no false pretenses of interest in his welfare, but a party that does and acts in his behalf.

They say that to put salt on the free-list will crush the interest of the salt-maker. This is not true. The tariff has nothing to do with the price of salt. It is placed there simply to remove the restrictions of trade just as removing the revenue from leaf-tobacco permits the pro-

ducer to deal with the article of his labor and production at home and abroad without let or hindrance.

What has been the conditions of our salt interest under a tariff? Take for illustration the furnaces in the Kanawha and Ohio valleys. Where once the hum of industry was heard under every shed and the smoke-stacks belched out their heated volumes of smoke and fire, and the cooper made the shop ring with the music of his industry, there is nothing now but rotten timber and rusty, idle machinery. The miner that was employed at fair wages about these furnaces in supplying them with fuel has had to hunt other fields of labor or seek new avenues for employment. The price of labor has gone down, and homes that once smiled with plenty and happiness have become the abodes of poverty and discontent. How can the tariff be said to help this industry in the light of this business experience? Every laboring man knows that the tariff has not helped this industry; he knows to place salt on the free-list can not affect it in the least. There is but one thing that can affect any business interest, and that is the great law of supply and demand, and it is as impossible to escape the operation of this law as it is that of the great law of gravitation, and this truth is as susceptible of demonstration as any problem in Euclid.

We are told by the enemies to tariff revision that to place wool on the free-list will destroy the wool-growing interest in this country. This is not the case, as political economy discloses the fact that the tariff does not in anywise affect the production or price of wool. This can be shown by a well authenticated schedule of prices of this article for nearly three-quarters of a century last past in this country; and so well is this established that it is needless for me to incumber the RECORD with a recital of this schedule here. So true is it that it can not be successfully gainsaid or denied. Our wool-growers are aware of this, and in consideration of the great reduction made on the necessaries of life by this bill they are willing that this article may go upon the free-list. This provision of the bill will stimulate industries as regards the manufacture of woolen goods, will give steadier and better employment to labor in this line, and, in my judgment, stimulate the wool market. I do not like to go into details with reference to this bill, but I will insert here a clipping which I have taken from a current journal, which illustrates in a very forcible manner the burdens which the workingman has to bear under the present tariff law, and which is well worthy of his careful perusal. It is a true tariff story:

The American workingman returns at night from his toil clad in a woolen suit taxed 55 per cent., stockings and undershirt taxed 75 per cent., a cotton shirt taxed 45 per cent., a woolen hat taxed 75 per cent., and, perchance, a pair of gloves in winter taxed 75 per cent.

He carries in his hand his tin dinner-pail taxed 45 per cent., and greets his wife with a cheery smile as she looks at him through the window pane taxed 60 per cent., from which she has drawn aside the curtains taxed 40 per cent.

After scraping his boots on a scraper taxed 45 per cent. he wipes them on a mat of bagging taxed 40 per cent.; he lifts the door-latch taxed 45 per cent., steps in on a carpet taxed 63 per cent., and gives a kiss to his wife in a woolen dress taxed 70 per cent. She has a needle taxed 25 per cent. in her hand with which she has been mending, with thread taxed 46 per cent., an alpaca umbrella taxed 50 per cent.

It is a small brick house which they have bought with their hard earnings of a building association. The bricks were taxed 20 per cent., the lumber taxed 16 per cent., and the paint 54 per cent. The wall-paper, taxed 25 per cent., makes the room brighter, with its plain furniture taxed 35 per cent.

Hanging his hat on a brass pin taxed 45 per cent., he hangs his pail on a steel pin taxed 45 per cent., and proceeds to get ready for his supper. He washes his hands with castile soap taxed 20 per cent. in a tin basin taxed 45 per cent., and wipes them on a cotton towel taxed 45 per cent. He then goes to the looking-glass taxed 45 per cent. and fixes his hair with a brush and comb taxed 30 per cent.

He is now ready for his supper, which his wife has cooked on a stove taxed 45 per cent., with pots and kettles taxed 53 per cent. The table is spread with the commonest crockery, taxed 55 per cent., and he drinks his water out of a cheap glass tumbler, taxed 45 per cent. His meal is a frugal one, because hard times have cut his wages down, and he is saving every cent he can to pay the next installment due on his house.

With an appetite worthy of an ampler meal he takes up his knife and fork taxed 45 per cent. and begins to eat a piece of salted fish taxed 25 per cent. He pours on it a little vinegar taxed 36 per cent. Upon his boiled potatoes, taxed 40 per cent., he sprinkles salt taxed 80 per cent., and eats a small pickle taxed 35 per cent. He ends his meal with a pudding of rice taxed 112 per cent. and an orange taxed 20 per cent.

After supper he smokes a pipe and enjoys the happiness of his wife, who has this day bought a woolen shawl taxed 65 per cent., a black silk dress taxed 50 per cent., and a pair of scissors taxed 45 per cent.

There are few persons who have ever thought of the iniquities that are thus heaped upon the masses of the people by the present tariff law. However, it is becoming so apparent that the inequalities of this law should be removed; that further delay of action is not only unwise but dangerous. From a national and commercial standpoint we must revise our tariff system and to some extent remove the restrictions that it now imposes upon American commerce. We have an extent of territory, a variety of soil and climate, and a diversity of industries that challenge the admiration of the world. There is no reason why we should not stand at the head of the list of the world's commerce, as we evidently do in all things else. The flag of our merchant ships should wave in proud distinction in every seaport of the globe. Our manufactured articles, from the lowest to the highest, are everywhere in demand. Why hamper our trade with unnecessary restrictions? The great bulk of our commerce is now carried in foreign bottoms, for which we pay annually the enormous sum of $150,000,000. This is due to a very great extent to trade restrictions imposed by our present tariff law. Why not remove these retrictions and thus stimulate American commerce, open up new fields of industry, widen the scope of labor, and place in market everywhere the products of our labor and enterprise?

The life of every nation and its stable prosperity depend upon its commercial interest. The greatness and prosperity of Athens began with its commercial enterprises. Rome flourished as her foreign trade extended. Carthage, hard by the great sea, became great and powerful as her ensign floated into foreign ports over the argosies of her industries. Great Britain asserted herself as the proud mistress of the seas when she opened up, by liberal legislation, the avenues which lead to foreign commerce. The history of trade admonishes us to throw aside the narrowness of selfishness and bids us go abroad and assert our commercial supremacy. The broad fields of the West, nodding with their golden grain, say to us by signs unmistakable in their beauty and abundance that they can vie in fertility of soil and geniality of climate with those of India. The cotton-fields of the South in their blossoming whiteness speak with a mute eloquence that surpasseth speech that they can compete with any lands in the world. The stock-raisers of the whole country are ready to enter all markets of the world, after supplying those at home, and turn into money the products of their labor and superior intelligence. The manufacturer everywhere, with his skill and genius, can stand along by the side of the foreign producer and by the superior excellence of his article outsell his foreign competitor the world over.

The Tariff.

SPEECH

OF

HON. BENJAMIN F. SHIVELY,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, May 16, 1888.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. 9051) to reduce taxation and simplify the laws in relation to the collection of the revenue—

Mr. SHIVELY said:

Mr. CHAIRMAN: I acknowledge my obligation and tender my thanks to the gentleman from Kentucky [Mr. MONTGOMERY] for yielding me a portion of his time. It were vain, however, to suppose that in these few minutes anything substantially new could be thrown into the current of this debate. Four weeks of almost continuous discussion might well be supposed to exhaust the resources of a subject even more complex than that under consideration. I shall therefore content myself with a few brief general observations on the bill now before the House, and a few suggestions relative to its application to the interests of my own immediate constituents.

At every point, Mr. Chairman, in this controversy we are confronted by the fact that every political party in this country stands pledged to a revision and reformation of the present tariff. In such revision and reformation the vast and complicated interests of 60,000,000 people are involved. It is to these interests, and to these people that the solemn assurances of national conventions have been given. These assurances are found in the national platforms of 1884 in plain, direct, unequivocal propositions. The sincerity of parties is to be determined by their affirmative efforts to redeem these pledges. That party which, now unmindful of its own promises, contents itself with systematic opposition to every proposition of relief presented by its more courageous competitor, chooses its position at the bar of public opinion as a defaulter to its obligations, and a trifler with the public conscience. [Applause.]

The hour is past, sir, when the American people will accept elaborate disquisitions on impossible theories as compensation for broken promises and violated faith.

Official statistics show that there is $120,000,000 surplus in the United States Treasury. Official estimates indicate that by June 30 this sum will reach $140,000,000. Millions are too large for human comprehension. The imagination is bewildered that attempts to grasp a million. But $140,000,000 is over $21,000,000 more than the entire net ordinary expenses of the United States Government for the first twenty-one years after the adoption of the Federal Constitution. It is more than ten times the net ordinary expenses of the first year of Andrew Jackson's administration. It is four times the net ordinary expenses of the Government for the year 1850, and over three times the gross expenditures of the Government for the same year. It is more than twice the net ordinary expenditures, and nearly twice the gross expenditures, of the Government for the year 1860, and $5,000,000 more than the net ordinary expenditures of the Government for the year 1878. These comparisons are based on the official statistics of the Treasury Department, found in the last report of the Secretary of the Treasury, and give but a modest idea of the monstrous exactions that have been forced from the people under the color of taxation.

This vast and rapidly accumulating surplus lies in the public Treasury, the prolific parent of threatening evils. It has already hatched a vast brood of lobbyists, who view it as their plunder and the tax-payers as their victims. It leads to a distribution of favors among preferred corporations, to the prejudice of a pure administration of public affairs. It suggests new and questionable schemes of Federal expenditure. It breeds reckless and improvident innovations on the settled and accepted functions of the Government. It invites extravagance and spoliation. It corrupts the public morals by tempting the public virtue. It destroys patriotism by its conclusive and ever-present evidence of unjust and excessive taxation. It undermines good citizenship by destroying self-reliance and personal independence. It places industry, skill, enterprise, and thrift at a discount, and idleness and mendicancy at a premium. It represents the confiscation of $140,000,000 of the tax-payers' property. It not only represents confiscation, but deprives the country of this amount of circulating medium. It is congestion of the life-blood of commerce. It adds to the burden of every debt, of every mortgage, of every bond, of every item of local and general taxation. Its baleful influence, subtle, silent, and unseen, reaches through every channel of trade, over every field of labor, into every department of enterprise, around every branch of industry, and draws each closer every hour to the brink of panic and disaster. As the surplus of $140,000 flows each day into the public Treasury, the lines of credit throughout the country are drawn with constantly increasing tension from manufacturer to wholesaler, from wholesaler to retailer, and from retailer to consumer. This increasing strain can not endure, and unless relief is furnished from the constant drain on the energies of the nation, and the debt-paying power of the people, the fabric of credit must break down and the country be plunged into bankruptcy and distress. In view of these plain and undeniable facts, Mr. Chairman, how admirably the President comprehends the situation when he says that "it is a condition that confronts us, not a theory." [Applause.]

Legislation is compromise. Especially is this true when it touches questions of taxation. The bill before us is not perfect. Its authors do not claim the attribute of infallibility. It is a composite measure, looking toward concrete justice. The right of amendment exists, and I reserve the privilege of exercising it. But, sir, in its general scope and features this bill responds to the oft-repeated demands of the people for a careful, just, and equitable revision of the tariff and reduction of taxation. Do gentleman imagine the country can be deceived by the cry of "Free trade?" Why, Mr. Chairman, the average rate of duty under the Hamilton tariff of 1795, when our industries could truthfully plead infancy, was only 11.21 per cent. The war tariff of 1812 averaged only 32.76 per cent. The average rate on all imports under the tariff of 1832 was 28.99 per cent., and on dutiable articles 38.25 per cent. Under the "Compromise Tariff," of 1834, the average rate was 19.25 per cent. Under the Whig tariff of 1842, which was then considered radically protective, the average rate of duty on imports was 26.92 per cent., and on dutiable articles 33.49 per cent. Under the Walker tariff of 1846 the average rate on all imports was 23.20 per cent., and on dutiable articles 26.22 per cent. Under the tariff of 1857 the average rate was 15.66 per cent., and on dutiable articles 20.12 per cent. Under the "Morrill war tariff" of 1861 the average rate on all imports was 34.74 per cent., and on dutiable articles 40.74 per cent. Under the schedule in the pending bill the proposed average rate on dutiable articles is 40 per cent. The English tariff schedule contains only sixteen dutiable articles. The Morrill tariff schedule of 1861 contained less than fifteen hundred dutiable articles, while the Mills bill now under consideration embodies a schedule of over thirty-five hundred dutiable articles!

Sir, there is vastly more protection in this bill than there was in any of the various American tariffs previous to the late war, and even more protection than in the war tariff of 1861. In view of these incontrovertible facts, what possible grounds are there for the long list of hysterical prophecies about destruction to American industry, with which we have been entertained during the past four weeks? Do gentlemen, who for four years have slept on broken promises, imagine that the common sense of this nation can be deceived by their stale, hackneyed, irrelevant dissertations on British free trade? The whole question goes to the public conscience. All this antique eloquence about the Cobden Club, and British gold may answer as mere vocal exercise, but will scarcely be accepted as compensation by the millions of American people who demand relief from contraction of the currency, derangement of business, destruction of values, and confiscation of property by excessive taxation.

In my district, sir, there are over one thousand manufacturing establishments, large and small. The prosperity of these industries is bound up with the prosperity of the whole country. Were the pending measure of a violent, reactionary, or revolutionary nature, I, acting under a primary obligation to my constituents, should oppose it. But, sir, it is not such; while on the other hand the exactions of excessive taxation, and the burdens of unequal laws, fall with peculiar weight on a vast majority of my people. We have the largest wagon, carriage, and plow factories in the world. On these articles there is a duty, but it affords no protection commensurate with the exactions collected from these manufacturers in way of increased cost of raw material. Plows manufactured in South Bend, Ind., are to-day turning the soil in England, Ireland, Scotland, and Wales. After paying increased prices for iron, steel, lumber, and paint, our manufacturers carry their product into a free-trade market and defy the pauper labor of the world. [Applause.]

I challenge any gentleman on this floor to indicate wherein the tariff protects either those manufacturers or their employés. Like the duty on the farmer's wheat, the duty on wagons and plows may humbug some people into the support of "trusts" which swindle the farmer, the manufacturer, and the workingman, but it adds not one farthing to the profit on the capital invested, nor one cent to the wages of the labor employed. [Applause.] These duties, however, shall remain, sir, as a matter of grace, until you give us freer iron and steel, and release other raw materials from the control of the combine, and give them to our manufacturers at competitive instead of monopoly prices.

I this day received a letter from a prominent manufacturer of fine carriages and harness in my district, in which he says: "Reduce the tariff on iron, steel, oils, and paints, and we can successfully contest for any market in the world." And he adds that his firm is "now carrying its products into Germany, Mexico, and a number of the South American States." Think you that the law which increases the cost of the raw material which these men use is beneficial to their industry or in any sense contributes to widen their market?

Again, sir, I am in receipt of a communication from another gentleman in my district, who is connected with one of the largest and most prosperous fine vehicle factories in the United States, from which I take the liberty of quoting as follows:

The following is a comparison of prices showing what we are obliged to pay for the finest Parisian vehicles and what they can be produced for in any first-class factory in this country:

No. 756. Duc (ladies' driving phaeton):	
Cost in Paris, 2,680 francs, equal to	$536.00
Same can be duplicated here for	475.00
No. 764. Phaeton (mail):	
Cost in Paris, 3,050 francs, equal to	610.10
Same can be duplicated here for	550.50
No. 183. Coupé (Brougham):	
Cost in Paris, 3,800 francs, equal to	760.00
Same can be duplicated here for	725.00
No. 766. Landau (full leather top):	
Cost in Paris, 5,000 francs, equal to	1,000.00
Same can be duplicated here for	850.00
No. 184. Mylord (cabriolet):	
Cost in Paris, 3,000 francs, equal to	600.00
Same can be duplicated here for	550.00
No. 186. Victoria (an eight-spring):	
Cost in Paris, 5,100 francs, equal to	1,020.00
Same can be procured here for	950.00

I might extend the list indefinitely, but the above will suffice, as the vehicles mentioned are representative ones of their class.

Following is a schedule of wages paid to the mechanics in this country who are employed in the construction of the vehicles named above:

	Per day.
Body-makers	$3.00 to $4.00
Blacksmiths	3.25 to 3.50
Finishers	2.00
Helpers	1.50
Trimmers	3.00
Painters	2.00

You will not fail to notice that our mechanics are quite liberally compensated, and notwithstanding this we are able to produce vehicles which are in every respect equal to those we buy in Paris, which latter are supposed to be produced by pauper labor. It is all a mistake to suppose that the tariff controls in fixing our rate of wages. We have to pay the market price for our labor, and skill determines largely what that shall be. I might add that the only reason any carriages are imported from Paris is to satisfy the whims of some of the trade and discover any little novelties in fittings, etc., which may be brought out by the foreign designers.

Mr. Chairman, the writer of this letter differs from me in politics, but being a man of convictions, with large commercial experience and good practical business sense, he declines to humbug himself, deceive others, or hazard the welfare of the country to subserve the selfish purposes of any political party. The Republican tariff commission of 1883 recommended a 20 per cent. reduction of the tariff. President Arthur and Secretaries of the Treasury Folger and McCulloch, all Republicans, recommended a revision, reformation, and reduction of the present tariff. The Republican national convention of 1884 solemnly promised the people a revision and reformation of the tariff. Is it at all strange that many of the best men in the party believe that there was reason, sense, and patriotism in those recommendations and virtue in those promises, and now therefore utterly repudiate the proposed panacea of cheaper tobacco and freer delirium tremens? [Applause.]

Thanking the committee for this extension of time, permit me to observe that attention has been called to the wagon, carriage, and plow industries, more particularly for the purposes of illustration. Admitting all that the most ultra "trust" tariff advocate claims, the benefits of the tariff can not follow our products beyond our own shores. In other words, the advantages of the tariff stop with compelling our own people to pay higher prices for our own products. On the other hand, the disadvantages of the tariff, if any such there be, follow our products into every foreign market they seek.

For instance, our plows go into the British Isles and into many countries of continental Europe. It is safe to say that some product of American manufacture may be found for sale in every city of Europe. To my knowledge, vehicles manufactured in the city, in which I have the honor to reside, may be found to-day in Cape Town, South Africa, on the streets of Sydney, and Melbourne, Australia, in all the principal cities of Mexico, and even in Persia, to say nothing of the South

American trade. Now, will it be claimed that a tariff which increases the cost of the lumber, iron, and steel in these vehicles to our manufacturers does not place the latter at an absolute disadvantage in every foreign market where their products are offered for sale? Are not these clear cases where American enterprise, American pluck, and American skill have pushed their products into the markets of the world, not by virtue of, but in spite of, obstructive legislation?

A "trust," Mr. Chairman, is a combination of substantially all of the manufacturers of the country engaged in any single industry. The purpose of such combination is, first, to limit the product, and, second, to advance or keep up the price. When the limit of the product fixed by the combine is reached, the laborer may seek work elsewhere or starve by the roadside, while the consumer is plundered by the increased price. The formation of a "trust" is only possible, first, when this country contains a substantial monopoly of the natural products entering into the manufacture, or, second, when the tariff shuts out all foreign competition, and thus protects the domestic combination in its monopoly of the market. George Stephenson once said, "Where combination is possible, competition is impossible." The tariff is essential to the "trust," as it removes the element of competition and holds up the hands of the American people while the combination goes through their pockets.

I herewith submit a list of a few American trusts, and couple with each the average rate of protection, the amount paid to labor, and the amount of profit which each trust reserves for itself:

Name of trust.	Protected by duties averaging, per cent.—	Adjusted to guaranty a bonus in each $100 of product amounting to—	Their whole expense in $100 worth of product being—
Salt trust	50	$33	$25
Earthenware trust	56	36	40
Bessemer-steel trust	84	46	9
Plow-steel trust	45	33	29
General steel trust	45	33	29
Nail trust	45	33	22
General iron trust	45	33	25
Copper trust	24	22	22
Zinc trust	52	28	25
Lead trust	74	43	65
Glass trust	55	36	45
Soap trust	26	19	8
Linseed-oil trust	54	35	5
Rubber-shoe trust	25	20	24
Envelope trust	25	20	11
Paper-bag trust	35	26	15
Cordage trust	25	20	12
Average	.....	30	24

This list was prepared by Henry J. Philpot, of Des Moines, Iowa, evidently with much study and care. To it might be added many other trusts, which are laying the millions of consumers in this country under contribution to secure colossal fortunes to the few.

In an equity suit brought by some of the stockholders of the Jackson Iron Mining Company, in the Lake Superior region of Michigan, in 1883, the secretary of that company was put on the witness stand, and under oath admitted that from the organization of the company in 1863 up to that time, they had declared a sum total of dividends of 1,785 per cent.; that the original capital stock was $300,000; that the dividends declared amounted to $5,355,000; that the plant was in 1883 worth $1,500,000. An average annual dividend of 89½ per cent. for twenty years, and an addition of 400 per cent. to the value of the original plant in the same time, shows the languishing condition of an "infant industry," which all this time was clamoring for protection against the pauper labor of Europe.

The Quincy Copper Mining Company, of Michigan, paid an average annual dividend of 50 per cent. for the ten years preceding 1881, and the Calumet and Hecla Mining Company paid in dividends last year $2,250,000 on an investment of less than $1,000,000. It will be remembered in this connection that copper had a war tariff of 2 cents per pound, and now enjoys a peace tariff of 4 cents per pound. A member of the Edgar A. Thomson Steel Works, located at Braddock, Pa., admits to a member of the Committee on Ways and Means of this House that he drew out of that establishment as dividend in a single year the sum of $1,500,000, or $5,000 per day, to say nothing of the undivided profits. This firm is protected by a tariff of $17 per ton on steel rails, and $27.50 a ton on steel beams, and yet their works are at this hour surrounded by a cordon of Pinkerton's brass-buttoned mandarins to protect imported foreign labor inside, shoot the life out of struggling American workingmen outside, and guaranty absolute free trade in labor!

Illustrations might easily be multiplied, Mr. Chairman, but these will suffice. How well such beneficiaries of our present tariff can afford to overwhelm Congress with tons of white paper and barrels of ink, worked into literature by their paid agents, and used by their retained attorneys, and subsidize a thousand newspapers besides in their efforts to hoodwink, cheat, and deceive the American people into resisting any interference with a system that yields to them such princely incomes. There is not a pound of iron, of copper, or of steel used in my district, nor in any other district of the country, either in the form of machinery in the factories, or as material to be worked into machinery for use on the farm or in the household, the price of which has not been increased to pay these vast dividends.

The Jackson Mining Company charges the increased price to the jobber, the jobber passes it along to our manufacturer, our manufacturer must subtract a portion from the wages of labor, perhaps lose a portion himself, and pass the rest along to the man who buys the plow, the wagon, the grain-drill, the sewing-machine, or the cook-stove. The market is the objective point toward which all the energies of the manufacturer are directed. The elements that determine his ability to enter the market are, first, the cost of his plant; second, the cost of his raw material; third, the cost of labor, and, fourth, the cost of transportation. The price that he pays for his plant, or for his raw material, or for transportation, is each determined by others. The cost of these he can not control. The cost of labor, alone, he measurably determines for himself. If to compete in the market it becomes necessary to reduce the cost of his finished product, labor is the first to suffer.

In brief, sir, it is susceptible of mathematical demonstration that our high tariff on raw material, first, increases the cost of such raw material to our manufacturer; second, it increases the cost of the manufacturer's plant; third, it decreases the wages of labor; fourth, it depletes the home market by decreasing the purchasing power of wages and of farm products; fifth, it narrows our foreign market by reducing our power of successful competition, and finally, as a natural sequence of the foregoing, it lessens the employment, wastes the energies, and destroys the opportunities of American workingmen.

Why can not 80,000 skilled American workingmen be employed in making copper wire, copper bolts, copper screws, copper kettles, copper boilers, and a hundred other articles of copper-ware to supply our own market and those foreign markets now monopolized by the British? Simply because American manufacturers are charged double prices for raw copper produced in this country, while the same copper is actually sold to the British manufacturer, after paying transportation, at rates much cheaper than to our own. Our 4 cents a pound duty shuts out foreign copper, doubles the price of domestic copper, discourages and prevents domestic manufacture leaves American labor in idleness or to seek employment in other trades, while foreign capital and foreign labor control the market and laugh at the monstrous stupidity that shuts American capital and American labor out of foreign markets, and destroys their power at home. We put up a tariff against the copper ores of South America, and Brazil, and other South American countries retaliate by shutting out American flour. The American manufacturer, the American mechanic, the American consumer of copper goods, the American farmer, and the American miller are swindled by the operation of the law, and yet the attorneys of the mine owners insist that this tariff must be kept intact under the delusive cry of protection to American labor! Freer raw material means more employment, better wages, larger opportunities, cheaper goods, wider markets, and increased individual and general prosperity.

Much has been said, Mr. Chairman, in the course of this debate about a "home market." It is sought to give to this empiricism the strength and respectability of a theory. Considered as a theory, reduced to its last analysis, it finds its neatest application in the case of the savage, who builds his own hut, clothes himself with the skin of the wild beast, constructs his own canoe, hunts his own game, and declares perpetual non-intercourse against his dusky neighbors. He is his own home market. To him commerce is a swindle. Producing all the articles he consumes, he improves in the production of none. But he bravely maintains his commercial independence. He scorns the servile dependence of the civilized dupe who surrounds himself with abundance of food, clothing, and shelter, and hundreds of articles which administer to his physical, intellectual, and moral wants, each article having been made by a different workman in a different part of the world, and for each of which articles he has given the product of his own labor in return. To this savage every friendly approach of his neighbor is a cunning and insidious assault on his "infant industries."

In view of the fact, sir, that there are to-day at least thirty-five trusts in this country, lessening production and keeping up prices, the theory of a home market for our manufactured products scarcely requires notice. Thirty-two of these trusts are directly protected and largely maintained by the tariff. Their first function is to limit the production of the very articles that are to go to the market. This is creation of a home market by prevention of production. Their second function is to keep up and even advance the price of the article in trust. This is creation of a home market by destroying the capacity of consumers to go into the market and buy. I refer particularly to those industries now organized in trusts, because they illustrate directly the abuse of the power of taxation which it is the duty of Congress to correct and reform.

But it is to the American farmer that the home-market argument is

addressed with peculiar fervor and assurance. We have had twenty-seven years of high protective tariff. In 1860 our farmers sold 90 per cent. of their products at home; in 1870 they sold 80 per cent. of their products at home; in 1880 they sold only 70 per cent. of their products at home. Thus the farmer's home market has each year been proportionately decreased instead of increased. Thirty per cent. of his product must go abroad and compete with the markets of the world. This 30 per cent., which goes into the free-trade market of the world, fixes the price of the 70 per cent. that remains at home. For if his product would bring one cent more at home than abroad, not one dollar's worth would be sent abroad. The American farmer to-day buys everything he has to buy in a protected market at protected prices and sells everything he has to sell at prices fixed in a free-trade market.

In 1884 our farmers furnished 72 per cent. of our total exports, while manufactures furnished less than 17 per cent. The non-protected farmer furnishes nearly three-fourths of our exports, while other industries furnish the remainder. So when American obstructive legislation breeds hostility abroad, the American farmer is the first victim of retaliation. American trusts demand and secure a high protective tariff against France, and France gets even by shutting out the American "hog product" and breadstuffs. We declare war against the products of Germany, and Germany shuts out American meats, breadstuffs, butter, cheese, and other farm and dairy products. Within the past three years there has been a gradual proportionate decrease in our agricultural exports, traceable in a large degree to the retaliatory measures of other nations against the United States. The farmer is presented with the red-hot end of the tariff poker at every point along the line.

Why, Mr. Chairman, there is not a trust in this country but that finds the farmer its best subject for plunder. The mine owners may divide their millions in dividends each year; who pays them? These millions attach to the metal, and follow it into the plow, the wagon, the nail, the barbed wire, the stove, into every article containing iron, steel, or other metal on the farm or in the household. These increased prices, which pay vast dividends, can be passed from the mine owner to the jobber, from the jobber to the manufacturer, from the manufacturer to the wholesaler, from the wholesaler to the retailer, and from the retailer to the farmer, but there they are fastened. The bill is charged up against the farmer—tariff, bounty, profits, and all—and he has no possible escape from it. Yet the farmer is appealed to to resist a revision and reformation of the tariff.

Permit me to observe, sir, with becoming modesty, that I enjoy the distinction of having worked on a farm until I reached my majority. I know something of the struggles of our agricultural classes. Constituting nearly one-half of our population, their interests are entitled to the most serious consideration. When it is said that the American farmers, as a class, have prospered commensurately with the improvements in the means of production I repudiate the assertion as utterly without foundation. The sickle, the cradle, the reaper, the marsh harvester has each been swept aside by the inventive genius of the age, and the self-binder is in the field. Where twenty men gathered the harvest with the sickle, three do it now with the self-binder. Other improved forms of farm machinery have supplanted the old and ruder patterns. The farmer, who has thus multiplied his productive power in every direction, works long hours, practices close economy, makes sacrifices of personal comforts right and left, and yet the great body of American farmers are engaged in a desperate struggle to keep even, and a large percentage are fighting their battles along the very border-line of subsistence. According to the last report of the commissioner of labor of Michigan 42 per cent. of the farms of that State are under mortgage. There are over $175,000,000 of mortgages on the farms of Indiana. Many of the other Western States are still more heavily incumbered. The exactions of excessive taxation, and many of the millions of dollars which go each year to the trusts and the combines, are extorted from the farmer in a hundred ways, subtle and unseen, but the mortgage which these exactions force on his home is the living fact that follows him from day to day, and month to month, as an ever-present shadow. The present tariff supports the farmer as the rope supports the criminal. [Applause.]

With the further indulgence of the committee, Mr. Chairman, I invite attention to a few facts touching the distinctively labor feature of the tariff question. If the tariff protects labor, American workingmen, after twenty-seven years of protection, should be universally prosperous, contented, and happy. Yet the third annual report of Hon. Carroll D. Wright, United States Commissioner of Labor, shows that in the six years ending with 1886 there were strikes in 22,336 establishments in this country. Of these, 18,342, or 82.12 per cent., were ordered by labor organizations. During the same period there were lock-outs in 2,182 establishments. Of these, 1,753, or 80.34 per cent., were ordered by combinations of managers. Of the strikes, 16,692, or 74.74 per cent., and of the lock-outs, 1,981, or 90.8 per cent., were in the States of Massachusetts, New York, Pennsylvania, Ohio, and Illinois, where protection is said to have showered its blessings on the laboring man. These facts point like index-fingers to the terrific struggle between the trusts and the combines for their millions of dividends on one hand, and the millions of wage-earners battling against poverty, hunger, and starvation for themselves, their wives, and children on the other. At every point in this struggle the fact stands out that the tariff is the combine's protection and the laborer's tax. [Applause.]

Why, sir, it is notorious that it is in the protected districts of Pennsylvania that occur our frequent carnivals of strikes, lock-outs, reduction of wages, and insolent and brutal treatment of labor. It is from there that the red prophecies of danger are flecked athwart our industrial horizon. It is there that the State militia is called into requisition to overawe and terrorize workingmen. It is there that Pinkerton's thugs compel labor to contract under the duress of the bayonet or starve by the roadside. It is there that, while the Government by the tariff holds up the hands of the people while the trusts go through their pockets, all the powers of the State are invoked to secure absolute free trade in labor.

It has been asserted with constant repetition during this debate that reduction of the tariff always means panics and consequent widespread distress to labor. This assertion is a perversion of history. It has not even the force of coincidence, to say nothing of the strength of cause and effect to sustain it. With equal and even greater consistency it might be said that a high protective tariff leads to panic and bankruptcy. It was under the present tariff that our country suffered the most terrific and widespread commercial collapse in its history. From 1873 to 1879 there was a continuous succession of financial disasters; the nation was strewn with the wrecks of sixty thousand bankruptcies; enterprise was paralyzed, labor crushed, and a million men on our public highways as tramps. Men and women by the thousand went to the verge of starvation, and children cried for the crusts of charity. Our courts were filled with litigation, our poor-houses with paupers, and our penitentiaries with criminals. The red flag of confiscation was flaunted from every court-house in the land, and homes passed by the thousand under the hammer of the auctioneer. I do not attribute all these disasters to the protective tariff, but rather to a reactionary financial policy that involved a monstrous crime against the American people. But the tariff did nothing to mitigate the evil, and to the extent, sir, that it unbalanced the forces of production, distribution, and consumption, it aggravated and prolonged it.

Comparisons, Mr. Chairman, are often misleading. Especially is this true of comparison of wages between countries in which the conditions of production are radically different. Density of population, dearness of land, vast standing armies, and expensive aristocracies are among the conditions in European countries. In England the population numbers 400 to the square mile, in the United States only 15. If instead of 60,000,000 there were 600,000,000 population in the United States the conditions between the latter and European countries would not even then be equal. But, aside from these considerations, comparisons may suggest too much for the comfort of the ultra protectionist. Under the same tariff the Massachusetts farm hand gets $15 per month and the California farm hand $35 per month. The gentleman from Philadelphia [Mr. O'NEILL], himself a Republican and protectionist, admitted on this floor only a few days ago, that the average wages in New York City were 40 per cent. higher than in Philadelphia. Wages in free-trade England are 40 per cent. higher than in protected Germany, 50 per cent. higher than in protected Austria and Italy, 75 per cent. higher than in protected Spain, and at least twenty times higher than in China, with her thousand years of protection. Now, no single one of these facts by itself proves anything; but all taken together show the folly of the assertion that a protective tariff always means higher wages, and that different systems of taxation account for the different rate of wages in different countries. Indeed, sir, the only plain truth which comparisons among European countries where conditions are similar disclose is, that low wages and protection are there found together, while the highest rate of wages prevails in free-trade England.

Not the labor which subsists on least, but that which produces most in a given time is the best able to take and hold the market. When building railroads in India, Brassey found high-priced English labor more profitable than 12 cents a day native labor. The $3 a day labor which produces $4 worth per day for the employer is cheaper than the $1 a day labor that produces $1.10 worth per day for the employer. I know a builder of large experience who testifies that the American bricklayer is cheaper at $4 per day than the French bricklayer at $2 per day. By a consular report recently issued from the State Department it is shown that the average labor cost for weaving per day in Switzerland is 49 cents, in England 65 cents, while in the United States it is from 80 cents to $1.12. But the average cost for weaving per 100 yards in Switzerland is 60 cents, in England 55 cents, and in the United States 40 cents. So $1 of wages in the United States pays for the weaving of 250 yards, while in England it would pay for the weaving of less than 190 yards, and in Switzerland less than 167 yards.

The productive power of labor determines its competing power, and in this American labor leads the world. Both Mr. Evarts and Mr. Blaine, when Secretary of State, claimed that by reason of his superior intelligence and skill the American mechanic produced from two to three times as much in a day as the average European mechanic. Then why the constant dread of European competition? The American workingman is to-day selling his labor in a free, competitive market, and buying his subsistence in a tariff-protected monopoly market.

But they tell us that the nation under our tariff has grown rich. Yes, intelligence, skill, genius, industry, and pluck have multiplied

our productive powers and added to the wealth of the nation. This wealth is the creation of labor, not the child of legislative legerdemain. Legislation may confer power on the few to accumulate vast fortunes from the labor of the many, but can guaranty labor no compensation for the loss it thus sustains. Many years ago, in the month of September, the ague almost shook us Indiana people out of the windows; those chills have long since subsided. The school fund of our State is the largest in proportion to population of any State in the Union, and our agricultural product the greatest. There would be the same measure of economic wisdom in ascribing our splendid school fund and our large agricultural product to the stimulating effects of the ague, as to attribute our increase in wealth as a nation to the tariff. [Applause.]

Mr. Chairman, to force labor to contend against adverse natural conditions is no kindness to labor. But to lay all other departments of labor under contribution to make up the loss which such unprofitable labor sustains is positive injustice. Not the amount of employment, but the productivity of that employment determines its profit or loss to labor. The product of labor is the natural reward of labor. If labor engages in unproductive employment, such labor is waste instead of gain. Rice culture in Canada would furnish vastly more employment than in South Carolina. But would not all other forms of industry have to be taxed to pay the bounties that alone could make rice culture in Canada possible? Productive labor would thus be taxed to make up losses to unproductive labor.

The most consistent protectionist of whom we read was Robinson Crusoe. With Robinson labor was an end, not a means. Were he alive to-day he would probably be president of the "Boston Home-Market Club." For the edification of his disciples on this floor, I invite attention to Robinson's philosophy and its practical application in the administration of the affairs of Desert Island, as set forth by Frederick Bastiat, the French economist, as follows:

"Do you recollect how Robinson Crusoe, having no saw, set to work to make a plank? Yes. He cut down a tree, and then with his ax hewed the trunk on both sides until he got it down to the thickness of a board. And that gave him an abundance of work? Fifteen full days. What did he live on during this time? His provisions. What happened to the ax? It was all blunted. Very good; but there is one thing which perhaps you do not know. At the moment that Robinson gave the first blow with his ax he saw a plank which the waves had cast up on the shore. Oh, the lucky accident! He ran to pick it up? It was his first impulse; but he checked himself, reasoning thus: 'If I go after this plank it will cost me but the labor of carrying it and the time spent in going to and returning from the shore; but if I make a plank with my ax I shall in the first place obtain work for fifteen days, then I shall wear out my ax, which will give me an opportunity of repairing it; and I shall consume my provisions, which will be a third source of labor, since they must be replaced. Now, labor is wealth. It is plain that I will ruin myself if I pick up this stranded board. It is important to protect my personal labor, and now that I think of it, I can create myself additional labor by kicking this board back into the sea.'

"But this reasoning was absurd! Certainly. Nevertheless, it is that adopted by every nation which protects itself by prohibition. It rejects the plank, which is offered it in exchange for a little labor, in order to give itself more labor. It sees a gain even in the labor of the custom-house officer. This answers to the trouble which Robinson took to give back to the waves the present they wished to make him. Consider the nation a collective being, and you will not find an atom of difference between its reasoning and that of Robinson. Did not Robinson see that he could use the time saved in doing something else? What 'something else?'

"So long as one has wants and time one has always something to do. I am not bound to specify the labor that he could undertake. I can specify very easily that which he would have avoided. I assert that Robinson, with incredible blindness, confounded labor with its result, the end with the means, and I will prove it to you. It is not necessary. But this is the restrictive or prohibitory system in its simplest form. If it appears absurd to you thus stated, it is because the two qualities of producer and consumer are here united in the same person.

"Let us pass, then, to a more complicated instance. Willingly. Some time after all this, Robinson having met Friday, they united and began to work in common.

"They hunted for six hours each morning and brought home four hampers of game. They worked in the garden for six hours each afternoon and obtained four baskets of vegetables. One day a canoe touched at the Island of Despair. A good-looking stranger landed and was allowed to dine with our two hermits. He tasted and praised the products of the garden, and before taking leave of his hosts, said to them: 'Generous islanders, I dwell in a country much richer in game than this, but where horticulture is unknown. It would be easy for me to bring you every evening four hampers of game if you would give me only two baskets of vegetables.'

"At these words Robinson and Friday stepped one side to have a consultation, and the debate which followed is too interesting not to be given *in extenso:*

"Friday: Friend, what do you think of it?

"Robinson: If we accept we are ruined.

"Friday: Is that certain? Calculate.

"Robinson: It is all calculated. Hunting, crushed out by competition, will be a lost branch of industry for us.

"Friday: What difference does that make if we have the game?

"Robinson: Theory. It will not be the product of our labor.

"Friday: Yes, it will, since we will have given vegetables to get it.

"Robinson: Then what shall we make?

"Friday: The four hampers of game cost us six hours' labor. The stranger gives them to us for two baskets of vegetables, which take us but three hours. Thus three hours remain at our disposal.

"Robinson: Say rather that they are taken from our activity. There is our loss. Labor is wealth, and if we lose a fourth of our time we are one-fourth poorer.

"Friday: Friend, you make an enormous mistake. The same amount of game and vegetables and three free hours to boot make progress, or there is none in the world.

"Robinson: Mere generalities. What will we do with these three hours?

"Friday: We will do something else.

"Robinson: Ah, now I have you. You can specify nothing. It is easy to say something else, something else.

"Friday: We will fish. We will adorn our houses. We will read the Bible.

"Robinson: Utopia! Is it certain that we will do this rather than that?

"Friday: Well, if we have no wants we will rest. Is rest nothing?

"Robinson: When one rests one dies of hunger?

"Friday: You are in a vicious circle. I speak of rest which diminishes neither our gains nor our vegetables. You always forget that by means of our commerce with this stranger nine hours of labor will give us as much food as twelve now do.

"Robinson: It is easy to see that you were not reared in Europe. Perhaps you have never read the Moniteur Industriel? It would have taught you this: 'All time saved is a dear loss. Eating is not the important matter, but working. Nothing which we consume counts if it is not the product of our labor. Do you wish to know whether you are rich? Do not look at your comforts, but at your trouble.' This is what the Moniteur Industriel would have taught you. I, who am not a theorist, see but the loss of our hunting.

"Friday: What a strange perversion of ideas! But——

Robinson: No buts. Besides, there are political reasons for rejecting the interested offers of this perfidious stranger.

"Friday: Political reasons!

"Robinson: Yes. In the first place, he makes these offers only because they are for his advantage.

"Friday: So much the better, since they are for ours also.

"Robinson: Then, by these exchanges we shall become dependent on him.

"Friday: And he on us. We need his game, he our vegetables, and we will live in good friendship.

"Robinson: Fancy! Do you want I should leave you without an answer?

"Friday: Let us see; I am still waiting a good reason.

"Robinson: Supposing that the stranger learns to cultivate a garden and that his island is more fertile than ours, do you see the consequences?

"Friday: Yes. Our relations with the stranger will stop. He will take no more vegetables from us, since he can get them at home with less trouble. He will bring us no more game, since we will have nothing to give in exchange, and we will be then just where you want us to be now.

"Robinson: Short-sighted savage! You do not see that after having destroyed our hunting by inundating us with game, he will kill our gardening by overwhelming us with vegetables.

"Friday: But he will do that only so long as we give him something else; that is to say, so long as we find something else to produce which will economize our labor.

"Robinson: Something else—something else! You always come back to that. You are very vague, friend Friday; there is nothing practical in your views.

"The contest lasted a long time, and, as often happens, left each one convinced that he was right. However, Robinson having great influence over Friday, his views prevailed, and when the stranger came for an answer, Robinson said to him: 'Stranger, in order that your proposition may be accepted, we must be quite sure of two things: The first is that your island is not richer in game than ours, for we will struggle but with equal arms. The second is, that you will lose by the bargain. For, as in every exchange, there is necessarily a gainer and a loser, we would be cheated if you were not. What have you to say?' 'Nothing, nothing,' replied the stranger, who burst out laughing, and returned to his canoe."

Banana-culture, Mr. Chairman, on the Laurel Ridge of Pennsylvania, would require vastly more labor, and hence furnish more employment than banana-culture in Florida. Fig-culture on the shores of Lake Superior would furnish much more employment than fig-culture in Cal-

ifornia. Carving Hebraic statutes on tables of stone amid the thunders of Mount Sinai would furnish more employment than printing protection statutes at the rate of 100,000 per hour on an improved power-press. Walking from the Atlantic to the Pacific would furnish more labor than sweeping across the continent in a palace car. Then why not devise a system to protect the Pennsylvania banana against the Florida banana, the Lake Superior fig against the California fig, the stone carver against the printing-press, and the pedestrian against the steam-engine? True, the statute could amend no law of nature. The natural conditions would remain, as before, against Pennsylvania, Lake Superior, the stone-carver, and the pedestrian, and in favor of Florida, California, the printing-press, and the steam-engine. The law, however, might succeed in forcing labor into unprofitable employment, and lay the great mass of American people under contribution to make up for the waste of labor, capital, and natural resources. Pennsylvania bananas thus protected ought to be worth at least $1 apiece, the Lake Superior figs $10 a pound, and the census-takers would find that we were rich!

It occurs to me, sir, that the fundamental error underlying this controversy is the evident misconception of the real question involved. It is no longer a question of production. The problem of production has been solved. Its solution has been accomplished, not by statute, but by the 250,000 inventions that have leaped from the human brain. [Applause.] By the intelligent application of the forces of nature the productive power of the American people has been multiplied from ten to a thousand fold. With such swiftness has our power of production increased that we to-day behold the spectacle of combinations on all sides to arrest its progress and keep up prices against the cheapening force of American skill and invention.

The great question which now confronts this country and the world is the problem of distribution. Toward the solution of this problem we have tunneled mountains, spanned rivers, and bound up the continent with railroads and telegraph lines. Millions are spent each year to break down the barriers of nature, improve our rivers and harbors, and liberate internal commerce. Appropriations of the public moneys are made to blow out the rocks at Hell Gate and remove obstructions from the highway of nations. By American genius, in its intelligent application of electricity, time and space are eliminated from human calculation and the nations of the earth brought face to face. But against all this stands obstructive class legislation fortifying the privileges of the few against the processes of natural justice to the many.

In spite of all these improvements and expenditures the powers of production surpass the powers of distribution. Back of the obstructive statute the centripetal force of production outruns the centrifugal force of distribution, and draws all forms of productive industry each hour nearer the vortex of universal monopoly. Back of the statute are intrenched the trust, the pool, and the combine, gathering splendid fortunes for the tens from the labor, the sacrifices, and the misfortunes of the millions. Of what avail, sir, is the infinite superiority of the American mechanic if he is denied a foreign market for the product of his labor and subjected to the caprice and exactions of the combinations at home? Imitating our example, with a justificatian we have not, the fellah of Egypt, the ryot of India, the serf of Russia, the mongrels of Central America, the pygmies of Terra del Fuego, as well as the more advanced and civilized people of the earth, can intrench themselves in parchment to the teeth and laugh at the superior genius, skill, and natural resources of America.

Already are the European and the South American states throwing out their hostile lines in retaliation on our external trade and narrowing our foreign markets. The doctrine of international obstruction, like Macbeth's "bloody instruction, which, being taught, returns to plague the inventor," is bearing its fruits in a restricted market to our farmers and limited employment to our labor. On all sides the "ingredients of our poisoned chalice are commended to our own lips." American genius, American skill, American energy, American pluck, American courage, and American perseverance place America in an overwhelming majority against the world. But in the rivalry of nations, in the domain of obstructive legislation, the weakest and meanest people under the sun may print their parchment and defy our power.

In conclusion, Mr. Chairman, no one need be deceived. The issue is broad, plain, and distinct. The Government must have money to pay its expenses, its debts, the pensions to its soldiers. A large proportion of this money must be raised by customs taxation. Sufficient taxes must be thus collected, added to our internal revenue, to defray all the expenses of the Government economically administered. Within these limits I favor a discriminating tariff. At every point I would give American labor the benefit of the doubt, but let a measure of the regulating power of competition loose among the American combines, and compel them to allow freer raw material to our manufacturers and cheaper necessaries of life to our consumers. Reduce the surplus in the public Treasury, and leave the present excess of taxes in the pockets of the people.

Opposed to all this stand the privileged combinations of the country to whom has been farmed out the power of taxation. They are arrayed in solid phalanx in favor, not of protection to infants, but monopoly for giants; not in favor of keeping up the price of what labor has to sell, but of what labor has to buy; not in favor of moderate taxation and economic government, but in favor of excessive taxation and profligate expenditures; not in favor of that fundamental principle of equal justice to all, which forms the very substructure of this Republic, but in favor of the principle of special privileges to the few, which corrupts government and destroys the welfare of the many. On such an issue, and with such a cause, we confidently appeal from the clamor of greed, of privilege, and of power on this floor to the millions on the farms and in the workshops of the country, on whose shoulders at last fall the burdens of government, and in whose hearts at last rests the safety of our institutions. [Prolonged applause.]

APPENDIX.

[From report of Hon. Hugh McCulloch, Secretary of the Treasury under President Arthur.]

First. That the existing duties upon raw materials which are to be used in manufactures should be removed.

Second. That the duties upon the articles used or consumed by those least able to bear the burden of taxation shall be reduced.

[Secretary of the Treasury Folger, 1882.]

It is believed that the time has arrived when a reduction of the duties on nearly all the articles in our tariff is demanded and feasible.

[Message of President Arthur to Congress.]

I recommend an enlargement of the free-list so as to include within it the numerous articles which yield inconsiderable revenue, a simplification of the complex and inconsistent schedule of duties upon certain manufactures, particularly those of cotton, iron, and steel, and a substantial reduction of the duties upon those articles, and upon sugar, molasses, wool, and woolen goods.

[Hon. James A. Garfield, House of Representatives, March 10, 1871.]

I was surprised at a remark of the distinguished gentleman from Michigan. He asserted that there is no item in the whole tariff that can stand alone on its own merits, but that all must be taken in a lump in order to stand. That coal must take salt by the hand, and they, too, must take something else by the hand; and thus all interests unite with all forces before they can make a stand before the country. If this remark be true it strikes a blow at the whole tariff system, a blow I am not willing to strike. I am unwilling to admit that bad taxes must be tied to good ones and thus be kept afloat.

[Report of Republican Tariff Commission, 1883.]

Early in its deliberations the commission became convinced that a substantial reduction of tariff duties is demanded, not by the mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defenses. Such a reduction of the existing tariff the commission regards not only as due recognition of a public sentiment and a measure of justice, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interests affected by such reduction. No rates of defensive duties except for the establishment of new industries which more than equalize the conditions of labor and capital with those of foreign competitors can be justified. Excessive duties or those above such standard of equalization are positively injurious to the interests which they are supposed to benefit.

* * * * * * *

If the reduction reaches the amount at which the commission has aimed and if there is any truth in the allegation of the opponents of the present economic system, that a duty on articles such as are produced in this country, whether in manufactures or agriculture, enhances the price to the consumer, not only of what is imported but of the whole domestic production, to an amount of which the duty is the measure, the reduction proposed by the commission would benefit consumers to the extent of hundreds of millions of dollars.

[Hon. JOHN SHERMAN, June 9, 1868.]

Every advance toward a free exchange of commodities is an advance in civilization; every obstacle to a free exchange is born of the same narrow, despotic spirit which planted castles upon the Rhine to plunder peaceful commerce; every obstruction to commerce is a tax upon consumption; every facility to a free exchange cheapens commodities, increases trade and productions, and promotes civilization.

[Hon. PRESTON B. PLUMB, United States Senator, January 11, 1883.]

Who pays these taxes? When the manufacturer of iron comes to the Senate and says "I can live, or I can make a profit, if a certain duty is imposed," what is he saying? He is simply saying "If you give me a certain duty you put it in my power to charge over that duty as an additional tax on the farmers of the United States."

[Hon. Henry Wilson, of Massachusetts, United States Senate, 1857.]

Since the reduction of duties on raw materials in England, since wool was admitted free, her woolen manufactures have so increased, so prospered, that the production of native wool increased more than 100 per cent. The experience of England, France, and Belgium demonstrates the wisdom of that policy which makes the raw material duty free. Let us profit by their example.

[Hon. Ralph Beaumont, chairman of the National Labor Legislation Committee.]

For twenty-five years we have had this "protection" Mr. Blaine offers us, and we have made more millionaires and more paupers under that system than were ever made in a civilized country on the earth in the same time before.

[Resolution adopted at a mass meeting of workingmen at Philadelphia, April 19, 1888.]

Resolved, That we emphatically protest against petitions to Congress that have been or are being signed in the mills and factories, either under the direction of the foreman or otherwise, being accepted as the free expression of the sentiments of workingmen, as the manner in which these signatures are procured is but a species of slavery.

[Andrew Jackson's message to Congress.]

The ambition which leads me on is an honest desire and a fixed determination to * * * persuade my countrymen, so far as I may, that it is not in a splendid Government supported by powerful monopolies and aristocratical establishments that they will find happiness or their liberties protection; but in a plain system, void of pomp, protecting all and granting favors to none, dispensing its blessings like the dews of heaven, unseen and unfelt save in the freshness and beauty they contribute to produce.

[Grover Cleveland's message, December, 1887.]

When we consider that the theory of our industries guaranties to every citi-

zen the full enjoyment of all the fruits of his industry and enterprise, with only such deduction as may be his share towards the careful and economical maintenance of the Government which protects him, it is plain that the exaction of more than this is indefensible extortion and a culpable betrayal of American fairness and justice. This wrong inflicted upon those who bear the burden of national taxation, like other wrongs, multiplies a brood of evil consequences. The public Treasury, which should only exist as a conduit conveying the people's tribute to its legitimate objects of expenditure, becomes a hoarding-place for money needlessly withdrawn from trade and the people's use, thus crippling our national energies, suspending our country's development, preventing investment in productive enterprise, threatening financial disturbance, and inviting schemes of public plunder.

Restoration of Certain Public Lands Contained in the Parishes of East and West Feliciana, East Baton Rouge, St. Helena, St. Tammany, Tangipahoa, Livingston, and Washington, in the State of Louisiana.

REMARKS

OF

HON. SAMUEL M. ROBERTSON,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 18, 1888,

On the bill (H. R. 6115) restoring to the Florida parishes of the State of Louisiana certain public lands as compensation to the people thereof for lands disposed of by the United States Government at the Montpelier and Greensburgh land offices in said State, now pending before the House Committee on the Public Lands.

Mr. ROBERTSON said:

Mr. SPEAKER: The interesting incidents surrounding the origin of the claim upon which this bill is founded will demand investigation of the diplomatic correspondence upon the question of the purchase of Louisiana, and the treaties preceding that event between the powers under whose jurisdiction the extent of this country had been.

On November 3, 1762, by secret treaty, France ceded Louisiana to Spain. According to the cession Louisiana lay west of the Mississippi River, including, on the east side, the island of Orleans.

The boundary of this island, which was somewhat triangular in shape, began at the mouth of the river Iberville, now called the Manchac, the mouth of which was closed by General Jackson in the war of 1812, down the middle of the Iberville to the Amite, down the middle of the river Amite, through the middle of Lake Maurepas and Lake Pontchartrain to the Gulf.

In 1763 a definite treaty was entered into between France, Spain, and England. The secret treaty of 1762, in so far as Spain and France were concerned, was, in relation to the boundary of the country ceded to Spain, ratified by them; and France did then cede to England all of her possessions east of the Mississippi and north of the island of Orleans, which included the provinces of East and West Florida. This treaty was concluded on the 10th of February, 1763. In 1795, by a treaty between the United States and Spain, the thirty-first degree of latitude was fixed as the northern boundary between the United States and Spanish possessions.

During the occupancy of England the territory ceded by France was divided into two provinces, East and West Florida. The boundary of the latter extended from the Mississippi to the river Perdido. The remaining province comprised that portion of the cession east of the Perdido. These names were well established and well known to France, England, and Spain, and particularly to the United States, being always named in diplomatic correspondence and elsewhere as the Floridas.

In 1779, about eighteen years after the treaty in which the Floridas had been ceded to England, Spain took forcible possession of West Florida by passing her troops over the mouth of the river Iberville and establishing a garrison. In 1783, in a treaty between England and Spain, the Floridas were ceded to Spain by the former. Spain took actual possession and held these provinces in so far as she was concerned until the treaty of 1819, when she ceded the Floridas, East and West, by name to the United States. During a portion of that period, and, in fact, to as late as 1810, she exercised the right of domain over them; disposed of the land, by grants and otherwise, to the inhabitants of the country, which have long been the subject of controversy in the courts of the United States and in Congress.

By the very secret treaty of St. Ildefonso, entered into in 1800 between Spain and France, the former ceded to the latter the province of Louisiana in the following words:

His Catholic Majesty promises and engages to retrocede to the French Republic, six months after the full and entire execution of the stipulations herein relative to his royal highness the Duke of Parma, the colony or province of Louisiana, with the same extent that it now has in the hands of Spain and that it had when France possessed it, and such as it should be after the treaty subsequently entered into between Spain and other states.

The text of this treaty, beyond what is here stated, was not made known to the world, not even to our negotiators in 1803. In 1803, on the 30th day of April, at Paris, France ceded Louisiana to the United States by treaty, after long and continued anxiety and discussion and a severe diplomatic battle as to boundaries, France being represented at that time by M. Barbé Marbois, who is so well known to the country as the author of the History of Louisiana. Louisiana by name was ceded to the United States without a definite understanding as to the boundary or extent of the territory ceded in terms of the treaty of St. Ildefonso, with a change of the word "retrocede" to the word "cede" in the American text. Notwithstanding the great difference of these two words, "cede" and "retrocede," in meaning, they were treated as synonyms by the American translation of the treaty and gave rise to a long-continued controversy in the interpretation of the terms of the treaty.

Not only was there no doubt on the part of France that under this treaty the Floridas were not ceded, but it was clearly and emphatically stated to Mr. Livingston, our minister to France during the negotiations, that they had not been ceded in the treaty of St. Ildefonso, and were still the provinces of Spain.

The great anxiety on the part of the United States to gain possession of the uninterrupted commerce of the Mississippi River, and particularly to preclude all possibility of the acquisition or the control of the commerce of this river by England as a consequence of the wars then pending in Europe, caused our Government to buy property at that time with indefinite description and doubtful boundary, with the hope of acquiring by strategy that which they were unable to purchase for money or proffered commercial advantages. The name "Louisiana" was applied to country varying in extent in different periods of history. Colonial possessions were at the time of the early settlement of the country bounded by imaginary lines which were always a cause for dispute between the three powers of Europe as to the extent of their possessions, the matter frequently being referred to the arbitrament of arms. The war of 1756, in which France lost her Canadian provinces, had its origin in this fruitful source of controversy.

But, sir, at the time of its purchase in 1803, there was no doubt in the mind of Spain and France, as well as England, each of which had possessed it, that the Floridas formed no part of Louisiana, which had in 1762 been ceded to Spain, and it included the French possessions west of the Mississippi and the island of Orleans only. This matter is so clearly stated by Mr. Webster in an argument before the Supreme Court, in a very interesting case, that I quote from it the following extract:

How did the parties understand the treaty of 1763?

The letter of L'Abbadie, 1 Laws United States, 442, shows that it was considered that the whole of Louisiana was the property of Spain; and then, 1763, it was admitted that the whole of Louisiana lay west of the Mississippi; and in 1783, Spain, recovering the left bank from England, received it as Florida. It may be emphatically inquired whether it is reconcilable to sound principles to go back to the times of uncertain and contentious claims, or to the time of fixed and acknowledged rights. A contemporaneous exposition of the treaty of St. Ildefonso is obtained from the acts of the parties to that treaty. When, on the 30th of November, 1803, Spain delivered Louisiana to France, she delivered nothing on the eastern side of the river.

In support of the truth of the assertion that the United States had full knowledge of the difference between the Floridas and Louisiana it will be necessary to quote a portion of a letter from Mr. Madison, then Secretary of State, to Mr. Livingston, the minister to France, dated September 28, 1801, concerning the pending negotiations for the purchase of Louisiana:

In the next place it will deserve to be tried if France will make over to the United States the Floridas not included in the cession to her from Spain, or at least West Florida, through which several of our rivers, particularly the important Mobile, empties into the sea, etc.

In a letter from Mr. Livingston to the Secretary of State, dated April 24, 1802, I find the following:

The business most interesting to us, that of Louisiana, still remains in the state it was. The minister will give no answer to any inquiries I make on that subject. He will not say what their boundaries are, what their intentions, or when they are to take possession, and what appears very extraordinary to me is by a letter which I have just received from Mr. Pinckney we find that he still supposes that the Floridas are not included in the cession, and he writes me that he has made propositions to purchase them, which lies before the minister with whom he is to have conference.

Mr. Pinckney was at that time minister to Spain. In another letter from Mr. Livingston to Chevalier d'Azara, dated May 28, 1802, it is stated:

It is generally understood that Spain has made a cession of Louisiana to France.

And then in another part of this same letter he states:

I take the liberty to ask, sir (if the Floridas are included in the cession to France?), what stipulation the cession contains securing to the United States this important privilege?

In answer to that portion of the letter which relates to Louisiana, Chevalier d'Azara says:

I want to inform you that the affair concerning which you have addressed me, not having passed through my hands, I am unable to give all the information which you desire. It appears certain, however, that the treaty ceding Louisiana has been concluded, but I am of the opinion that the Floridas are not comprised in the cession.

In a letter from Mr. Livingston to Mr. Madison, dated November 2, 1802, is the following:

Florida is not, as I before told you, included in the cession.

The primary object of these negotiations with France was not for the

purpose of obtaining the whole of Louisiana, but simply for the purpose of obtaining New Orleans and the Floridas. Showing still further that Louisiana was not considered to include the Floridas, I quote the following:

The French Republic is understood to have become the proprietor, by the cession of Spain in the year , of New Orleans as a part of Louisiana, if not of the Floridas also. If the Floridas should not have been included in the cession, it is not improbable that they will have since been added to it.

So continues the doubt about the acquisition throughout the entire diplomatic correspondence, both France and Spain emphatically stating that in the cession made at St. Ildefonso of Louisiana, Spain did not transfer the Floridas, and they were the proper authorities to interpret their treaty of 1800. On the 20th of May, 1803, twenty days after the signing of the treaty ceding Louisiana, Mr. Livingston writes a letter to the Secretary of State, from which the following are extracts:

The subject of this letter is too important to admit of delay.

* * * * * * *

I informed you long since that, on inquiring whether the Floridas were within the cession of Spain, I was told by M. Marbois that he was sure that Mobile was, but could not answer further. I believed his information incorrect, because I understood that Louisiana, as it then was, made the object of the cession; and that since the possession of the Floridas by Great Britain they had changed their names.

* * * * * * *

I accordingly insisted, with M. Marbois, at the time we negotiated, that this would be considered as within our purchase. He neither assented nor denied, but said that all they received from Spain was intended to be conveyed to us.

I asked him what orders had been given to the prefect; who was to take possession; what orders had been given by Spain as to the boundary in ceding it? He assured me that he did not know, but that he would make the inquiry and let me know. I asked the minister what were the east bounds of the territories ceded to us? He said he did not know; we must take it as they had received it. I asked him how Spain meant to give them possession? He said according to the words of the treaty. But what did you mean to take? I do not know. Then, you mean that we shall construe it our own way? I can give you no directions; you have made a noble bargain for yourselves, and I suppose you will make the most of it.

Now, sir, the sum of the business is to recommend to you in the strongest terms, after having obtained the possession that the French commissary will give you, to insist upon this as a part of your rights, and to take possession, at all events, to the river Perdido. Your minister here and at Madrid can support your claim, and the time is peculiarly favorable to enable you to do it without the smallest risk at home. It may also be important to anticipate any designs that Britain may have upon that country. Should she possess herself of it and the war terminate favorably for her, she will not readily relinquish it. With this in your hand East Florida will be of little amount, and may be yours whenever you please. At all events, proclaim your right and take possession.

This preceded the consummation of the treaty of 1803. Subsequently, on the 31st of March, 1804, nearly a year after, Mr. Madison wrote the following to Mr. Livingston:

In mine of January 31st I informed you that Louisiana had been transferred by the French commissioner to our commissioners on the 20th of December; that nothing officially passed on the occasion concerning the boundaries of the ceded territory; but that M. Laussat had confidentially stated that it did not comprehend any part of West Florida; adding, at the same time, that it extended westwardly to the Rio Bravo, otherwise called Rio Del Norte.

"Orders were accordingly obtained from the Spanish authority for the delivery of all the posts on the west side of the Mississippi, as well as on the island of New Orleans. With respect to the post in West Florida, orders of the delivery were neither offered to nor demanded by our commissioners."

In faithful keeping with the terms of the treaty of 1803, France began arrangements to put the United States in possession of her newly acquired territory. It must be known that Spain still held possession of Louisiana, the island of Orleans, and the two Floridas, delivery not having been made under the treaty of St. Ildefonso. It therefore became necessary for this power to put France in possession; hence she became an extremely important factor in the interpretation of the terms of that article of the treaty of St. Ildefonso which was incorporated in the treaty of 1803.

Let us see if there was any act at any time between 1800 and 1803, before the treaty of that year, which would in any way indicate what Spain had sold to France. The order of the King of Spain for the delivery of the colony and dependencies of Louisiana was issued at Barcelona, October 15, 1802. It instructs that France be put in possession of—

The colony of Louisiana and its dependencies, as also of the city and island of New Orleans, with the same extent that it now has, that it had in the hands of France when she ceded it to my royal crown, and such as it ought to be after the treaties, etc.

Don Manuel de Salcedo, governor of Louisiana and West Florida, and Marquis de Casa Calvo were appointed commissioners to make the delivery. They announced the fact of the cession, in which they stated that the treaty was to be—

Executed in the same terms that France ceded it to His Majesty, in virtue of which the limits on both shores of the river St. Louis, or Mississippi, shall remain as they were irrevocably fixed by the seventh article of the definite treaty of peace, concluded at Paris on the 10th of February, 1763, according to which the settlements from the river Manchac, or Iberville, to the line which separated the American territory from the dominions of the king are to remain under the power of Spain, etc.

The act of transfer took place on the 30th of November, 1803, and on the 20th of December, 1803, France made delivery to the United States. But of what? The letter of Mr. Madison to Mr. Livingston shows conclusively that West Florida was not delivered, nor was this territory delivered by Spain to France.

It was coveted by our Government. It was always spoken of in diplomatic correspondence during the negotiations as most to be desired. It is true that this question has been ably reviewed by the Supreme Court of the United States, but the gist of the reasons for judgment can not be construed to mean anything more than that which was stated so clearly by Chief-Justice Marshall, that—

In controversies between two nations concerning national boundary it is scarcely possible that the courts of either should refuse to abide by the measures adopted by its own government. There being no common tribunal to decide between them, each determines for itself on its own rights, and if they can not adjust their differences peaceably *the rights remain with the strongest.*

In this last expression the strength of the title of the United States rests, or would rest had she not by the treaty of 1819—a most solemn compact—acknowledged the ownership to Spain by accepting from her by name East and West Florida.

Article II of this treaty reads:

His Catholic Majesty cedes to the United States, in full, property and sovereignty, all the territories situated to the eastward of the Mississippi, known by the name of East and West Florida. The adjacent islands dependent on said provinces, all public lots and squares, vacant lands, public edifices, fortifications, barracks and other buildings which are not private property, archives and documents which relate directly to the property and sovereignty of said provinces are included.

The said archives and documents shall be left in possession of the commissaries or officers of the United States duly authorized to receive them.

It has been clearly shown above that France, in keeping with the terms of the treaty of 1803, put the United States in possession of all she had sold, and in accepting this construction of the extent of the country ceded by so receiving it, the people of the Florida parishes claim that she was estopped by all the rules of equity, justice, and law from taking possession, seven years after, of the country not delivered, and which they had gained by their blood and private means without yielding to at least a part of the terms which they of right demanded. To understand this more clearly it will be necessary to review the facts as they existed preceding the heroic uprising and struggle of the oppressed people who inhabited that section of the present State of Louisiana now known as the Florida parishes, including the parishes of East and West Feliciana, East Baton Rouge, St. Helena, Tangipahoa, St. Tammany, Livingston, and Washington. Spain never having sold or delivered it to France, still held jurisdiction over it, governed it as she had previously done in every respect and particular, until the people threw off the Spanish yoke in 1810.

She had her posts and armed garrisons; her governor and all the usual officials properly accredited, and clothed with regal authority. Many emigrants from the territories adjoining had settled within the province. One of the most prosperous settlements was at St. Francisville. These people suffered Spanish oppression and wrongs until their self-respect and heroism impelled them to rise in their might and rend the shackles of despotism which the local Spanish authorites were fast riveting upon them. Mustering all the forces they could, gathering volunteers along the route, they proceeded to Baton Rouge, the most important post of West Florida, and demanded its capitulation.

On the 23d day of September, 1810, this little band of heroes stood in front of the gates of the fort, and in the face of the Spanish forces made up their minds if necessary to die for freedom's sake.

Young Louis Grandpré, the gallant Spanish officer who commanded the fort, refused to surrender it. He had been left there by the Spanish governor of the province, who was temporarily absent from the fort, and the noble blood in his veins made him prefer death to surrender. Commanded by that gallant old soldier, General Philemon Thomas, the oppressed and struggling heroes marched into the Spanish fort, with that spirit which alone inspires true bravery, the hope of freedom and the right of self-government. The struggle was short and decisive. The commander of the Spanish forces, refusing to surrender, met his death with determined resolution at the head of his forces. Having taken the fort the remaining portion of the town soon capitulated, and thus the last vestige of Spanish authority at this post crumbled into atoms before the determined valor of an oppressed people. After the capture of Baton Rouge the people, in a convention composed of the best citizens of the province, declared their independence. The instrument in which this declaration is made can be found at length in the Annals of the Eleventh Congress, third session, page 1255. I quote it in full, as showing more completely than could otherwise be expressed the condition of the people and the reason for their revolt.

By the representatives of the people of West Florida in convention assembled:

A DECLARATION.

It is known to the world with how much fidelity the good people of this Territory have professed and maintained allegiance to their legitimate sovereign while any hope remained of receiving from him protection for their property and lives.

Without making any unnecessary innovation in the established principles of the government we had voluntarily adopted certain regulations in concert with our first magistrate for the express purpose of preserving this territory and showing our attachment to the government which had heretofore protected us. This compact, which was entered into with good faith on our part, will forever remain an honorable testimony of our upright intentions and inviolable fidelity to our king and parent country while so much as a shadow of legitimate authority remained to be exercised over us.

We sought only a speedy remedy for such evils as seemed to endanger our existence and prosperity, and were encouraged by our governor with solemn promises of assistance and co-operation. But those measures which were intended for our preservation he has endeavored to pervert into an engine of destruction, by encouraging, in the most perfidious manner, the violation of ordinances sanctioned and established by himself as the law of the land.

Being thus left without any hope of protection from the mother country, betrayed by a magistrate whose duty it was to have provided for the safety and tranquillity of the people and Government committed to his charge, and exposed to all the evils of a state of anarchy, which we have so long endeavored to avert, it becomes our duty to provide for our own security as a free and independent State, absolved from all allegiance to a government which no longer protects us.

We, therefore, the representatives aforesaid, appealing to the Supreme Ruler of the world for the rectitude of our intentions, do solemnly publish and declare the several districts composing this territory of West Florida to be a free and independent State; and that they have a right to institute, for themselves, such form of government as they may think conducive to their safety and happiness, to form treaties, to establish commerce, to provide for their common defense, and to do all acts which may, of right, be done by a sovereign and independent nation; at the same time declaring all acts, within the said territory of West Florida, after this day, by any tribunal or authorities not deriving their powers from the people agreeably to the provisions established by this convention to be null and void; and calling upon all foreign nations to respect this our declaration, acknowledging our independence and giving us such aid as may be consistent with the laws and usages of nations.

This declaration, made in convention, at the town of Baton Rouge, on the 26th day of September, in the year of our Lord 1810, we, the representatives, in the name aforesaid, and on behalf of our constituents, do hereby solemnly pledge ourselves to support with our lives and fortunes.

By order of the convention.

JOHN RHEA, *President.*
ANDREW STEELE, *Secretary.*

Having proclaimed themselves a free and independent State, the people chose the Hon. Fulwar Skipwith, father of Hon. Henry Skipwith, of East Feliciana, governor, and passed such ordinances for the government of the State of West Florida as would secure them that freedom and self-government which they had so long cherished as a dream scarcely to be realized.

On the 10th of October, 1810, John Rhea, by order of the convention of West Florida, transmitted a long communication through Governor Holmes, of Mississippi Territory, to Hon. Robert Smith, Secretary of State for the United States. After reciting the fact of the previous transmittal of the act of independence, he says:

We therefore make this direct appeal through you to the President and General Government for the American States, to solicit that immediate protection to which we consider ourselves entitled.

The claim which we have to the soil or unlocated lands within this commonwealth will not, it is presumed, be contested by the United States, as they have tacitly acquiesced in the claim of France or Spain for seven years, and the restrictions of the several embargo and non-intercourse laws might fairly be construed, if not as a relinquishment of their claim, yet at least sufficient to entitle the people of this commonwealth (who have wrested the government and country from Spain at the risk of their lives and fortunes) to all the unlocated lands.

Mr. Speaker, I could dwell for hours upon the incidents of this epoch in the history of the people of this section of the present State of Louisiana, so replete is it with the trials and troubles which always beset a struggling people. It is an historical fact that they had no voice in forming the first constitution of the State, under which she was admitted into the Union in 1812.

But before deviating it may be necessary to mention the manner in which the United States extended its authority over this Territory. When the request of the people through John Rhea was submitted to the President he issued a proclamation in which he ordered Governor C. C. Claiborne, Territorial governor, to take possession of this Territory, stating that—

Considering that in the hands of the United States it will not cease to be a subject of a fair and friendly negotiation and adjustment.

This promise "of a fair and friendly negotiation and adjustment" has never been redeemed, and I stand here to-day on behalf of the people of this part of the district I represent, demanding a redemption of this promise by a just acknowledgment of their claim to the public land of the Territory, which has been pending before the Committee on Public Lands of this House, to which it was referred in 1810 by Governor Poindexter, of Mississippi Territory. I claim in the name of these people that by their efforts they rendered it possible for our Government to take possession of this Territory without war with a foreign power; that the Territory was a Spanish dominion at the time of their revolt against its authority; that it never had before been possessed by the United States, and that for seven years after the treaty of 1803 they bore the oppression of Spanish tyranny; that when they had gained their independence and declared it at their own expense and risk of their lives, they appealed to our Government for protection; that they did not resist the authority of Governor Claiborne or General Wilkinson when they planted the stars and stripes on their newly acquired soil at St. Francisville, but welcomed it as a harbinger of the generous protection of a glorious nation.

Mr. Speaker, the claim of the people of the independent State of West Florida was pending before this House and Senate when the Republic of Texas declared its independence in 1836. Ten years after she was admitted into the Union, and her claim to the public domain was recognized and granted. Will any one deny that this Territory was a part of the purchase of 1803? Yea! sir, it was even delivered as a part of the purchase on December 20, 1803. In Mr. Madison's letter of March, 1804, in speaking of the delivery of Louisiana, he said:

Mr. Laussat has confidentially stated that it did not comprehend any part of West Florida, adding at the same time that it extended westwardly to the Rio Bravo, otherwise called Rio del Norte.

Is not this river to-day the boundary line between the State of Texas and the Republic of Mexico? Can the recognition of the right of the people of Texas to the public land of that State be looked upon in any other light than the price of their valor in wresting it from a foreign power? These are significant questions, sir, and I propound them in the name of the descendants of the citizens of the once independent State of West Florida.

The people of this portion of Louisiana, the Florida parishes, achieved their own independence, and are entitled to all the benefits that should follow from the successful and patriotic efforts they made. France in 1803 did not surrender these lands as a part of the Louisiana purchase, because she recognized that they still belonged to Spain. Spain could not surrender or sell them in 1819, because nine years before these brave settlers had thrown off her yoke and set up a government of their own. France, I say, did not pretend to sell this territory, and Spain could not sell what was hers no longer.

These brave men welcomed, it is true, the stars and stripes as their standard, and offered strong hands and brave hearts to uphold that standard. But they did not surrender and never have tendered the lands which these strong arms had won for themselves. They relied on the proclamation of the President, that their rights would be the subject of a "fair and friendly negotiation and adjustment." I regret to say, sir, that their rights have been utterly ignored from that day to now.

It may be said that it is late now to appeal for justice, which has been so long denied; but, sir, the fault is not with these people; they demanded it in 1810, and have continued to prosecute it. It is not too late to be just. It is not too late to give back the lands which France did not sell and Spain could not bestow, but which brave men, animated by a love of liberty, had achieved the possession of by their valor and their own patriotic and unassisted efforts, and which this Government has no equitable and no honorable right to continue to deprive them of.

Improvements of Monongahela River—National defense.

SPEECH

OF

HON. OSCAR L. JACKSON,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

January 17, 1888.

The House having under consideration a resolution introduced by Mr. McMILLIN to authorize the expenditure of money in improvements of the Cumberland River—

Mr. JACKSON said:

Mr. SPEAKER: The gentleman from Louisiana [Mr. BLANCHARD], chairman of the River and Harbor Committee, certainly will not claim that this work is any more important than other public works of improvement in precisely the same condition, and why not wait for a general bill? If, however, he does claim that it is necessary to have instant action, why not bring in a general bill covering all these cases?

Mr. BLANCHARD. A general provision will be placed, I take it, by the River and Harbor Committee in the legislative portion of their bill covering such cases as this; but that bill is not likely to become a law until next July. In the mean time the improvement of the Cumberland River, appropriated for two years ago, is stopped because of the fact that no law permits the officials in charge of the improvement to acquire one or more small pieces of land necessary to the erection of the improvement works contemplated.

Mr. JACKSON. What public necessity is involved there that this should be made a special case over all other public works?

Mr. BLANCHARD. The gentleman's question might be answered and his wish subserved by a bill reported from the Committee on Rivers and Harbors, making an appropriation immediately available for the improvements of the rivers and harbors of the country; but that is a different question from the one we have now before us.

Mr. JACKSON. Let me inquire of the gentleman from Louisiana, chairman of the Committee on Rivers and Harbors, whether there is not a large number of Government works in process of construction and only partially completed, and where money already expended is liable to be lost if we fail to do what is asked for in this case. Are there not cases which need your help just as much as this proposed improvement does?

Mr. BLANCHARD. Mr. Speaker, it is unfortunately true that the failure of the river and harbor bill at the second session of the Forty-ninth Congress has resulted in serious detriment to the various Government improvements throughout the country; but that has nothing to do with this matter.

Mr. MCMILLIN. I have demanded the previous question.

Mr. JACKSON rose.

The SPEAKER *pro tempore*. For what purpose does the gentleman from Pennsylvania rise?

Mr. JACKSON. To submit a few remarks upon the pending proposition.

The SPEAKER *pro tempore*. The gentleman from Tennessee demands the previous question.

Mr. McMILLIN. I do not like to cut off any one, but as I demanded the previous question before the gentleman rose, I will ask him how much time he desires.

Mr. JACKSON. Not exceeding ten or fifteen minutes.

Mr. McMILLIN. Then I will yield to the gentleman that length of time.

Mr. JACKSON. I do not know, Mr. Speaker, that I could give any good reasons why the money of the Government should not be expended in this improvement as provided in the resolution offered by the gentleman from Tennessee; but I would like to call the attention of the House to the facts, and to let it be known by the House and by the country that this proposed improvement is but one of very many public works, the most of which are of much greater importance than the improvement of the Cumberland River, which are suffering for want of reasonable appropriations.

I want it to be known that it is by the neglect of the majority of the House and the present Administration that these public works are suffered to go without proper appropriations. It can not be pretended that we are unable to do what is necessary and proper, for the money is lying idle in the coffers of the Treasury.

Mr. Chairman, as I have already stated, there are many public improvements under the care of the Government, of much more importance than this one, suffering for lack of appropriation. Some of these are in the State which I have the honor in part to represent upon this floor, and others situated in different parts of the country. The commerce of the country is largely dependent on the condition of these works. They are improvements of vital importance, affecting great interests. I will only undertake to name a few of them, and at the same time suggest some other subjects worthy of Government care that have been entirely neglected. It has frequently been urged upon the attention of Congress that our coasts and seaboard cities are greatly in need of defenses which the country is fully able to provide at this time, and yet the gentleman's party has not seen proper to appropriate the money to expend in that direction. Take for instance the improvement of the Monongahela River, in my own State. The river and harbor bill did make a small appropriation for the improvement of that river, but it could not reasonably and profitably be used until the Government has acquired the property of a private corporation, and but little effort was made in that direction. But what little was done by Congress failed to become law for want of the President's signature. The Monongahela River has a much larger commerce than the Cumberland, to which the resolution of the gentleman from Tennessee alone refers. In fact, it is many times larger, and so far as tonnage is concerned the Monongahela River is not exceeded by any river or harbor in the whole country.

The number of people interested in the coal industries along this river and the still greater number of people dependent on it for their supply of fuel makes its improvement one of national importance.

It is also the most important public highway that has been occupied by a private corporation under authority of local law. Whilst it was an unfortunate policy that permitted a private corporation to acquire rights upon this grand and historic river, yet having acquired these rights they should be compensated for their property. This compensation should be fair and reasonable. But I insist that it is the duty of Government to reclaim this highway for the free use of the people for all time.

Our water ways are the great competitors with the railways, and if we will only preserve and improve them it will do much to solve the question of fair transportation.

Mr. Chairman, I do not speak of this improvement because it is situated in my own State. Pennsylvania is the friend of public improvements in all parts of our country, just as she favors the protection of all the industries of the United States. I ask to have printed as part of my remarks the following paper:

Address of Capt. John F. Dravo, president of the Chamber of Commerce and member of the Coal Exchange of Pittsburgh, Pa., before the Committee on Rivers and Harbors of the House of Representatives, February 12, 1886, in behalf of the free navigation of the Monongahela River.

To the River and Harbor Committee:

GENTLEMEN: In view of the pressing claims upon your time, and recognizing the courtesy which grants me a hearing, I will endeavor to compress what I want to say into the briefest words possible, even at the risk of not making my case as plain as it might and ought to be made.

To the end that my plea may be fairly understood, allow me to say that through the generous aid of the Government in providing a system of locks and dams for the Kanawha River and making the navigation of said river free, the great coal deposits of the Kanawha Valley have been opened to the markets of the South and Southwest, and the shipments from this comparatively new coal field have so rapidly increased as to aggregate the past year 30,000,000 bushels.

We make no complaint. Contrariwise, we think Congress did exactly right in making this river a free navigable highway for the people of the various States directly interested.

But long before the Kanawha coal was opened by the aid of the National Government the Monongahela valley, under the auspices of individual enterprise, had furnished the manufacturing industries and warmed and lighted the homes that line the Ohio and Mississippi Rivers. Cincinnati, Covington, Louisville, New Albany, Cairo, St. Louis, Memphis, Natchez, Vicksburg, New Orleans, Mobile, and a full score of lesser cities drew their supplies from the coal-fields of this valley, as did the cotton-presses and sugar-mills of the South.

During these years of individual enterprise a vast amount of capital has been invested in coal lands and mining plants, in steam towing tugs, in vessels for carrying coal to market, so that the coal tonnage of Pittsburgh equals, if it does not exceed, the tonnage of New York. Hundreds of hard-working miners, by industry and economy, have secured homes for their families, which will be rendered of but little value by the loss of trade. These living facts deserve grave consideration.

The waters of the Monongahela, like those of the Kanawha, are subject to great variations. For long periods during the year they are too scant for boating purposes. To provide water of sufficient depth for handling heavily-ladened crafts artificial means had to be devised to make up for the deficit of nature. Hence the system of locks and dams.

Those on the Kanawha were built by the Government, and are toll-free. Those on the Monongahela were built by a private corporation, and impose toll charges. That is the radical difference. The Government creates industries in one State and virtually destroys individual enterprise in another. It is the old law of competition, the weak succumbs to the stronger. Government is stronger than the individual. The combination of capital and the resulting sharp competition have reduced the margins of profits so small that the toll charges of the Monongahlea Navigation Company endanger the coal trade of the Monongahela valley, involving the loss of immense capital and the ruin of thousands of homes, as the entire valley from Pittsburgh to the State line, a distance of 90 miles, is entirely dependent upon the coal trade.

The toll charged may seem small. The Navigation Company, in their forty-fifth annual report, claim that these charges only amount to 4½ cents per ton. Four and one-half cents per ton is a small charge when compared with the producing cost of coal, but it is the feather which breaks the camel's back. These are times when small charges are determining factors in business. Trade is carried on upon extremely narrow margins. A difference of one-sixteenth of a cent a pound in the price of cotton decides whether a factory shall make a loss or profit. On some of our great railroads the cost of moving 1 ton of freight is figured down to the one-hundredth part of a cent. The day of war-inflated prices is past. Even fractions can not be ignored. Four and one-half cents toll per ton pays the Navigation Company good dividends, but it annihilates the dividends of the shipper. For while the coal trade has not for the past two or three years paid a dividend of 1 per cent., the Navigation Company keeps along all the while paying 12 per cent.

The revenue of the company, as per report, is stated to be $207,202.97, and is classified as follows:

From coal and coke	$139,509.78
From freights, empty crafts, timber, and steamers	62,758.94
From passengers	3,924.25
Total	207,202.97

Now, the items of freight, empty crafts, timber, etc., are made up of the necessary supplies connected with the operations of mining, and even the tolls derived from passengers come from travel appertaining to the trade; so that virtually the entire revenue of the Navigation Company is a direct tax on coal shipments. The toll charges, as published by the company, per thousand bushels, are for—

Pool.	Per 1,000 bushels.	Equivalent per acre to—
No. 1	$0.90	$0.90
No. 2	1.38	1.38
No. 3	2.94	2.94
No. 4	3.18	3.18
No. 5	3.42	3.42
No. 6	3.66	3.66

Taking on an average double the price of coal per acre in the hill, and on the upper pools four times the original price.

The coal in the lower pools is being rapidly exhausted, and therefore forcing the trade into the upper pools, subject to the higher rates of toll. In view of these vital and unquestioned facts, is it any surprise that I am before you pleading for an oppressed trade?

The fact is, the toll charges are equal to 7 cents per ton, as set forth by the memorial of the Pittsburgh Chamber of Commerce, copies of which I leave with the committee.

On the principles of simple equity we ask this great and rich Government to do for the Monongahela valley, in the State of Pennsylvania, what it has done and is now doing for the Kanawha valley, West Virginia. We are as good citizens in Pennsylvania as our brethren in West Virginia, and ought to be as well cared for. But Pennsylvania is not alone interested; the great States of Ohio, Kentucky, Indiana, Illinois, Missouri, Mississippi, Alabama, Louisiana, purchase our coal, and will be as much benefited as the State of Pennsylvania. Cheap fuel is a prime necessity for domestic and manufacturing purposes in these days of sharp competition and natural gas.

Let me call your special attention to another phase of the question, a somewhat remarkable fact. Some 4 or 5 miles below Pittsburgh, on the Ohio River, the Government has constructed the Davis Island dam, backing the water to the depth of 5 or 6 feet at the mouth of Lock No. 1, of the Monongahela Navigation Company, on the Monongahela River; and commencing at the State line between Pennsylvania and West Virginia, at the point where the Monongahela Navigation Company's improvement terminates, the Government has and is now constructing a system of locks and dams, which, when completed, will pool the waters to Morgantown, W. Va.

Thus it so happens that on this natural highway there is wedged in between these Government improvements a private corporation taxing the commerce of these national waters, an absolute barrier to interstate traffic. The products of West Virginia are as much compelled to pay duties in passing beyond the limits of State lines as if entering the ports of a foreign country; in fact, and we emphasize the fact, all the tax on coal passing through these locks is in the nature of an export duty, as all the coal so passing is exported to other States.

It seems to me that this anomalous condition of affairs constitutes an unanswerable reason why this wrong should be corrected at once. Allow me to say, in my judgment, the water ways of the nation should be improved, and made free, that they may serve as highways of trade and travel for the people, and as a protection of the people against the human tendency (not humane) of corporate highways. I say nothing against railroads; we need them all; I wish them well; I would extend to them all possible consistent aid, but Congress owes it to the people that the highways of nature should be improved that they may hold in check the tendency of all corporate authorities to undue exercise of power and excessive taxation.

Railroads belong to corporations; the rivers and lakes to the people. The

free water ways represent the democracy of nature, the largest freedom and the most unrestricted privileges; the "go-as-you-please" system of trade and travel. In this connection I beg to say the people do not object to the expenditure of the national money—if it is honestly done. If there is no job in it, I repeat the people do not and will not complain of the honest outlay of money. Beautify this city, improve our rivers and harbors, and see that it is honestly done, and there will be no complaints, and I would like the privilege of saying that there is one Department of the Government that in the main has preserved itself from reproach in the expenditure of public funds. I refer to the Engineer Department.

The experience of the last two years, the close margins, and the rapid development of the coal trade in the Kanawha, have demonstrated that the coal trade of the Monongahela Valley, under existing circumstances, can not long live, and hence I represent parties who have invested all they are worth, their life-earnings, in coal lands and mining plants, who will be bankrupted if this trade is forced to other fields. I represent the owners of thousands of humble homes, created by industry and economy, which will be rendered valueless if the occupants are forced to seek employment in distant fields of labor. No class of the people are taking a more lively interest in the solution of this question and watching more closely the legislation of Congress than the laboring element of our section of our county, especially that large class of workmen who by honest toil and economy have secured humble homes.

But you are asked for large appropriations for other points—millions for the Mississippi, large sums for the Ohio, etc. I have not one word in opposition. I only beg to suggest the importance and wisdom of first taking care of the waters where the freight originates, the points of developments which make the waters of the Ohio and Mississippi necessary. It is due to truth to say that the Monongahela Navigation Company, in the years gone by, has been a great benefit to the coal trade, a trade which has so largely added to the prosperity of the great cities on the Ohio and Mississippi waters, from Pittsburgh to New Orleans, and cheapened manufacturing processes in almost all sections of the Union. For this they are entitled to just consideration. We do not ask that their property be confiscated. They should be fairly compensated. But justice to others, to the thousands who depend on this trade for a living and who have invested their all in it, as well as the general good, righteously demand of you the same helping hand which you have extended to others. The good deeds of the company can not be allowed to continue a system which by the changed condition of affairs has become a destroying burden.
